FOREWORD TO THE 1971 REISSUE

Responding to widespread demand from librarians and other researchers, The H. W. Wilson Company has brought back into print the six early volumes of Current Biography Yearbook, 1940-45. Although their style and format depart considerably from present editorial policy, the volumes constitute a rich source of information on persons of the World War II period. They provide contemporary viewpoints on major world figures and furnish valuable leads to further research into the lives of a host of authors, organization heads, war correspondents, and women military leaders. And their reference value is enhanced by photographs that are difficult or impossible to come by elsewhere. The Company is pleased to make these volumes once again available to serve the research and reference needs of the scholarly community.

CHARLES MORITZ

Preface

With a world at war the task of bringing the information in the twelve monthly issues of CURRENT BIOGRAPHY up to date has been difficult. But it has occasionally been lightened by incidents such as our encounter with Franklin Pierce Adams of *Information Please,* former columnist for the New York *Post* and widely known as "F. P. A." Over the telephone we asked the person answering (presumed to be F. P. A.'s secretary): "What is Mr. Adams doing currently?" The voice replied: "Currently Mr. Adams is answering the telephone."

All biographies, including their accompanying lists of references, have been brought up to date so far as time and the printer's "deadline" have allowed. In nearly every case it has been possible to consult for this purpose published materials in newspapers, periodicals and books issued up to December 31, 1941.

This is the second annual volume of CURRENT BIOGRAPHY and is a cumulation of all the material in the twelve monthly numbers of CURRENT BIOGRAPHY for 1941. (These can now be discarded.) The total of 991 biographies in this volume includes: 1) long biographies of living persons; 2) short obituary notices. Many readers may wonder why only a brief mention is made of such important national figures as the late Associate Justice of the Supreme Court, Louis D. Brandeis, while lesser known living people are written up at length. This policy is the result of having questioned librarians, who tell us that the interest in persons no longer living can usually be satisfied by a brief description of their careers. To such description it is our practice to add full dates of birth and death, a bibliography of articles, books and newspaper stories, and, most important of all, references to longer obituary notices from generally available sources such as the New York *Times.* Photographs are included for living people only, except for a few photographs which accompanied obituary notices in our January 1941 issue.

Research for CURRENT BIOGRAPHY is an arduous undertaking. It entails constant search for biographical material through general catalogs and indexes of books and periodicals, through miscellaneous sources of biographical information, plus the reading and clipping of quantities of newspaper and magazine articles, supplemented by numerous telephone calls and letters to persons, publishers, agencies, special libraries and similar sources of information. The Editorial Staff includes, besides the Managing Editor, E. Mary Trow, the following writers: Frances Jennings, Lillian Price and Violet Smith. They, with the part-time contributors, Ruth Lechlitner, Charles E. Smith, Albert Friedman, Miriam Allen deFord and Herbert B. Grimsditch, share the responsibility of research and the writing of most of the sketches. A clerical staff assists with the correspondence, physical details of clipping, filing, etc., with the preparation of copy for the printer and with the preliminary proofreading.

Where it has been possible to get in touch with the biographees they have been approached for additional information and for the correction of any possible errors in fact. In no sense, however, are these official or "authorized" biographies.

A photograph of the subject accompanies each full sketch. Whenever these have been obtained from individual studios appropriate credit has been given. Of the remaining photographs, those not furnished by the biographees themselves were obtained from the Press Association, Inc., Rockefeller Plaza, New York City.

Editor

Explanations

Authorities for forms of names are the Library of Congress and the Wilson Company bibliographical indexes. Exception is made to the authorized form when the shortened form of a name is better known: e.g., Monty Woolley instead of Edgar Montillion Woolley. If the full name is not given in the heading it will be found in the sketch itself.

Following the name at the beginning of each sketch is its pronunciation, if difficult, and dates of birth and death, so far as available. The person's occupation is next given. Following this information is the sketch proper, and after it a list of references to additional sources of information, including magazine and newspaper references (in one alphabet) and books. Space limitations require that these bibliographies be short, but an effort is made to include the most usable materials. For persons no longer living, references to obituaries in newspapers and magazines are added. The books chosen for listing are limited to those of a biographical or autobiographical nature, including such well known reference tools as *Who's Who, Who's Who in America,* etc. The absence of a date after the title of a publication which is issued annually indicates that the volume used is the latest published.

Magazine articles are listed under *References* in abbreviated form (see list "Periodicals and Newspapers Consulted" for complete title). The form of entry is as follows: *Mag Art* 32:78-9 S '39 por. This means that an article supplementing our sketch will be found in *Magazine of Art,* volume 32, pages 78-9, in the September 1939 number. The abbreviation *por* means that the article is accompanied by a portrait. In the case of newspapers, the name of the paper is followed by paging and date.

When a name is followed by "See sketch 1940 Annual" reference is made to the volume of CURRENT BIOGRAPHY published in December 1940.

Dr. W. Cabell Greet, professor of English at Barnard College, editor of *American Speech* and speech consultant to the Columbia Broadcasting System, and Mr. Jules Van Item of the National Broadcasting Company's Shortwave Listening Station have been consulted for CURRENT BIOGRAPHY's pronunciations.

At the end of this volume a complete index of all biographies published in 1940 and 1941 is given.

ABBOTT, BUD Oct. 2, 1900- Stage and screen comedian

Address: b. c/o Universal Pictures Corp, Universal City, Calif; h. Stony Brook, Long Island, N. Y.

COSTELLO, LOU Mar. 6, 1908- Stage and screen comedian

Address: b. c/o Universal Pictures Corp, Universal City, Calif; h. Paterson, N. J.

BUD ABBOTT and LOU COSTELLO

Since 1929 Bud Abbott has been knocking Lou Costello around. A lean and hawk-eyed wise guy, he has been getting his roly-poly and not-so-very-bright partner into trouble in vaudeville, on the stage, in night clubs, over the radio and most recently in the films. It is all old-fashioned farce, sometimes brought up to date by modern cracks, more often not. This team believes that people want to be entertained without mental effort and it has stuck to buffoonery and belly laughs throughout the years. "Ours is a talking act," says Abbott. "A loud talking act," adds Costello. "One might call it corn," they both admit, ". . . but we like it."

The straight man of the partnership was born William Abbott in Asbury Park, New Jersey, where his father, Harry Abbott, was at the time advance man for Ringling Brothers' Circus and his mother was performing as a bareback rider. By the time he was old enough to go to school his family had moved to Coney Island in New York, where Public School 100 had him as a pupil until he "could outrun the truant officers." He was in the fourth grade. From then on he helped his father a little, did odd jobs around and painted a lot of signs until at the age of 15 he ran afoul a Mickey Finn in a Brooklyn beer joint and was shanghaied onto a ship sailing for Norway.

Abbott jumped ship at Bergen and worked his way back to New York, where his father was now associated with one of the burlesque chains. He got Bud a job as assistant cashier in the Casino Theatre in Brooklyn. It wasn't long before Bud had saved enough money to form a show of his own which he called *Broadway Flashes*. From producing this, he went on, in partnership with his brother, to operate burlesque houses all over. First there was Abbott's Corinthian Theatre in Rochester; then houses in Buffalo, Toronto, Cleveland. And finally there came over-expansion. Abbott sold his interests and by 1929 was back in a Brooklyn box office, in the Empire Theatre. It was here that he met Costello.

Costello hadn't been idle either. His father ran a small silk mill in Paterson, New Jersey, where Lou was born in 1908 and christened Louis Francis Cristello. He wanted his son to be a doctor, but it was soon clear that schooling and Lou would never agree. He was the kind of boy in Public Schools 11 and 15 who pulled girls' pigtails, brought frogs to school in his pockets, hid coats and hats—"I was a perfect brute," he confesses. Night after night he had to stay after school and write on the blackboard 50 times: "I'm a bad boy." Since this later became his tag line, he feels his attempts at an education were worthwhile.

He quit high school to work in a local haberdashery and quit this position to become an actor. His first pilgrimage west ended in Pittsburgh, where he worked in a slaughter house for $8 a week. Back in Paterson he was "spoined" by a chorus girl and tried to end it all as a prize fighter. Fourteen fights and a number of broken ribs later, he was out on the West Coast being bounced over half the back lots of Hollywood as a studio stunt man. He was tossed from high

ABBOTT, BUD and COSTELLO, LOU —*Continued*

places, bruised by whole football teams, chased by gorillas. "Yep," comments Costello, "I always was a very athletic fellow." "But," he adds, "my shape was different then."

Doubling for stars like Dolores Del Rio fired Lou with ambitions to become an actor. "When the talkies came in," he says, "I saw a lot of the actors was hotfooting it to New York for voice lessons. So I says if you gotta have voice lessons to be an actor, that's for me. So I decided to go to New York." On his way there he was stranded in St. Joseph, Missouri and hastened to answer a show's advertisement for a "Dutch" comedian. He got the job, changed his name to Costello and afterward stayed in burlesque and vaudeville, both in stock and on the circuit.

One of his engagements was for a week at the Empire Theatre in Brooklyn, New York. He had a straight man by then who was needed for the act. But the straight man fell ill, and Lou was at his wits' end looking for someone to replace him. Bud Abbott, in the box office, offered to fill in for a few nights—and never stopped. "Bud and I was right for each other," Lou knew from their first appearance together. They played most of the burlesque and many of the vaudeville circuits together, clowning, getting off old jokes, knocking each other around. Neither of them ever used a script. Abbott says it's because Costello "fumbles all over such things. He is one guy who gets lost when you give him directions."

Their first real break came in 1938 when a booker for the Loew's circuit caught their act in Washington. He signed them for a week at Loew's State in New York, and it was there that Ted Collins, Kate Smith's radio impresario, saw them. He gave them a 10-minute guest appearance spot on Kate Smith's program and from then on they appeared regularly on the program for a year and one-half. At first it was hard to tell over the air "who was asking and who was answering," but Lou fixed that up by adopting a thin falsetto which fitted in with his "I'm a bad boy" tag line. In the summer of 1940 they came on the radio again in Fred Allen's (see sketch this issue) place on NBC. There were critics, of course, who found their verbal slapstick "unoriginal and unfunny," but the public seemed to like their noisy, fast and foolish antics.

By the time they were filling in for Fred Allen, though, they had come up far from the early days of their partnership. As Abbott put it: "We have been partners 10 years—Minsky burlesque, vaudeville, presentation houses, lotsa hard times. Then we go over on the radio and we're sitting pretty." There was an engagement at Billy Rose's Casa Mañana and this brought an offer from the revue, *The Streets of Paris,* in 1939. The boys took it and with it got top billing, presenting on Broadway and at the New York World's Fair what was considered "some of the best music-hall clowning of our time." They continued on Kate Smith's hour, too, and also managed to put on a talking act at the *Versailles* night club at supper.

But the success from this triple engagement was mild compared with what happened to Abbott and Costello when Hollywood got hold of them. Actually Hollywood had been blessed with their services before, in 1938, when they made *One Night in the Tropics,* "an indiscretion better overlooked." But it wasn't until *Buck Privates* burst upon an enraptured country that Hollywood remembered this. Called "the best and most promising clowns to hit the screen in 10 years," Abbott and Costello bowled over the country with their personal brand of foolishness, with Abbott's straight-man playing, with Costello's bumbling, lovable dopiness. It had cost only $180,000 to make *Buck Privates.* One of the biggest "sleepers" of all time, it returned more than a million dollars. Abbott and Costello were more surprised than anyone. "It's just the same old stuff we've always been doin'," they insisted.

Before this picture there had been some talk of having Abbott and Costello streamline their patter to some extent—having them use gags at least no older than 10 years. They fought this outrageous idea. And they won. *In the Navy,* which followed, stuck to the same pattern, with Costello magnificent as an admiral directing the mad maneuvering of a battleship in a desperate attempt to impress his girl, both of them startling in one of the wildest shell games of all time. There were criticisms of these two pictures, however, even from the fans. They felt that Abbott and Costello didn't need in their films the frequent services of the Andrews Sisters or even Dick Powell. As a result the boys were allowed to run most of the show in *Hold That Ghost,* a full-blown comedy thriller, and in *Keep 'Em Flying,* the saga of their encounter with the air corps.

These pictures are bringing in Abbott and Costello about $6,000 a week and they're enjoying success. They both have comfortable homes—Abbott's is in Stony Brook, Long Island; Costello's in Paterson, New Jersey—big cars and little swimming pools. They don't enjoy affluence together much, though. Abbott sticks close to Long Island, to his wife, Betty Smith Pratt, and to his five dogs; Costello likes Paterson, New Jersey, his wife, Ann Battler, and his two daughters, Patricia and Carol. But they keep close tabs on each other. "Everything I buy is in good taste," Abbott says. "Anything that Costello buys is just pure dog."

ABBOTT, EDITH Sept. 26, 1876- Social worker; educator

Address: b. Faculty Exchange, University of Chicago, Chicago, Ill; h. 5544 Woodlawn Ave, Chicago, Ill.

Fernand De Gueldre

EDITH ABBOTT

The School of Social Service Administration at the University of Chicago in 1940 completed 20 years of its existence as one of the outstanding professional schools in a great University. It is Edith Abbott who, as dean of this school for the past 17 years, must be given credit for its remarkable history and excellent reputation. Miss Abbott came to her present position in 1924, after having been a member of the faculty of that University since 1913. During most of that time, from 1908 to 1920, she was a resident of Hull House, and later she assisted with the work of her sister, Grace Abbott, well known as former chief of the United States Children's Bureau. She has developed throughout her career her early interest, she says, "in the application of the use of social research methods in advancing the social reform program."

Nebraska born and bred, Edith Abbott comes of pioneer stock. She was born at Grand Island, Nebraska, September 26, 1876, the daughter of Othman A. and Elizabeth (Griffin) Abbott. On her father's side she represents the ninth generation of a family which came to this country in 1640 and was among the earliest settlers of Andover, Massachusetts. On her mother's side she comes from a colonial Quaker family which settled in DeKalb County, Illinois, the abolitionist section of the state. Her mother, born in a log house where the family kept a station on the "underground railroad," became noted for pioneer educational work in the West; in 1941, at the age of 96, she was still living in the Grand Island, Nebraska homestead.

Miss Abbott writes that in her childhood in this town on the old Overland Trail she experienced most of the difficulties of pioneer life. She saw the covered wagons moving West; she knew as a child the Pawnee Indians, gradually dispersed and disinherited through white encroachment on their lands. Her father became the first Lieutenant Governor of Nebraska and was a member of the first two constitutional conventions of that state.

For five years Edith Abbott attended an Episcopalian boarding school, Brownell Hall, in Omaha, and she was graduated from the University of Nebraska in 1901. She took an active part in college life, was author of the class play, and winner of Phi Beta Kappa honors.

Awarded a fellowship in economics at the University of Chicago, Miss Abbott received her Ph. D. degree there in 1905. She also took work in the Law School. The following year she held the European fellowship of the American Association of University Women and studied at the London School of Economics and Political Science of the University of London. She enjoyed her work there, but says that she counts as her greatest influence her contact with Mrs. Sydney Webb, who was then directing the research work for the Royal Commission on the Poor Laws and Relief of Distress.

Following her return to this country Miss Abbott taught economics for a year (1907-08) at Wellesley College. She was then offered the opportunity of joining the group of social reformers at Hull House who were "trying to set up a program of social investigation." In the research department of the Chicago School of Civics and Philanthropy (later the School of Social Service Administration) established by a grant of the Russell Sage Foundation, Miss Abbott began a series of studies that was afterward incorporated into a book, *The Tenements of Chicago, 1908-35* (1936). Her first book, however, published in 1910, was *Women in Industry.*

Becoming interested in the Juvenile Court of Chicago, she was co-author (with Sophonisba Breckinridge) of *The Delinquent Child and the Home* (1912). The year following, as statistician for the Chicago City Council Commission on Crime, she began a period of 10 years of work which led to various reports on the treatment of offenders in Chicago and particularly in the county jails of Illinois. Studies were also undertaken for the new United States Children's Bureau—in particular those of the early Mother's Aid experiment in Illinois. Her next publications were two large volumes on immigration problems. Appointed a consultant on the Wickersham Commission, she published in 1931 a series of studies on immigration and crime. When the depression led to great increases in relief and the organization of the new state relief administrations, Miss Abbott became a forceful advocate of the development of Federal aid for relief.

Meanwhile the School of Social Service Administration at the University of Chicago, of which she was dean, had expanded rapidly,

ABBOTT, EDITH—*Continued*

and for the next 10 years, from 1924 on, it registered more than 1,000 graduate students every year. Under her direction this school has been highly influential in public welfare administration and has published some threescore substantial volumes (many of them edited by Miss Abbott) as contributions to this field of work. Her most recently published book (1940), *Public Assistance,* is "a compilation of selected documents on public relief." Reading it, as one reviewer has written, "one gets a very good idea of the historical settings of our major welfare problems, and one is aware of the passion and insight of a great scholar and teacher whose influence extends beyond the walls of the classroom and whose message is timely for the intelligent layman as well as for the professional expert."

Miss Abbott was president of the American Association of Schools of Social Work for two terms and, in 1937, president of the National Conference of Social Work, the eighth woman in a period of sixty years to hold this office. She is currently the editor of the *Social Service Review,* a quarterly published by the University of Chicago Press. She has been a member of various boards and investigating committees of many social agencies, member of the Advisory Committee of the Cook County Bureau of Public Welfare since its organization in 1924, of the Advisory Committee of the Children's and Minors' Service of the Chicago Relief Administration since 1933, and president of the Illinois Conference of Social Work in 1939. She holds several honorary college degrees.

Despite her many scholarly publications, Edith Abbott prefers to be known simply as a social worker and as an educator of social workers. She is, she says, a pacifist, although she supports President Roosevelt because she believes in his social welfare program. A lifelong liberal with progressive ideas (she is proud that she comes from the home state of George Norris), she is not only a social worker, but a social reformer.

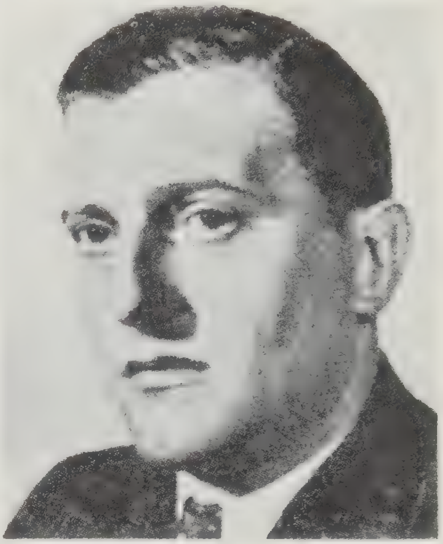
ABETZ, OTTO (ä'bĕts) Mar. 26, 1903- Ambassador of the Third Reich to the Vichy Government; High Commissioner of Occupied France



OTTO ABETZ

On July 4, 1939 Otto Abetz was expelled from France, suspected of being chief of the Nazi Fifth Column in that country. More than one Cabinet Minister and Cabinet Minister's wife must have grieved at his departure; and certain aristocratic and intellectual circles were desolated by the loss of such a charming and brilliant young man, so sincere, so peace-loving, so devoted to France—and with so much money to spend. In August 1940 the same people may or may not have been comforted: Otto Abetz came back to Paris in the uniform of Ambassador from the Third Reich, bearing the further rank of High Commissioner of Occupied France. Certainly no German better deserved the position.

Heinrich Otto Abetz, the son of a poor estate manager in Hanover, Germany, grew up around the time of the First World War. He lost his father when he was only 13. Idealistic, with artistic ambitions, he attended a fine arts school in the Grand Duchy of Baden and began his career as a drawing teacher during the difficult post-War period. With Briand in power in France and Stresemann in Germany, liberals were doing all they could to better relations between the two countries. There were international literary and scientific conventions; actors' companies were exchanged; a Franco-German Society was formed. Abetz, a Catholic working in the German Youth Movement, took an active part in all of this. He studied French literature, traveled in the French provinces, married a French girl from Lille (Suzanne de Brouckère, former secretary of his friend Jean Luchaire); from the industrial circles close to Stresemann he found patrons who helped to finance German-French youth congresses, supplemented by group tours of Germany and France, the publication of a Franco-German magazine at Stuttgart, the founding of a vacation camp in the Black Forest country of Sohlberg, where German and French youths lived together and swore eternal friendship. This movement, democratic and pacifistic, was discouraged by Stresemann's successors: youth congresses were canceled, the Franco-German Society dissolved.

Exactly what Abetz was doing just before Hitler's rise to power remains a little obscure. In any case, it is reported that it was 1932 when Von Ribbentrop (see sketch this issue) noticed him and suggested that he might be useful to the Nazis. Abetz hesitated at first, according to most versions of the story, and then was "simply drafted" to go to France to renew his old acquaintances and activities.

Jules Romains described him in 1934: "a healthy fellow, with reddish hair, an open, freckled face with frank, clear-cut features, a pleasant voice, often interrupted by laughter. . ." He spoke "impeccable French." He created an impression of "deepest sincerity." He represented himself as a western German who felt a bond of brotherhood with the Belgians, the northern French and the Swiss, nothing but aversion for the Prussians: as a "Man of Good Will" working "from the inside" in order to try to direct the Nazi movement (which had its regrettable features) into useful and pacific channels. Already, he confided, he had secured the confidence of one of Nazidom's rising men—Von Ribbentrop—who, though not yet in a position of great power, represented the more healthy and stable elements in Germany, and who promised to be very helpful. Romains, originator of a youth movement of his own—the July Ninth group—was charmed by the young German, inclined to believe him. He welcomed German speakers at a meeting of his group, accepted an invitation from Abetz to lecture in Germany in November 1934, let Abetz choose the subject of the lecture, was touched by a visit to Abetz's shabby apartment in Germany and the sight of his devoted French wife and the small son who symbolized Abetz's ideal of spiritual unity between the two countries.

M. Romains was by no means Herr Abetz's only success. His acquaintances broadened rapidly. He acquired honorary rank on the staff of Von Ribbentrop, later Germany's Foreign Minister. He became prosperous. (He is said to have disposed of 350,000 francs a month by himself.) He stayed at the Hôtel Irena in Paris and dined at Fouquet's on the Champs Élysées. He numbered among his dinner companions industrialists, statesmen, deputies, senators, aristocrats, intellectuals. He lectured to French clubs, veterans' associations, and also to organizations of German Nazis living in France. He was the guiding spirit of the *Comité France-Allemagne.* He could be depended upon to put Fascist parties and groups in touch with the press attaché of the German Embassy. He was always welcome at the Club Rive Gauche. It was through his efforts that the Franco-German Society and magazine were revived. He saw to it that papers whose policies Berlin approved received large advertising contracts. He was known as one always willing to lend money to hard up journalists or even bankers' wives. Authors were grateful to him for having helped sell their books to German publishers. They had received royalties in advance, even though the books themselves might gather dust in German files.

Many, too, were the distinguished Frenchmen who accepted invitations to tour Germany with all expenses paid and who came back thinking the Nazi evil had been slightly exaggerated. Herr Abetz was subtle: he didn't necessarily try to make Frenchmen into National Socialists; if he could create the impression that there was no reason why France and Germany should ever become enemies it was, very often, enough.

He found willing and efficient cooperation in high quarters as well. Among his close associates were Edouard Pfeiffer, former general secretary of the Radical Socialists and personal friend of Daladier; Count de Fels, who served as a liaison officer between Abetz and Flandin (see sketch this issue); Fernand de Brinon, editor of *L'Information,* who worked in the service of both Abetz and Georges Bonnet and who was vice-president of the *Comité France-Allemagne.* Georges Bonnet, Daladier's Foreign Minister, and Madame Bonnet were particularly dear friends. No one could have done more than this attractive young German to pave the way for Munich. Yet, after Munich, when Abetz accompanied Von Ribbentrop to Paris for the signature of the Franco-German accord of December 6, 1938 and proceeded to organize the official parties in celebration of the occasion, the guests found him as charming as ever. It was only after he had been repeatedly exposed in a very few such papers as Henri de Kérillis' *L'Époque* and after extensive Nazi espionage in France brought a number of arrests that French officialdom decided it could part with him. He went first to Belgium, then, in September 1939, returned to Berlin to direct the services of propaganda in France. Throughout the War he kept in close touch with his informers and agents in Paris.

In 1941 he is back in France, under slightly different circumstances. He has performed miracles in bringing about the fullest possible cooperation between Vichy and Germany's "new order." "And yet," Jules Romains mourns, "it is not certain that Abetz was a knave. It is not certain that he was not, in 1934, the man of good will, disinter-

ABETZ, OTTO—*Continued*
ested and fervent, of whom he gave me the picture. . ."

ACHESON, DEAN (GOODERHAM) (ăch'-ĕ-sŭn) Apr. 11, 1893- Assistant Secretary of State

Address: b. Department of State, Washington, D. C.; h. 2805 P St, N. W., Washington, D. C.

DEAN ACHESON

The appointment of Dean Acheson to the position of Assistant Secretary of State in January 1941 was considered a significant one by many commentators. For many months Mr. Acheson had been active in promoting American aid for Great Britain as a member of the Committee to Defend America by Aiding the Allies. He had stated firmly that "the defeat of Hitler is essential for the continuance of free government and free life in this country and for its security and independence"; he had been one of four lawyers who published an opinion that the destroyer-naval base deal with Britain was legal.

As a firm supporter of aid to Britain, as well as a prominent lawyer and former Under-Secretary of the Treasury, Dean Acheson was a logical choice to carry out the Administration's intentions in the Department of State. It was understood that he would "coordinate State Department activities in connection with the British purchasing and other agencies by serving as connecting link with the British Embassy and the Treasury," and would "also aid Secretary [of State] Hull in dealing with other important questions as they arise." One of the important questions which Acheson has dealt with since his appointment is aid to Russia. In July 1941 a Soviet military mission held consultations with him. And in October Secretary of State Hull issued orders creating a Board of Economic Operations with Acheson as its chairman—its duties to "assist in formulating policies and coordinate the activities of the various divisions of which the board is composed."

In 1940 and 1941 Dean Acheson was thoroughly in agreement with President Roosevelt's policies, a supporter of a third term ("in this time of crisis I believe that the safety of our country and all it stands for can best be assured by the election of President Roosevelt") and the head of one of the Administration's important committees. Such harmony did not always exist, however. In 1933 Mr. Acheson collided heavily with Roosevelt's policies in his first governmental position.

He came to this position with the reputation of a first-rate lawyer, a reputation he still has. He was born in Middletown, Connecticut, the son of Edward Campion and Eleanor (Gooderham) Acheson, and intended to be a lawyer almost from the start. First came a B. A. from Yale University in 1915 and then a Bachelor of Laws degree from Harvard University three years later. Before graduation he had married Alice Stanley of Detroit, Michigan in 1917 and served as an ensign in the United States Navy during the First World War. (They now have two daughters and one son.)

In 1919 Acheson got a position that almost every Harvard man of his generation wanted—he became secretary to Supreme Court Judge Louis D. Brandeis, who used to pick the star man of each class to assist him. With two years' experience with Brandeis behind him he entered the Washington law firm of Covington, Burling and Rublee in 1921 and remained there until 1933, when he was appointed Under-Secretary of the Treasury. It was thought at the time that Roosevelt made the appointment because of Acheson's association with Brandeis. But though Acheson had been affected by Brandeis' legal liberalism, his own economic ideology, it was generally felt, was less liberal.

Acheson remained at the Treasury for exactly six months, making a success of his job despite the fact that he was a lawyer rather than an economist or financial expert. Then the gold-purchase plan came up. Acheson's position was that it was illegal. He was emphatic in his view; it was impossible for him to carry out the policy; and Roosevelt asked for his resignation.

Acheson returned to his old firm, now Covington, Burling, Rublee, Acheson and Shorb, on January 1, 1934 and devoted himself to its large and prosperous practice. It was not until February 1939 that he again became associated with the government. It was at this time that he headed a committee appointed by the Attorney General which was set up to study the problem of administrative tribunals, "to suggest improvements to make the process more workable." At the end of January 1941 this committee made its report on "judicial fair play" in the New Deal reform agencies, a report which the New York *Times* hailed as "a landmark in the history of administrative reform."

The Assistant Secretary of State is a dark-haired, mustached, young-looking man who is a Fellow of the Yale Corporation, a trustee of the Brookings Institute and a member of Washington's Metropolitan Club and of the Century Club of New York.

ADAMS, FRANKLIN P(IERCE) Nov. 15, 1881- Author; member of the *Information Please* radio program

Address: h. Westport, Conn.

Bulletin: Mr. Adams sends us the following information: "Fired from the New York *Post* on August 15, 1941, 5:02 Eastern D. S. T."

From July 1941 issue:

Franklin P. Adams, according to Frank Sullivan, "is not exactly handsome, yet he has élan. He is no Cesar Romero, yet he is not a Wallace Beery, either. Franklin has a certain electric dash and affects a kind of leer which seems to madden women." He affects other people other ways. His column, "The Conning Tower" in the New York *Post*, his grumpish, nimble comments on *Information Please*, his verse, comments, puns and rambling recollections of his weekly sorties, meetings, meals and reading have won for him what he calls "my adorers," a certain number of skeptics and even an occasional mild detractor.

For the purpose of record in history's book
I was born in Illinois, County of Cook,

Ray Lee Jackson

FRANKLIN P. ADAMS

he says. He was the son of Moses and Clara (Schlossman) Adams and was brought up in what, less poetically, is known as Chicago. F. P. A. (short for Franklin Pierce Adams) still remembers how

In our yard, near the drying shirts and socks
I planted nasturtiums and four o'clocks.

From 1889 to 1899 this occupation was interrupted by schooling at the Douglas School and at the Armour Institute of Technology, from which he was graduated in 1899. From there F. P. A. went to the University of Michigan "and almost completed my freshman year." Then he set out to earn his living. His first job was as an insurance supply clerk with Adolph Loeb & Son in Chicago; his next as an insurance solicitor. This job was an enlightening one. "Once," he recalls, "I asked George Ade to insure his household furniture and wearing apparel. This was on February 22, 1901. He was having breakfast at 11 o'clock in the morning, and strawberries—not a common breakfast for 1901, when we didn't have strawberries until June. So I thought: 'A writer's life for me.' "

By 1903 it had begun. For $25 a week he conducted a column in the Chicago *Journal* called "A Little About Everything" and wrote a daily weather story. One year later, despite an increase to $30, he came to New York and since then, he says: "I have done the same sort of work on the New York *Evening Mail, Tribune, World, Herald Tribune* [and *Post*]. If I had enough money I should do no work."

The *Evening Mail* column was called "Always in Good Humor," and the publisher insisted its name be lived up to. This was a strain, endured, however, until the end of 1913, when F. P. A. went over to the *Tribune*, his

ADAMS, FRANKLIN P.—*Continued*

farewell to the *Mail* being an Horatian ode, *Exegi monumentum aere perennius,* which, read acrostically, said "Read the *Tribune.*" His followers did, slightly relieved at the new title, "The Conning Tower." They were legion, for F. P. A.'s reputation as a wit was, even then, no mean one. "Writers, artists, dowagers and debs discussed his epigrams. Latin professors entertained their classes with his versified translations of Horatian odes."

The daily stint, if not the wit, was interrupted for a while during the First World War, in which F. P. A. served in the Intelligence and wrote an occasional column, "The Listening Post," for the A. E. F. magazine, *The Stars and Stripes.* He recalls his experiences fondly:

I didn't fight and I didn't shoot
But, General, how I did salute!

After the War it was back to the *Tribune* until 1923, when F. P. A. shifted over to the *World,* and after the *World* expired in 1931 he went back to the *Tribune,* now the *Herald Tribune.*

For his "Conning Tower" in the *Herald Tribune,* syndicated in six newspapers, F. P. A. received $25,000 a year at first and later $21,852. But all was not sweetness and light between him and Ogden Reid, the *Herald Tribune's* publisher. It has been whispered that Mr. Reid didn't want F. P. A. on his newspaper in the first place. And it is definitely known that when F. P. A.'s contract ran out in 1934 he missed a column for the first time in his history until it was renewed. When it came up for renewal again, sitting it out seemed no solution, and in 1937 F. P. A. left the *Herald Tribune.* He explained it easily: "They just wanted me to work for less money, whereas I wanted to work for more." He settled for a job with the New York *Post* in May 1937.

"The Conning Tower" today differs little from F. P. A.'s columns when he was but a sprig of a boy. "His prose has been divided between sane and salty comment on the current United States scene, good humored corrections of misquotations and bad grammar by other journalists and the weekly 'Diary of Our Own Samuel Pepys.'" Not infrequently his personal appreciation of the humor in situations has got him into trouble. Once, back in 1921, when P. F. Collier ran a full-page advertisement of Dr. Eliot's *Five-foot Shelf of Books,* F. P. A. kidded it. He was rewarded by a letter from the *Tribune's* business manager: "I want to thank you for . . . yesterday's column. It has cost us only about $12,000 in the first 24 hours. My congratulations on your effective work."

F. P. A.'s verse, despite the devastating twist he usually manages to get into the last line of a poem, has, on the whole, caused less trouble. It is "mocking and impudent," written in "rackety rhythms" and honest rhymes. Free verse he scorns—he knows it is used because

Line

Many of the poems have been published in book form, beginning with *Tobogganing on Parnassus* in 1910 (this venture was preceded by a musical comedy, *Lo,* written with O. Henry) and proceeding through 10 volumes until the publication of *The Melancholy Lute,* his own selection of the outpourings of 30 years, in 1936. Unimpressed by this, he still says his favorite recreation is "not writing."

Once a week "The Conning Tower's" survey of the general scene is interrupted by F. P. A.'s survey of his own particular scene in "The Diary of Our Own Samuel Pepys." He started this back in 1911 "solely to get a day off." "At the beginning," he confesses, "I tried to be facetious, using the old dodge of paraphrasing modern slang in archaic words. I wince now at reading it." Today in a mildly seventeenth century form he tells the reader what he ate during the week, the tennis and poker he played, the books he read, the clothes he wore, the teeth he had repaired, the plays he saw and, particularly, the comings, goings and sayings of his friends. They include most of Manhattan's artists and writers, and a typical sentence might run something like this: "At Neysa [McMein's] and later to George and Beatrice Kaufman's where I sat with Mrs. Dorothy Parker who is deeply cherished by me; then on to an evening with H. Swope, M. Van Doren," etc., etc. The record of these excursions and activities has been preserved in two volumes published in 1935 and dedicated to F. P. A.'s children, Anthony, Timothy, Persephone and Jonathan.

It is not his own writings alone that have made "The Conning Tower" famous, however. Frequently F. P. A. has been known as much for his contributors as his contributions. Edna St. Vincent Millay, Dorothy Parker, Arthur Guiterman, Sinclair Lewis, John Erskine, Deems Taylor, Groucho Marx are merely a few of the now-famous who brightened the pages of the *Evening Mail, Tribune,* et al.

Despite his many writings in his column and elsewhere, and his equally numerous friends, there were once some people in the United States to whom the initials F. P. A. meant little. This was remedied in May 1938. Mr. Dan Golenpaul outlined the idea of *Information Please* to F. P. A. and he jumped at it. "I said I enjoyed that kind of stuff and would be glad to do it for nothing. I still feel that way and am glad that I don't have to do it for nothing." On the program F. P. A. is not only "a plinth of omniscience," but able to "serve up his learning with a nice sprinkling of Attic salt"—which means with startling puns, informal quips and general deftness. It is sheer modesty, listeners agree, that makes him say he "can't remember a thing that's happened in the last 10 years but remembers everything before that."

Away from the mike and the *Post,* F. P. A., who has been accused of looking something like a cross between the late King Alfonso of Spain and Groucho Marx, loves to loll about the Players Club, a large cigar in his mouth, a loud necktie around his neck—he is "a pioneer who has done more for the crimson cravat than any other man living," according to Frank Sullivan. He lives with his second wife, Esther Sayles Root, whom he married in 1925 (he was divorced from his first wife, Minna Schwartze), and his four children in Weston, Connecticut. He complains though, that "I have to go to Redding to play tennis with Stuart Chase."

ADAMS, JAMES TRUSLOW (trŭs'lō)

Oct. 18, 1878- Historian; writer

Address: b. c/o Charles Scribner's Sons, 597 Fifth Ave, New York City; h. Southport, Conn.

James Truslow Adams, the eminent, readable historian, believes that "there is a thread, a movement to history." "There has been operative through the hundreds of thousands of years of our mostly unrecorded history," he says, "a gradual advance, call it progress or what you will." This is the general philosophy of history which has inspired his many books and articles.

Unlike many other modern historians, Dr. Adams doesn't believe in "the economic or any other single theory of history." He believes it is the historian's job to select facts "according to their interest or importance," and then to "tell the story as he honestly sees it, using the facts as he determines them," seeing the scene as a whole, impartially. And he believes, too, that whatever he writes should be made "as readable as possible." This, he says, "is not striving for popularity but a duty owed to the reader. . ." Critics have praised him for his "admirable style—one of the best styles of the present day," but there have been sterner ones in recent years to rebuke him for being an "amiable popularizer of our marching destiny."

This man who feels "I have done the best work I could in the way that pleased me best and have had much fun out of it and some profit by luck" tried his hand at a number of things before he finally settled down as an historian. His was an old family: the ancestors of his father, William Newton Adams, settled in Virginia in 1658 and, during George Washington's lifetime, owned the next-door plantation at Mt. Vernon; his father's mother could trace her ancestry back to Alejandro de Ineypoy Rojas y Queypo, who was Spanish Governor General in America in 1558. His mother was the former Elizabeth Harper Truslow. James Truslow Adams himself was born in Brooklyn, New York, but "my memory," he says, "begins in France." After a childhood spent much abroad, he attended Brooklyn Polytechnic Institute with the intention of becoming an engineer.

Harris & Ewing

JAMES TRUSLOW ADAMS

Although he received a B. A. degree in 1898 from this institution, he never became an engineer. Instead he went on to Yale to take a Master's Degree in 1900. During the period he was studying there he intended to become a professor of philosophy, but unfortunately "the teaching discouraged me." He left Yale for Wall Street, where for the next 13 years "I was broker, banker, manufacturer and railroad man all on a small scale." One of the few historians not associated with a university, Dr. Adams (Doctor by virtue of seven honorary degrees) was to comment later that "too long an academic training and career is rather a detriment than a benefit to an historian and it should at least be supplemented by some years of an active career in affairs among men." His 13 years were valuable for this reason, he feels. "They taught me much of men and affairs and incidentally took me into all but five states of the Union."

But, Dr. Adams admits, "I got fed up and quit on a small independent income to look for something more interesting. I spent a year studying Persian. Then I wrote a poor history of the village where I lived." This "finger exercise" for his later work was finished in

ADAMS, JAMES TRUSLOW—*Continued*
1916 and called *The Memorials of Old Bridgehampton.* It was followed two years later by *The History of the Town of Southampton.* All these years, Dr. Adams insists, "I worked harder writing history than I had in Wall Street."

His interest in local history was superseded by an interest in world history during the years of America's participation in the First World War. He became a member of Colonel House's commission to prepare data for the Peace Conference and followed up this work with a position as captain in the Military Intelligence Division of the Army's General Staff. Then in 1919 he was detailed on special duty at the Paris Peace Conference. Dr. Adams got "immense stimulation from the group of specialists working for Colonel House"; "my experience in the War," he adds, "also taught me much as to how history is made."

As soon as the War was over, Dr. Adams settled down to an even closer consideration of historical problems and spent the next six years in solid work on a history of New England "without other occupation and without holidays." The first volume, published in 1921, was *The Founding of New England.* "In my innocence," Dr. Adams says, "I had expected to have to pay for it myself. It won the Pulitzer Prize." And it won instant, unanimous critical acclaim—was called by Samuel Eliot Morison "the best short history of early New England that has appeared for a generation." This volume on the origins of colonial life was followed in 1923 by *Revolutionary New England, 1691-1776* and in 1926 by *New England in the Republic, 1776-1850.* The trilogy as a whole was recognized as a work that would be "long indispensable to serious students," as a masterpiece of its kind.

In 1927 came *Provincial Society, 1690-1763,* a pathbreaking work of historical research, different from his later interpretive books. (Dr. Adams says, "I have deliberately tried my hand at different sorts of work.") This was the year, too, in which he was married to Kathryn M. Seely. Not long after their marriage the Adamses went abroad, where they lived most of the next nine years, commuting "between London, other capitals and the United States." Dr. Adams has always believed in living and traveling away from home. From it he has, he feels, gained "perspective and wider knowledge of human nature."

In 1928 Adams edited *Hamiltonian Principles* and *Jeffersonian Principles;* in 1929 he produced a work which diverged somewhat from those the public had come to expect of him. Its title was *Our Business Civilization* (it was published in 1930 in England as *A Searchlight on America*), and its main argument was a plea for a more contemplative and less material existence. In 1930 his *Adams Family* was published, an "eminently fair" book which one critic went so far as to call "perhaps his finest contribution to history."

By this time Dr. Adams, who had published many kinds of historical works on many subjects, had decided that "the ripest fruit of knowledge is to *interpret* facts, to try to find out how they are related and how they influence one another." This he did in *The Epic of America* (1931), a book which sketched in our national history with broad strokes and interpreted the various elements and the qualities of character that have gone into its making. Called by Allan Nevins "the best single volume of American history in existence" and praised for its lucidity, geniality, intelligence and spirit by even those critics who found it not a great book and one marred by personal references, it soon topped the best-seller lists and was translated into French, German, Danish, Swedish, Italian, Hungarian, Spanish, Romanian and Portuguese.

In 1931 *The Tempo of Modern Life* was also published, a collection of Dr. Adams' magazine articles that provided a sampling of the work he contributed and continues to contribute to magazines as varied as the *Rotarian, Reader's Digest, Good Housekeeping, Current History* and the New York *Times Magazine.* The next year, the one in which he won the $1,000 prize given by the *Yale Review* for an article on public affairs of that year, saw the publication of the first volume of *The March of Democracy;* the second volume appeared in 1933, when both volumes were published in England under the title *History of the American People.* Considered by some "a popular yet scholarly account," the consensus of critical opinion, however, was that Dr. Adams had disappointed his public, that his latest work had a suggestion of the "commercialization of artistic and scientific effort." And critical comment on the book that followed, *Henry Adams* (1933), was little more enthusiastic.

America's Tragedy (1934) was called "a real contribution to a complex period in American history," and *The Record of America,* a high school text which he wrote the next year in collaboration with Charles G. Vannest, was praised for its understanding and "live treatment" of its complex subject. There was much more fuss and argument over *The Living Jefferson* (1936). Opinions on it varied from "shrewd and understanding, splendidly written, fair in its judgments, logical in its reasoning" to "an example of a very clever writer and historian at his worst." The book itself is generally conceded to be "an able though one-sided interpretation of Jeffersonian ideals and principles" in its first part; while its last two chapters comprise what has been called "a wholly gratuitous attack" on the New Deal. Those who remembered Dr. Adams' comment the year before—"There is only one certain thing ahead for me if I live some years more, and that is to pay for the New Deal"—and those who had followed his writings were not surprised. And it was not unexpected when the year following the publication of this book, he appeared before the Senate Judiciary Committee in opposition to Roosevelt's Supreme Court plan; when in 1940 he thundered against a third term, against the fact that "even in the United States the power of one man has become almost overwhelming"; when in 1941 he announced his indignation at "non-defense" expenditures, at "the groups and bureaus who like leeches are sucking the financial life blood of our nation."

In his writings Dr. Adams' next interest was Britain. *Building the British Empire,* the first volume of his work, appeared in 1938; the second volume, *Empire on the Seven Seas,* was published in 1940; and the whole was called "an eloquent tribute to the British world imperium, the overthrow of which, Mr. Adams feels, would constitute an almost inconceivable catastrophe." Critical opinion was divided on these books, too, and they were hailed as "a real contribution to the general reading public" and dismissed as "dull" and "too condensed."

There was no division, however, on the *Dictionary of American History,* edited by Dr. Adams and R. V. Coleman, which appeared in 1940, too. Containing 6,425 separate articles by more than 1,000 historians and experts, its volumes were immediately recognized as "indispensable," as "an important contribution to American historiography"; and the "care and learning of its editors" were praised.

Member of many societies, contributor to learned journals and encyclopedias, Dr. Adams, who is living quietly in Southport, Connecticut, indulging when he can his "simple tastes" (he merely prefers the best of everything in literature, food and friends), says he has discovered the ultimate object of his writing. It is, he says, "to make people think, and to relieve a certain pressure on my own mind. The latter is probably the real truth," he adds, "as I have no confidence in my ability to accomplish the first."

ADRIAN, (GILBERT) (ā'drĭ-ăn) Mar. 3, 1903- Dress designer

Address: c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif.

Gilbert Adrian, "Hollywood's highest-priced couturier," has probably been responsible for more fashion trends than any other designer in the United States. To him goes the credit for such international successes as the pill box hat, originated for Garbo in *As You Desire Me,* and the snood which he argued film executives into accepting for Hedy Lamarr in *I Take This Woman.*

Adrian is a New Englander by birth, having been born in Naugatuck, Connecticut, in 1903, the son of Mr. and Mrs. Gilbert Adrian, Sr. He left his home town to enter the School of Fine and Applied Arts in New York City and from there went on to Paris, where he studied, with intense interest, the creation of feminine fashions and modernistic designs.

It was as a student in Paris that Adrian first met Irving Berlin. The famous song composer saw one of Adrian's newly-designed gowns, was impressed and asked to see others. The result of the interview was a contract for

ADRIAN

special art work for the first *Music Box Revue* in 1921.

Two other *Music Box Revues* followed. When the series terminated Adrian handled special designing for the *Greenwich Village Follies* and George White's *Scandals.* It was Natacha Rambova who persuaded the young man to go to Hollywood for the first time to make Rudolph Valentino's clothes. Adrian remained with the famous picture star for some time.

His associations with Metro-Goldwyn-Mayer began in 1925, after Sid Grauman, Hollywood film theatre owner, had asked him to prepare a special prologue for Charlie Chaplin's *The Gold Rush.* So successful was his work that he received seven offers from motion picture corporations within twenty-four hours. By then he had practically discarded his first name, calling himself merely Adrian.

Greta Garbo is one of Adrian's best friends, and he has designed all her screen clothes for more than ten years. In 1936 she was included in his list of women who met his requirements for grace. Others in the select group were Elsa Maxwell, Lady Mendl, Joan Crawford, La Argentina, Katharine Cornell (see sketch this issue) and Mabel Strickland.

That was the year the couturier worked on costumes for Greta Garbo in *Camille.* This he particularly enjoyed, since it was the kind of story that gave him unusual opportunities to express his ideas. "Doing the costumes for *Camille,*" he remarked, "was an exercise in charm. That charm could be expressed in everything from 40-yard crinolines to snoods, fringed parasols, bustles and pyramided skirts." Later that same year Adrian was invited to design an entire ballet for the *Monte Carlo Ballet Russe.*

Adrian studies every person for whom he designs clothes as a doctor studies a patient. "I must know what an individual thinks about, what she likes and doesn't like, before I can get personality into her clothes," he declares. In his opinion, Garbo's glamour grows out of her "earthiness." Norma Shearer he describes as a typical, conservative young woman who looks her truest self in simple, tailored things. Joan Crawford typifies to the designer restless, active youth, and for this reason he expresses a great deal of freedom in her screen clothes.

He personally supervises the creation of all his costume designs for leading screen stars and often spends 15 or 18 hours a day on the set while a film is being made. Ordinarily Adrian works in a room whose walls and carpets are a soft shade of oyster white, flanked by sepia murals. At one end of the room is a dais where he keeps a dummy figure dressed in a costume from one of his current pictures.

In 1941 Adrian was beginning to turn his attention to mass production and custom-made costumes, making arrangements for a new shop in Beverly Hills. "No longer do I want to be associated only with glamor," he said. And despite the fact that he has created most of his fashions for Hollywood's most sophisticated stars, Adrian had chosen petite, unglamorous Janet Gaynor for his wife. The couple eloped to Yuma, Arizona, on August 14, 1939. They have a son, Robin Gaynor, born in late 1940. Miss Gaynor's signet ring was engraved, "Janet, I love you." It was Janet's second marriage; Adrian had previously been a bachelor.

In appearance, Adrian is wiry and small. His manner is reserved, yet intense. He has a thin, sensitive face, dark hair and eyes. His hobby is collecting antique furniture.

AGUIRRE CERDA, PEDRO (ä-gē'râ sĕr'dä pā'drō) Feb. 6, 1879—Nov. 25, 1941
Former President of Chile

Bulletin: On November 10, 1941, Aguirre Cerda turned over his Presidential authority to Chile's Vice-President, Geronimo Mendez, because of illness. On November 25 he died in Moneda Palace, Santiago, where he had been confined to bed for two weeks, suffering from acute bronchial and lung congestion. President Roosevelt personally apologized to the Chilean Government for an article on Aguirre which had appeared in *Time* shortly before and which, he said, spread lies about his drinking habits which were being used by Nazi propagandists.

From January 1941 issue:

Heading the Government of Chile is President Aguirre Cerda, a short, pock-marked man with a dark mustache and an attractive smile, sometimes known as "Don Tinto" because of the *tinto* or red wine pressed fom his vineyards. A millionaire landowner, a member of Santiago's most fashionable club, the Paperchase, by personal conviction a moderate rather than a radical (his Radical Party is primarily a party of the middle class), the accomplishments and objectives of his administration nevertheless express the common denominator which holds the ill-assorted parties of the Chilean Left together. He was elected in 1938 by a newly-formed coalition of Leftist parties called a Popular Front, although its program was fundamentally nationalistic and moderate. In 1940 the Popular Front was "officially" disbanded and President Aguirre made it clear that he had no obligation to the parties concerned—only to the program on which he had been elected. It remains a working combination, however.

Pedro Aguirre Cerda was born in Los Andes on February 6, 1879, the son of Juan Bautista Aguirre Campos and Clarisa Cerda Escuedero de Aguirre. He was educated at St. Felipe College, the Pedagogic Institute and the School of Law and Political Sciences of the University of Chile, received his diploma as professor of Spanish and philosophy in 1900 and his law degree in 1904, and was admitted to the Bar. He then not only took up the practice of law in Santiago but also taught in a school for non-commissioned army officers and instructed in civics, Spanish and philosophy in secondary schools. By 1930 he had become professor of political economy at the University of Chile, and at the time he became President in 1938 he was known both as a top-flight lawyer and as the dean of the University's School of Industry and Commerce which he had established in 1934.

In the meanwhile he had been making himself prominent in politics. As a member of the Commercial Education Council and of the Councils on University, Secondary and Primary Education, in 1910 he was commissioned by the government to study administrative and financial law in the University of Paris, and during his stay in Europe until 1912 represented Chile at a number of conferences, notably educational meetings in France, Italy and Belgium. In 1915 he was elected national deputy for Los Andes; in 1918 he represented Santiago and joined the Cabinet as Minister of Justice and Public Instruction; in 1920 he was appointed to the Ministry of the Interior for the first time; from 1921 to 1927 he was Senator for Concepción. In 1919 and 1926 he made journeys abroad to study industrial education in the United States and conditions in Europe, respectively, his 1926 trip resulting in two books on economics: *El Problema Agrario* (1929); and *El Problema Industrial* (1933). In 1930 he became president of the Council of Fiscal Defense. He was also Minister of State at various times, as well as president of the Radical Party.

Oddly enough, without the Chilean Nacistas (Fascists), Aguirre might never have come into power. In the election of 1938 his rivals for the Presidency were: the candidate of the Conservatives and Liberals, Gustavo Ross, backed by the outgoing Conservative government headed by President Allesandri, by most upper-class Chileans and by foreign business, including North American firms which helped finance his campaign; and General Carlos Ibáñez, the candidate of the Nacistas. The scholarly Aguirre was supported by the Popular Front, a Left coalition to which belonged the Confederación de Trabajadores (the labor organization), the Radicals, Radical Socialists, Socialists, Democraticos and Nacional Democraticos (Communists). The Leftist parties had never been able to attain a majority in the Chamber or Senate, which were controlled by the Rightists.

On September 5, 1938, a few weeks before the election, the Nacistas attempted a *putsch*. It was bloodily suppressed, 60 to 100 participants killed, and "most of them unnecessarily and in cold blood." Ibáñez and Gonzales von Marees, the Nacista chief, were jailed. In a fury at President Alessandri some 15,000 Nacistas swung their votes to Aguirre in order to defeat the Administration's candidate, and in the election of October 25 Aguirre won by a majority of 4,111. (Most observers believe that the majority would have been greater if there had been no official intimidation.) Thus a liberal whose program stressed popular education, public health, social insurance, public housing and extended democracy for Chile was elected by the votes of the totalitarians who promptly organized into the Vanguardia Popular Socialista, which votes with the Conservatives and Liberals in its opposition to the Government and which faces dissolution. After the one-minute inaugural ceremonies on December 24 (Aguirre became President of Chile by the simple expedient of donning a tricolored sash), Aguirre

Chilean Consulate

PEDRO AGUIRRE CERDA

AGUIRRE CERDA, PEDRO—*Continued*

could hardly do less than pardon those Nacistas who had been arrested in the abortive *putsch*. Chilean politics are complicated.

He did other things, however. Almost immediately he secured the routine resignations of fifteen ambassadors and of seven top-ranking army leaders whom he suspected of Rightist sympathies. He also ordered a nationwide reduction in bread prices, raised the hours of employment of Federal workers to eight a day, decided that Cabinet ministers must spend three hours each day receiving the public in order "to keep in touch with the masses," and gave his tacit approval to the appointment of a Communist as Mayor of Valparaiso (later replaced by a Radical). The avowed aim of the Popular Front was to take control away from the *haciendados* and big businessmen and to befriend the *rotos* ("ragged ones").

The new Government was to face many difficulties in the months to come. There were Cabinet crises; the Rightists still controlled Congress; huge sums of money were expended for relief when an earthquake devastated the country; in August 1939 Aguirre peacefully suppressed a revolutionary plot of some generals, among whom was the ex-President of the republic; the Second World War upset Chile's economy, European markets were lost, and the trade balance with the United States became increasingly unfavorable; the prices of food and rent rose. Nevertheless wages seemed to rise correspondingly, and somehow business has been good. (Businessmen call it a "mild inflation.") There can be no doubt that Aguirre is popular with the working people of his country nor that he has done as much as he can to develop new industries and to diminish unemployment.

Most Rightists, however, fear Communist participation in the Government more than anything else—and although the Communists are not actually represented in the Cabinet, they are a power in the Popular Front. Growing more and more restive, in November 1940 the Rightists called a mass meeting of the Opposition, expecting 50,000 persons; Aguirre let them meet, but only a fourth or fifth of that number turned up. On the other hand, a hastily organized Popular Front meeting called for the same time brought a far greater crowd, which marched to the Presidential palace, the Moneda, to cheer Aguirre. The next move on the part of the Rightists was later in November, when one of Aguirre's men was voted to victory in a Senatorial by-election: they announced that because of street disorders attendant upon this election the Conservative and Liberal Parties had decided not to participate in the Congressional elections in March 1941, the first since Aguirre came to power, in which most observers had expected Popular Front representation would be strengthened. *La Hora*, a newspaper supporting Aguirre, wondered if this refusal were not a threat of a Rightist revolution in the subtle language of South American politics. The suspicion was not removed when, over the opposition of the parties of the Popular Front, the Rightist-controlled Chamber passed a bill outlawing the Communists which was later vetoed by Aguirre on the grounds that it violated constitutional liberties.

No revolt materialized, however. And possibly the greatest danger to the Popular Front program came from feuds between the parties which made it up. The Socialists for a while seemed about to withdraw support because of their opposition to the Communists.

President Aguirre Cerda has much to worry about. Perhaps it is just as well that he owns a vineyard to which he can occasionally retire, to drink his own wine (Conchali), ride horseback, or go walking quietly with his wife, Juana Rosa Aguirre Luco, in the Parque Forestal.

ALAIN, (DANIEL A.) (à-lăN') Sept. 11, 1904- Cartoonist; illustrator

Address: 31 E. 12th St, New York City

Alain's cartoons, which appear in magazines like the *New Yorker, Collier's, Saturday Evening Post*, have been praised for their "fourfold virtue of acute observation, clarity, humor and pungency." His main characteristics as a cartoonist are an economy and lightness of line that give his drawings a peculiarly gay quality reminiscent of the line drawings of André Dunoyer de Segonzac.

Most of his cartoons are good-natured yet barbed comments on the earnest absurdities of human reactions. There is the lady bent on asking a question on what apparently is the *Town Meeting of the Air*, and she has had her hair done for the purpose. There are languid young men whose brief attempts at athletics end in mild disaster. And there are, most conspicuous of all, his favorite Mexicans and South Americans, whose capacity for utter and picturesque relaxation is a vivid comment on the activity of the visiting gringoes. ("I feel like a damned fool with that airplane luggage," says one of the gringoes crossly, sitting in an oxcart in the midst of a cactus-dotted landscape with a sleeping Mexican under every bush.)

Daniel A. Alain (he uses Alain for his signature) was born on September 11, 1904, in the disputed territory of Mulhouse, France and, until he became an American citizen in 1933, had a choice of three nationalities: French, German and Swiss. At the age of 14 he embarked on his career by publishing a little opus entitled *Petite Histoire de la Guerre en Caricatures*. He also had five years of schooling in Geneva's École des Beaux-Arts. After he had emerged as an interior decorator and printed-silk designer he went to Paris.

For a while he stayed there, and his drawings for printed silk brought him a certain amount of fame in the textile industry. Finally a New York silk firm engaged his services and imported him to the United States. "But," says Alain, "as soon as I could laugh in English I returned to cartooning." That is what he has been doing since, with Greenwich Village as his *pied-à-terre*. He also illustrated books, among them Lee Strout White's *Farewell to Model T* (1936) and Ernest Mortenson's *You Be The Judge* (1940), a thorough but humorous analysis of legal ways. Alain's sketches helped to set the mood of the book. "Along with the author's good-natured approach . . . they serve to rescue the law from mustiness and expose it to the sunshine of commonsense appraisal in terms of everyday living. . . With his intuitive touch, Alain could, I'm sure, illuminate all those court decisions which, presently clothed only in cold and cryptic type, even lawyers cannot understand. The profession of the law would be a simpler and a gayer pursuit if men like Alain . . . were engaged to decorate legal treatises."

Alain looks a little like the languid young men of his cartoons, blond, with a thoughtful little smile and a long wandering nose. He has made two yearly sketching trips to Mexico, and he returned with a wealth of cartoons about his beloved Latin Americans. He explains this aspect of his art: "My partiality for Mexicans and natives of Guatemala has been the source of many of my cartoons and occasionally my conscience has bothered me, in fear that they be misconstrued as slander. Actually it is difficult to sneer at Latin Americans, since when they are funniest they usually manage to be most charming as well. Anyway I felt better on the subject after I had a certain reassuring experience.

ALAIN

"One day I had entered a small church in Guatemala, in a distant village rarely visited by white men. An old Indian shuffled from saint to saint, kneeling in front of each one. . . He finally came in front of me . . . put a knee on the ground, mumbled some incantation and gestured exactly as he had done in front of the holy images. . . I came out of the church with a glowing conviction that Christian love of my Pan-American brother was written on my visage. I have hoped ever since that something of it would transpire through my pictures."

ALEGRÍA, CIRO (ä-lâ-grē'ä thē'rô) 1909- South American writer

Address: c/o Farrar & Rinehart, Inc, 232 Madison Ave, New York City

Armed with but two useful English words, "Scotch highball," Ciro Alegría, young Peru-

CIRO ALEGRÍA

vian novelist whose book *El Mundo Es Ancho y Ajeno* (*Broad And Alien Is The World*) was the prize-winning entry in the 1941 Latin-American Novel Contest, has explored the American metropolis and capital and approves of both. He found especially democratic the fact that the Senators do not listen to their colleagues' speeches but read newspapers and talk to one another while history-making orations are under way.

Ciro was born in 1909 in Trujillo, the third largest city in Peru, of Spanish-Irish parents. His father and mother are cousins, and his great-grandfather on both sides was an Irishman named Diego (James) Lynch who amassed a fortune and settled down among his mines in the hills of Peru. He was known as a generous and convivial neighbor, and the Lynches lived in comfort until a flood destroyed the mines and ruined Diego Lynch. "He left his heirs a fine memory and a dozen silver spoons." Surrounded by Indian and *cholo* (part Indian, part Spanish) workers, Alegría and his brothers and sisters were attached to the peons, an attachment which worried his mother, who was still haunted by the family's former grandeur.

In 1928, at the age of 18, Alegría became a newspaper reporter in Trujillo and later joined the *Aprista* Party, now outlawed in Peru. He participated in the 1931 revolt and was taken to Lima as a political prisoner. During his prison term, until 1933, he read a great deal and wrote poetry. Exiled from Peru as a condition of his release, Alegría has lived since 1934 in Chile, where he spent a great deal of time recovering from a tubercular illness.

In 1935 he was awarded first prize for his novel *La Serpiente de Oro* (The Golden Serpent) in a contest held by the Chilean publishers, Nacimiento. He is well known in literary circles throughout South America both for that novel and for another entitled *Los Perros Hambrientes* (The Starving Dogs).

In 1941 Alegría received the $2,000 award for *Broad And Alien Is The World* in the Latin-American Contest conducted by the Division of Intellectual Cooperation of the Pan American Union and sponsored jointly by the publishing house of Farrar & Rinehart and by *Redbook* Magazine. His prize-winning novel was submitted to the judges, Blair Niles, John Dos Passos and Ernesto Montenegro, by the Chilean Committee in spite of the fact that Alegría is a Peruvian. Of their choice Dos Passos said: "I can say without any hesitation that *El Mundo Es Ancho y Ajeno* is one of the most impressive novels I've ever read in Spanish."

The prize was awarded at a dinner at the Waldorf Astoria, April 14, 1941, Pan-American Day. A letter from Secretary of State Cordell Hull was read by Archibald MacLeish, Librarian of Congress, who presided. In the letter Mr. Hull hailed cultural interchange among the Americas as a "means of strengthening the friendship which prevails today." A dramatization of a scene from the book was written by Stephen Vincent Benét and produced for the assembled notables by Lowell Thomas and Henry Hull.

Broad And Alien Is The World is the story of a group of North Andeans who live in an isolated village. Their small civilization disintegrates and is finally destroyed by the pressure of powerful landowners who need man power to work their mines and estates. Using the small village in the Andes as a "focal point," Alegría has been able to describe the conditions existing in a larger section of South America.

Translated by Harriet de Onis, *Broad And Alien Is The World* was published in America on November 10, 1941. The critics, who felt that there was some justification for calling the book a "South American *Grapes of Wrath*," found it on the whole "loosely organized and none too astutely paced," though a novel of "real distinction." "Mr. Alegría sentimentalizes his story to some extent," the New York *Times* wrote, "but he gives an absorbing and richly detailed picture of the village, its dignity, tradition, superstitions and sorrows, and of the whole unstable complex of Peruvian Indian life."

Alegría writes vigorously and rapidly, as easily in New York as at home. His writing, moreover, takes little time. In four hours each day he writes thirty pages of longhand. The remaining time is left for sightseeing. In June 1941 he said he meant to stay here "as long as his money and passport are good."

Robert van Gelder, who interviewed Alegría in June 1941, reported that the Peruvian author was black-haired, stocky, and "healthy as a prize-fighter." In answer to his interviewer's query concerning the red hair of the Lynches which had figured so prominently in the publishers' press releases, the young author replied that when he lets his beard grow it comes in red.

ALLEN, FLORENCE (ELLINWOOD) Mar. 23, 1884- Judge
Address: b. Federal Bldg, Cleveland, Ohio

Judge Florence Allen, of the United States Circuit Court of Appeals for the Sixth Circuit, is the first woman to have been assistant County Prosecutor of Ohio; the first woman to sit in a court of general jurisdiction (the Ohio Court of Common Pleas); the first woman to preside as a judge in a court of last resort (the Ohio Supreme Court); and the first woman appointed to a Federal Circuit Court of Appeals. Her recipe to women lawyers who would like a similar career is this: "Take one generous dose of persistency. Add one large measure of industry, the kind that takes no thought of dances, evening parties or prolonged vacations. Mix thoroughly and season with a good portion of humor and several ounces of tact—and don't be emotional. It's what the men expect us to be."

FLORENCE ALLEN

Blue-eyed, bobbed-haired Judge Allen has always led an ordered, purposeful life. She is never late for appointments and never scrambles to be on time. She gets up at 5:30 every morning and is in bed at 9:30 after a day in which there has been exercise, carefully chosen food and hard, concentrated work. The program, however, isn't actually a dull one. Judge Allen's walks, for instance, are great fun for her. Dressed in her walking costume of full knickers and stout shoes, her spaniel with her, she strides through the town, committing poetry to memory as she goes. And when she is with people she is "as old-fashioned and friendly and comfortable as last year's hat," with a fine sense of humor and a "chuckle that tumbles out and wreathes her kindly face in smiles."

Although Miss Allen seems and is a very feminine woman, she has no patience with the

ALLEN, FLORENCE—*Continued*

details of living that are supposed to be woman's chief interest. She lets others choose her clothes for her, and her milliner sighs over the way she jams a hat on her head. As she points out: "The other judges are not expected to be responsible for selecting the dining room draperies or entertaining at a luncheon. Why, just because I am a woman, should I? I don't cook or sew or shop for the simple reason that I haven't the time or energy for these things, any more than the men judges have."

Florence Allen comes of a family of Ohio pioneers who moved to Salt Lake City, Utah, where she was born. Her father, Clarence Emir Allen, was a professor of Latin and Greek at Western Reserve University until his health sent him to Utah, where he became the state's first Congressman. Her mother, Corinne Marie (Tuckerman) Allen, came from a long line of educators and was sent to Smith College by her father, one of the early advocates of higher education for women, the first year the school opened.

In Salt Lake City, Florence was brought up in a rambling house full of children, all of whom played musical instruments. When she was four she could read; when she was seven she studied Latin; and when she was eight she knew some Greek. And then when she was given a Sunday School prize it turned out to be a book of nursery tales! After having been tutored by her father, Florence Allen went to private school in Salt Lake City and at 14 was ready to go to college. But she waited two years before she entered Western Reserve University, spending those years studying music.

After being graduated in 1904 Miss Allen went with her family to Berlin to study music further and while there was music critic for the *Musical Courier*. For two years she attended concerts, practiced and studied, and returned to Cleveland, Ohio, determined on a musical career. But a nerve injury made that impossible, and Florence Allen accepted the turn of events calmly. "I don't believe I ever would have been satisfied with just the piano for a profession," she says. "I can't remember being too upset over the affair. There were ever so many other things I was interested in, too."

At first Miss Allen tried teaching and translating; then she became music critic for the Cleveland *Plain Dealer,* a position she held from 1906 to 1909. Her main concern, though, was with civic affairs; she enrolled at Western Reserve to study political science and got her M. A. in 1908, by this time certain that she really wanted to study law. For a year she studied at the University of Chicago, when Western Reserve wouldn't admit a woman into its law school, and then went to New York University. There she got her LL. B. in 1913, and, years later, the first LL. D. it ever gave a woman (just one of Judge Allen's seventeen honorary degrees).

Miss Allen returned to Cleveland and was admitted to the Bar in 1914. She tried to get a position with a law firm in town, but women weren't wanted. She opened her own office. The first year in it she made $800 and she didn't make much more the year after that; but she got valuable experience. She had volunteered as a counselor for the Legal Aid Society and did much work for them. She also handled the legal work of the Woman's Suffrage Party of Cleveland (and led suffrage parades as well).

In 1919 Miss Allen was appointed assistant prosecutor for Cuyahoga County, Ohio, and one year later was elected judge of the Court of Common Pleas by the greatest vote ever given any judicial candidate for that court in Cuyahoga County. In this position she brought about a number of reforms, one of them inspired by finding out that the prosecutor's principal witness in a theft case had spent the torrid summer in jail while the alleged thief was out on bail. In 1922 Miss Allen was elected to the Supreme Court of Ohio for a six-year term and was re-elected in 1928 by a 350,000 majority. On the Supreme Court bench she wrote some important decisions, including one upholding the constitutionality of the City Manager plan and another holding constitutional Cincinnati's zoning ordinance. In 1934 President Roosevelt appointed her to the United States Circuit Court of Appeals for the Sixth Circuit, where she still is.

The Circuit Court's cases deal with taxes, patents, civil suits, personal injuries, forgeries, stolen cars, narcotics, admiralty law, contracts, interstate commerce, interpretations of the Federal Constitution, and crime in all its branches under the Federal statutes. One day the lawyers' tables will be piled high with intricate parts of a mechanical device to argue a patent case; the next week a question like the TVA will be argued before it. But Judge Allen seems completely informed on every subject. She is said to be one of the few judges who come to court with the briefs of the case to be heard read in advance—accomplished by her ability to concentrate and her trick of extracting succinct points from a page almost at a glance.

Judge Allen's years of study and experience were combined in her book, *This Constitution of Ours*, published in 1940, in which, "in terms of vital significance today," she interprets the Constitution. The result, according to William Allen White, is "a splendid piece of work, illuminating, scholarly, at times eloquent, always interesting, and written from a new, fresh viewpoint."

In this book is seen Florence Allen's liberalism, a liberalism that in her writing and in her decisions is unprejudiced, unbiased. And in all Florence Allen's life is seen her belief in social justice. "That's why I'm in law," she says. "I am interested in its social significance. It is one of man's important tools to promote better living together."

ALLEN, FRED May 31, 1894- Radio comedian

Address: c/o Walter Batchelor, 1270 Sixth Ave, New York City

FRED ALLEN

Fred Allen, "king of the quick quip," is in 1941 appearing with his troupe on CBS's *Texaco Star Theatre* each Wednesday evening at 9 p. m. "In his dry, unhappy, singsong drawl" Allen is active in more than half of the dialogue, gives his own news of the week, interviews unexpected guests, presides over the dramatic doings of the Texaco Workshop and sprinkles the program with his famous ad libs. His radio audience is estimated at 20,000,000 people.

These are much the same carryings-on the rueful comedian presented for six years over NBC for Ipana and Sal Hepatica. And he still continues to write most of the show's material himself, to the despair and amazement of most of radio's other jokemen, whom he calls "intellectual midgets living on borrowed minds." What little he doesn't write, he strenuously edits, doing his best to make Wednesday night's quips Thursday morning's by-words. He also finds time to turn out occasional pieces like his hilarious introduction to H. Allen Smith's *Low Man on a Totem Pole* (1941).

For about 25 years now Fred Allen has been aiming toward becoming this century's Mark Twain. And it all started in the Boston Public Library. He was born John F. Sullivan in Cambridge, Massachusetts and went to school there, working after hours as a stack boy in Boston's library. There he got hold of a book on juggling (maybe to help him with his work) and started practicing. When he felt he could manage the balls and cues and dishes, he entered one amateur contest after another, getting nowhere. Then, he remembers, the manager walked on one night in the middle of his act. "Where did you learn to juggle?" he coldly asked. Allen took a deep breath and said: "I took a correspondence course in baggage smashing." His career as a funster was under way.

It staggered along for two more years, however, as Allen toured movie houses around Boston as one of a troupe of amateurs, working at paying jobs at the same time. Then he blossomed out as a small-time performer under the name of Fred St. James, with a patter added to his juggling act. "Several people who knew me well intimated the 'Saint' part of my name was superfluous," he says. "Acceding to popular demand, I dropped it and was known as 'Fred James.' "

As Fred James, Allen spent 14 months in 1915 and 1916 appearing in vaudeville theatres throughout Australia, Tasmania, New Zealand and Honolulu. Then he returned to America and "more years of vaudeville from California to Vermont and from Nova Scotia to Louisiana." By this time he had changed his name again. "So many theatre managers had mistaken me for one of the James Boys on salary days that I reluctantly changed my professional name to Allen as a tribute to Ethan Allen who had stopped using the name shortly after the Revolution." His act had become more of a monolog than a juggling patter and Allen wasn't above using most of the old vaudeville standbys. When a sally met but a thin sound of applause, Allen would work up laughs by turning to the audience with a tender "Thank you, mother."

By the '20s Allen had graduated from vaudeville to revues. His first Broadway role was in Hammerstein's ill-fated *Polly*, but despite the short run he was able to get roles in other productions. There were the *Passing Show* of 1922, with Willie and Eugene Howard; *The Greenwich Village Follies*; the first *Little Show*, with Clifton Webb and Libby Holman; *Three's A Crowd*; and others. There were also assignments writing vaudeville acts, sketches, articles and even film shorts.

It was during this theatrical pre-radio period that Allen married Portland Hoffa (named for her place of birth in Oregon) in 1928. She had been with him in the *Little Show* and *Three's A Crowd* and at the time of their marriage was appearing in George White's *Scandals*. "We had no extended honeymoon," Allen recalls, "but spent a few days in Waterbury, Connecticut to make it seem longer."

In 1932 Allen entered radio, with a program called *The Bath Club*. Then came the *Linit Revue*, in 1933 the *Salad Bowl Revue* for Hellman's Mayonnaise, and in 1934 the *Town Hall Tonight* program for the Bristol-Meyers Company. In this last program he continued

ALLEN, FRED—*Continued*

until late in 1940, when the sponsoring company insisted his hour show be cut to 30 minutes. The *Town Hall Tonight* shows presented the Mighty Allen Art Players, the Town Hall Quartet, Portland Hoffa and Peter Van Steeden and his Orchestra, and was one of the first network programs to introduce amateurs and other novelties. On the Texaco program, which began in October 1940, Allen's show includes the Texaco Workshop and Portland Hoffa, as well as tenor Kenny Baker and Al Goodman's Orchestra. The spurious feud with comedian Jack Benny (see sketch this issue) started back in 1936.

In 1935 Allen made his first full-length film, *Thanks a Million*. Three years later came *Sally, Irene and Mary*, and at the end of 1940 *Love Thy Neighbor*, with Jack Benny. All the movies have been hits, and Allen has made money from them all (he received $100,000 for *Love Thy Neighbor*), but he doesn't like Hollywood. He thinks it "phony," he rebels at having to dress up for garden parties, at showing off, running around. Besides, he says, "Hollywood is no place for a professional comedian. The amateur competition is too great."

Allen is a devout Catholic who "seldom drinks, has never gambled, and quietly gives away far more money than he spends on himself." He and his wife avoid social life—putting together an hour show every week leaves him little time for play. He lives in a four-room apartment in midtown Manhattan, which, "furnished in stiffish fashion, includes a well-stocked library equipped with everything from Joe Miller's Joke Book to the works of Schopenhauer." Allen describes his literary tastes by saying he likes "about three feet five inches of the Five Foot Shelf." Evenings Allen writes; mornings he sleeps; every Tuesday finds him taking boxing lessons to keep his tall, broad-shouldered frame in trim; every Friday finds him taking his wife to dinner and to the theatre. His voice, says a critic, "is not only dissonant, like a jarring string, but he [speaks] in sharp fourths, the most unpleasant sequence of sounds that can fall on the human ear." The late O. O. McIntyre once said that Allen "sounds like a man with false teeth chewing on slate pencils." Whether spending an evening out or talking before the microphone, his face retains its gloomy, parched expression, intensified by the slow motion of his jaws as they mull over a wad of tobacco. Allen thinks chewing tobacco is a safer habit than smoking cigarets: "When you smoke cigarets you're likely to burn yourself to death," he says. "With chewing tobacco the worst thing you can do is drown a midget."

ALLEN, JAY (COOKE, JR.) 1900- Journalist

Address: h. 21 Washington Sq, New York City

"The population of Occupied France is 95 per cent hostile to the Germans," said Jay Allen in August 1941. He had reason to know; he had just had a unique opportunity to study the situation. The Nazis arrested him March 13 and kept him in prison at Châlon-sur-Saône and Dijon for four months and seven days. They made one of the biggest mistakes of their lives. Not only did they fail to get any evidence whatever of espionage against him, but with the eye of an observant newspaperman he picked up much information, and on his return to America wrote a series of 10 articles, syndicated in newspapers throughout the United States, proving from direct experience the conclusion given here. These articles with added new material were to be published by Harpers in February 1942, in a book tentatively titled *My Trouble With Hitler*.

Jay Allen is, as the *New Republic* called him, "a crack American newspaperman." As Jay Cooke Allen, Jr., he was born in Seattle, Washington, the son of an attorney, Jay Cooke Allen, and Jeanne (Lynch) Allen. He attended Washington State College and Harvard University, but was graduated from neither. After brief service in a United States Naval unit and a trip as oiler on a Matson liner, he went to work as a reporter on the Eugene (Oregon) *Morning Register*. Next came a year as police reporter on the Portland *Oregonian*. Then, like so many young Americans of the time, he went in 1924 to Paris, and found work on the Paris edition of the Chicago *Tribune*.

The next year the *Tribune* made him correspondent of its foreign press service, covering France, Belgium, Spain, Italy, Austria, Poland, Germany and the Balkans. In 1935 he left the paper and for a while worked in Europe for the Chicago *Daily News*. When the Spanish Civil War broke out, he was not on any newspaper: he was living and writing in Malaga. He cabled the *Tribune* and asked for his old job back. He got it. But when he wanted the paper to send him to the danger zone, insuring his life for $50,000, they promptly refused, ordering him not to take risks. The next they heard was an account of the blowing up of the Alcazar at Toledo. He got his insurance! During this period he acted as correspondent also of the London *News-Chronicle*.

The *Tribune* should have known that nothing could scare Jay Allen. He had already been reported dead in the early days of the Civil War, in Madrid, when the car in which he was riding was shot at and his chauffeur was killed. "It does give you a kind of eerie feeling," he said, "to turn up and find all your friends mourning your death."

There was nothing new to Allen in securing adventurous "scoops." Although he does not like to talk about his exploits, the record shows that he secured the first newspaper interview ever given by General Francisco Franco, was the last reporter to see the Queen of Spain when she fled from the country with her children, covered the murder of Engelbert Dollfuss in Vienna and has interviewed Marshal Pilsudski, Ex-King Carol of Romania (and Madame Lupescu), Marshal Weygand, Marshal Pétain, Alfonso XIII of Spain, and Primo Rivera in his cell in Alicante Prison, just before his execution.

In December 1936 Allen came back to the United States, but by the next spring he was in Spain again, this time for Esquire Features Syndicate, with his headquarters in Bilbao. He returned home in January 1938 and stayed until October 1940, lecturing at the New School for Social Research in New York and collaborating with Elliot Paul in writing *All the Brave,* published in 1939, with drawings by Luis Quintanilla. In 1924 he had married Ruth Austin, an Oregon girl, and their son, Jay Cooke Michael, had been born in 1927. They took an apartment on the edge of Greenwich Village and settled down for a brief period.

By October 1940 Allen was once more on his way to Europe, however—this time to Vichy and North Africa to cover the Second World War for the North American Newspaper Alliance, serving also as war correspondent of *The Nation.* By March 1941 he was planning to come back to America, but decided to try to visit Paris first and gather some of the firsthand news which correspondents in Occupied France were not permitted to send out.

With Kenneth Downs of the International News Service, Allen, as he relates in his articles, succeeded in crossing the line and reaching Paris. He said later that this was done by thousands of persons daily, and that only one in a hundred got caught. Downs left for Syria, and Allen stayed for nine days. It was on his return journey, when on March 13 he was trying to cross the line at Montchanin, that he was arrested by a customs guard. The ostensible cause of his arrest was the lack of "proper credentials"—he did not know of a new regulation (perhaps invented for his special benefit) which required an extra stamp on his visa.

He was held in Châlon for two and a half months without trial and then sent to Dijon by the Gestapo. When the news of his imprisonment leaked out, it was generally rumored that the Nazis had locked him up to "kill" a news story he would otherwise have released. Actually he was in far more serious danger, as he was able to reveal after being held incommunicado in Châlon. By his own carelessness, as he afterward admitted, he was carrying a typewritten report which he had not even read, one which contained important information about German fortifications. His notebook and a list of addresses he had managed to destroy, however, and he had written a new fake notebook much more complimentary to his captors. He was fairly well treated, the Gestapo never forgetting that he was an American. "I met scores of German officers and soldiers who talked to me —their prisoner—as they never talked to civilians in the occupied areas," he said. It was from these conversations that he deduced a serious slump in German morale. But except for such encounters, he was held in virtual solitary confinement in Dijon, having only 15 minutes a day outside his cell, a period during which he was not allowed to talk or to smoke.

JAY ALLEN

Finally Allen and another American newspaperman, Richard Hottelet of the United Press, were exchanged for three Germans held by American authorities. Even then, in Spain, on his way to Lisbon, Franco's police tried to take possession of him, but were prevented by the Nazis, who were fearful of trouble with the exchange arrangement.

Jay Allen was in the fall of 1941 again living in New York with his wife and son, lecturing on the European situation and working on a two-volume *History of Foreign Intervention in the Spanish War.* Tall, broad-shouldered and handsome, with crisply waved brown hair and alert dark eyes, he is the very picture of the "foreign correspondent" of popular imagination. But he is more than that: he is, as *The Nation* said, "courageous, informative, and unprejudiced"—and he is, to quote George Seldes (see sketch this issue), "one of America's great journalists."

ANDERSON, SIR JOHN July 8, 1882- Lord President of the British Council; member of the War Cabinet

Address: h. Picket Wood, Merstham, Surrey, England

Few men in British public life have had to stand up to more severe or continuous criticism than Sir John Anderson, today Lord President of the Council and a member of the War Cabinet. A year before the Second World War the London *Daily Herald* parodied Robert Burns in a skeptical little ditty addressed to him:

John Anderson, my jo, John,
When we were first acquaint,
The cheering Tories hailed you
As superman plus saint.
The tasks they gave you then, John,
Larger and larger grow,
I wonder can you do them all,
John Anderson, my jo?

Since that time his tasks have continued to "larger and larger grow," and many British voices have become even more skeptical. Before the War broke out his was the primary responsibility for civil defense, including Air Raid Precautions (A. R. P.). He took a skating holiday in Switzerland, and news photographs showed him skating on the ice when (said his critics) he should have had his nose to the grindstone, evolving schemes for the protection of the public against imminent danger. And when he did at last produce his defense scheme in December 1938, it appeared to them that the mountains had been in travail and had given birth to—the Anderson shelter.

This celebrated contraption, consisting of sheets of corrugated iron sunk a few feet into the earth and forming a kind of cubbyhole, was designed by an engineer friend of Sir John, but has since become universally known as "the Anderson." Protests against it arose immediately; some ventured to ask why deep-dug shelters of reinforced concrete could not be provided if war were not expected sooner than the leisurely tempo of rearmament at that time seemed to indicate. Plan after plan was submitted by competent engineers and architects, but Anderson turned them all down. As late as June 1940 he was saying in Parliament: "In this war we must avoid at all costs what I may call the deep-shelter mentality." Yet as one Britisher put it, later events proved that while the Anderson shelter was admirably designed for growing mushrooms or celery, and under certain circumstances would even stand up to the blast of a bomb, it often gets full of water and is no sort of a place to stay in for more than a quarter of an hour or so.

Further criticism was aroused when Anderson became Home Secretary and Minister of Home Security after Churchill took over in May 1940. After the fall of Holland, Belgium and France there was a widespread movement in the popular press to intern all the aliens. Anderson did just about that. He mixed up Nazis and refugees who were among the most bitter enemies of the Nazi regime, and in so doing caused such widespread protest that some of the "Class C" aliens later had to be released. The "Silent Column" which he organized with Duff Cooper was also abolished in July. But Anderson's defense of the emergency regulation which allows the Home Secretary to suppress a newspaper "calculated to impede the war effort" permitted the suppression of the *Daily Worker* by Herbert Morrison some months later, a suppression deplored by some on the Voltairean principle: "I detest what you say, but will defend to the death your right to say it."

In spite of public opinion, when Winston Churchill made Cabinet changes in October 1940 Sir John Anderson was not demoted, but promoted to a seat in the War Cabinet. According to the Prime Minister, although Anderson had been subjected to much irresponsible criticism he had been "a tower of strength to me." Since that time it has been frequently rumored that he is favored by most Tories as Churchill's possible successor.

This "lean, flint-like, tight-lipped Scotsman" who has made so many enemies is the son of an Edinburgh publisher, D. A. P. Anderson, of Westland House, Eskbank, Midlothian. He went to a well-known Edinburgh day school, George Watson's College, and afterward to Edinburgh University, where he was graduated M. A., B. Sc. After study at the University of Leipzig he entered the Colonial Office in 1905, and four years later was sent out to Africa as secretary to the Northern Nigeria Lands Committee.

After this any recital of Anderson's career becomes a little dizzying. In 1911 he became secretary to the West African Currency Committee. The next year he was principal clerk in the office of the Insurance Commissioners; the year following, secretary at the same office; and from 1917 to 1919 he served as secretary to the Ministry of Shipping. In 1918 he collected the first of his distinguished orders, as Companion of the Bath. He was knighted as K. C. B. the next year, and after service that same year as additional secretary to the Local Government Board and as second secretary to the Ministry of Health he became chairman of the Board of Inland Revenue. It was during the Irish Rebellion in 1920, when Sir John was joint Under-Secretary to the Lord Lieutenant of Ireland, that he made himself at least partially responsible for the formation of the Black and Tans (auxiliary police). Among the Irish, "every self-respecting assassin conceived it to be his first duty to plug Sir John. But nobody hit him."

Finally in 1922 Sir John became permanent Under-Secretary of State at the Home Office. As the *Daily Herald* put it: "At the Home Office he must at last have found a room without a draught. At all events he stayed there for 10 years." During that entire period he was the civil servant responsible for the guidance and support of successive Home Secretaries. In 1923 he advanced a grade in the Order of the Bath to Knight Grand Cross.

In 1932, although it was decidedly unusual for a civil servant to get such a post, Sir Samuel Hoare recommended Anderson's appointment as Governor of the Indian province of Bengal during the most active period of Bengal terrorism. The talents he had shown in crushing the general strikes in England in 1926 may have been a further recommendation. "Well," Sir John is quoted as saying, "I suppose that I have almost completed my career in Whitehall, and being a Scot I am ready to try another." In its course he was to collect two more knighthoods—Grand Cross of the Indian Empire when he started out and Grand Cross of the Star of India after his term in Bengal was finished. But his six years there were stormy. At home a leader of the India National Congress attending a Round Table Conference had objected to his appointment because he was "a gentleman connected with the administration of the Black and Tans." And in India he soon acquired the name "Iron Man," his regime there being "hard-handed in the extreme." Assassins blew up his train, shot at him more than once; but he succeeded in practically putting an end to civil disobedience. The only inconsistently sentimental note was his reprieve of one would-be assassin on the grounds that "if he were given useful work he would forget politics."

Pictures Inc.

SIR JOHN ANDERSON

Shortly after his return to England, on January 1, 1938, Anderson was appointed to Chamberlain's Privy Council. On January 3 he became a director of Vickers, Limited, on January 7 he joined the Board of the Midland Bank, and within the next three months he was elected to Parliament as a National Government member for the Scottish universities, accepted the deputy chairmanship of the Rudyard Kipling Memorial Fund and was appointed a director of the Imperial Chemical Industries. He settled down in the rural Home County of Surrey. In May he refused the chairmanship of Imperial Airways but later accepted another job: the chairmanship of a Parliamentary Committee to consider civilian evacuation in time of air raids. In November, Chamberlain enlisted him to organize the whole business of civilian defenses and anti-aircraft services, with the portfolio of Lord Privy Seal. As has already been noted, he was one of those who survived the upset of May 1940, under Churchill, becoming Home Secretary and Minister of Home Security and in October of the same year being appointed Lord President of the Council, with a seat in the War Cabinet.

Despite criticism, one thing to Sir John's credit is the organization of A. R. P. services in general, which has been carried out with great efficiency. If today wardens, firemen, ambulance services, rescue squads and demolition parties are doing excellent work in the British Isles, it is partly due to Sir John's efficiency in the past. Yet, as one Englishman sums up the situation: "He is a supremely

ANDERSON, SIR JOHN—*Continued*

efficient civil servant, a man of files and documents, rules and regulations and 'passed-to-you-please,' having all the virtues of that type and all the real and grave drawbacks attaching to the official mind. Give him a large-scale scheme to work out in detail, and he will do it splendidly. Every part will be in its place, every eventuality provided for. But if you want a man who can plan imaginatively and look a long way ahead, a man of humane sympathies who knows the lives and needs of the people, then don't ask him."

Anderson is a widower with one son and one daughter. He married, in 1907, Christina, third daughter of the late Andrew Mackenzie of Edinburgh. She died in 1920. One writer describes him: "To look at the long, rather broad face of this middle-aged widower, with its dour mouth and steadfast eyes, you might take Sir John for a Scottish cleric. He does not talk readily and he seems cold and rather hard in his manner. His habits of mind, one imagines, are inclined to be old-fashioned. He prefers mahogany furniture and has a low opinion of women in politics. Apropos of his humor, it has been said of him that 'he is a man who takes some time to laugh at his own jokes.' "

Who's Who

ANDERSON, JUDITH Feb. 10, 1898-
Stage and screen actress

Address: b. c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif; c/o National Theatre, W. 41st St, New York City; h. Pacific Palisades, Calif.

Near the end of the nineteenth century (February 10, 1898), Judith Anderson was born in Adelaide, South Australia, the daughter of James and Jessie Margaret (Saltmarsh) Anderson-Anderson. (She dropped half of the double-barreled name for stage purposes.) Her mother was English; her father, a Scotsman, had been wealthy but lost his money when this youngest of his four children was still quite small. He managed, however, to give the girl eight years of good schooling at two private institutions in South Australia, Rose Park and Norwood.

In 1915 Judith Anderson went on the stage, playing Stephanie in *A Royal Divorce*. She played in stock in various Australian cities for a few years, then in 1918, with her mother, set out for the greener fields of America. They landed in California and went to Hollywood, where the motion-picture industry was just beginning to toddle its first hesitant steps. But letters from Australian managers were no open sesame to the too-thin, awkward, wide-eyed girl in those pre-talkie days; and so Mrs. and Miss Anderson packed again and went on to New York.

There it was the same story. For a while Judith Anderson haunted booking agencies, while her mother (who was no seamstress) sewed for their living, and they lived somehow on next to nothing in a shabby room. Then came the big flu epidemic of the First World War period, and under-nourishment made Judith Anderson an easy victim. Barely able to be up again, she resumed her tramping from agency to agency. At last, one day, she felt so weak she was afraid she would faint on the street. Merely hoping for a chance to sit down, she dragged herself into another agency and fell into a chair. The manager of a 14th Street stock company, passing through, saw her. Without her even asking for it, he engaged her to play supporting parts at $40 a week—"and supply your own clothes."

She made good. The next year she was promoted to leads and to $50 a week. In 1920 she toured with William Gillette in *Dear Brutus*. Then, after leads in stock companies and other roles, came her first triumph on Broadway, as Elise Van Zile in *Cobra* (1924). She made this rather shoddy melodrama into a vibrant and unforgettable thing. Judith Anderson had arrived.

The plays in which she has starred since that time are many and varied. In 1925 she appeared in *The Dove* for two seasons for David Belasco. In 1927 she revisited her native Australia and played there in *Cobra, Tea for Three* and *The Green Hat,* returning to the United States that same year to appear in *Behold the Bridegroom.* In 1928, after appearing in *Anna,* she succeeded Lynn Fontanne (see sketch this issue) in the Theatre Guild production of Eugene O'Neill's *Strange Interlude*, playing the role of Nina to loud critical acclaim. She toured in *Strange Interlude* in 1929, and after a period from 1930 to 1931 during which she was the "Unknown One" of Pirandello's *As You Desire Me*, accepted the role of Lavinia in another O'Neill tragedy, *Mourning Becomes Electra.*

Appearances in a series of less spectacular successes followed: *Firebird* (1932); *Conquest,* the Theatre Guild production of *The Mask and the Face, The Drums Begin* (1933); *Come of Age*, *The Female of the Species* and *Divided by Three* (1934). In 1935 she played Delia in Zoë Akins' Pulitzer prize-winning *The Old Maid*, and the next year Gertrude in the John Gielgud production of *Hamlet.* In 1937 she made her first London appearance, as Lady Macbeth, and in the fall of 1941 (her only Broadway appearance during the interval having been as Mary, the mother of Jesus, in *Family Portrait* [1939]), returned to the same dark deeds and brooding thoughts in Maurice Evans' Broadway production of *Macbeth.*

Brooks Atkinson writing in the New York *Times* said of the performance: "Miss Anderson spreads a flame of acting over the highly wrought scenes. . . Her Lady Macbeth is her most distinguished work in our theatre. It has a sculptured beauty in the early scenes, and a resolution that seems to be fiercer than the body that contains it. It is strong without being inhuman. And she has translated the sleep-walking scene into something memorable; the nervous washing of the hands is almost too frightening to be watched. . . Magnificent acting." Many authorities consider her the finest emotional actress on the American stage. Her acting has been compared to "modern music with strange warm colors running through it." Her special field, however, is in tense, rich, meaty parts which are in essence glorified character roles and which give her a chance to show what she can do as an actress. This is as true on the screen as on the stage, and audiences will remember for a long time her magnificent playing of Mrs. Danvers, the malevolent housekeeper, in *Rebecca* (1940).

But those who identify Judith Anderson with roles like that of Mrs. Danvers don't know her real nature. She has, remarks Katharine Roberts, "a talent for gaiety and a genius for reticence." Immensely interested in other people—in what they are and what they think rather than in what they do—she is totally uninterested in herself, and "cannot be interviewed." When, soon after signing her seven-year MGM contract in 1940, she visited New York, newspaper interviewers were amazed to see a film star who came to New York for a week with only one suitcase and who wanted to talk only about her "baby"—which was her new house in Pacific Palisades.

"For years I lived in trunks, suitcases and railroad stations," she said, "and now I've bought a house. I'm a sleepy, lazy girl, and I love the earth. I love the space. I love the sunshine. I love the trees. Eucalyptus, mimosa, pepper trees, daphne, vegetables—marvelous! I've got to save my money to buy fertilizer and seeds. I've got no interest in clothes." A three-acre place can use up lots of seeds and fertilizer.

And she loves the movie life. She hated it in 1932, when she played a sort of "fuzzy gangster's moll" in a thing called *Blood Money* (1933). She felt that that first picture lived up to its title, and it took a very good offer to get her to try again in *Rebecca.* But then she went overboard entirely, agreed to play the schoolteacher in Eddie Cantor's (see sketch this issue) *Forty Little Mothers,* signed a seven-year contract—and bought her house. Even a role in another gangster picture, *Lady Scarface* (1941), couldn't make her quit the movies after that. She may be "sleepy" and "lazy," but she enjoys being up by dawn and in the studio from 6:45 a. m. to 7 p. m. She likes Southern California, appreciates the fact that "people don't wear hats, and nobody notices me because I'm bareheaded."

Vandamm

JUDITH ANDERSON

In 1937 Miss Anderson married Benjamin Harrison Lehman. They were divorced in 1939, and she has not remarried. Her constant companions are her two dachshunds. Once called "one of the best-dressed actresses," today she would far rather spend her money on her home than on clothes. One of her idiosyncrasies is to dress her dark hair in a different manner for every play in which she appears. Somehow she gives the appearance of being tall, though actually only five feet four inches. She has a brooding, wistful, arresting face, with haunting dark eyes. But there is nothing melancholy about her; she has a rich vein of humor, and her characteristic expression of interest is a low chuckle, as if she were communing with a highly sympathetic confidante inside her own mind.

ANDREWS, ROY CHAPMAN Jan. 26, 1884- Explorer; former director of the American Museum of Natural History

Address: h. 11 E. 73rd St, New York City

Bulletin: In November 1941 Dr. Roy Chapman Andrews resigned as director of the American Museum of Natural History. The world's political troubles, he said, had curtailed "expeditionary" work for which he was qualified and made necessary a "financial" leadership for which he did not believe himself equipped.

From January 1941 issue:

Roy Chapman Andrews is the executive director of the American Museum of Natural History, which contains $30,000,000 worth of dinosaurs, birds, shells, insects, skulls and artifacts, and is visited by about 1,700,000 persons every year. Under him is a staff of some 800 curators, assistant curators, secretaries, technicians, guards and carpenters. He is also the narrator on the "New Horizons" geography and science program of Columbia's *American School of the Air*, an author of note and a famous explorer whose career "is almost pure Alger, with a robust leavening of Kipling, P. C. Wren and even a dash of Sax Rohmer."

Until 1934 Dr. Andrews hadn't spent twelve months in any one country for twenty-five years. During this time he narrowly escaped death from wild animals, typhoons, bandits, bombing planes and poisonous reptiles. But Dr. Andrews shrugs off these adventures, telling those who approach him with admiring wonder how he once nearly killed himself in New York answering the telephone, and quoting statistics on deaths from accidents in the bathtub.

"Exploritis," says he, "is a congenital disease and one is born an explorer." Roy Andrews always knew he wanted to be one. He was born in Beloit, Wisconsin, the son of Charles E. Andrews, a druggist, and Cora M. (Chapman) Andrews. From the time he was nine he owned a gun and loved to shoot and mount the things he had shot. He went to grammar and high school in Beloit, but hated anything except nature study and spent more time learning taxidermy than reading the *Idylls of the King* or *The House of Seven Gables*. And it was taxidermy that paid for his four years at Beloit College.

Armed with his B. A., which he received in 1906, Roy Andrews set out first for Chicago and then for Pittsburgh. The museums of both cities had no job for him. He arrived in New York with about $30 and presented himself at the American Museum of Natural History. He would take any job, he said, even a job washing floors. When the director there suggested that a man of his education wouldn't really want to wash floors, Andrews replied: "Not *any* floors. But the museum floors are different." The director took him at his word, or almost, and gave him a job in the preparations department, where he washed the floor, mixed clay and did all sorts of odds and ends.

Dr. Andrews' first important achievement in the Museum was the construction of the enormous model of a whale which hangs between the second and third floors, to the awe and amazement of school children and their parents and teachers. He came to know more and more about whales, and in 1908 was sent on a whaling expedition to Alaska. It was on this trip that his exploration of the lives and loves and structure of these sea-going mammals really got under way. In 1909 and in 1910 he went on the cruise of the *U. S. S. Albatross* to the Dutch Indies, Borneo and Celebes. At one point during this cruise he and two men Friday were left on an island where they calmly ate monkey meat, collected birds, mammals and reptiles before going on to investigate whales in Japanese coastal waters. In 1911 and in 1912 Dr. Andrews was in Korea; in 1913 he was with the Borden Alaska Expedition. Until 1914 Dr. Andrews continued to study whales, to make collections for the Museum and to write monographs on his discoveries. Before he was 30 he was the leading authority on whales, and Columbia University had given him a Master's Degree (in 1913) for a thesis on the subject. Later, both Beloit College and Brown University conferred the degree of Doctor of Science on him.

From 1916 on Dr. Andrews was obsessed with the idea of exploring the deserts of outer Mongolia. In that year and the next he undertook two small reconnoitering expeditions in the surrounding region, and in 1919 his second expedition explored North China and outer Mongolia. The third expedition left for Central Asia in 1921, the first party ever manned by specialists drawn from so many fields. In 1922 it set out for the Gobi Desert with motor trucks and fought its way through sandstorms, bandits and overnight drops in temperature of 40 degrees, to carry out "the first phase of perhaps the most revelatory excavating work ever done in the science of paleontology."

When the series ended in 1930 the Gobi Desert had been mapped and opened to motor travel for commercial purposes. Many geological strata previously unknown had been discovered by it; and some of the richest fossil fields in the world had been opened; the first dinosaur eggs and skulls and parts of the skeleton of the Baluchitherium, the largest known mammal, had been found; and Central Asia had been established as one of the chief centers of the origin and distribution of the world's reptilian and mammalian life.

From these expeditions came many scientific papers, for Dr. Andrews believes that no expedition should ever be organized without provision for speedy publication of its field results. From these expeditions, too, came a number of books by Dr. Andrews, written in a terse, chatty, journalistic style. *On the Trail of Ancient Man* (1926); *Ends of the Earth* (1929); *The New Conquest of Central Asia* (1932); and *This Business of Exploring* (1935) are only a few of them. All of them have been popular, all of them fascinating reading. As one critic put it: "Roy Chapman Andrews has never written a dull book or an unscientific one." His latest book is *This Amazing Planet* (1940), into which he has packed miscellaneous knowledge from his explorations and his work at the Museum.

In his expeditions Dr. Andrews has always been a notable organizer of facts, material and men, and it is that talent combined with his scientific knowledge and experience which qualifies him so well for his present position, which he has held since 1935. Yet, in "his lean, scholarly face, softened by pince-nez glasses, there is little except the strong muscles of the jaw to suggest the character of a superb explorer."

Dr. Andrews has two children, George Borup and Roy Kevin, by his first marriage in 1914 to Yvette Borup of Paris, France. Since 1935 he has been married to Wilhelmina Christmas of New York City. Polo, fox hunting and shooting are his favorite sports, next to exploring. But whatever he does, whether it is work or play or both, Dr. Andrews is "all action. He was never content merely to see the world. He wanted to feel it—all of it—and wherever possible to wrench out whole chunks as scientifically priceless souvenirs."

ARIAS, ARNULFO (ä'rĭ-äs är-nōōl'fô) Aug. 15, 1901- Former President of the Republic of Panama

DR. ARNULFO ARIAS

Bulletin: In October 1941, after a series of anti-United States actions climaxed by his refusal to let ships flying the Panama flag be armed, Arias fled secretly from Panama by plane. Immediately the second Vice-President of Panama, who had favored collaboration with the United States, was sworn in as acting head of the Government. When Arias returned, he was jailed, then forced to leave the country. In Nicaragua late that same month, it was reported that Canada would later admit him.

From May 1941 issue:

On March 5, 1941 Panama's dark and flaming President Arias proclaimed the solidarity of his nation with the United States in all matters pertaining to the defense of the Panama Canal. He announced an agreement permitting this country to use Panamanian territory for air bases and air defense stations during the duration of the War—a measure essential to adequate protection of the slim Canal Zone.

The news brought a measure of comfort to United States diplomats and citizens perturbed by the policy, pronouncements and acts which so far have characterized the "reign" of the world's youngest President. In December of 1940 editorial columns were buzzing about his obvious readiness to "embarrass" the United States by considering foreign claims to defense sites as valid as ours; in February of 1941 he declared our tenure of Rio Hato illegal, and seemed reluctant to grant six badly needed additional bases. For a brief time there seemed danger that consent might be refused entirely, either through sympathy with Nazi aims and efforts or in an attempt to rally Latin-American support against "Yankee Imperialism." Now it appears that this serious crack in hemisphere solidarity has been averted, for the moment at least.

Jeremiahs are not lacking, however, to remind us that the dapper, compact President still has five years to go. On June 2, 1940 Arias was swept into office by the largest vote ever polled during Panama's 36 years as a republic. His opponent, Dr. Ricardo Alfaro, contributed to the victory by withdrawing the week before election day, charging that his party was denied the right of suffrage. Dr. Arias' own National Revolutionary Party had helped things along before that by clapping a number (2,000 according to Alfaro) of opposition supporters into jail on charges of revolutionary activity.

"I was not fighting a political party," Alfaro declared when he sought asylum in the United States, "I was fighting an army." How he managed to pile up as many as 3,022 votes against the steam roller's 107,759 remains a mystery.

On October 1, before 30,000 of his countrymen, Arnulfo Arias took office, swearing to uphold the constitution that had been adopted under the auspices of Theodore Roosevelt when Panama seceded from Colombia in 1904. Seventeen days later he presented to the unicameral legislature a Bill of Reforms which left the document as much like the original as a dictatorship is like a democracy. Among its provisions were: (1) a two-year increase of the Presidential term, from four to six years, applying retroactively to that of Arias; (2) disfranchisement of all non-Spanish-speaking Negroes, prohibition of further immigration by these, by Asiatics and by North Africans; (3) establishment of government monopolies and expropriation of private property at the discretion of the President; (4) declaration of a state of siege if and when the President deems necessary. The legislature approved these "reforms" and in November a plebiscite confirmed them by 100,000 affirmative votes to 537 in the negative. The zealous government saw that all votes were marked and all polls manned by watchers.

The new constitution leaves some 70,000 to 90,000 people without a country and—since three-quarters of the pay roll of any concern must go to Panamanians—perhaps also without a means of livelihood. Its provisions bear witness not only to the diligence with which Arias observed methods during his years in Fascist Italy, but also to his experience at home. His country has paid dearly for the privilege of being bisected by the most strategic waterway in the world. "He has seen most of its retail business taken over by Chinese, Eastern Europeans and East Indians. He has seen Jamaica Negroes, first imported to build the Canal, monopolize jobs on that waterway. He has seen the import business, utilities and banking taken over by Anglo-Saxon Americans, by the British and by Germans. He has heard English spoken on the streets as freely as Spanish. . . Finally, he has found that the wage scale for his own countrymen is lower than the scale for aliens."

The Arias family, long prominent politically, has become record-breaking in this generation, when for the first time two brothers have served as President of their country. Their sister Josefita is the first woman to hold office as Consul General, in which capacity she now represents Panama in New York. Arnulfo is the first man under 40 to be President of any country.

He was born on August 15, 1901, in the city of Penonomé, far in the beautiful interior of Panama. As a child his chief pleasures were swimming in the little river near the village and riding a white pony named Pisa Flora (walks on flowers). His father, Antonio Arias, died when Arnulfo was very young, and upon his mother, Carmen (Madrid) de Arias, fell the burden of educating five children. The tiny, black-eyed little woman devoted herself to the task, with spectacular results. After they were graduated from high school the three girls, Josefita, Eudoxia and Carmen, were sent to school in the United States. Harmodio, several years older than Arnulfo, went to the University of Cambridge in England. Arnulfo, like his sisters, came to the United States, where, after first attending Hartwick College in Oneonta, New York, he took his B. S. degree at the University of Chicago, and then went to Harvard for his M. D. This was followed by work at Boston City Hospital, where he was neurological assistant from 1924 to 1925. Returning to Panama, he became director of the clinics of surgery and gynecology in St. Thomas Hospital in Panama City, worked in the Students' Clinic and taught hygiene in the normal schools, besides carrying on a large private practice.

His medical interests survived through a good deal of his political career. This began with his membership in the patriotic society *Acción Communal*. Overnight his name became known, when his *coup d'état* on January 2, 1931 dislodged Dr. Florencio Harmodio Arosemena as President of Panama, replacing him with the recently defeated candidate, Dr. Alfaro, then First Vice-President. One reward for leading Panama's first and only revolution was an attempted assassination, which deposited two bullets in Dr. Arias' neck. Another was the position of secretary of the Department of Health and Charity, which he held from 1931 to 1936. He installed modern sewerage and water systems, built hospitals and dispensaries, contributed substantially to improving sanitary and hygienic conditions. At this time he was married to Señorita Ana Matilde Linares, described by his official biographer as "a lady distinguished for her culture, her wit, her beauty, and her illustrious lineage."

In 1932 he was largely responsible for his brother's election to the Presidency, and was soon given the post of Secretary of Agriculture and Public Works, organizing in 1933 Panama's first Health Congress. In August of the following year, before going to Italy as his brother's Envoy Extraordinary and Minister Plenipotentiary, he participated in founding the National Revolutionary Coalition, the nucleus of his present party. After his return from Italy in 1935 the political fireworks which led to the founding of the National Revolutionary Party and the forcible outlawing of all other parties began. Since that time Panama has been a one-party country and its small but vigorous military police force knows how to deal with competition.

When Harmodio's term ended in 1936, the capable Arias management secured the election for Dr. Juan Demóstenes Arosemena, who in the revolution of 1931 had been arrested and set to sweeping out a jail by order of Arias. During Arosemena's term, Arnulfo Arias returned to Italy as Minister, later moving on to France, Sweden, Denmark. At various times he served as delegate to the League of Nations and to European scientific congresses. In the capitals of Europe he made the most of opportunities to visit hospitals and clinics, keeping up with new medical technics. He also kept a studious eye on political technology and became convinced that what Panama needed was "State Socialism consonant with new social movements"—presumably those he had admired in Italy.

The outbreak of the present War found him in Paris. There he served in the hospitals until the end of 1939, returning home, with the Légion d'Honneur, to participate in the Presidential campaign. Brother Harmodio's paper, the *Panama American*, supported him staunchly. It had, in fact, been whispered that the ex-President, shrewd, able, and one of the wealthiest men in Panama, would probably try to establish a political dynasty by putting his brother in office while he remained the power behind the gavel.

Either the prophets or Harmodio's calculations missed fire. Almost at once the *Panama American* condemned Arnulfo's new constitution as fostering totalitarian trends. There are those who trace a connection between this stand and the fact that Harmodio legally represents large United States corporations, pointing out that despite the New-Dealish tone of its English section, the Spanish articles in the *Panama American* had been at least hospitable to Fascism. In any case, its present mood is definitely anti-totalitarian. In February 1941, Ted Scott, the pugilistic journalist who edited its English part, was ejected from Panama. He returned to America describing Arias as "a notorious Gringo-hater and anti-American."

Scott brought tales of a Panama controlled through a "vicious minority" due to the President's "rightabout-face on the issues of the election." He revived memories of Virginio Gayda's 1939 retort discourteous to President Roosevelt (that the Fascist frontier is now in Panama), and of Arias' own inaugural statement which appeared in the official version but was deleted from the address as delivered: that he believed the United States knew how to cooperate with Panama on a basis of good will, but that

ARIAS, ARNULFO—*Continued*

Panama, although too small to defend herself, could always make concessions to foreign countries who would defend her against demonstrations of ill will.

Yet, just as liberal journals were crying out that the core of the center of Western Hemisphere defense was rotten, came the manifesto and agreement of March 5, the first agreement on bases to be concluded in Latin America. Secretary of State Hull pronounced himself highly pleased and journalists held their pencils poised for the next move.

ATTAWAY, WILLIAM (ALEXANDER) (ăt'ȧ-wā) Nov. 19, 1911- Novelist

Address: b. c/o Doubleday, Doran & Co, Inc, Garden City, N. Y.; h. 4636 S. Michigan Ave, Chicago, Ill.

WILLIAM ATTAWAY

When he was still a student at college, William Attaway decided to give up his scientific ambitions and become a writer. It seemed to him that the Negro had many competent professional men but few "good, honest" voices. He decided, therefore, to become a literary mouthpiece for his people. *Let Me Breathe Thunder* (1939), his first novel, revealed him as an "authentic young artist," but since it was not about Negroes, it represented for him a kind of literary groping, an effort to find his *genre*. In his second book, *Blood on the Forge* (1941), however, he sank his literary teeth deep into his chosen problem and emerged a more mature artist, closer to his goal of being a successful "voice" for his race.

William Alexander Attaway was born in Greenville, Mississippi, the son of Dr. William A. Attaway and Florence (Parry) Attaway. His father, he tells us, "was a doctor who did not want his children to grow up under the Southern caste system, so he packed up his family and followed the great migration North." In Chicago, Attaway attended a public elementary school and a technical high school, intending to become an automobile mechanic. Under the pressure of his family, who wanted him to have a profession rather than a trade, he changed to academic subjects and allowed himself to be sent to the University of Illinois, from which he was graduated in 1936 with a B. A. degree. Attaway's facility with his pen earned him much recognition there, and his play *Carnival* was produced at the University in 1935.

After spending his first year out of college traveling about the country to gather material for his first book, he came to New York City intending to earn his living as a free-lance writer. He did write his novel as planned, but he earned his living at a wide variety of jobs, including those of salesman in a ladies' dress shop and labor organizer.

The next two years Attaway spent as an actor. His sister Ruth, who had been on Broadway, succeeded in getting him a role in a road company of *You Can't Take It With You* which took him through almost every state in the Union. When he was traveling through Texas the news reached him that his book had been accepted for publication.

Let Me Breathe Thunder, his first book, is the tragic story of two young, hard-boiled, unscrupulous white hobos who pick up a little Mexican boy in the course of their wanderings and allow his charm to smooth down some of their roughness. Of the book his publisher said: "William Attaway has brought to his publishers a book as poised, as perceptive, as honest and tender as many an older writer with a solid list of books behind him would be proud to claim." The story has been criticized for its combination of sentimentality and "scatological, combative, alcoholic, and bawdy passages." Even those critics who did not praise Attaway's performance, however, were certain that it showed great promise.

In 1941, after the material had been collected on a Rosenwald Fellowship, Attaway's *Blood on the Forge* was published. It is the story of three Negro brothers who leave a farm in Kentucky to go to Western Pennsylvania to work in the steel mills just after the First World War, when a shortage of man power caused a mass migration of Southern agricultural labor to Northern industry. The story deals with the competition of Negro and White labor and the difficulties of agricultural labor to adjust itself to industrial conditions. In this book Attaway "writes of the suffering and frustrations of his people with crude power and naked intensity."

The *New Yorker* found that "Mr. Attaway writes of his people knowingly and with warm appreciation. . . Their speech sounds completely authentic. A fine sincere book." Milton Rugoff, writing in the *Herald Tribune Books,* said: "Mr. Attaway has a rich vein of human experience to explore and he has, I think, the equipment to do so. *Blood on the Forge* is only a beginning." According to Drake de Kay the book is a "faithful depiction of the primitive approach to life of a social group on whose laborious efforts the whole scheme of modern industrial life is based."

Attaway's prose style is largely monosyllabic, and he uses short, rapid dialogue to accelerate the momentum. His approach is naturalistic and his handling of detail is cumulative rather than selective. His characterizations are accomplished in gross, and he is especially capable in his handling of the earthier and more primitive aspects of human behavior.

William Attaway is unmarried. He is six feet tall, and weighs 185 pounds. His favorite sport is tennis.

ATWELL, WAYNE J(ASON) Oct. 19, 1889—Mar. 27, 1941 Head of the anatomy department at the University of Buffalo Medical School; outstanding biologist; listed in *American Men of Science* as one of the nation's 10 best anatomists; author of numerous biological articles; in 1938 received a grant of funds from the National Research Council for experimental work.

AYDELOTTE, FRANK (ā'dĕ-lŏt) Oct. 16, 1880- Educator

Address: b. Institute for Advanced Study, Princeton, N. J.; h. 324 Cedar Lane, Swarthmore, Pa.

Bachrach

FRANK AYDELOTTE

"My life has been one of stirring adventure," said Dr. Frank Aydelotte in 1939. Some people might consider that a queer phrase to describe a career as teacher and college executive. But they do not know Dr. Aydelotte. "He enjoys tight places for the fun of getting out of them," remarked Brand Blanshard, professor of philosophy at the Quaker college, Swarthmore, of which Dr. Aydelotte was president for 19 years. "Enthusiasm for a life of learning, zest for producing in the field of scholarship"—these are his announced objectives.

Dr. Aydelotte was born in Sullivan, Indiana, the son of William E. and Matilda (Brunger) Aydelotte, who were of French Huguenot origin. He received his B. A. at Indiana University in 1900, and his M. A. at Harvard in 1903, his special field having been English literature. From 1905 to 1907 he was Rhodes Scholar from Indiana, taking a B. Litt. degree from Brasenose College, Oxford, in 1908. He has honorary doctorates from Allegheny College, Yale, Indiana, Oberlin, the Universities of Pennsylvania and of Pittsburgh, and from Oxford, which made him a D. C. L. in 1937. He is also an honorary fellow of Brasenose. His connection with Oxford has continued to be close: he has been American secretary to the Rhodes Trustees since 1918. In this connection he performed one service which had been thought impossible. Cecil Rhodes' will provided for two scholarships from each of the United States. But it did not seem fair to Dr. Aydelotte that sparsely populated states should have exactly the same number of Rhodes Scholars as had those producing a far greater number of potential scholars. He worked until he got a law through Parliament, in 1929, providing for redistricting.

Dr. Aydelotte began teaching in the Southwestern State Normal School in California, Pennsylvania in 1900. The following year he was instructor in English at Indiana University, then for two years taught English in the Louisville, Kentucky, Boys' High School. He returned to Indiana as associate professor of English from 1908 to 1915, for six years was professor of English at Massachusetts Institute of Technology, and in 1921 became president of Swarthmore. During his tenure there he not only secured $4,000,000 in additional endowments, but inaugurated a system of working for honors, "of teaching subjects for content rather than courses for credits to such of the undergraduates as were ready to accept a stiffer intellectual discipline." He had turned an average small college into one of the best in the United States before, in 1939, he was appointed director of the Institute for Advanced Study. For a year he held both positions; then he resigned from Swarthmore and became full-time director of this unique institution.

The Institute for Advanced Study is not to be confused with Princeton University, although it is in the same town, uses many of the same facilities and works in close collaboration with Princeton. It was founded in 1939 by Louis Bamberger, a Newark merchant, and his sister, Mrs. Felix Fuld, to provide a place where a few highly qualified students might engage in productive scholarship. It confers no degrees, and its faculty of 17 world-renowned scholars (most famous of whom is Albert Einstein [see sketch this issue]) and the 50-odd "members" (graduate students or college teachers on leave) consider themselves "all students together." At present it has schools of mathematics, economics and politics, and humanistics (with emphasis on archeology and Oriental art). Dr. Aydelotte succeeded the first director, Dr. Abraham Flexner (see sketch this issue), whose lectures and writings first suggested the idea of such an institute to Mr. Bamberger and Mrs. Fuld. No better choice could have been made: as Eleanor Kittredge has said, Dr. Aydelotte "has a passion for excellence, and his life has been spent in trying to release the superior gifts of mind and character in the persons of his associates." When he left Swarthmore the faculty debated on a parting gift, and finally, as most appropriate, wrote and published a volume, *An Adventure in Education,* telling the story of their retiring president's services to the college.

In Princeton Dr. Aydelotte, with his wife and son, lives in an elm-shaded house built in 1696. Here he has housed his fine sixteenth and seventeenth century library. In spite of the engrossing demands of his position as director, he still finds time for outside interests. He is a trustee of the Carnegie Foundation for Advancement of Teaching, chairman of the educational advisory board of the John Simon Guggenheim Memorial Foundation (it was he who organized the Guggenheim Fellowships), a member of the Senate of Phi Beta Kappa and of the Institute of International Education. In 1918 he was chairman of one of the divisions of the War Department's Committee on Education and Special Training. He has played a prominent part in the work of the American Philosophical Society, the World Peace Foundation and the National Research Council. Dr. Aydelotte writes occasional articles for the educational journals, and four of his books have been published: *Elizabethan Rogues and Vagabonds* (1913); *College English* (a textbook, 1913); *The Oxford Stamp, and Other Essays* (1917); and (with Laurence Alden Crosby) *Oxford of Today* (1922).

In 1907 he was married to Marie Jeannette Osgood of Cambridge, Massachusetts, and they have one son, William Osgood. Dr. Aydelotte is of medium height—five feet nine inches—and weighs one hundred-sixty pounds. Blue-eyed, he was once light-haired, but now is bald—which sets off still more than before his large, outstanding ears about which he has been teased all his life. But no one who observes his radiant, friendly smile or comes under the spell of his dynamic personality notices whether or not he is handsome. He works at top speed, bubbling over with enthusiasm, with "unquenchable and contagious gusto." But he is no extroverted "go-getter"; he is himself an austere and dedicated scholar. His salient qualities are modesty and profound integrity. In manifestation of the first, Dr. Aydelotte is a passionate golfer of more than average ability, but does not want the figures of his golf score published because he finds them "too hard to live up to." In evidence of the second characteristic, during his incumbency at Swarthmore he became a convert to the faith of the Society of Friends but did not formally join the Quakers until after he had resigned, so that no one could even suspect him of having had any ulterior motive.

It is natural that such a man should take the present chaotic situation of the world much to heart. Dr. Aydelotte is an advocate of some sort of international government after the War. But to succeed, he says, it must improve on the League of Nations in two respects: it must be joined by the strongest world powers, including the United States, and the states composing it must "definitely give up some part of their national sovereignty to the international government." Such a federal union, he believes, could follow only on defeat of the Axis powers. And when or if such a union is formed, there could be no wiser choice for an American member of its governing board than Dr. Frank Aydelotte.

BACON, LEONARD May 26, 1887- Author; poet

Address: h. The Acorns, Peace Dale, R. I.

LEONARD BACON

The Pulitzer Prize in poetry for 1940 was awarded to Leonard Bacon, whom J. P. Marquand calls "a man of the world, of ideas and of letters," for his *Sunderland Capture, and Other Poems*. This collection of lyrics inspired one critic to write that "the author is a man who has dared to meet himself face to face" and another to comment that "Leonard Bacon is prolific, vigorous, tender, satirical, sometimes even savage, but in spite of some good work he has done in the ballad, he is really one of the best satirists of our time."

Sunderland Capture is Leonard Bacon's thirteenth published book of poetry and the seventeenth book to have his name on the title page. (Individual poems have frequently appeared under the pseudonym "Autolycus.") There have been critics who found him "without parallel in our contemporary American verse"; others who regretted his wordiness, his "lack of poetry," his lack of clarity. But even disagreeing critics agree that there are few satiric poets today who have his poetic equipment and knowledge and his ability to produce facile comments on the contemporary scene, political, literary or social.

This was decreed by superior powers
In a moment of wisdom sidereal
That those who dwell upon ivory towers
Shall have heads of the same material

is the sort of verse that hits quickly, lightly, successfully.

Much of the background and inspiration and knowledge and emotion that go into Leonard Bacon's poetry are revealed in his autobiography, *Semi-centennial* (1939), on which Stephen Vincent Benét comments: "It is a poet who has written this book." Leonard Bacon was born in Solvay, New York, into what he feels was the best of all possible families. "If it were possible to choose and I had been wise in the choice, I could not have done better," he says. There were famous men on both sides of the family, and to young Leonard his father, Nathaniel Terry Bacon, was a great man, too, a physical chemist who wrote essays on economics, was a remarkable linguist and an authority on Swiss history. His mother, Helen (Hazard) Bacon, was a lovely woman, her "mind finely cultivated." It was to her, Bacon remembers, that "I owe my permanent, early and intense interest in literature and specifically in poetry. Long before I could read I had, because of her tutelage, dozens of poems at my tongue's end." And, he questions: "What more could I ask than to be introduced as a child by a beautiful woman to divine beauty?"

"Up to my eleventh year," Bacon recalls, "I don't suppose there was a happier child on the planet than I. But I must have become a problem in some way, for the higher powers decided at that point that I ought to go to boarding school, and St. George's at Newport, then a tiny struggling affair with not more than 24 boarders, was my destined fate." The first year at school was "miserable," but from "wonderful" vacations Bacon returned annually to a school "that grew easier against the pull of the collar," and it was with some regret that he left it in 1905.

It was foreordained that he should go to Yale, for Yale was a Bacon tradition. There he met people he liked, teachers he liked and admired, and was immediately active on the Yale *Literary Magazine*. All this was interrupted in 1907, however, when an amiable Boston specialist decided that the "abominably scrawny" lad was suffering from a tubercular lesion ("I personally never believed it," Bacon says) and sent him abroad to the Alps. Bacon returned to Yale to become an editor of the *Literary Magazine* and class poet. He was graduated in 1909 and "went forth from the half-light of a world of learning and young mirth into the surrounding darkness of an America which seemed not to care particularly for poets, class or otherwise."

"My ambition was crystal clear," he says. "I knew I wanted to write poetry and nothing but poetry." Instead, he went that summer to a rubber plantation in Nicaragua with his father, "an exciting experience," and returned to the United States in the fall of 1909 to enroll at Yale for graduate work. This scholastic interlude was hardly a successful one—Bacon says it reminds him of Balfour's remark on the story of mankind: "a brief and discreditable episode in the history of a minor planet." But it was punctuated by the publication of his first book, "a privately printed volume of very immature verses called *The Scrannel Pipe.*" As the result of his graduate work or perhaps because of this publication, Bacon suffered a slight nervous collapse, gave up his studies and went to work on a cattle ranch in Montana, where he stayed until spring.

Next, in July 1910, Leonard Bacon settled down for 13 years of teaching English at the University of California. That first year was an exciting one: there was "the tigerish effort to keep half a jump ahead of three swollen divisions of freshmen"; he was writing verse "with a furious energy and little skill"; and he was falling rapidly in love with Martha Sherman Stringham, whom he married in 1912. (He still dogmatically affirms that no man has been more happily married.)

Bacon also found a lot of fun in introducing to poetry "young ranchmen from the San Joaquin valley, or girls who know no delight beyond a Bakersfield drugstore"—particularly when not one of them had ever seen the *Oxford Book of English Verse.* But this joy was tempered when he found to his horror that he knew "hardly enough grammar to teach it. . . It was three mortal years before I even began to feel adequate, nor am I sure I ever was." Before then, though, Bacon had begun to teach the University of California's first course in verse composition—"I was as near happy with that class as a teacher ever gets"—and soon afterward his translations of *Heroic Ballads of Servia* (with G. R. Noyes, 1913) and of *The Song of Roland* (with Selden Rose, 1914) appeared.

In 1917 Bacon left literature and poetry to enlist as second lieutenant in the United States Air Service. There was a nightmare period of actual flying in Toronto, followed by a period at the radio school at Columbia University. It was January 1919 before Bacon sat down to teach English again and to write poetry. His translation of *The Lay of the Cid* appeared in that year and for a year and a half he was "'on fire" with the mock epic of *Ulug Beg* (1923), the book which "for better or worse shaped my fate and . . . got me more of what a man really desires than most of my other works." And then in 1923 he gave up teaching forever.

Everything would have been well except for the melancholia which descended upon him in the autumn of 1923. It was senseless, Bacon admits: "I was perfectly married, I had three lovely children, I had enough money for our modest necessities. *Ulug Beg* was out. A new book had been accepted, another was under way." But there it was, and for more than a year he suffered before finally, early in 1925, committing himself into the hands of Dr. Jung. By this time *Ph. D.s, Male and Female, Created He Them* had been published; and while he was consulting Jung *Animula Vagula* (1926), "the record of my *saison en enfer,*" was written.

By 1926 Bacon was established poet enough to deliver the Phi Beta Kappa poem at Harvard ("it went off well"). And in that year, after the death of his parents, he and his family moved from California to Peace Dale, Rhode Island. "A new life began. *The Legend of Quincibald* (1928) was beginning to take a sort of shape. [1927 had seen the publication of *Guinea-fowl, and Other Poultry.*] And *Furioso* (1932), though only a couple of cantos along, was definitely on the way. Life was simple but intensely pleasant."

It was partly to prepare himself better for the writing of this last work, partly to finish up some loose ends with Jung, and partly because he had always wanted to live in Florence, that Leonard Bacon and his wife set sail for Europe in the spring of 1927. For three years they lived abroad, three full and happy years. During those years the *Legend of Quincibald,* an attempt to deal symbolically with the stuff of personality, was published (1928). It was called "wordy" and "unclear" as well as praised for its "vigor, wit, brilliance, passion, energy." In 1930 *The Last Buffalo, and Other Poems* appeared. And in 1932 *Furioso* was finally published, a narrative poem in the Byronic manner and form, whose hero is Gabriele d'Annunzio. Bacon ruefully comments that it "created, if possible, even less excitement than is usually manifest when my volumes from time to time appear."

Back home in Rhode Island, Leonard Bacon continued to write poetry—*Dream and Action* (1934); *The Voyage of Autoleon* (1935); and *The Goose on the Capitol* (1936), satirical verses chiefly on contemporary political and social problems of which one critic wrote: "The verses seldom sting, instead they awkwardly bump and paw." Another, however, summed them up as "full of good witticisms." Of *Rhyme and Punishment* (1936), Irwin Edman commented: "It is never precise-edged light verse or, where lyrical in intent, genuinely lyrical in effect." Other volumes were *Bullinger Bound, and Other Poems* (1938), which included a title poem built on the Prometheus theme and, among other poems, a group of word portraits of people where "the satirist yields to the sound observer whose analysis of human behavior is keen and just, not without pity and sympathetic understanding"; and his Pulitzer Prize winner, *Sunderland Capture* (1940). He also judged poetry for earlier Pulitzer Prizes, worked on his autobiography and contributed articles on people and literary movements and material like his accounts of visits to Hawaii to magazines such as the *Saturday Review of Literature* and *Harper's.* These are often noteworthy for keen understanding and brisk phrasing (one familiar quip of his is "the end of the ultra-violet decade and the beginning of the infra-red").

Leonard Bacon continues to live in the lovely South County of Rhode Island, his

BACON, LEONARD—*Continued*

greatest interest outside poetry being fishing, particularly fly-casting for trout or salmon. This to him is "a sort of physical extension of poetry . . . a great deal more than a pastime." But poetry itself continues to be his life, "my blessing and my curse." As he says in the last paragraph of *Semi-centennial*: "In the event that a humanly great thought should burn across my brain and incarnate itself in inevitable and indestructible words that come home to men's businesses and bosoms, I should be happy indeed but only happier in degree than I have been, and still am, to be a part, no doubt inconspicuous, in a great effort to get people to seek true and essential pleasure. I may never think that thought or discover those words. But if you have had a better time than I have had trying, you've had a damned good one."

BANKHEAD, TALLULAH (BROCKMAN) Jan. 31, 1903(?)- Actress

Address: h. Gotham Hotel, New York City; Jasper, Ala.

In 1935, when Tallulah Bankhead was playing in a rather dreary comedy called *Something Gay*, John Mason Brown wrote: "She is so gorgeously endowed that it will be one of the tragedies of our time if before it is too late, and owing to faults in her own temperament or to deficiencies in her playwrights, she fails to take her place in our theatre as the really important performer she might so easily have become." In the role of Regina Giddens, a predatory Southern woman, in Lillian Hellman's (see sketch this issue) *The Little Foxes,* she finally supplied an answer to her friends' plaintive wail, sounded ever since she came back to the United States: "Tallulah, why don't you get a good play?" This role was a natural for Miss Bankhead, whose Southern background helped her make the characterization of Regina lifelike and convincing. Far from being discomfited by having to play an unsympathetic character, Miss Bankhead proclaimed publicly to all and sundry that she "loves Regina to death." She felt quite at home in the Giddens household. And audiences, accustomed to glimpsing her brilliance through the discouraging murk of mediocre plays, forgot the long row of sophisticated *femme fatale* portrayals and began to identify Tallulah with unscrupulous, money-loving but definitely fascinating Regina.

Tallulah Bankhead was born in Huntsville, Alabama, on January 31, 1903. Her father was William Brockman Bankhead (see sketch 1940 Annual), who was to become the Speaker of the House of Representatives. Her mother, Adalaide Eugenia (Sledge) Bankhead, one of Virginia's most beautiful women, died a few days after Tallulah's birth. Tallulah got her strange name from her grandmother, another Virginia belle. Her childhood pictures, however, show her as an extremely homely child: she was quite fat, had a deep voice and an "infectious laugh that already was slightly Rabelaisian." The deep, husky voice was the result of the bronchial ailment that plagued her as a child, but later Tallulah found it a considerable asset. She spent her childhood shuttling between seminaries and convents, both of which she loathed bitterly. Together with her sister Eugenia she attended the Convent of the Sacred Heart, Mary Baldwin Seminary, Convent of the Visitation, Convent of the Holy Cross in Virginia and the Fairmont Seminary in Washington, D. C. In-between she stayed at Montgomery with her aunt, Mrs. Thomas Owen, and when her father, then a rising politician, remarried, at his house in Virginia.

By 1917, when Tallulah's father was running for Congress, she had lost weight and become a beauty, with great blue eyes, tawny hair and a "vote-for-Daddy" smile. She had also discovered that she wanted to be an actress. There was no opposition from her family, it being tacitly assumed that the Bankheads were bound to be public characters of one sort or another. Her father, who himself narrowly missed being an actor in his youth, was frankly sympathetic. He was to see the name of Bankhead shine as brightly on the stage as it did in the halls of Congress, where his father, himself and his Senator brother John Hollis "represented Alabama for an aggregate of some threescore years." If Tallulah was often called "Speaker Bankhead's gal Tal," he himself was to be identified as "Tallulah's father." Her first appearance was in the old Greenwich Theatre in New York City in a play called *Squab Farm,* in 1919. The next year she was appearing in "a somewhat footloose vehicle" entitled *Footloose* and in *39-East.* The next few years were occupied with run-of-the-mill roles in *Nice People* (1919); in 1922 in *Everyday Danger, Her Temporary Husband* and *The Exciters.*

TALLULAH BANKHEAD

In 1923 Tallulah was summoned to London to play in *The Dancers* with Sir Gerald du Maurier. The story is that at the last moment she got a cable canceling the engagement, ignored it and went to England anyway. She got the rather juicy role of Maxine in *The Dancers* and was immediately a tremendous success. For the next eight years she starred in fifteen London productions. Her husky intriguing drawl, her tawny hair, arched eyebrows and enigmatic smile endeared her to the hearts of the London audiences. Du Maurier called her "Swanface"; thousands of London flappers found her the epitome of glamor and besieged the stage door for a glimpse of her. They hailed her in 1924 in *Conchita, This Marriage,* and the *Creaking Chair* and in 1925 in *Fallen Angels.* Her greatest triumph, however, came with her performance as Iris March in Michael Arlen's *Green Hat* (1925), a part in which Katharine Cornell (see sketch this issue) also scored a hit in the United States. The audiences loved her sophistication, her brilliant humor, "that serious air of directness and simplicity which fitted in so strangely with certain decadent mannerisms." George Jean Nathan, it is true, numbered her (until her performance in *The Little Foxes*) as one of his histrionic skepticisms and remarked unkindly that her success seemed to be due largely to the fact that "with her wild and woolly ways and manner, she was a novelty to a stage whose women generally comport themselves as if they all had been written by Pinero, and that, further, in two of her exhibits she had taken her

BANKHEAD, TALLULAH—*Continued*

clothes off, which always gets the sedate London critics."

The sedate London critics had only unreserved praise for most of Tallulah Bankhead's performances, which ran through a pretty wide range, from that of Amy in *They Knew What They Wanted* (1926) to that of Marguerite Gautier in *The Lady of the Camellias* (1930). She was best liked, however, in sprightly parlor comedies such as *Her Cardboard Lover* (1928); *The Gold Diggers* (1926); and *Let Us Be Gay* (1930). Her social life reflected her performances in its brilliance. She belonged to the clever and elite Noel Coward (see sketch this issue) set. Her house on Farm Street, Mayfair, which she had reconditioned from a stable, was famed for the sensational parties given there and the important social figures that came visiting. Augustus John (see sketch this issue) painted her portrait. Her name was at one time coupled with that of Count Anthony de Bosdari, a prominent figure in the younger international set. But rumors of her engagements always subsided, after pleasurably exciting her admirers, with Tallulah's invariable statement that she preferred her "present bachelor state."

In 1931 Tallulah Bankhead came back to the United States after signing a long-term contract with Paramount. Her film career turned out to be a failure: somehow the elusive Bankhead personality failed to register on the screen except as a faint travesty of Marlene Dietrich. She was, besides, the victim of unfailingly bad pictures. In one of her first pictures, called *Tarnished Lady,* she flitted neurotically and to no purpose from luxurious penthouse to squalid dive. At one time she was co-starred with—and back-staged by—Charles Laughton in *Devil and the Deep.* Other pictures monosyllabically entitled *My Sin, The Cheat,* etc., exploited the Bankhead *femme fatale* reputation without ever suggesting her sophisticated stage personality. Her last film venture in 1933 was *Faithless.*

Disappointed, Tallulah Bankhead returned to the stage in *Forsaking All Others* (1933), a play which allowed her to be gay, pathetic, desperate and tragic all in one evening, and in 1934 she toured the United States in *The Snob,* a London success. In that same year she played Judith Traherne, the doomed heroine of *Dark Victory,* played it with the intensity and power that she possesses when her attention is turned to stark tragedy. Then in 1935 came the revival of *Rain* with Tallulah Bankhead as Sadie Thompson. Her characterization, hard-boiled and raucous, was dismissed as merely an adequate impersonation of Jeanne Eagels. And critics felt that her sultry strength was wasted on negligible plays like *Something Gay* (1935) or *Reflected Glory* (1936). "Miss Bankhead," wrote one critic, "needs to be protected against that fretful energy of hers. It makes her wasteful of her gifts. . . It keeps her unsteady in her playing. Although her acting is enormously skillful it is sadly lacking in discipline. It tempts her into playing all scenes with an equal drive instead of saving herself for her climaxes."

Probably what could be called the low of her acting career was her performance in 1937 in *Antony and Cleopatra.* Of this unlucky venture one critic wrote briefly: "Tallulah Bankhead barged down the Nile last night as Cleopatra—and sank. . . As the Serpent of the Nile she proves to be no more dangerous than a garter snake." This moment of deep darkness was followed by the first gleamings of the dawn. The revival of *The Circle* provided Tallulah Bankhead with a more suitable vehicle and found her giving a performance of poise and grace. Her personal life, too, had passed through a change: on August 31, 1937 she eloped with John Emery, an actor whom she married in Jasper, Alabama, where she had spent most of her childhood. "He is crazy as a hatter," she said cheerfully to excited interviewers, "but then so am I."

In 1939 she read the script of Lillian Hellman's *The Little Foxes* and knew at last that here was a role for her, something into which she could get her teeth. There was a little doubt at first about her getting the part: rumors circulated about the author's feeling that Tallulah looked too young and the actress' feeling that she need not sacrifice any of her beauty to bring reality to the part of Regina, who, in the play, has a grown-up daughter. Her performance was hailed as a "superb example of mature acting fully under control." After years of bad luck, bad casting and bad playing, Tallulah Bankhead seemed to have finally found the right vehicle for her "special brand of magic." She kept on playing Regina Giddens in New York and on the road for some time, stopping only to play the title role in *The Second Mrs. Tanqueray* in the summer of 1940 (a performance enriched by her experience in *The Little Foxes*) and to divorce her husband in Reno in June 1941 (reason: "that old debbil career"). In the fall of 1941, however, after touring cowbarns all summer with *Her Cardboard Lover,* she accepted a role in Clifford Odets' (see sketch this issue) *Clash By Night,* which Billy Rose was planning to produce.

Tallulah Bankhead, who has kept her cyclonic ways off as well as on the stage, is a complete rebuttal of the idea that Southern females are languorous. She has her share of activities outside of the stage. She has been voluble in various Equity rows: in 1939, a particularly busy year, she aided the adopt-a-Spanish-orphan movement, led the march on Washington in behalf of the Federal Theatre Project, which was to be cut, and publicly besought her father to "do something about it"; she has also taken up cudgels against fingerprinting aliens and, in 1940, proposed giving away her salary of $1,000 a week to the Finnish fund. The next year found her doing her bit for Fight for Freedom, Inc., and aid to Russia. She is a rabid baseball fan (a Giant rooter, because "I just couldn't root for a team named Yankees"); has given parties for her baseball heroes; and her dressing room decorations consist largely of various baseball souvenirs. When last heard from she had a

Pekinese named Annie, a golden marmoset called Senegas and a lion cub named Winston Churchill. She still thinks that "all you would need to do is to build a fourth wall and you could live right on the stage." She felt that way about *The Little Foxes* set; and of all her performances, her father, the late Speaker Bankhead, particularly enjoyed that of Regina Giddens, mostly because with her blonde hair up and dressed in the lush costumes of the 1900's she looks very much like her mother.

BARBER, MARY I(SABEL) Dietitian; food consultant

Address: b. War Department, Office of the Quartermaster General, Washington, D. C.; h. 74 Sherman Rd, Battle Creek, Mich.

MARY I. BARBER

Bulletin: Miss Barber writes us: "My appointment from the Office of Production Management terminated June 1, 1941. My title now is Expert Food Consultant to the Secretary of War and I am assigned to the Subsistence Branch of the Quartermaster Corps. My work is practically the same as it was under the Office of Production Management."

From July 1941 issue:

If he's "in the Army now," the young American male is getting five pounds of well-balanced rations daily, which make him considerably better fed than 60 per cent of the civilian population. Anxious mothers, wives and sweethearts who feel that their boys in training need to be fortified by extra boxes of home-cooked tidbits, may be thus reassured by Mary I. Barber, OPM food consultant, who helps prepare menus for the 4,200,000 meals a day fed to the Army's 1,400,000 men. Miss Barber, the first dollar-a-year woman in the defense program, is president of the American Dietetic Association. Prior to her present position in the Army's Quartermaster Corps she was head of the Home Economics Department of the Kellogg Company, Battle Creek, Michigan.

Food—its history, cost, preparation, conservation—has always been Mary I. Barber's career. Born in the country of the Pennsylvania Dutch (who know good food and enjoy it), she grew up in Titusville, Pennsylvania, the daughter of James Renwick and Emma Louisa (Michael) Barber. Following her graduation from the Titusville High School she entered Drexel Institute, later studied at the University of

BARBER, MARY I.—*Continued*

Pennsylvania, and received her B. S. in home economics at Columbia University in 1920. Miss Barber was a hospital dietitian and also taught cooking in a Philadelphia high school in pre-World War days. During the War, in the Government's drive to conserve food, she worked with the New York State Bureau of Conservation. After the War she became a member of the faculty of Teachers College, Columbia University.

Miss Barber was vice-president, 1937 to 1940, of the American Home Economics Association. She is currently president of the Michigan Home Economics Association and a member of the Business and Professional Women's Club and of the Altrusa Club. She was Pantry Editor of *Child Life* Magazine (1936-41); has contributed many articles on food to various periodicals; and is co-author, with M. B. Van Arsdale, of two books: *Our Candy Recipes* (1922) and *Some Reasons Why in Cookery* (1923). In connection with her work in cooking and dietetics she has traveled all over the United States, Central America and in three countries in Europe. Her chief hobby, she says, is old cookery books; for recreation she likes golf and swimming. In politics she is a Republican; her church affiliation is Episcopalian.

In an address on April 4, 1941 in New York City under the auspices of the Home Economics Women in Business, Miss Barber gave a report on how the United States is tackling the job of producing well-fed fighting men. In order to show how much better Army "chow" for the modern trainee is than that given our heroes who fought on rather lean stomachs in the country's past wars, Miss Barber arranged a demonstration. Soldiers from Fort Slocum, each in a uniform representing a different American war era, stepped forward, exhibiting on trays the food items allowed in other days. "Kitchen police" were universal in the Valley Forge era. Food (whatever could be mustered) was issued uncooked to each man, who prepared his own meals over a camp fire. More often—as during the Civil War—the men lived by foraging. When it could be supplied, Washington's men got each day a pound of beef, some flour and milk. They also were given 6.8 ounces of peas, 1.1 of rice and a quart of spruce beer daily. Extra luxuries (probably not for culinary purposes) were .06 ounces of candle and .18 of soap.

The above rations, Miss Barber said further, held pretty much through the Civil War, together with the heartily disliked "hardtack." Civil War days also brought mention of "yeast powder" (baking powder), peas, dry beans, "green" coffee and sugar. An Act of Congress in 1812 provided each man also, besides his quota of beef and flour, with one gill each of vinegar and rum and .64 ounces of salt in addition to the allotted soap and candle. No stimulants were prescribed in the Civil War diet, nor in that of the Spanish-American War. In 1898 fresh potatoes were added to the diet, and field kitchens began to make their appearance.

According to Miss Barber, by 1917 the variety in the total of food items had been greatly increased over that established in 1913. Prunes, syrup and evaporated milk had arrived; coffee was roasted and ground; butter and lard were commonplace; cinnamon and even lemon extract appeared. In 1918 were added sweet potatoes and corn meal. The Army's World War food bill for one year, said Miss Barber, totaled $727,092,430, representing 3,777,500,000 pounds of food.

Although Miss Barber apparently itemized no typical menus for trainees in World War II, she assured her audience that a man could have no possible quarrel with his food except perhaps with its flavor. At home he might demand his roast beef rare; in camp he'd have to eat it well done, since that was majority preference, and Uncle Sam's chefs have not yet gotten around to catering to individual tastes. Modern army dietitians have set the stamp of approval on chocolate cake for dessert, and have made pie—the home variety—a specialty. But if mothers and sweethearts, still undismayed in the face of this drastic competition, want to send their men a bit of apple strudel, nut bread or just plain fudge, the Army (individually at least) probably won't object.

BARKLEY, ALBEN W(ILLIAM) Nov. 24, 1877- Majority leader of the United States Senate

Address: b. Senate Office Bldg, Washington, D. C.; h. Paducah, Ky.

The majority leader in the Senate is Alben W. Barkley ("Dear Alben"), whom *Time* calls a "dependable, likable, old-dog sort of man," in politics "regular as a metronome." No Senator has been more consistently faithful to President Roosevelt than Alben Barkley, even though he once helped to override the President's veto of the Veterans' Bonus.

Alben William Barkley, Democratic Senator from Kentucky, was born there, in a Graves County log cabin, on November 24, 1877. The son of a tobacco farmer, John W. Barkley, and Electra A. (Smith) Barkley, he worked in the fields and attended county schools until old enough to enter Marvin College in Clinton. It was 1897 when he received his B. A., and he proceeded to put himself through Emory College, Oxford, Georgia, and the University of Virginia Law School at Charlottesville, Virginia by working as a janitor and a waiter. In 1901 he was admitted to the Bar and found his first law position in the office of Paducah's Judge W. S. Bishop (Irvin S. Cobb's "Judge Priest"). Two years later he married Dorothy Brower of Paducah, and in 1905 he conducted a "muleback campaign" that made him prosecuting attorney for McCracken County for a term of four years. At the expiration of his term he was elected judge of the McCracken

County Court, and he served in that capacity until elected to Congress on March 4, 1913, after covering the first Kentucky District with a horse and buggy.

In 1919 Barkley was chairman of the State Democratic Convention at Louisville, Kentucky. In the House his outstanding activity was to help foster the Prohibition Amendment and Volstead Act, even becoming a paid speaker for the Anti-Saloon League. In 1920 he was a delegate at large to the Democratic National Convention at San Francisco, where he voted to seat Franklin Delano Roosevelt. In 1923 he was an unsuccessful candidate for Governor of Kentucky. In 1924 he was once more chairman of the State Democratic Convention, this time at Lexington, Kentucky, and also a delegate at large to the Democratic National Convention in New York. And in 1926 he was a successful candidate for the United States Senate.

Barkley took his Senate seat on March 4, 1927. The next year, once again a delegate at large to the Democratic National Convention, he stumped for Al Smith. By 1932, the year he was for the first time temporary chairman of the Democratic National Convention at Chicago and delivered the keynote speech, he had come out openly for repeal of the Prohibition Amendment. His Republican opponents therefore promised to defeat four Barkleys: "the Free Trade Barkley, the Protectionist Barkley [before the New Deal he had voted for coal and oil tariffs], the Dry Barkley, the Wet Barkley." But the Republicans were unable to keep their promise, and after he returned to the Senate on March 4, 1933, Barkley was picked as lieutenant-leader by the late Joe Robinson.

Again in 1936 it was Barkley who was chosen, this time by President Roosevelt, to deliver the keynote speech at the Democratic National Convention in Philadelphia. The summer of 1937 found him once more honored by Roosevelt, who swung his election as Senate leader from Mississippi's Pat Harrison by the famous letter which began "Dear Alben." "Dear Alben" got it by one vote. Then in the Senatorial campaigns of 1938 Roosevelt backed Barkley's candidacy for the Senate against that of Governor Chandler, who was "still an avowed New Dealer." A letter by President Roosevelt which was made public announced: "Senator Barkley's long familiarity with national affairs, his integrity, his patriotic zeal, his courage and loyalty, and his eloquence . . . give him exceptional equipment as a legislator and a leader." There could be little question of Barkley's election after that, and his third term in the Senate began January 3, 1939.

In 1940 Barkley tried to halt the inquiry on the feasibility of a third Presidential term, although in 1928, in Coolidge's day, he himself had voted for a resolution to cut the Presidential tenure. He announced, dryly: "A wise man may change his mind, a fool never does." Appropriately enough, that summer he was permanent chairman of the Democratic National Convention in Chicago at which Roosevelt was nominated for the third time, and he returned to head the Administration forces in the fight to put through the conscription bill. In 1941 it was he and Senator Byrnes (see sketch this issue) who nursed the Lend-Lease Bill through the Senate, holding the New Deal members firmly in line to vote against all restrictions. Barkley's critics, however, say that Byrnes, less plodding and more expert at handling people, did the most important part of this job.

ALBEN W. BARKLEY

In February 1941 Barkley's views on the Second World War were that a declaration of war was not yet necessary, but might later become so. "There is but one way to stop a conqueror," he proclaimed. "That way is to defeat him. The only way to stop Hitler is to defeat him, and if we do not help Great Britain and other nations now fighting him to defeat him over there we shall some day have to surrender to him or defeat him over here." He, with Tom Connally (see sketch this issue) sponsored the amendments to the Neutrality Act which passed the Senate in November 1941.

Hard-working Senator Barkley is chairman of the Committee on the Library of the United States Senate, and also serves on the following committees: Banking and Currency; Expenditure in Executive Departments; Finance; Foreign Relations; Interstate Commerce; Government Organization. He is a Methodist, an Elk, a member of the Delta Tau Delta Fraternity and of the Loyal Order of the Moose. With "heavy features . . . a chest like a keg" and a voice unrivaled by any hog-caller for "breath, depth and carrying power," he is the sort of earnest speaker who perspires and gesticulates, but impresses. He writes his own speeches, batting them out on a typewriter. A good-natured man, he "tries hard to turn a wisecrack" from time to time, will sing when requested, and, "as befits his plodding nature, his favorite song is *Wagon Wheels*." Senator and Mrs. Barkley have one son, David, and two daughters, Marion and Laura. In Wash-

BARKLEY, ALBEN W.—*Continued*

ington the Senator drives his own car, entertains "moderately but often." He is proud of his Senate record; he says: "If being loyal to the greatest President is hanging on his coat-tails, I'm proud to hang on."

BARNETT, EUGENE E(PPERSON) Feb. 21, 1888- General Secretary of the National Council of the Young Men's Christian Association

Address: b. 347 Madison Ave, New York City; h. 45 Harvard Ct, White Plains, N. Y.

EUGENE E. BARNETT

The man considered the world's foremost leader of youth is Eugene E. Barnett, appointed (January 1, 1941) General Secretary of the National Council of Y. M. C. A.'s and their World Service activities in 32 countries. The man who is director of more than two million American youth, as well as associated international groups, believes that youth itself—not buildings or equipment—is the primary concern of the Y. M. C. A. He is deeply convinced of the growing need for world cooperation and of the importance of the Y. M. C. A. in maintaining international good will and understanding. In his speech at the closing session of the annual meeting of the National Council in October 1940, Mr. Barnett said:

"We see mankind, notwithstanding all its conflicts and warfare, bound together by an amazing homogeneity of problems. We see mankind trying to assimilate science, technology and intercommunications, now suddenly become world-wide and instantaneous in its outreach. We see a revolution which, on the one hand, may be headed toward the abyss but one which, on the other hand, may lift humanity to a higher level of existence than we have ever dared to dream of. It goes without saying that America is inextricably involved in this world-wide revolution."

With years of extensive experience not only in this country but in Europe, the Orient, South America and other countries, few men know the problems of world youth so intimately as does Eugene Barnett. He believes that the primary importance of youth training is the development of leadership. "Leaders," he says, "are needed everywhere, men who will not only rebuild destroyed countries, replace outmoded equipment and develop new opportunities opened up by the events of the past three years, but who will meet the challenges of the century. One challenge is to achieve a democracy purged of selfish individualism and class barriers."

Since he entered Y. M. C. A. work in 1908 as student "Y" secretary at the University of North Carolina, Mr. Barnett has given his entire career to the building of the organization. He was born in Leesburg, Florida, February 21, 1888, the son of Robert H. and Sarah (Epperson) Barnett. After receiving his B. A. degree at Emory University in 1907, he did a year of postgraduate work at Vanderbilt University. From 1908 to 1910 he continued his studies at the University of North Carolina, and did further work at Columbia University from 1923 to 1930.

In 1910 he married Bertha Mae Smith of Jasper, Florida. The couple has three sons and a daughter: Robert Warren, former Rhodes scholar, now in China on a special project for the Institute of Pacific Relations; Eugenia Mae of Seattle, Washington; Henry DeWitt, a 1939 graduate of the University of North Carolina; and Arthur Doak, a student at Yale University. The Barnetts live modestly in White Plains, New York. Mr. Barnett is a member of several organizations, including the Masons. His religious affiliation is Methodist.

He was selected by the General Secretary of the Y. M. C. A. International Committee in 1910 to go to China. There Barnett began his work by founding the Hangchow Association. From 1921 to 1937 he served on the staff of the National Committee of the Chinese Y. M. C. A. as executive head of its City Division and concurrently as Associate National General Secretary. He pays special tribute to the work of Dr. David Z. T. Yui, China's national "Y" secretary, and his dream of democracy for China's young men. During this period Barnett's work took him all over China, where he made many friends among the country's civic, religious and educational leaders. He served as a member of the National Christian Council; as a college trustee of Methodist, Presbyterian and Baptist institutions; and as chairman of the Shanghai School for American children. Today he is regarded as one of the leading authorities on affairs and conditions in the Far East.

In 1937, while on furlough in the United States, Barnett was selected as executive of the World Service program, succeeding Francis S. Harmon. That summer he made extensive tours of Association work in Peru, Chile, Argentina, Uruguay, Brazil and Mexico, and during the following summer visited Y. M. C. A.'s in Europe. On both journeys he interviewed political, educational and youth leaders in each country, gathering a vast amount of information regarding youth conditions. During the summer of 1940 he returned to the Far East, spending some months in occupied and unoccupied regions of China, Japan, Korea, Manchuria and the Philippines. He had confidential talks with Baron Y. Sakatani of Japan, Baron Yun Chi-ho of Korea, Generalissimo Chiang Kai-shek and Dr. H. H. Kung of China, and President Manuel Quezon (see sketch this issue) of the Philippines.

After these conversations abroad and observations made also in the United States, Barnett expressed his keenly felt concern for the predicament of young people today, of "Youth —millions too many." These are "the youth of our cities—in factory, school, office and home. The youth of our colleges and universities. The youth who in increasing numbers will be making up our defense forces. The all but forgotten youth who comprise our neglected minorities—Negroes, North and South, Mexicans on our Southern borders, and Orientals in our great cities and across the continent. . . The youth of lands where the light of freedom has for the time been put out. The youth of lands where youth are so much cannon fodder for military machines. The youth of the world whose dreams no amount of frustration can quite extinguish. . . Youth out of which our new democratic collectivism, our new world order, youth out of which the Kingdom of God will yet be built."

A man of energy, care and insight with a capacity for quietly getting things done, in all parts of the world Eugene Barnett has made friends with whom he maintains a continuous correspondence. "Numerous executive problems seldom ruffle his Southern calm. There is always a sense of strength and sureness in his quiet manner, no matter how great become the demands upon his time and energies." That a sense of humor goes with this organizing ability may be gathered from Mr. Barnett's quoting of a jingle he likes to remember:

The centipede was happy quite
Until a toad in fun
Said, "Pray, which leg goes after which?"
That worked her mind to such a pitch
She lay distracted in a ditch
Considering how to run.

Who's Who in America

BARRATT, SIR ARTHUR SHERIDAN (băr'ăt) Feb. 25, 1891- British Air Marshal; head of the Army Cooperation Command
Address: Berkeley Square House, W. 1, London, England

Photographic News
SIR ARTHUR SHERIDAN BARRATT

Sir Arthur Sheridan Barratt, who learned to fly when aviation was in its elementary stages and who distinguished himself in the First World War as an intrepid pilot and a distinguished leader, was the man appointed to head the British Army Cooperation Command, established on December 1, 1940. This Royal Air Force command amounts to a special joint army command and works with the armies in the field. It is believed to be an important development for the time when Britain will take the offensive against Germany.

Barratt is an officer of the robust, sporting type, known as "one of the six best all-round athletes in the forces." He might easily have become a professional boxing champion, BARRATT, SIR ARTHUR—*Continued*

and a story of his boyhood is still remembered in England. His school boxing instructor was having a bout with him and, being a professional, was able to keep the boy at arm's length. Barratt was laid flat three times, but he staggered up and put in a good left. The instructor lowered his guard, put an arm around Barratt's shoulders and said: "You've got guts. You can take it. And one day you'll be able to hand it out good and proper. Then I wouldn't like to be them as gets it."

Besides being a boxer, Barratt is an excellent angler, a crack shot, an outstanding steeple chaser and a winter sports expert. Billy Bishop, V. C. (see sketch this issue), in charge of the Canadian air training scheme, once said of him: "I know no one possessing such perfect coordination of mind and muscle. Nothing that Barratt really wants to do is beyond him." To his sporting tastes Barratt adds others, much more surprising in a fighting man. In peace time he can often be seen going round to the Bond Street galleries, indulging his real love for art which runs mainly to the extreme modernists. He is also something of a gourmet. In reading he is mainly interested in technical matter connected with his work, though nothing is better for relaxation than a good detective story, he thinks. Films are good, too, for entertainment; they are even better, he says, for use in training flyers.

Born at Peshawar, India, the son of Charles Henry Barratt of Clifton, Bristol, England, young Arthur was sent home at an early age (as is usual with children of parents stationed in hot climates) and at 14 went to Clifton College. From there he proceeded to the Royal Military Academy, Woolwich, took general and gunnery training and passed in 1910 into the Royal Artillery. Those were the days when to fly at all was an adventure, but Barratt, like Sir Cyril Newall, saw a great future for aviation and for its application to warfare. So, in 1914, he had himself trained at the Central Flying School, Upavon, and in July of that year was seconded to the Royal Flying Corps—as the army air arm, then separate from the naval, was called.

Very shortly after, Barratt was sent out to the 3rd squadron of the Royal Flying Corps to take part in the War in France. Most of his service was in the Ypres district. It was distinguished service, for he was mentioned in dispatches four times, won the Military Cross, the Belgian Croix de Guerre and the Croix de l'Ordre de la Couronne. At the beginning of 1916 he was promoted to the rank of squadron commander; in 1917 he became wing commander, in charge of the third and fourth wings; and in April 1918 he rose to lieutenant colonel. He went to the Rhineland with the Army of Occupation, was in charge of the second brigade of the R. A. F. for some time and finished his War service on the R. A. F. headquarters staff at Cologne.

The War over, Barratt decided to resign his army commission and throw in his lot with the Royal Air Force. He was given the rank of squadron leader, was raised to wing commander in November 1919 and was then posted to the directorate of training and organization. In 1924 he took a course at the army Staff College at Camberley, after which he became commandant of the School of Army Cooperation. In 1927 he was sent out to the Far East to serve under the general officer commanding the Shanghai Defence Forces and there worked alongside Lord Gort.

Barratt saw active service again in 1931 when he was posted to his birthplace, Peshawar, as air officer commanding the No. I (Indian) Group. But it wasn't too active to keep him from indulging in the region's sports: in polo, tentpegging and pigsticking. In 1932 he went up one step in rank, to air commodore, and acted as senior staff officer at the Indian headquarters until the end of 1934.

In 1935 Barratt was back in London, where he spent two years at the Air Ministry as director of staff duties. Then in 1936 he was promoted to the rank of air vice-marshal and made commandant of the R. A. F. Staff College at Andover, a position he kept until 1939, when he was again sent out to India as a commanding air officer. When the Second World War broke out he was immediately recalled and, since cooperation between airplanes and ground forces was his special study, was given liaison work with the French Air Force. Then, in January 1940, when a new British command called "British Air Forces in France" was formed to coordinate the work of the R. A. F. with the British and French Armies, he was made its air officer commanding in chief. On his return from France in July 1940 Barratt was again promoted, this time to air marshal, and knighted as Knight Commander of the Bath. He was already a Companion of the Bath and of the Order of St. Michael and St. George. From his return on, he was kept active in England on special duties until his appointment as head of the Army Cooperation Command was announced in November 1940.

This officer, now in one of England's most important positions, is in his late 40's, and his outlook is still as young as his years. Fellow officers like to tell the story of the wedding of his only child Suzanne (her mother is Norah Lilian Crew of Clifton). The ceremony had been scheduled early in 1940, and since Barratt was on duty in France there seemed no chance of his being able to attend it. But at the last moment he looked around, saw the front was quiet enough, stepped into a plane and was there right in time.

BARRYMORE, ETHEL Aug. 15, 1879- Actress

Address: h. Mamaroneck, N. Y.

Vandamm

ETHEL BARRYMORE

On the evening of Tuesday, February 4, 1941 Ethel Barrymore, the undisputed First Lady of the American theatre, celebrated her fortieth anniversary as a star on the New York stage. First she played her usual role as Miss Moffat in Emlyn Williams' (see sketch this issue) *The Corn Is Green,* "the most heartwarming performance of her career"; next she listened to a broadcast over WJZ and the Blue Network in which Alexander Woollcott, Herman Shumlin (see sketches this issue), Helen Hayes, Arthur Hopkins, Louis B. Mayer, and her brothers Lionel and John paid tribute to her. Almost tearfully she thanked them all and the public. "If my years are to be lined up and counted off," she said, "I can think of no pleasanter way for it to happen. If I have little consciousness of the burden of years, it is because so many, known and unknown to me, have conspired to make those years light."

For 40 years Ethel Barrymore has been a star; for 40 years she has appeared on Broadway, in small towns from Maine to California; in stock, vaudeville, motion pictures. Audiences have seen her grow from a sprightly young thing into a mature woman, "gracious, imposing, regal." And always they have acclaimed her acting. As a Barrymore, she is used to that, for Barrymores have been figures on the American stage for many, many years. Maurice Barrymore, her father (his real name was Herbert Blythe), was acting long before she was born. Her mother, Georgiana (Drew) Barrymore, was the sister of the famous actor John Drew. And her brothers, Lionel and John, are familiar and important figures in the theatrical and film world.

Ethel herself began acting almost as soon as she could talk. She was born in Philadelphia and went to school there—to the Convent of Notre Dame. But it is not school books or school games that she and her brothers remember: it is rather the memory of tempestuous performances like that of *Camille* which the young Barrymores put on at the ages of 10, 12 and 14 in an old barn.

When she was only 12 Ethel got her first chance at a real performance, in a very minor role in her uncle John Drew's play, *The Bauble Shop.* And one night when Elsie de Wolfe, the leading lady, was ill, Ethel Barrymore stepped into her part, giving "a surprisingly good account of herself" in the role of a 32-year-old woman. People knew then that Maurice Barrymore had a clever daughter, and Uncle Drew advised producer Charles Frohman to keep an eye on the girl.

Frohman took the advice. In 1901, after Miss Barrymore had appeared in *That Imprudent Young Couple*; had made successful appearances in London in *Secret Service* (1897) and Sir Henry Irving's melodrama *The Bells* (there were reports then that she was engaged to Sir Henry's son Laurence); and had played at the Garrick Theatre with Annie Russell, he engaged her for the starring role of Madame Trentoni in *Captain Jinks of the Horse Marines.* The critics didn't like the play much, but they adored her. One week after the opening, Ethel Barrymore rounded the corner to the theatre to find her name in lights for the first time. She cried like a baby.

Other starring roles followed: in *Carrots, A Country Mouse, Cousin Kate* and *Sunday,* in which she spoke the famous line, "That's all there is, there isn't any more." She was Nora in Ibsen's *A Doll's House,* Mrs. Grey in Barrie's *Alice Sit-by-the-Fire,* the leading character in Galsworthy's *The Silver Box.* Ethel Barrymore became the nation's romantic idol. Young girls were solemn disciples of what they called the "Ethel Barrymore walk" and the "Ethel Barrymore voice." Some of them even talked about how they had "adopted" the "Ethel Barrymore neck."

Ethel Barrymore kept on appearing on the stage, year after year. With her beauty, glamor and fascinating voice which has always kept its plaintive, haunting quality (carpers call it monotonous), she was always sure of huge audiences when she played in drawing-room comedies, like Zoë Akins' *Déclassée,* BARRYMORE, ETHEL—*Continued*

which gave her two profitable seasons in 1919 and 1920, and Somerset Maugham's *The Constant Wife,* which she first played in 1926 and frequently took around summer theatres later. But Miss Barrymore did not confine her roles to drawing room ones. She was the somber peasant in *Rose Bernd* in 1923; Sister Gracia in *The Kingdom of God* (she opened her own theatre, the Ethel Barrymore, with this play); she appeared in blackface in Julia Peterkin's *Scarlet Sister Mary*; she played frequent Shakespearean roles; she was often seen in Ibsen.

She appeared in one talking picture, too. There had been appearances in the silent films back in 1914 when she was seen on the screen in *The Awakening of Helena Ritchie,* in one of Edna Ferber's *Emma McChesney* stories and in other works, but it wasn't until 1933 that motion picture audiences saw her again. In that year she appeared in *Rasputin and the Empress* with her brothers, Lionel and John. She explains this solitary film appearance by saying: "I did it only to be with my brothers, whom I don't often see." And she confesses: "You know, I've never seen that picture. . . They tell me it was pretty good, too."

After a series of rather flimsy vehicles in recent years—in *Whiteoaks* (1938) and *Farm of Three Echoes* (1940) she played excessively aged if still vigorous characters, and in Vincent Sheean's (see sketch this issue) *An International Incident* she was a lady lecturer—Miss Barrymore was finally given in *The Corn Is Green* a drama of substance and an impressive part. As an English school mistress in a Welsh mining town she is triumphant, all critics have agreed. She herself says: "I like it better than anything I've ever had. It has everything in it that I care about." In May 1941 Mrs. Franklin D. Roosevelt presented her with the third annual Barter Theatre Award for the season's outstanding performance, and when in the fall of that year Ethel Barrymore gave her 300th performance in the play critics noted that she was having the longest run of her career.

In her 60's Ethel Barrymore is a mellowed, philosophical, witty and still occasionally imperious person who can and does quell an obstreperous stage hand with a withering glance. There was a report recently that she had hit one with a rolled-up piece of paper when he refused to obey her. She denied this. "I didn't need to hit him," said she. Miss Barrymore's personality and charm are as popular in the remotest touring towns as on Broadway. "I never know what some people mean when they complain about the rigors of the road," she says. "Lord, they must be very faded lilies indeed if they mind touring! Oh, I look forward to it—the drafty dressing rooms, the rats, everything! It's all part of it." She intends to get her chance at all this—and a good long chance—with *The Corn Is Green.* "I expect to fall into my grave playing it," she told a reporter, "which I hope will not be soon."

Ethel Barrymore's three children, Samuel Pomeroy Colt, John Drew Colt and Ethel Barrymore Colt, all feel about the theatre much the way their mother does. (She was divorced from their father, Russell Griswold Colt of Philadelphia, in 1923.) All three of them have appeared on the stage, and each of them has received the traditional Barrymore big red apple on opening night from their Uncle John. They spend a good deal of time with their mother, when they can, at her comfortable house in Mamaroneck, New York, where she has lived for the past 27 years.

When she is not acting, rehearsing, thinking about the stage or concerning herself with her children, Ethel Barrymore can whip up a lot of enthusiasm about sports. She has seen all of Joe Louis' and Henry Armstrong's fights and has a large collection of fight pictures. There's always a small radio in her dressing room to get prize fight and night baseball returns. Stage hands know, as one put it, "We never have to worry about getting the scores—we just listen outside her door." Miss Barrymore explains her interest by the fact that her father "was the amateur lightweight champion of England when he was in Oxford. He taught me to love sports from the time I was 12."

Music (she is an accomplished pianist), mystery stories and an occasional jaunt to the Stork Club also keep Miss Barrymore amused when she is off the stage. But it is the theatre she mostly thinks about and talks about. She doesn't worry about it, as so many other actors, actresses and playgoers do. "Four thousand years ago in Greece," she says, "they were saying the theatre was on the skids. Well, it never was and never will be. The theatre is perfectly wonderful. People always will want to go to it. It is the healthiest art there is."

BARUCH, BERNARD M(ANNES) (bȧ-ro͞ok′) Aug. 19, 1870- Industrialist
Address: b. 597 Madison Ave, New York City; h. 1055 Fifth Ave, New York City

One favorite quotation from Bernard Baruch is: "When God and the community have been so good to a man, isn't it natural that he should try to make some repayment?" Stock speculator and counselor to Presidents, Wall Street oracle and patriot, ever since the opening guns of the Second World War Baruch has been advocating for the United States "some plan along lines similar to the experience tested by the United States War Industries Board of 1917 and 1918," the Board which he headed. In June 1941 was published his *American Industry in the War*, a compilation of his most important current writings on industrial mobilization for war together with the report of the War Industries Board issued in 1921. And on July 10 Senate Republican Leader McNary, after conferring with Wendell Willkie, who urges a single defense head for the United States, praised Baruch as "a tower of strength deserving of every confidence."

Bernard Mannes Baruch was the son of a doctor, Simon B. Baruch, who left Poland in 1853 as "a refugee from attacks on freedom." In the United States the doctor married Belle Wolfe, the descendant of a Portuguese Jew who had settled in America in pre-Revolutionary days. Their son, Bernard, was born in South Carolina on August 19, 1870 and brought up on the Southern Lost Cause (he has been called "a South Carolinian first, a Democrat second, and an American third"), although his family moved to New York City when he was young. There he took his B. A. from the College of the City of New York in 1889, leaving behind him the reputation of an athlete and of a Phi Beta Kappa scholar. He soon found himself a job as a broker's boy on Wall Street at $3 a week. His father had wanted him to be a doctor, but one story says that when Bernard was small his mother took him to a phrenologist who examined his "bumps" and announced: "This young man has great gifts in finance and business. He might be a good lawyer. A doctor, no!"

Few phrenologists make such lucky hits. As a broker's boy young Baruch developed an almost photographic memory for financial reports—and at night school he studied law and bookkeeping. By the time he was 27 he had made himself so valuable that he felt he could ask for a salary of $50 a week. Instead he got a sixth interest in the business, but since 1897 was an unusually good year, he netted $6,000. He promptly married Annie Griffen of New York. (She died in 1938, leaving a son and two daughters.)

It wasn't long before Baruch himself, fortified by his studies of industrial geography and of the commodity and market situation, was investing money in the market. Ten thousand dollars borrowed from his father was soon lost, but he began to recoup—and by the time he was 30 he had made and lost a million. At the same time Baruch had lost his first reverence for certain minds on Wall Street: he found himself getting the better of the best of them. Legends grew up around the young speculator who made fortunes overnight and who seemed to operate by some infallible gambler's instinct.

Blackstone
BERNARD M. BARUCH

"They called me a Robin Hood who took from the rich but did not give to the poor," Baruch once put it, contentedly. But the description was probably not entirely accurate. It was about 1905 when Baruch actually toyed with the idea (he had, by this time, sold his seat on the Stock Exchange) of becoming a voluntary, unpaid counselor in all cases involving the rights of the public, and although he didn't carry out the plan he did begin to contribute large sums to charitable causes.

His period of real public service came much later. When Woodrow Wilson ("the most Christlike man in America," Baruch called him later) became President, he offered Baruch the post of Secretary of the Treasury, but it was refused. In 1916, however, Baruch began making speeches urging the necessity for some prepared scheme of industrial mobilization, and soon Wilson appointed him to the Advisory Commission of the Council of National Defense. It was March 5, 1918 when Baruch was appointed chairman of the War Industries Board—he was chairman of the Commission on Raw Materials, Minerals and Metals, commissioner in charge of raw materials for the Board and member of the Commission in Charge of all Purchases for the Allies. Part of the country was shocked, for Baruch had been considered a mere speculator, but his abilities at unscrambling all sorts of messes and at choosing the right men to help him soon earned respect.

The War over, Baruch became connected with the American Commission to Negotiate Peace as a member of the Drafting Commission of the Economic Section, and he was also appointed a member of the Supreme Economic Council and chairman of its Raw Materials

BARUCH, BERNARD M.—*Continued*

Division, American delegate on the economics and reparations clauses and economic adviser for the American Peace Commission. According to one authority "his advice was so good that Wilson ignored it, for Baruch knew that it would be impossible to collect a huge indemnity from the Germans." In 1927, too, he predicted that the Dawes Plan would be scrapped within two years.

In October 1919 Baruch was a member of President Wilson's Conference for Capital and Labor and in 1922 a member of President Harding's Agricultural Conference. Known as the counselor of Presidents, often seen entering the White House "pince-nez on his nose, a broad smile on his face, and his tie askew," by this time Baruch had also resumed his market operations and was busy recouping losses entailed during the War years. (He had sold most of his stocks and bonds to put the money into Liberty bonds, and had once even paid for a government mission to England out of his own pocket.)

Yet a nostalgia for public service remained. One writer has said of Baruch: "He has an intuitive mind, but behind that and his tremendous pose of authority, there lurks what used to be known in the Hoover period as an inferiority complex. He wants so terribly to be known as something more than a speculator." It seems that he wanted to be known as the savior of the farmer, too; but three Republican Administrations turned down his farm plans, and he kept backing the wrong men for President. In 1924 it was William Gibbs McAdoo, in 1928 Al Smith. (He always backs the Democratic ticket.)

In the meanwhile things had been happening behind the stock market. It was the spring of 1929 when Baruch, whose least word on Wall Street received the attention due an oracle, wrote an article in which he foresaw not only a rosy future for American industry but the complete abolition of the "business cycle," basing his prediction on the settlement of the reparation question; exactly when he quietly withdrew his own investments and those of his friends from the market isn't certain. If not infallible, at least Baruch was one of the few Wall Street prophets who, after the crash, declined to look around nearby corners for prosperity. In March 1930 he announced for publication that a world-wide depression of several years' duration had arrived.

Hoover, like other Presidents, had consulted Baruch from time to time, both officially and unofficially. Baruch had given advice on the organization of the Reconstruction Finance Corporation, although he refused to accept a place on it; and in 1932 he was a member of the National Transportation Committee. Nevertheless, when stocks crashed again in the spring of 1932, Hoover decided that Baruch was one of the villains behind this "plot" to discredit his Administration. His files were searched, his income tax analyzed; nothing was found, and the matter went no further. But it was generally agreed that if Baruch had been subpoenaed, fear of his testimony on the inner workings of some of the great banks would have resulted in a great wave of short selling.

If by 1932 Baruch was on bad terms with the outgoing President, it didn't seem likely that he would be much more friendly with the incoming one. It was rumored (though Baruch himself denies this) that he had called Franklin Roosevelt a "stuffed shirt" until New York's Governor got the nomination for which Baruch had quietly backed Governor Ritchie of Maryland. Yet when Roosevelt was nominated Baruch promptly made himself the heaviest single contributor to the Democratic cause—Hugh Johnson, his research assistant, was not the least of his contributions; he reassured Wall Street about Roosevelt; he prepared attacks on Hoover's "uncontrolled inflation."

By 1933 everyone expected that Baruch would be invited to enter Roosevelt's Cabinet, and even after the Cabinet was announced the press made much of the fact that although Baruch was not in it, AAA's George Peek and NRA's Hugh Johnson were Baruch's close associates; that the Farm Bill and NIRA were vaguely framed along lines once laid down by Baruch; that during Raymond Moley's absence at the London Conference, Baruch served as a relay between the President and the London delegation. The idea was that Baruch had become even more powerful than if he had been given a Cabinet post, actually a sort of "Assistant President." Bankers muttered that Baruch had sold Wall Street to Washington and Brain Trusters muttered that Baruch had sold Washington to Wall Street.

On the other hand, others pointed out that, far from being as influential either as his enemies suspected or as he would have liked to have been, Baruch found his farm program barely recognizable by the time the Brain Trust finished with it, and Roosevelt's financial policies made him deeply apprehensive. Certainly by February 1938, when Baruch testified before the Special Committee of the United States Senate to Investigate Unemployment and Relief, his testimony could with some justification be called "the heaviest gun . . . fired at the New Deal." This was precisely because he did not go in for wholesale condemnation of Administration policies ("I am . . . in sympathy with most of the great social objectives, for which I have myself argued for many years"), but rather created the impression of a socially-minded man who had reluctantly come to the conclusion that the traditional American profits system was being gravely endangered by some New Deal methods. In *The New Dealers* Baruch's "ingenuous effort to be all things to all men" is referred to; he is described as "a political amphibian, at home in both elements but unable to live permanently in either." The description seems apt. But he has also been described as a man who never holds grudges, political or otherwise.

In 1934 Baruch was given his first official post in Roosevelt's regime and made chairman of a committee to recommend legislation to take profits out of war, a step which he had advocated for nearly two decades. In February 1937 he presented to the Senate Committee on

Military Affairs his recommendations for legislation for war-time industrial mobilization. That same year, returning from abroad, he was quoted: "Europe is hopeless." He had been alarmed at the extent of German rearmament even before that and with "adamantine nationalism" had consistently urged rearmament, a war reserve of strategic materials, trained man power—and a careful neutrality in the war which he foresaw.

Yet although in 1937 Baruch spoke against selling munitions or lending money to belligerents, he is not found among the critics of Roosevelt's foreign policy today. In January 1941 he urged the centralization of the defense power in the President, also pleading for exemptions from the Sherman Act for committees of industrialists cooperating with the Government in the defense effort; for more labor representation; for increased taxes and a "pay-as-you-go" policy. And he has continued to make regular trips to Washington, to visit President Roosevelt (Raymond Clapper says he lunches with the President once a week) and defense chiefs, to preach the need for priorities and for placing a ceiling on prices, rents and wages. It is said that Leon Henderson is only one of the men who now consult him constantly, and in November 1941, after the House rejected the "over-all" plan of control of rents, prices and wages presented by Representative Gore and recommended by Baruch, Henderson still had other plans to present.

As a result of his experiences, Baruch is extremely critical of the way the present defense program has been carried out and of the "yes-men" who have been in charge of it. He wants one single defense chief. And in September 1941 he didn't believe the United States had yet begun to use its vast resources. "Don't forget that the Germans are using our plan," he was quoted. "The Germans said that they consciously followed the American plan of industrial mobilization and improved upon it. . . I think it's about time that we got ready and did some business."

Over six feet tall, with snowy white hair, aquiline features and blue-gray eyes, "fluent of gesture, perpetually smiling," Bernard Baruch "seems forever animated by some inner boyish pleasure." He would rather talk about himself than about anything else in the world, but few people mind that trait in him. He is a very careless dresser, and his mind is said to be unusually disorderly, too—more notable for astounding intuitions than for logic and sequence. The exact size of his fortune isn't known. Ferdinand Lundberg talked about $37,500,000; Baruch himself calls this figure "sheer nonsense." In 1934 he closed his offices in Wall Street and announced that he was going to write three books: an autobiography, a message to the youth of America, the story of man's conquest of nature. Since the publication of his *Making of Economic and Reparation Sections of the Peace Treaty* (1920) no books but economic treatises have yet appeared, however. Aside from writing, Baruch's hobbies are hunting, riding and golf; he hates parties. It is true that he plays bridge, but (lesson to those who have never been known as Wall Street wizards) seldom for any but extremely small stakes!

BEALS, CARLETON (bēlz) Nov. 13, 1893- Author; journalist

Address: h. 1943 Berkeley Way, Berkeley, Calif; Brockett's Point, Bramford, Conn.

Edward Mallory

CARLETON BEALS

Carleton Beals has lived what he calls a "life more changeful, colorful and disorderly than most." Today almost universally acknowledged as one of the major interpreters of Latin America, he has been a newsboy, grocery delivery boy, delicatessen clerk, carpenter, machinist, chauffeur, farm hand, bookseller, laboratory assistant, teamster, teacher, dishwasher, waiter, shoe clerk, ditchdigger, bookkeeper, cashier, professional chess player, BEALS, CARLETON—*Continued*

porter, shipping clerk, advertising solicitor, principal of a high school, gold prospector. He has seen four Mexican revolutions. He has known personally or interviewed Premiers Data and Primo de Rivera and President Azaña of Spain, Mussolini, at least six Presidents of Mexico and three Presidents of Nicaragua. Indians and artists and revolutionaries and bums and politicians and ambassadors have been among his close friends—and enemies.

On the more conventional side, he has been lecturer at the University of California, the New School for Social Research and the National University of Mexico; he has been on the editorial or advisory board of at least half a dozen magazines, among them *Common Sense* and *Living Age*; he has written innumerable articles and perhaps 20 books. The year 1940 saw the publication of two: *The Great Circle,* the second autobiographical volume he has written; and *Pan America,* which gives Mr. Beals' own program for the Western hemisphere.

Carleton Beals was born on November 13, 1893, in Medicine Lodge, Kansas, the son of Leon Eli and Elvina Sybila (Blickensderfer) Beals. His grandmother was Carrie Nation—which may or may not account for a certain belligerently crusading spirit of which he has often been accused. "At the age of three years," he says, "I took my family to Pasadena, California." In what was then a "virgin empire," with mountains that were made for roaming, free from bungalows, concrete highways and monopoly, he lived until 1911. "The world was a symbol of hope." He was graduated from the Pasadena High School in 1911 and then went on to take his B. A. *cum laude* at the University of California in 1916. For the most part he studied mining and engineering.

With a scholarship Beals next set out for Columbia University to take his graduate degree. He wrote a thesis on the self-sufficient state, at the same time completing the work required for a Teachers College certificate and a book with which he hoped to get the Hart, Schaffner and Marx Economics Prize. And he worked in his non-existent spare time. The book ended up in the fire, but in 1917 he acquired his M. A. (later, Dr. Butler's signature was to be very useful when a Spanish gendarme demanded Beals' identification card) and then found a job punching an adding machine in the export department of California's Standard Oil Company.

It wasn't exactly his idea of living. In a year he was through, and with "that peculiar impulse" which, he says, "all my life had led me to reject easy solutions and try my powers in unusual situations," he set out through the California and Arizona deserts in a secondhand Ford. After the car broke down he hired burros. After his money ran out he walked and bummed rides on freight trains, working for almost nothing along the way. He kept going further south. He had troubles—he nearly starved, he got bitten by a poisonous insect, he got lost, he got into mix-ups with soldiers (it was 1918)—and when he landed in Mexico City it was in a car of squealing pigs. There were 15 centavos in his pocket, the clothes he wore were worth something less than that, his feet were rubbed sore and he had no possessions but a blanket that was full of holes. He didn't know more than the Spanish he had picked up along the way, either, and he had no acquaintances in town. Yet Mexico City was probably the most fortunate place in which he could have found himself at that particular moment.

"Strange but providential things" happened to him there. Strangers—more than one—befriended him. He finally founded the English Institute with a couple of other Americans and in four months or so was making a modest living. He found a job teaching in the American High School, of which he shortly afterward became principal. He found another job teaching military English to the members of President Carranza's staff and also gave Shakespeare lectures once a week to the women of the American colony. In less than a year he was earning more than he ever had, and although his working day was already long he managed to find time for writing, too. Throughout his long journey across the country he had carried a little notebook with him, and that was full.

Then came another Mexican revolution. President Carranza fled; Beals lost first his position at the War Department, then at the American High School. But the first four articles he had ever written had been accepted by the first magazines to which he had sent them, and he had a book on Mexico completed. He decided to see Spain, since it seemed evident that a free-lance journalist could get along anywhere. It was 1920. He studied for a while at the University of Madrid, feasted on El Greco and Goya, and then went on to Italy. For nearly a year he read and talked only Italian, studied at the University of Rome, watched Mussolini's rise to power, wrote short stories, part of a novel, articles on Fascism and finally a book on Fascism (*Rome or Death,* published in 1923). Then, when he had an offer from a publisher to publish his book on Mexico if revised, he decided to return.

Said Beals of those European days: "Europe . . . was a closed-in world. For three years I had kept my hand on its palsied pulse, had felt the deathly fever rising." Already he foresaw a new war "to save the British empire," although he hardly foresaw the depression in the United States. Somehow he was glad to get back to the New World in 1923. In Mexico he revised his book, which was published the same year under the title *Mexico,* and attended the University of Mexico for a while. August 1924 found him in New York City—the first time he had been in his own country for more than six years. He was "again virtually penniless," and felt like a stranger.

In New York he worked on *Brimstone and Chili* (1927), the story of his personal experiences in the Southwest and in Mexico, and after plans to go to South America were frustrated he returned to Mexico. Those were the Mexican days of President Calles and Ambassador Morrow, of D. H. Lawrence and Colonel Lindbergh (see sketch this issue). Beals knew them all. He wrote articles for *The Nation* and the *New Republic,* among other publications, taught a couple of English classes, and in 1927, at the time of General Sandino's Nicaraguan "rebellion," made a dangerous journey through Honduras and Nicaragua and got an interview with the General when the entire American press and Army were convinced that the "rebel" had fled. *Banana Gold* (1932) tells the story of this adventure, and is filled with accounts of marine atrocities.

Early in 1929 Carleton Beals ventured into his own country again to lecture, and then it was abroad again—Spain, North Africa, Italy, Turkey, Russia, Germany—and back to Mexico. *Destroying Victor,* a novel, was published that year, too, but got a lukewarm reception from most critics. In 1930 he went on an anthropological and educational mission through the Oaxaca Mountains; in 1931 he published *Mexican Maze,* which added great prestige to his reputation not only as a journalist but also as a historian, travel writer and sociologist. From 1931 to 1932 he had a Guggenheim scholarship while completing *Porfirio Diaz, Dictator of Mexico* (1932). And from 1932 to 1933 he was in Cuba, gathering material for *The Crime of Cuba* (1933), which blasted at the bloody dictatorship of Machado and seriously questioned the unselfishness of the United States' role. The book was published almost simultaneously with Machado's overthrow, was "a mighty weapon on the side of the revolution," and made Carleton Beals the hero of the Cuban youth movement.

The year 1934, which Beals spent in Panama, Colombia, Ecuador and Peru, saw the publication of *Black River,* a fictionized history of American oil companies in Mexico, and *Fire on the Andes,* which told the story of Peru. He finally returned to the United States more or less permanently. He gathered material for *The Story of Huey P. Long* (1935), and in 1936 was a special correspondent for the New York *Post* at the Scottsboro trial in Alabama. The only other book by Beals which is concerned exclusively with the United States, however, is the bitter *American Earth* (1939). *Stones Awake* (1936) was a novel which carried a Mexican peasant girl from the time of the Diaz regime in 1910 to the present; the titles *America South* (1937); *The Coming Struggle for Latin America* (1938); and *Pan America* (1940) all speak more or less for themselves. *Glass Houses* (1938) and *The Great Circle* (1940) are autobiographical, the latter carrying on where the first left off.

Critics differ as to Carleton Beals' accuracy, although nearly everyone agrees that he is a "first-rate reporter." He is either full of prejudices, given to overstatement, "forever catching someone in a foul plot"—or a "refreshing debunker," his conclusions "ugly only because veracious." It depends almost entirely on one's own point of view. Beals' sympathies, he says, are with the people, whether he is talking about Mexico or Nicaragua or Cuba, and he seldom likes the things that foreigners have been doing there even if the foreigners are American citizens. It is seldom that he has anything very good to say about the government of any country, either—except possibly that of Cárdenas in Mexico and the late Spanish Republic. He is little more sympathetic with Russia than with the Fascist countries, and he finds the democracy of the democracies pretty incomplete. As for the present War, his view in 1940 was that it is a struggle for essential raw materials, "a struggle bound to grow more bitter, whoever wins," that "the free market is gone anyway" and the United States had better see what it can do in the Western hemisphere without infringing on the rights of the South American countries instead of attempting to intervene in Europe. He is something of a cynic.

In 1931 Beals was married in the Palace of Cortés in Coyoacán to Elizabeth Wright Daniels. After a divorce he married Blanca Rosa Leyva y Arguedas in September 1934. Sandy-haired, blue-eyed, Beals is soft-spoken and mild-mannered but fond of a good fight. He likes even better horseback riding, "investigating social phenomena," the tropics, reading, outdoor travel, and almost all persons who have "interested themselves, in one way or another, in just causes." Writing he describes as "the shakeless point in my life."

BEARD, CHARLES A(USTIN) Nov. 27, 1874- Professor; historian

BEARD, MARY Aug. 5, 1876- Author; historian

Address: b. Johns Hopkins University, Baltimore, Md.; h. New Milford, Conn.

"Tall, white-haired and angular in the Hoosier tradition," independent-minded Charles Beard has most of his life been provoking his fellow historians (and citizens) into either criticism or thought, and usually both. In the quarter of a century since his publication of the pioneering *An Economic Interpretation of the Constitution of the United States* his views have developed rather than changed, but in the meanwhile he has been spasmodically attacked and hailed as an ally by Right, Left and Center. Since the Second World War he has concentrated most of his forces in a battle

BEARD, CHARLES A. and BEARD, MARY—*Continued*

with United States interventionists; before that he was breaking lances with the internationalists. He calls his own foreign policy "continentalism." As for his books, they have been probably as thoroughly read and thoroughly dissected as those of any modern historian. A compound of history, economics, political science and salt, they have often been scoffed at by historians as "unreliable", "passionate", "impressionistic"; by economists as "pretty weak"; by political scientists as "muddy", "dogmatic." And yet, as one wistfully frank rival said: "What he does may be, I think, probably vastly more important than the contributions of the more straight-laced of us. . ."

CHARLES A. BEARD

The son of William Henry and Mary (Payne) Beard, he was born on November 27, 1874 near Knightstown, Indiana. His great-grandfather had been a Federalist; his grandfather was a Whig and rebel Quaker who ran a "one-man church" with 600 volumes of comparative religion; his father was a "copper-riveted, rock-ribbed, Mark Hanna, true-blue" Republican—a building contractor who also ran a bank, read the classics and raised his family on a farm near Spiceland in order to develop its "backbone." Young Charles went to a nearby Quaker academy and outside of school hours ran a hand press. When he was graduated at 18 his grandfather bought him the weekly Knightstown *Sun* and for four years he and his brother ran it—even made it pay—before Charles went away to the Methodist DePauw University in Greencastle, Indiana. There, on the college team, he debated such subjects as the Federal income tax and the right of Labor to organize; in 1896 he spent a summer in Chicago, investigating Hull House, labor problems, the Democratic National Convention and the oratory of William Jennings Bryan; he reported for the Henry County *Republican*; joined Phi Gamma Delta, was awarded a Phi Beta Kappa key, and acquired his Ph. B. in 1898. After a youthfully patriotic attempt to mobilize a volunteer company for service in the Spanish War, he went abroad—to Oxford, to study English and European history. There he took part in the organization of Oxford's Labor College, now known as Ruskin.

Young Beard returned to America in 1899 to teach at Cornell University and to marry 23-year-old Mary Ritter of Indianapolis in March 1900. The daughter of Eli Foster and Narcissa (Lockwood) Ritter, she had taken her Ph. B. at DePauw the year before he had left college, and was a member of Kappa Alpha Theta and Phi Beta Kappa. The two of them went back to Oxford to lecture at Ruskin, to appear before labor groups and make friends with labor leaders. In England a daughter, Miriam, was born; and by 1902 they were again in the United States, studying economics, politics and the history of England and Europe at Columbia University. Beard acquired his M. A. in 1903, his Ph. D. in 1904 (the year Veblen published his *Theory of Business Enterprise*); then, with his wife and daughter, he settled on the edge of the University. In 1907 he became adjunct professor of politics, working with such colleagues as James Harvey Robinson and John Dewey.

He was then only a "tall, rangy young man . . . with a sharp aquiline profile, looking half farmer and half Roman philosopher," but, as one of his former students said: "When Beard strode into the classroom it was like a salty breeze blowing out the stuffiness from the room." He found history full of myths; he made it concrete, started giving his students a batch of Treasury statistics or pamphlets by John Taylor to analyze. In the meanwhile he was having rather startlingly unmythical studies published, some written in collaboration, and was promoted to an associate professorship of politics in 1910. His first collaboration with Mrs. Beard, who was active in both the women's and the labor movement, was *American Citizenship* (1914). And it was that same year when he leaped into fame or notoriety with the appearance of the eighth book carrying his name: *An Economic Interpretation of the Constitution of the United States.*

At that time the Founding Fathers were sacrosanct, perhaps because they had seldom been poked. Beard, with his "theory of economic determinism" which "had not been tried out in American history, and until it was tried out, could not be found wanting," suggested that they had not exactly ignored their own immediate economic interests when formulating the Constitution. Although his views were more Madisonian then Marxian, they were not docilely received. Taft and Elihu Root, the New York Bar Association and *The Nation* were among his more scathing critics, but 1915, the same year that saw the appearance of his wife's *Woman's Work in Municipalities*, brought forth his *Economic Origins of Jeffersonian Democracy.* He hadn't abandoned his thesis.

It was 1917 when Nicholas Murray Butler was supposed to have been asked: "Have you seen Beard's last book?" and to have replied, "I hope so." Beard was then still teaching at Columbia as a full-fledged professor. It was not for long. Although he supported America's entry into the First World War—with qualifications—he was quick to resent any attacks upon his fellow teachers and upon what he considered academic freedom. In October of that year he resigned, ostensibly as a protest against the dismissal of Professors Cattell and Dana, basically as a "protest against the business control of university educational policy" and the "doctrinal inquisition" of himself and others by trustees. The New York *Times* thereupon carried an editorial headed "Columbia's Deliverance."

It was several years before Beard returned to university life. Someone said: "Beard dabbles." From 1917 to 1922 he served as director of New York City's Training School for Public Service; in 1918 he organized the New School for Social Research with Dewey, Veblen and Robinson; in 1921 he was active with the Workers' Education Bureau. He was a "scorching critic" of the Lusk bills of 1921 and of post-War Red hunting. In 1922 he was lecturing on war guilt at Dartmouth College (he was the author of the first general study on the problem); later in the year he went with Mrs. Beard to Tokyo to become adviser to the Institute of Municipal Research there and to help plan the consolidation of a greater Tokyo; and after the 1923 earthquake he returned to advise Viscount Goto, Japanese Minister of Home Affairs, on the rebuilding of the city. From 1927 to 1928 he was adviser to the Yugoslavian Government, but found that the oppression of the Croats, Macedonians and Hungarians continued despite all his advice. He came home "cured"—convinced that all Europe was just a "big Balkans"—proceeded to start a dairy farm, eventually sold wholesale over 300,000 quarts of milk a year, and organized the milk producers. In September 1939 he finally rejoined the Columbia faculty as a visiting professor of government; and in the fall of 1940 he accepted his first regular academic appointment in 23 years and became professor of American history at Johns Hopkins University.

Along with all this "dabbling," Beard had managed to write a constant stream of articles for the *New Republic*, *Harper's*, *Scribner's* and *Current History*; to make himself active in the American Historical Association (president, 1933), the American Political Science Association (president, 1926) and the National Association for Adult Education; to engage in battles with J. P. Morgan and William Randolph Hearst; to have at least 20 books published after 1917—some written alone, some in collaboration; to edit numerous others. The *History of the United States* (1921, 1929) was the second product of his and his wife's collaboration (her *Short History of the American Labor Movement* [1920, 1925] had been published in the meanwhile), but it is their two-volume *Rise of American Civilization* (1927) which has become a classic. One of its most memorable and disputatious feats is the picturing of the Civil War as a "second American Revolution" of the planting class against the capitalists, of the Fourteenth Amendment as a semi-conspiratorial method of protecting capitalist enterprise.

Their *America in Midpassage* (1939), actually the third volume of *Rise of American Civilization*, has been described by one critic as "not only history but a magnificent essay about history." "With the aloof amusement of two moralists who stayed sober while the rest of the world got tight, they investigate the causes of the crash, the closing of the banks, the New Deal and government by the Brain Trust." Before its appearance Mrs. Beard, "quick, incisive and camera-shy," had been writing *On Understanding Women* (1931) and editing and co-editing other books that might have been similarly titled, but she brought much more than a typically feministic viewpoint to its writing. In 1942 the Beards are working on a fourth volume of *The Rise of American Civilization*, titled *The Idea of Civilization in the United States.*

Underwood and Underwood

MARY BEARD

Today, Professor Beard would like to see America as "a workers' republic"—"worker" including "all those powers covered by the idea of 'management', 'artcraft' and 'statecraft,' in the broadest sense." He hates Imperialism above everything else, sees no natural or permanent advantages in free trade, sees our greatest problem as one of distribution. Therefore, although he wishes there were a "real internationalism" that would make world collaboration possible, he has consistently argued that America should cultivate her own garden in the world as it actually is. "Self-interest is not only a legitimate, but a funda-

BEARD, CHARLES A. and BEARD, MARY—*Continued*

mental cause for national policy; one which needs no cloak of hypocrisy"; and to his mind "the supreme interest of the United States is the creation and maintenance of a high standard of life for all its people and ways of industry conducive to the promotion of individual and social virtues within the frame of national security." To get it "there must be the utmost emancipation from dependence upon the course of international exchange." These are some of the ideas which he has expanded in such books as *The Idea of National Interest* and *The Open Door at Home* (1934); in *A Foreign Policy for America* (1940) and *Public Policy and the General Welfare* (1941). In 1939 he fought against revision of the neutrality law, calling it "An Act for Allowing the President of the United States to Enter Any War That Begins Abroad"; in April of that year he warned that "we're blundering into war," a war in which "civil liberty would perish" and which could not be held "to any alleged democratic purpose"; he has not changed his mind, although some were surprised to find his name listed in the "independent group" of 58 who in September 1941 united in a public condemnation of Roosevelt's "shoot on sight" order, a statement that was made public by General E. Wood (see sketch this issue) of the America First Committee.

Beard says: "Of the totality of things discussed knowingly by the Bright Boys, I am entirely ignorant." He doesn't make claim to any of the lordly objectivity usually appropriated by historians for themselves, but instead speaks scornfully of "the solemn and pompous deceptions of 'objective' history." The secret of successful collaboration, as far as his wife and he are concerned, is "division of argument." They probably have a lively, unacademic time of it, especially if their children, Miriam and William, should happen to be present. Miriam is married and is herself the author of *Realism in Romantic Japan* (1930) and *History of the Business Man* (1938). The Beards own a "dour, sprawling house, atop a Connecticut valley slope," and number among their good friends Senator George Norris and Vice-President Wallace.

BECKER, MAY LAMBERTON Aug. 26, 1873- Author; conductor of the Reader's Guide, New York *Herald Tribune Books*

Address: b. New York Herald Tribune, 230 W. 41st St, New York City; h. 114 Morningside Drive, New York City

MAY LAMBERTON BECKER

Few figures in the literary world are better known to book lovers than May Lamberton Becker, who, as conductor of the *Reader's Guide*—first in the New York *Evening Post*, then in the *Saturday Review of Literature*, and since 1933 in the Sunday *Books* of the New York *Herald Tribune*—has supplied invaluable research service on books and authors to all inquirers. Mrs. Becker has not only an encyclopedic knowledge of the field, aided by a prodigious memory, but a truly human interest in readers and a genuinely wholehearted desire to serve them. As the *Publisher's Weekly* has said: "Our book world would not be the same without her." To further meet the needs of readers she has published *A Reader's Guide Book* (1924); *Adventures in Reading* (1927); and *Books as Windows* (1929).

Besides her work as conductor of the *Reader's Guide* and as a literary lecturer, Mrs. Becker also edits a weekly *Books for Young People* review section in the *Herald Tribune Books*. Her unfailing good judgment and lively estimates of what is best in children's books have established her as an authority to readers, writers and publishers of such books for young people. She has found time also to edit a series of tales for young readers—the Golden Tales series covering the regional output both in Canada and in this country: Old South, New England, Prairie States, Far West, Southwest, etc. In 1936 she published *First Adventures in Reading*, and in 1937 *Choosing Books for Children*.

Mrs. Becker's latest book for young people, *Introducing Charles Dickens* (1940), has exceptional interest and value because the author has for many years been an enthusiastic Dickensian. This knowledge of and love for the great English novelist she transfers to her study of his life and writings. Not only his characters, but Dickens himself comes alive in her pages: "It is a book to put on like spectacles and look through." According to Anne Caroline Moore: "It brings Charles Dickens to life in our own time, and she does it without violating the confidence of the young explorer of books bent on making his or her choice." Other reviewers are impressed by its special charm for grown-up readers, and commend the prints, photographs and pen-sketch illustrations. Still other reviewers were impressed by the success of her editing of *Growing Up With America*, an anthology published in 1941.

May Lamberton Becker was born August 26, 1873 in New York City, in one of the huge old Fourteenth Street "residences." Her father, Ellis Tinkham Lamberton, a Vermonter, had the distinction of having been the "last man to be mustered out of the Civil War." Her mother, Emma Packard (Thurston) Lamberton, Massachusetts-born, was a gifted teacher. When the family moved to Jersey City she established a special private school there—one of the first schools for children to employ modern "progressive" educational methods. The mother herself taught her young daughter (as she was later to teach Mrs. Becker's own little daughter), and May Lamberton was encouraged also to read anything she wanted to in the big family library. Though she read enormously from the age of four, she wasn't by any means an indoor bookworm. She likes to recall the huge garden back of the house where her family grew vegetables, and where she and the neighborhood boys played and practically "lived." Mrs. Becker says she owes to that hardy outdoor life her "iron constitution and a digestion like a horse," since she and the boys would cook the garden vegetables in old tin cans and bake potatoes black in their "camp" fires.

When she entered the Jersey City High School she was determined to "get 100 in everything," and she did, too—until she came down with scarlet fever and had to be out of school six months. Her record thus broken, she decided not to be a "stuffy grind," but to have a good time instead. In high school she founded the Alpha Sigma Society, a literary organization still in existence there. When, at 16, she was graduated, she knew exactly what she wanted to be: a newspaperwoman. Her father had died when she was 12, and the family income was limited. Her Greek teacher offered to send her to Barnard College, all expenses paid. But the determined young journalist didn't want either to become a teacher or to be under financial obligation to anyone. Accordingly she applied for a report-

BECKER, MAY LAMBERTON—*Cont.*

ing job on the Jersey City paper, and got it—"because of my good vocabulary." Her big chance came one day when the dramatic-and-baseball critic asked her to cover for him a matinee of Mansfield in *Beau Brummel.* Possibly because she had never read any drama criticism, she says, her piece on the play was so unusual and won so much attention that she became thereupon the regular drama critic, and later music critic also.

In 1894 May Lamberton married Gustav Louis Becker, pianist and composer, who came from Texas. Because she was the first in her family circle to marry outside New England, the family considered Gustav Becker a "foreigner." For their honeymoon the young couple went to Bayreuth to the Wagner Festival. On their return they settled in New York and took an active part in musical society: for years the "Becker Tuesdays," at which musicians and their friends met, were famous. A daughter, Beatrice, was born to them (the widow of Frederic Warde, typographer; and herself well known in the English typographical field as Paul Beaujon). The Becker marriage was dissolved in 1911.

Mrs. Becker began her own career as a lecturer on music; then, in 1907, substituted for a friend in delivering a series of talks on Victorian literature to women's clubs. As a lecturer in the book field she soon became widely known and in much demand. During the First World War she was chief of the Foreign News Bureau of the National Council of Defense. Afterward she served in editorial positions on magazines such as the *Pictorial Review*, *St. Nicholas* and *Scholastic.* It was in 1915 that she began the personal guidance, question-and-answer department called *Reader's Guide* for the New York *Evening Post,* a column which she now conducts for the New York *Herald Tribune Books.*

On her lecture tours Mrs. Becker has traveled extensively in this country and abroad. She used to spend summer vacations with her daughter in England where she was well known and popular in English literary circles. Her book, *Introducing Charles Dickens,* was later published in London. Its entire profits, including Mrs. Becker's royalties, go to war relief in London for rest centers for children whose homes have been bombed. In the United States the profits have paid for an ambulance, "the Charles Dickens," that has been operating in London. She is at present working on the American edition of *Tokens of Freedom*; and is under contract for "seven different books" which, she says, "I'll write when I can."

Tremendously energetic, with an energy constantly renewed not only by that "iron constitution" but by continuous fresh and happy interest in anything about books and people, Mrs. Becker is nonetheless always ready for a good chat with friends. She always enjoys a joke, and is the generous, keen, warm-hearted person her candid hazel eyes and hearty smile suggest. Cats are her chief hobby; she loves talking about cats—hers or anyone's—more, perhaps, than anything else. Mrs. Becker's Siamese cats became famous in the book *Five Cats from Siam* (1935), in beautiful full-page photographs.

Who's Who Among North American Authors

BEEBE, WILLIAM July 29, 1877- Scientist; writer

Address: b. New York Zoological Park, The Bronx, New York City; h. 33 W. 67th St, New York City

Dr. William Beebe, director of tropical research of the New York Zoological Society and "the one professional zoologist of the first rank whose writings hold a high place in pure literature," sailed on May 16, 1941 for Bermuda. Before departing he said that United States Army defense preparations at Bermuda had probably ruined opportunities for him to continue his undersea studies at his six-acre laboratory and residence. Beebe had built a large house on this property, which he bought from the Bermuda Government. The laboratory-residence, "Nonsuch," figures in his book, *Nonsuch: Land of Water* (1932).

"There's nothing scientific about my journey," explained Beebe. "I'm just going to see if I can't rent my place to a general or an admiral." The Army had been extending its base near his property and the sand used had disturbed the waters, he went on to say. Beebe had also heard that gasoline from the army planes and their runway near his property had contaminated the Bermuda waters. In the event that he can no longer work at his Bermuda station, he is planning to establish a laboratory elsewhere, probably in South America.

Millions have seen Beebe's spherical steel diving chamber, or tank, a watertight ball with quartz windows which he christened the bathysphere—he had been writing about a deep-sea fish, Bathytroctes—when it was exhibited at the Chicago Century of Progress Exposition and later at the New York World's Fair. It was designed by Otis Barton. He and Beebe were the first men to descend in it as far in the ocean's depths as 3,028 feet, and Beebe described the weird experience in *Half Mile Down* (1934). Usually accompanied by another observer, he would curl his lean length in the constricted chamber of the bathysphere and telephone his underwater observations to other members of his staff in the boat above. Occasionally language failed him temporarily, and he could only report: "Am writing at a depth of a quarter of a mile. A luminous fish is outside the window." But when he returned to the world of men, he wrote: "One thing we cannot escape—forever afterward, throughout all of life, the memory of the magic of water and its life, of the home which was once our own—this will never leave us."

William Beebe was born in Brooklyn, New York, the son of Charles and Henrietta Marie (Younglove) Beebe, and was christened Charles William. He received a B. S. degree from Columbia University in 1898, and then remained at Columbia another year to do postgraduate study. It was that same year (1899) that he became curator of ornithology at the New York Zoological Park, known in the city as The Bronx Zoo, and director of the Zoological Society's Department of Scientific Research. Honorary degrees have been conferred on him by Tufts College and Colgate University.

As a boy Beebe had been fond of reading the scientific romances of Jules Verne and the historical stories of G. A. Henty and had been "tremendously impressed" by Kipling. Later he read H. G. Wells and John Buchan. A taste for adventure and exploration so fostered must eventually find expression, and soon he made his first expedition into the heart of Mexico with his first wife, Mary Blair (who later divorced him, married Robert Niles, and became famous as Blair Niles, the novelist and writer of travel books). His *Two Bird-Lovers in Mexico* (1905) describes this trip. Later his wife collaborated with him in writing *Our Search for a Wilderness* (1910).

Next, Beebe's experiences at the Zoological Society's research station at Kartabo, British Guiana, yielded *Tropical Wild Life* (1917), written in collaboration with C. I. Hartley and P. G. Howes. There followed the beautiful series of monographs on pheasants. For his studies of pheasants, he lay for hours in the thick grass of Sarawak jungles to watch their mating dance, though tortured by an army of ants and in momentary danger of discovery by head-hunting Dyaks.

During the First World War, however, the scientist turned aviator. Theodore Roosevelt, whom Beebe regards as the greatest influence upon his life, was later to write: "Beebe, as bomber, has sailed in planes over the German lines; in company with a French officer he has listened to a wolf howl just back of the fighting front; he has gone with Iroquois Indians into the No Man's Land between the trenches of the mightiest armies the world has ever seen."

Much oppressed in mind as a result of his experiences, Beebe returned to Guiana after the War for peace and solace, and there he wrote the papers originally published in the *Atlantic Monthly* and elsewhere and collected in *Jungle Peace* (1918). He dedicated them to Colonel and Mrs. Roosevelt "with deepest friendship," and T. R. reciprocated with a book review in which he stated: "Mr. Beebe's volume is one of the rare books which represent a positive addition to the sum total of genuine literature. It is not merely a 'book of the season' or 'book of the year'; it will stand on the shelves of cultivated people, of people whose taste in reading is both wide and good, as long as men and women appreciate charm of form in the writings of men who also combine love of daring adventure with the power to observe and vividly to record the things of strange interest which they have seen. Nothing like this type of book was written until within the last century and a half. Books of this kind can only be produced in a refined, cultivated, civilized society."

WILLIAM BEEBE

Walter Prichard Eaton and some other literary naturalists, on the other hand, have sometimes complained mildly that Beebe's style is a trifle too portentous and that he strives a little too obviously to create literature in everything he writes. The *Dial* termed his style "sonorous and imaginative rather than nervous."

Beebe's *Galápagos: World's End* (1924) was a fully illustrated account of those strange reptiles, sea-iguanas. Then in *Arcturus Adventure* (1926) he described the Zoological Society's first oceanographic expedition, naming his book after the vessel in which they had sailed. *Zaca Venture* (1938) recorded its thirty-fifth expedition, this time on the schooner *Zaca* in the Gulf of California, from March to May of 1936.

Beebe used to be conscious of the jangle and racket of New York only for a day after his return from jungle or sea; he claims to be able to work in a boiler factory. His idea of the perfect equalization of time is six months spent in the jungle or at sea and six months in the heart of New York City, within reach of the best operas, theatres and libraries. He does most of his reading at night, and is usually awake at dawn, finding five hours' sleep sufficient. He likes some intellectual games, but cannot abide bridge or poker. While clothes interest him little, he usually puts on a dinner coat in the evening. He dislikes thinking about food so long as it is well cooked, and has found the meat of the Mexican iguana particularly tasty. Beebe's wishes in regard to meals are to have a tabloid for breakfast, another for lunch, but a dinner of

BEEBE, WILLIAM—*Continued*

many courses, beautifully cooked and served, eaten slowly with that rarest of things, real conversation. The cigarets he smokes are the mildest obtainable and he never smokes when alone.

His writing and lecturing ability is still a mystery to him. He has an atrocious memory, yet when he sits down with a pen or stands in front of an audience words and sentences begin to materialize with almost no conscious effort on his part, and whether they are good or bad the conscious part of him reads or listens with interest to what is happening. Hence, he says, he can never become conceited because he always has the feeling of being a transmitting instrument for some impersonal source of supply.

Charles G. Shaw says Beebe "believes marriage the most wonderful thing in the world." The present Mrs. Beebe, whom he married in 1927, is also a writer: Elswyth Thane Ricker, author of *The Tudor Wench* and other books on British topics.

"Who can be bored for a moment in the short existence vouchsafed us here; with dramatic beginnings barely hidden in the dust, with the excitement of every moment of the present, and with all of cosmic possibility lying just concealed in the future, whether of Betelgeuze, of amoeba or—of ourselves?" inquires Beebe in *Edge of the Jungle*. *"Vogue la galère!"*

BEECHAM, SIR THOMAS, 2ND BARONET (bē-chŭm) Apr. 29, 1879- Conductor; composer

Address: b. c/o Columbia Broadcasting System, Inc, New York City

A pungent wit, a conducting skill accompanied by pyrotechnic displays of podium gymnastics, a prodigious memory and a viewpoint liberal and individualistic, fearlessly voiced in terms that have been quoted on both sides of the Atlantic, have made Sir Thomas Beecham a Shavian figure in the contemporary musical world. His background, too, adds a strong color note to the personality of the fiery, dapper little man with the tidy goatee.

Sir Thomas inherited his taste for music from his father, the late Sir Joseph Beecham, 1st Baronet, who collected old musical instruments, together with a fortune of some $150,000,000. Beecham, *père*, made this fortune in the world-famed Beecham pills. It is said that in one advertising campaign he issued a hymnal with paraphrased words that praised his product:

Hark! the herald angels sing,
Beecham's pills are just the thing.

And when Sir Thomas, like the herald angel, conducted his own orchestra in London, it was affectionately called "Beecham's P'ilharmonic."

Born April 29, 1879 in Lancashire, England, the son of Joseph and Josephine (Burnett) Beecham, young Godfrey Thomas, at the age of seven "scornful of staid convention and the usual childish music lessons, was learning Wagnerian and other scores in his home by listening again and again to a reed organ which could be played by perforated music rolls." With the financial assistance of his wealthy father, at the age of 10 he founded an amateur orchestra which was often conducted by the great Hans Richter and, at least once, "with considerable aplomb," by young Beecham himself.

His formal education at Rossall School and at Wadham College, Oxford, went on concurrently with his musical education. In 1903 he married Utica, daughter of Dr. Charles S. and Ella (Miles) Welles, of New York. Two sons were born of the marriage. It was in 1916, on the death of his father, that he became 2nd Baronet.

In 1902 Beecham toured with a traveling opera company, and in 1905 he made his first appearance in London, with the Queen's Hall Orchestra. At 27 he was rich enough to found his own orchestra, the New Symphony, and he served as its conductor until 1908, when he organized the Beecham Symphony Orchestra. Then, in 1910, he began producing operas at Covent Garden and later at Drury Lane. Season after season, including the four years of the First World War, he kept on giving such operas as *Pelléas et Mélisande*, *Elektra*, *Salomé* and Delius' *Village Romeo and Juliet*. All in all it cost him about a million pounds or so of his inheritance. When asked if he really did lose that much, he answered: "It wasn't quite that much. But someone added up the total for me. When I heard it I fainted and had to be revived with brandy." And he comments on the whole experience: "My most successful season [Drury Lane, 1913 to 1914] was in Russian. Nobody understood a word of it." In 1916 he was knighted for his services to music.

Beecham's first appearance in America was in 1928, when he was described as "the most athletic conductor America has seen for many a season." Called "a born evangel of action," when conducting "he leaps, ducks, weaves, lunges, skates and does everything but a back flip." When he was conducting the New York Philharmonic in January 1928, the audience still recalls that, following an unusual gymnastic workout, the maestro walked off the podium with stiff, mincing steps quite unlike his usual gait. "My braces snapped," he explained when he got off stage. Braces repaired, the athletic Sir Thomas resumed the concert. It is said that his violent conducting mannerisms are mostly put on as a show for the audience. In rehearsals "Tommy," as he is affectionately referred to by his men, conducts quietly, gets results by hard rehearsing and ironic British humor. At one time when the French horn came in too loud he said: "And now I'd like to hear the horn, too."

Fond of telling funny stories about his career, Sir Thomas recalls the night when a black cat made a shambles of a Covent Garden performance of *Tristan und Isolde* by going to sleep on the prompter's box in full view of the audience; and of the time an alcoholic harpist in the London Philharmonic so loudly improvised his cadenzas in *Lucia di Lammermoor* that Beecham and the orchestra had to interrupt "with a desperate, crashing chord in D major fortissimo."

Sir Thomas likes to talk of "my orchestra," the London Philharmonic, which he founded with socialite backing in 1932. This creation was his greatest achievement in the field of concert work. In the autumn of 1940 this famous orchestra was taken over by its members to play one-night stands throughout England. It missed one appearance when Liverpool was bombed, another when its busses were bogged in Lancashire snowdrifts; but it carries on in spite of war and has played to more than 150,000 persons. Many of its members have been called to the colors, but Sir Thomas says that the authorities have cooperated with him "by stationing the players near places where they will be available for concerts."

In the spring of 1940 Sir Thomas was on his way to Australia, admittedly as a lecturer-propagandist. At that time, on his stop-off in New York, he issued a scathing denunciation of the Chamberlain Government. "A firm hand would have avoided the terrible weakness, the shocking mistakes that the [British] Government has made before and during the present War," he said. This feeble Government, he felt, greatly endangered chances of an Allied victory, at least an early one. Sir Thomas says that democracy "represents the slow evolution of man's freedom and permits us to make fools of ourselves in our own way. The opposing philosophy forces us to make fools of ourselves in someone else's way." He is not worried about the searing effect of war on the artist, and he vigorously opposes those who would ban German music and who speak of Wagner as a prophet of Nazi philosophy. "Incidentally," he says, "*Die Meistersinger* is not Hitler's favorite opera, in spite of what Nazi propaganda bureaus say. His favorite opera is *The Merry Widow*. I know because he told me so while we were both guests at the Wagner home in Bayreuth a few years ago." Of this meeting with Hitler in 1936 Sir Thomas said further: "I tried to persuade him to come to England. He said he was afraid that might 'put too much of a strain on your police force.' I pointed out that the King walked about with immunity. He said he did not think he could be sure of the same indifference and freedom from annoyance." As a postscript to this bit of Führer leg-pulling Sir Thomas added slyly: "Naturally, I made no comment on that."

Cannon

SIR THOMAS BEECHAM

Sir Thomas pulls no punches in stating his opinions, political or musical. California is still outraged over the remarks on cultural progress in America which he made there on tour in February 1941. These remarks included references to an asserted lack of devotion to the better theatre in this country, absence of opera, deficiency in choral societies and even politics and statesmanship. He emphatically asserted that Hollywood musical directors did not produce music but only shocking noise. "No one with the slightest artistic refinement can listen to movie music without the utmost pain."

But the sardonic maestro is by no means severe in his criticism when it comes to orchestras. He likes an ensemble, he says, that "can play the notes." And because he likes also "to get in touch with the human side of orchestras" he was particularly delighted with Mayor La Guardia's invitation to him to conduct the orchestra of the New York City WPA Music Project. He feels that an orchestra represents "the most exact epitome of what a well-ordered social system should be. . . All are subordinated to one purpose, and there is variety within unity." He says proudly that "up to the present I have never

BEECHAM, SIR THOMAS—*Continued*
encountered an orchestra which failed to accomplish my purpose."

That the WPA Orchestra responded beautifully to Sir Thomas was enthusiastically admitted by music critics. Olin Downes called these concerts in 1941 among the most exciting given in New York. Pleased with the quality of his audience, plain men and women and numerous young people from all over town, Sir Thomas was in fine fettle. Conducting without score, he took the orchestra radiantly through the famed "Paris" Symphony of Mozart: "The music glowed and sang with a transfigural beauty and a veritable lust of life. No wonder that the audience resounded with an ovation." Other critics applauded his conducting of Haydn's Symphony in B-flat major, No. 102, especially for the "feeling of complete security with which the players of the orchestra moved under Sir Thomas' positive and knowing command." This particular program closed with a tone poem by Delius. Beecham, known for his unusually sensitive interpretations of Mozart, is universally recognized as the greatest exponent of the music of the late Frederick Delius, his close personal friend. It was he who organized the Delius Festival in October 1929, and it was with Delius' *Sea Drift* that he opened his concert series in the summer of 1941 over CBS. This concert series was followed by engagements in Montreal, Chicago, Mexico City and Seattle.

Soon after this series he was engaged to conduct opera performances for a six weeks' period during the New York Metropolitan Opera Company's 1941 to 1942 season. This engagement, which marks his first appearance as opera conductor in the United States, will begin with a four weeks' run in January 1942; after out-of-town appearances he will return for a fortnight in March. He is also scheduled to be guest conductor of symphony orchestras in New York, Philadelphia and Detroit, and with them he will feature works by contemporary American and British composers. Among the American compositions he plans to play are Aaron Copland's *El Salon Mexico*, Virgil Thomson's *Second Symphony*, Zoltan Kurthy's *Overture*, William Schuman's *American Festival Overture* and a new piano concerto by Courtlandt Palmer.

The Beecham musical memory is fabulous: he often conducts lengthy and difficult scores entirely from memory and without a mistake. The story is told of the time he arrived only a moment before curtain time in Manchester to conduct an opera troupe there. Beecham calmly lit a cigar while the manager nervously paced the floor and exclaimed: "But it's time to begin!" "Ah, yes," sighed Sir Thomas as he adjusted his tie, adding, as he paused at the door, "By the way, what opera are we playing tonight?"

Off the podium "the stormy petrel of British music" looks small (he is five feet five), relaxed and reserved. "Indeed, with his expressed desire for 'content and peace,' his kindly brown eyes, his neatly trimmed white goatee and his polished and beautiful speech, he seems like a retired English schoolmaster, with just a hint every now and then of the gentleman who slipped when he came to dinner."

BEMELMANS, LUDWIG (bĕm'-ĕl-mĕns) Apr. 27, 1898- Author; illustrator
Address: h. 20 Gramercy Park, New York City

Of Ludwig Bemelmans, William McFee comments: "Ludwig Bemelmans is one of those fortunate writers who have all the reviewers ranged on one side, rooting for him . . . one always wants to reread Bemelmans." *The Donkey Inside* (1941) was received with all the customary enthusiasm. This semi-fictional collection of 23 sketches, essays and anecdotes based on two trips to Ecuador, a country which Bemelmans calls "the quintessence of South America," inspires the following comment from one critic: "Mr. Bemelmans has a fine faculty for making *everything* seem strange and exciting, including tame headhunters, the servants on André Roosevelt's ranch, a cocktail party in Quito and the Indian lad whose bus-driving brother gets a bonus for calling his machine *Adolfo Hitler.*"

The author himself, however, is afraid that when Ecuador authorities receive copies of his book, which describes in story and picture the "beautful madness of this lovely land" from which he returned in October 1940, they won't permit him to revisit them. "I love the country," he says sadly, "and I say in the book how wonderful it is, but I also point out truthfully some things about it that the inhabitants are not pleased to see. You know the Spaniards. They are most eager to have you see what is good, but when you say: 'Yes, it is beautiful, but aren't there a great number of flies on it?' then they have no use for you."

Bemelmans' own country didn't have much use for him either. He was born in Meran in the Tirol on April 27, 1898, the son of Lambert and Frances (Fisher) Bemelmans. His father was a Belgian painter, his mother the daughter of a prosperous Bavarian brewer. After his parents were divorced Ludwig was brought up in Regensburg by his Grandfather Fisher, who looked upon all artists as *Lumpen.* Ludwig attended the Königliche Realschule at Regensburg, couldn't pass, and then was sent to a private academy for backward boys in Rothenburg until its rector wrote to take him away. After that there was nothing to do but become an apprentice for a Bavarian uncle who owned a string of hotels in the Austrian Tirol; Ludwig wanted to paint, but had been assured that painters were "hunger candidates." It took him a year to run through the string of hotels—every manager sent him back in despair—and at the last hotel he shot a vicious headwaiter who had struck him. It was then a choice between reform school and America, a land which, according to well-informed sources, would "sheer his pelt and clip his horns." He chose the latter.

So it was that in December 1914 Ludwig Bemelmans, age 16, sailed from Rotterdam for the United States, eager to see the Indians. In his pockets were letters of introduction to managers of several American hotels, and as soon as he reached New York he stopped at the employees' entrance to the Astor. The letter of introduction was effective, but only briefly so. As a bus boy he broke too many dishes. There were more letters, however, and the McAlpin manager was also impressed. There Ludwig stayed for a year, and then a hotel which he calls the Splendide (critics think he refers to the Hotel Ritz) took him on as waiter's runner. This time it was his fondness for Belgian hothouse grapes as much as anything else that proved his undoing, but "Mr. Sigsag" of the Grill Room befriended him, and he was working there and studying painting in his spare time when the United States entered the First World War.

LUDWIG BEMELMANS

Young Bemelmans entered the First World War, too, shortly after his French had been gently corrected by Marshal Joffre, one of the Splendide's distinguished guests. The young man was variously stationed at Fort Ontario near Oswego, New York, at the Field Hospital, Unit N, and at the Officers' Training School at Camp Gordon near Atlanta, Georgia. His is perhaps the most unconventional war diary to be published in modern times, but it remained untranslated from the German until two decades later.

After the Armistice, Bemelmans, now a second lieutenant and a naturalized American citizen, planned to return to Munich to study painting. But "Mr. Sigsag," now assistant head of the banquet department of the Splendide, persuaded him that his was a better proposition, and until 1925 Bemelmans was associated with him. *Life Class,* published in 1938, might have been dedicated to this serious, kind, comic little man whose whole life centered in the Splendide and who finally perished in one of its elevator shafts. Bemelmans' own days at the Splendide are humorously and carefully recorded in the book's pages.

Next came the period when Bemelmans was himself part owner of the famous Hapsburg House on New York's East Side. At last he had an opportunity to satisfy his artistic aims. He joyously painted pictures on the walls of the restaurant—maybe an old coat, maybe a pair of open windows, a

BEMELMANS, LUDWIG—*Continued*

bird cage or a sprig of green vine—but pictures that were all, for some unknown reason, funny. Bemelmans, as a matter of fact, spent much of the Hapsburg profits in making the restaurant as interesting as he could. He spent some of them, too, in ordering the most expensive foods and the best dining room for himself; but apparently his partners didn't decide definitely to buy him out until they found him feeding their costliest imported wines to his pet dachshund. Now Bemelmans occasionally grows nostalgic about the life of a restaurateur who is also an epicure.

One day May Massee, editor of children's books for the Viking Press in New York City, was taken by a lithographer to see Bemelmans at his apartment on 8th Street. There he had painted Tyrolean landscapes on his window shades so that he could pull down the blinds when homesick or lonely and be comforted by the familiar scenes. Miss Massee, seeing them, immediately decided that here was a man who should be writing a book for children. She managed to persuade Bemelmans that she was right, and the first result of her persuasion was *Hansi* (1934), a story about Bemelmans' childhood in the Tirol, which he also illustrated.

In November 1935 Bemelmans married Madeline Freund, the daughter of a Westchester banker. They have one daughter, Barbara. *The Golden Basket* (1936), whose hero in real life was an old waiter in a hotel Bemelmans remembered, was his second book. More children's books followed: *Castle Number Nine* (1937) and *Quito Express* (1938), the story of a lost baby in Ecuador, to which Bemelmans had just made a four months' visit. Critics, nearly all critics, found them "enchanting", "delightful", "unexpected and lovable"—in other words, average Bemelmans.

The year 1937 also marked the appearance of *My War with the United States,* the war diary mentioned earlier. Naïve and wickedly apt, humorous and touching, full of war experiences that could never have happened to anyone else, the ravings of insane patients, homesickness, adventures with girls and odd little comparisons between Germany and the United States, critics had a difficult time describing it and deciding exactly what to say about it but apparently had little difficulty in admiring it. Bemelmans was by this time selling articles and illustrations to the *New Yorker, Town and Country, Vogue* and *Stage* with great regularity, and in 1938 made a trip to Europe for Condé Nast. *Life Class,* the story of his days at the Astor, McAlpin and Splendide, appeared the same year—"as perfect an equivalent of his ingenuously sophisticated drawings" as is James Thurber's prose of his. And in 1939 came *Madeline*—rhymed couplets about a little girl in a Parisian school who made her schoolmates insanely jealous by having her appendix out. It had beautiful water-color reproductions of real scenes in Paris and no particular moral. "Humorous and delightful," said the *New Yorker.* That same year 10 of his short stories and sketches, illustrated by the author, were published under the title *Small Beer.* "I think no one in the informal-essay field today can equal it," said Otis Ferguson. *At Your Service; the Way of Life in a Hotel* was published in 1941. *Hotel Splendide,* a collection of sketches, mostly from the *New Yorker,* was published in December 1941 and hailed as "vintage Bemelmans . . . as mellow and fruity as ever."

When writing for children Bemelmans simply writes stories that he himself happens to like, although he does try them out on his young daughter Barbara. (She "loves much worse books much better," he says cheerfully.) Usually characters and illustrations are based on real people and real events: Bemelmans claims he has no imagination. Few would agree with him on that score, however; as one critic says: "[To Bemelmans] most of the world is slightly fantastic. In his pictures the most ordinary objects become, by some process in his mind, faintly ridiculous; and people walk, sit and talk in a fashion most disconcertingly ludicrous."

Bemelmans likes to draw really big pictures—he once tried to persuade Miss Massee that children's books should be three feet square. For the colored ones he uses water colors. He really likes painting much better than writing and probably would never write a word if he had plenty of money and no insomnia. As it is, writing serves as "occupational therapy," for Bemelmans seldom can get more than three or four hours sleep a night, and while lying awake makes a habit of writing in his mind, then putting the key phrases down and filling in between them. He rewrites four times or more. He still loves good food, good living and travel, but finds that all three are more readily available to a restaurateur than to a literary artist. Sighing philosophically, he says: "If a check bounces now and then—well, it is something I must accept."

Who's Who in America

BENCHLEY, ROBERT (CHARLES)

Sept. 15, 1889- Humorist; writer; dramatic critic; actor

Address: b. c/o Metro-Goldwyn-Mayer, Hollywood, Calif; h. Scarsdale, N. Y.

One way to describe Robert Benchley is to say that he is all things to all men—and all of them funny. He is probably the most versatile humorist in America, and the most successful. He has written a score of brilliantly funny books; his articles and dramatic criticism in the *New Yorker* have been gospel to theatregoers; he has been the star of a popular radio program; his presence has enlivened many a motion picture; and he has produced and starred in one-reel films that have been considered the most profitable in that field outside of cartoons.

Perhaps it is through these one-reelers that the man in the street knows Benchley best, and with good reason; certainly Benchley, sprawled on his bed in picturesque disarray (in *How To Sleep*) or brightly adding national income for the year 1889 to two Irishmen and carrying one (in the immortal *Treasurer's Report*), is unforgettable. John O'Hara (see sketch this issue) says lyrically of him: "Robert Charles Benchley is like a summer sunset on Lake Louise. He is like India's coral strand. He's a Waldorf salad, a Berlin ballad, and, lately, he's Mickey Mouse." This last refers to Benchley's participation in the semi-documentary Disney fantasy called *The Reluctant Dragon*, in which he is shown happily wandering around the Disney studios, finding out what makes Donald Duck tick.

A modest little biography supplied by Benchley himself claims that he was born on the Isle of Wight, September 15, 1807, shipped as cabin boy on the *Florence J. Marble* in 1815, wrote *Tale of Two Cities* in 1820, married Princess Anastasie of Portugal in 1831 (children: Prince Rupprecht and several little girls) and was buried in Westminster Abbey in 1871. That is not strictly true. Mr. Benchley was born on September 15, 1889, in Worcester, Massachusetts, the son of Charles Henry and Jane (Moran) Benchley. He went to Phillips Exeter Academy, where he is still remembered as the author of a paper on "How to Embalm a Corpse," written after being given an assignment to write an exposition of how to do something practical. Then he drifted on to Harvard, from which he received his B. A. degree in 1912. Offspring of a plain, severe, devout New England family, he never drank, smoked or gambled throughout his whole college life, but merely exercised his more or less perverse sense of humor. He was president of the *Lampoon*, Harvard's comic magazine, participated in the Hasty Pudding show as a chorus girl (he recalls with pride that his waist then was a negligible 19 inches, far from today's comfortable girth) and delighted his friends with impromptu lectures. He received an excellent education in spite of the fact that his "courses were selected with a serious purpose in mind—no classes before 11 in the morning or after 2:30 in the afternoon and nothing on Saturdays." For a while he considered a diplomatic career—this project flopped when he had to write his term thesis on the Newfoundland Fisheries case. "His interpretation was scholarly, but his approach was from the point of view of the fish"—a point of view that he was to keep all his life.

ROBERT BENCHLEY

Benchley's first position was as secretary to the director of the Boston Museum of Fine Arts. His next was in the New York advertising office of the Curtis Publishing Company, where he worked until 1914, when "Curtis stayed in Philadelphia in its small way and I went elsewhere." Back in Boston, Benchley married Gertrude Darling and got a position with the Russell Paper Company as a social service worker organizing clambakes and bowling matches for the employees. In 1915, a week after Benchley's first son, Nathaniel Goddard, was born, the directors decided "that the boys had had enough clams," and Benchley was fired.

His next association was more in his line. He worked under F. P. Adams (see sketch this issue) as associate editor of the New York *Tribune's* Sunday Magazine, writing weekly articles which steadily increased his reputation as a humorist and becoming a welcome after-dinner speaker at smokers and banquets. His best effort, perhaps, was his address on Prohibition and the Navy, when, in the character of Josephus Daniels' chief assistant, he disclosed to the Navy League the government's intention to drive "even the *memory* of vile spirits from our jolly jack tars."

The end of the association was an unhappy one. Benchley, who hates war violently, resigned in 1917 in protest against the *Tribune's* war policy. His next two years were rather desolately occupied with a job as press agent for William A. Brady and as publicity secretary to the Aircraft Board in Washington. Mean-

BENCHLEY, ROBERT—*Continued*

while, though, *Vanity Fair* was publishing his articles, and in 1919 he was hired as its managing editor. It was there that he met Robert Sherwood and Dorothy Parker, working respectively as photographic editor and dramatic editor. Although these three undoubtedly brought new wit and new life to the magazine, they were regarded with caution and even fear. For example, when a notice was posted forbidding employees to speculate about one another's salaries, the irrepressible trio took to wearing theirs on a placard around their necks. As a result of these high jinks—and a rather inconvenient sense of editorial independence—they left *Vanity Fair*. Benchley soon thereafter became *Life's* dramatic editor (1920) and kept that position—which he took with considerable misgivings, reiterating that he knew nothing about reviewing plays—until 1929.

Benchley and Sherwood, who had become *Life's* editors in 1924, helped to boost its circulation by their highly popular burlesque issues, taking off a dozen prominent magazines and even tabloids. (Benchley once posed for a newsphoto of an ax butcher, and Dorothy Parker was snapped as the murdered paramour.) Benchley's dramatic reviews were also getting him a steadily growing following of admirers. One of the high spots of his career as a dramatic critic was his *contretemps* with *Abie's Irish Rose*. Benchley panned it in 1922 and for five long years was faced with the task of describing the play in different terms every week in his "Confidential Guide." People bought *Life* merely to gloat over Benchley's plight and read such desperate paraphrases as "Just about as low as good clean fun can get"; "Showing that the Jews and the Irish crack equally old jokes"; "The kind of comedy you eat peanuts at"; and finally the mournful "Will the Marines *never* come?" During those years he also began to write books, each page of which was "riddled with pitfalls for sanity," among them *Love Conquers All* (1922); *The Early Worm* (1927); and *20,000 Leagues Under the Sea or David Copperfield* (1928). He also conducted a column called "Books and Other Things" in the New York *World* from 1920 to 1921.

In 1922 Benchley made his acting debut in a skit in *No, Sirree*, an amateur show produced and staged by eminent figures in the literary and art world (offstage music, the program note stated, was by Jascha Heifetz). The name of the skit was *The Treasurer's Report*. This little gem of mangled figures and metaphors, written by Benchley in a taxi on the way to the first rehearsal, was in 1930 incorporated into a book called *The Treasurer's Report, and Other Aspects of Community Singing*, which went into 12 editions and was translated into Swedish. Irving Berlin heard him and signed him up for his *Music Box Revue*, which ran nine months. Ten weeks in vaudeville followed, with his act obligingly scheduled early enough in the evening not to interfere with his duties as dramatic critic.

In 1929 Benchley resigned from *Life* Magazine to become dramatic critic of the *New Yorker*, for which he also wrote criticisms of the New York press under the signature of Guy Fawkes. He kept that position until more profitable Hollywood activities began to claim most of his time. He started in motion pictures in 1928 when, at the suggestion of Walter Wanger, then in Paramount, he dragged out his old stand-by, *The Treasurer's Report*, and went over it lightly at the Astoria studio. Audiences loved Mr. Benchley, loved his nightmare-like financial calculations, loved his apologetic chuckle—and he has since produced over 30 of these shorts for several studios.

Among his better short subjects are: *The Love Life of the Polyp*; *How To Vote*; *How To Sleep* (which gave MGM the Academy Award for the best short of the year); *An Evening Alone*; *Raising a Baby*. Aptly described as "Benchley humiliations recollected in tranquility," they all show him thwarted by the complexities of life around him. Although Benchley goes about producing them at his usual unhurried pace, the average shooting time is three days, the average cost around $8,000. Gross returns are five times that, and for this reason alone the portly Mr. Benchley is worth his weight in gold to Hollywood.

Nor is that all he has to offer. He is in 1941 under contract to MGM as actor, writer and director. Considered one of Hollywood's crack writers of light dialogue, he has been constantly called in to supply a light touch or to bolster up failing dialogue. After a while, when it became apparent that he could read his own lines with considerable effect, they put him to work as an actor in feature-length pictures. Benchley has played supporting roles such as the disillusioned newspaperman in *Foreign Correspondent*, the family lawyer in *Hired Wife*, the good-natured father in *Nice Girl*, the wayward husband in *You'll Never Get Rich*, with Fred Astaire and Rita Hayworth. The characters he portrays on the screen have a startling resemblance to himself and he occasionally gets a chance to play his mandolin, an accomplishment acquired during his Harvard days. Although Benchley has long fought off attractive radio offers (once when a tobacco firm questioned him about his favorite brand of cigaret, he wired back uncompromisingly: "Marijuana"), in 1938 his friends finally persuaded him to take part in an Old Gold program. He flourished like a green bay tree, rating sixth on a national popularity poll.

Benchley's friends often indulge in heated discussions about which of Benchley's manifestations are most expressive of him. Many of them agree that it is in such books as *My Ten Years in a Quandary, and How It Grew* (1936) or *After 1903—What?* (1938) that the true Benchley is to be found. Or even in his other books: *Of All Things* (1921); *Pluck and Luck* (1925); *No Poems; or, Around the World Backwards and Sideways* (1932); *From Bed to Worse* (1934); and *Why Does Nobody Collect Me?* (1935). Stephen Leacock it was who said: "None excels Robert Benchley in the ingenious nonsense of verbal humor." This humor is tinged with a sort of merry madness. He is the master of the dazzling *non sequitur* ("Is life made too easy for the youth of today? Are we raising a generation of pampered dawdlers? What is that on your necktie?"); his flights of extravagance threaten reason; yet his very lack of logic is implacably logical. And his nonsense is always couched in prose that is a model of clarity and elegance. There is, besides, something infectious about his style that forces all the critics to write like Benchley when reviewing his books.

"A bland punchinello," Benchley's private life is the stuff of which legends are made. His friends Ernest Hemingway and Donald Ogden Stewart (see sketch this issue) have put him in their books. Everybody has a favorite story about him: the time Benchley left a note to the milkman at Grant's tomb; the time a suite of offices directly below his office was devastated by fire while he sat tapping out a story in a fireman's helmet presented to him by his native Worcester; the time he telephoned the late ex-Kaiser at Doorn, on a sudden impulse to speak German. Through all these stories the Benchley personality emerges as an extremely likable one, a quality that carries over to the screen. Universally respected as a craftsman, his genuine kindness has won him legions of friends. "I cannot think of anyone," says John O'Hara, "who has not been advanced spiritually, culturally and even financially by association with Mr. B." Yet he is modest and has had to be lured into every step of his career by friends who thought more of his talents than he did. He has never done anything for himself but has merely been "tossed from pillar to post, augmenting his income at each rebound."

In life, as on the screen, Benchley carries on an indomitable if losing fight against the conspiracy of inanimate things. A confirmed foe of order, he tries to carry confusion wherever he goes, cunningly mixing up appointments, writing love letters to his bankers above his endorsement of checks. His rebellion against discipline is expressed in his favorite motto, plain above his desk: "The work can wait." He is a constant defier of the deadline, the creator of elaborate alibis. Yet, paradoxically, he has a phobia about unclean copy, and his typewritten manuscripts—he "cannot write more than three or four lines in longhand without fainting"—are models of tidiness. Hemingway used to call him "Garbage Bird" to describe his appearance "in the early morning light of Montparnasse on certain occasions." He himself says modestly that he is "handsome in an unusual sort of way." A grandfather, and the father of a second son, Robert Gale, Benchley has become resigned to a life of fervid activity and only occasionally remembers with a sigh his ancient ambition to write a history of the Queen Anne period.

BENEDICT, RUTH June 5, 1887- Anthropologist

Address: b. Department of Anthropology, Columbia University, New York City; h. 448 Central Park West, New York City

RUTH BENEDICT

If asked who is the foremost woman in anthropology today, most anthropologists would name Ruth Benedict either first or second. She is one of those who have contributed most to a stronger alliance among various branches of social science: anthropology, sociology, psychology. With others in this group of social-scientific pathfinders, she has gone a step further: having applied related technics to the materials of anthropology, she applies the findings of her science to fundamental problems of our day.

In her book, *Race: Science and Politics* (1940), she presented a popular account of what scientists have learned about race, and an analysis of what she calls "racism," examining and refuting the claims of racial superiority and analyzing the motivation of racial propagandists. "Dr. Benedict has put into her debt," wrote one reviewer, "all those who wish honestly to come to grips with the perennial race problem, whether in its Negro, Semitic, BENEDICT, RUTH—*Continued*

Nordic, Oriental, or 100 per cent American guise." Most scholars agree with the fundamental thesis of her book although several take issue with specific items of fact.

Dr. Benedict writes not only as a scientist, but also as an Old American convinced "that all the arguments are on the side of the Founding Fathers who urged no discrimination on the basis of race, creed, or color." In 1799 "her ancestors 'went West' from Connecticut to New York on a bob-sled, with a cow tied on behind to give milk for the babies. Six of her ancestors fought in the Revolution. On the other side of her family, her great-great-grandfather in 1802 fled to the United States from his home in Nova Scotia because he dared to propose a toast to George Washington at a public banquet; only the influence of his relative Cornwallis had saved him from being shipped to Bombay as a political prisoner."

The descendant who was to pioneer in academic fields and fight for democracy with her pen was born in New York City on June 5, 1887. Her father, Dr. Frederick S. Fulton, a physician, died when she was two years old, and her mother, Bertrice J. (Shattuck) Fulton, supported her family by teaching. The first six years of Ruth Fulton's life were spent on the family farm in Norwich, New York. Then she and her sister followed the trail of their mother's teaching appointments through Missouri and Minnesota, keeping house for her and taking care of her. After taking her B. A. degree at Vassar in 1909 she taught English for a while in a girls' school, turned to anthropology only later. In 1914 she came East and was married to Dr. Stanley R. Benedict, a biochemist, who died in 1936.

Dr. Ruth Benedict was first known as a poet, though at the same time unknown, for she wrote under the name of Anne Singleton. Her verse became familiar to readers of *Poetry*, *The Nation* and other periodicals which published contemporary verse. In 1919, rather indifferently and chiefly because she wanted "busy work," she enrolled at Columbia University for some courses under Franz Boas (see sketch 1940 Annual), the grand old man of anthropology. Her interest was soon deeply serious and eventually she became, next to Dr. Boas himself, the key figure in the Department of Anthropology In 1923 she received her Ph. D. degree at Columbia and since that time she has been teaching there, the first eight years as lecturer, then as assistant professor, and since 1930 as associate professor. After the retirement of Dr. Boas in 1936 she was until 1939 acting head of the Department—a considerable distinction for a woman in any large university.

Her teaching career has been interspersed with periods in the field, where she studied the Pueblo Indians, the Mission Indians, the Apache, the Pima, the Blackfoot. Her students have gone on expeditions to New Guinea, Samoa, Fiji, Africa, South America and to many North American tribes. Dr. Benedict is in 1941 working on a book in which some of this widespread field work will be drawn together. Studying the manifold experiments in living represented by primitive peoples today has been exciting to her, she says, partly for the light it sheds on our own "tribal ways."

Dr. Benedict has made special studies of primitive religion, mythology and folklore, as well as what the profession calls "straight ethnology." Her *Tales of the Cochiti Indians* was published in 1931, and *Zuni Mythology* in 1935. In the '30s, when psychoanalysts began to appreciate the insight to be gained through direct collaboration with anthropologists, she was among the first to give active cooperation. Her *Patterns of Culture*, published in 1934, visualized culture as an integrated whole, applying to groups the psychiatric and psychological concepts usually employed in connection with individuals. Of this book, which aroused considerable controversy, the New York *Times* said: "By training, vocation and chief interest Dr. Benedict is an anthropologist, but a quartet of sciences, anthropology, sociology, psychology, and philosophy, is responsible for the volume, which is expertly conceived and brilliantly developed." A colleague, Dr. Melville Herskovits, commented that "quite aside from Dr. Benedict's argument her book represents a heartening return to the distinguished writing tradition of early anthropological literature."

The literary gift that determined her earlier choice of a career has proved an asset to Dr. Benedict's students and friends as well as to her readers. No matter how swamped she is with editorial and teaching duties, speeches to deliver, conferences to attend, "deadlines" to meet, she somehow always finds time to doctor the ailing manuscripts that are left on her doorstep.

Looking at Dr. Benedict, one would place her as poet rather than scientist. Tall, gray-eyed, with short, white hair smoothly outlining a finely shaped head, she habitually wears tones of grayed blue or green. She speaks in a soft, low voice, sometimes quite slowly, occasionally hesitating for a word. Although she no longer publishes poetry she still writes a little and reads a large part of what is being produced. For that matter, she finds time to read an amazing amount of contemporary prose. Aside from reading, her chief winter diversion is shifting from one task to another or traveling to attend some conference or make a speech. In summer, when she is not gathering data in the field or initiating a group of students into field methods on an Indian reservation, she usually retires to the old family farm in Norwich and works on her next book.

American Men of Science
American Women
Who's Who in America 1938-39

BENNY, JACK Feb. 14, 1894- Radio and film actor

Address: b. c/o National Broadcasting Co, Sunset Blvd. and Vine St, Hollywood, Calif; h. 1002 N. Roxbury Dr, Beverly Hills, Calif.

Jack Benny has always been a worrier, and in Hollywood they say he lives on a diet of fingernails and black coffee. A hit ever since he entered radio in 1932, nobody has ever been able to understand why he should worry, and it was harder than ever to understand it in 1941. This was the year in which his eighth contract with the makers of Jell-O was better than any previous ones; the year in which more than 1,000 New York and Hollywood celebrities paid tribute to him in a coast-to-coast broadcast honoring the beginning of his tenth year in radio; the year in which he was cited for service to race relations "in terms of real democracy"; the year in which his salary from radio reached an estimated $350,000 and that from motion pictures $200,000; the year in which he was a guest on the *Quiz Kids* program. And still he worries!

Nobody else associated with him does, though. General Foods, his radio sponsor, considers him and his show important enough to get more than three-quarters of its advertising appropriation for Jell-O. His co-workers know they have a good thing. And millions of listeners forget their troubles for a half hour every Sunday night while he and his troupe make merry.

They have made merry in the same way ever since Benny has been on the air, for he hasn't varied his routine in all that time. Unlike other radio comedians, he doesn't depend on conventional question-and-gag routines, but instead builds up a clear picture of himself in a given situation and lets the audience follow him through the complications that develop out of it. The man who once said, "Gags die, humor doesn't," thinks up comic ideas that last a long time: he tries to sell his old Maxwell; he presents himself as a violin virtuoso; he palms himself off as a Western sheriff of the old school; he nurses along a feud with Fred Allen; he gets mixed up with the Navy. And no matter what the situation, the humor derives from it, rather than from independent gags.

No matter what the situation, too, Jack Benny gets it in the neck. Tenor Dennis Day, orchestra leader Phil Harris, announcer Don Wilson, sharp-tongued Mary Livingston, valet Rochester get their digs in every time. Benny explains that he tries to make his character "encompass about everything that is wrong with everybody. On the air I have everybody's faults." His fellow performers never let him forget it. Each one an individual with an established character, they toss back at him the fat lines for which Benny as straight man lays himself open.

Benny isn't the kind of comedian who can just throw these lines out. He's no ad libber, and probably the saddest and truest lines of his radio history came out when Fred Allen (see sketch this issue) had him on the ropes. "If I had my writers here," he moaned, "you wouldn't talk to me like that and get away with it." But Benny works hard with his writers, and Sunday night's finished performance is the result of a week's hard work. Every Monday morning he and Bill Morrow and Eddie Beloin sit down to think out the next show. By Tuesday there is a rough draft, and anything from six to eighteen hours on Wednesday and Thursday are spent polishing, changing, building, cutting what they've thought up into a working rehearsal script. On Friday night there's a rehearsal and another on Saturday with the whole cast brought together. Often more revisions are made then, and it is not until Sunday, at final rehearsal, that the show is in its final form. By that time Benny and his co-workers have not only lined up a situation and written funny lines but they have also figured out ways in which to make the audience buy. The commercials, which Benny never figures as just necessary evils, have been trickily and neatly fitted into the program.

JACK BENNY

They buy a lot of Jell-O in Waukegan, Illinois, where Jack Benny was born, and they even planted a Jack Benny elm beside the city hall. There were few indications they would do so, however, back in the early 1900's when little Benny Kubelsky was practicing on his fiddle studying to be a concert violinist. He wasn't exactly a child genius, and Benny admits that his father, Mayer Kubelsky, gave him a monkey wrench at the same time he presented him with a violin. "He told me not to take chances. Plumbing isn't a bad business." His mother, Emma (Sachs) Kubelsky, agreed.

The family left Waukegan for a while to live in Chicago, but they were soon back, and their son went to high school in Waukegan and spent his summers there helping in his father's haberdashery store. He also kept practicing his violin, and became good enough to play with a small orchestra at school dances

BENNY, JACK—*Continued*

and firemen's balls but not quite good enough to get a job in the local theatre orchestra. He compromised with a job as doorman for the theatre and later with one as property man. Then, feeling he had had enough theatre training, he went on the stage himself.

He was 17, and his act was called "From Grand Opera to Ragtime." In it a vaudeville pianist named Cora Salisbury did her turn, and then Benny entered with his violin and sawed away with the little finger of his bow hand elegantly extended, pretending to be mesmerized by its motion back and forth. On the circuit around Waukegan he was a hit and sometimes made as much as $75 a week. For six years he did this until the Navy got his services, for much less, in 1918. But Benny never got to be a sailor. After his enlistment he was made a sort of juvenile lead in *Maritime Frolics,* a revue put on by the Great Lakes Naval Station, and with it toured the midlands. It was then that the Jack Benny of today was really born. He tried to raise money for the Navy by playing the violin, but discovered one day that joking with audiences was much more likely to bring forth contributions. Pretty soon he was really cutting loose with gags and thinking of himself as a monologuist rather than a musician.

He still called himself Benjamin Kubelsky, though. When the War was over, he decided Ben K. Benny was a neater name for a vaudeville performer. This eventually became Jack Benny when people began confusing him with a fiddler named Ben Bernie (see sketch this issue). It was easy to do this, for though Benny's act was a monologue, he always carried his violin on the stage and looked at it wistfully from time to time. He got along, and it wasn't long before he was able to walk on the stage of the Palace Theatre in New York, once the high temple of vaudeville, without any props and wow the audience. He was a success in the Shubert revues in which he appeared and the night clubs where he entertained.

At the end of one transcontinental vaudeville tour, Benny landed at the Orpheum Theatre in Los Angeles and played for eight straight weeks, establishing a new house record. MGM, just beginning to be interested in revues, promptly offered him a contract, and the *Hollywood Revue of 1929* was enlivened by his presence. Other feature pictures and shorts followed—for MGM, Vitaphone, United Artists—and Jack Benny pictures have continued through the years to be a Hollywood feature. It wasn't until 1936, however, after his performance in *Broadway Melody of 1936,* that he became a star. That was the year, too, in which he signed a contract with Paramount. Since then he has appeared in *College Holiday*; *Artists and Models*; *Artists and Models Abroad*; *Man About Town*; *Buck Benny Rides Again*; and *Love Thy Neighbor*, a continuation of his radio feud with Fred Allen. In 1941 he coyly convulsed audiences in a revival of *Charley's Aunt,* and then promptly reported to Warner Brothers for *The Widow Wouldn't Weep,* a comedy of divorce by Dalton Trumbo (see sketch this issue).

But many wisecracks flowed over the stage between Benny's first film appearance and the time he became a star. Shortly after his first ventures, he went back to New York. He had a wife with him this time. Her name was Sadye Marks and she had been a stocking clerk in the May Company in Los Angeles before he married her on Valentine's Day (his birthday, too) in 1927. She is now Mary Livingstone, his highly vocal partner. The Bennys arrived in New York just as Earl Carroll was casting his annual edition of the *Vanities.* Benny got a part, became the show's star and for two years cashed in as a leading comedian and master of ceremonies.

It was in 1932 that Benny's voice first came over the air. On Ed Sullivan's broadcast there was an announcement: "Ladies and gentlemen, this is Jack Benny talking. There will be a slight pause while you say, 'Who cares?'" Canada Dry soon cared enough to sign him up for a year; Chevrolet followed suit in 1933 and 1934; and the General Tire and Rubber Company sponsored him in 1934. Then came Jell-O, which Benny still continues to sell, his program the "favorite program" five times and Benny the "favorite comedian" seven times in annual polls of radio editors; his Crossley rating consistently at the very top. Never has there been a lessening in his popularity. Even the fact that in April 1939 he pleaded guilty to cheating the Government of $700 in duty on trinkets which had been smuggled into the United States by Albert N. Chapereau, was fined $10,000 and given a suspended sentence of a year and a day, made no difference. Instead there were reports in the spring of 1941, when rumors of a rift with Jell-O were current, that he had been given a number of $25,000-a-week radio offers. He didn't take them but remained at his $17,500 salary and got three program lay-offs and an agreement to have the second show on Sunday night broadcast by recording.

Harrassed-looking, cigar-smoking Benny is no wit off the stage, and no playboy either. With Mary Livingstone and their adopted daughter, Joan Naomi, he lives quietly in their handsome Beverly Hills home, the silence broken only by occasional heckling from Mary, who takes their radio programs seriously but who does call him, sweetly, "Doll." (He calls her "Doll," too.) When he feels that he has to relax, he plays bridge or casino or even follows a golf ball for a mile or two.

BENSON, SALLY Sept. 3, 1900- Author
Address: c/o Random House, Inc, 20 E. 57th St, New York City; h. 151 E. 46th St, New York City

Sally Benson's sister said to her once: "I know you and I know just how smart you are. You don't write your stories. You get them through a Ouija board." If this is true, the Ouija board is to be congratulated. Mrs. Benson's latest collection of short stories, *Junior Miss,* all dealing with the troubles, trials and foibles of 12-year-old Judy Graves and formerly published in the *New Yorker,* was the Book-of-the-Month Club choice for June 1941. Writing in the New York *Times,* E. H. Walton says: "Any one who is familiar with Sally Benson's work will know how deft and subtle and amusing *Junior Miss* is. Though she has forsworn the sophisticated wit and irony for which she is so noted, these seemingly simple sketches still bear her hallmark and are no less adroit than her earlier stories. In writing of Judy Graves' minor adventures, Mrs. Benson is as pithy and concise as ever, as much a master of the perfect phrase, with an added quality of warmth and gentleness which, until now, she has rather conspicuously lacked."

Perhaps the talent for the "brilliantly malicious" phrase for which Mrs. Benson has previously been most noted is a gift from her mother, of whom she herself says: "Mother is part Irish, but she always seems all Irish to me. She never gives anybody a compliment. She used to say, 'Go on to your party, you look terrible but maybe somebody will dance with you.'"

At the time when Sally was hearing those words she was Sara Mahala Redway Smith, who was born in St. Louis in 1900 and came to New York City 11 years later. She was the daughter of Alonzo Redway and Anna (Prophater) Smith. She was graduated from the Horace Mann School somehow ("I was very dumb"), and since at 17 she had no desire whatsoever to go to college she walked confidently into the National City Bank and asked to see the president. She did, as a matter of fact, succeed in seeing the vice-president, who gave her a job "singing into dictaphones" at $60 a month.

At 19 Sara Smith married Reynolds Benson, now graduate manager of athletics at Columbia University. A daughter, Barbara, was born the next year. But she kept on with her career, next getting a job on the old *Morning Telegraph* which entailed interviewing stray authors, actors, actresses. After that she reviewed movies—32 a month—for a pulp-paper house. Her salary was only $75 a month, but she filled it in by continuing with her interviews. It was not until 1930 that Sally Benson wrote her first piece of fiction. It was called *Apartment Hotel.* She promptly sold it to the *New Yorker,* and when she went to see the fiction editor she was told that it was the best story "of whatever its kind was" they had ever published. Would she write more?

Robert McAfee

SALLY BENSON

She would. But not right away. For three months she simply gloried in the satisfaction of having written and sold a story, for nine months she couldn't get down to work. Getting "broker and broker," she finally wrote another. Since that time the magazine has refused only one of her stories, *The Overcoat,* which was later published in the *American Mercury* and republished in O'Brien's collection of best short stories. "It's true that I haven't had a rejection," Miss Benson once confided, "probably because I haven't tried other markets. My style fits here and it wouldn't most places. Every once in a while editors of some of the national magazines have asked for my stuff, but what they really want are healthy, clean-limbed, hearty young people on a raft, and that isn't for me." Her stories have from time to time appeared in other important magazines, however, and she sees them in print just as they come from her typewriter, first draft. She writes with amazing speed—two or two-and-a-half hours is average for a short story—and the *New Yorker* provides her with an office to write them in.

"I like stories that have rounded ends and don't rise to climaxes; that aren't all wrapped up in a package with plot," she says. "I like them, that's why I write them." Most of them

BENSON, SALLY—*Continued*

are about women. Critics, however, have quarreled about her attitude toward her characters, who are not always entirely attractive. She has often been called a ruthless satirist, one who writes "with quiet malice and shrewd venom"; but of her first collection of short stories, *People Are Fascinating* (1936), William Rose Benét wrote: "I don't find, as the publishers aver, that Mrs. Benson is a cynic. In fact, she has an extraordinary sympathy for human beings. This usually involves seeing right through them and being unable to restrain oneself from exposing their weaknesses." Of *Emily* (1938), another collection, a second critic commented that the author was "ironic . . . shrewd . . . too clear-eyed for comfort, but," he went on, "what she distills is not poison. And in the stories which deal with young girls she is compassionate in a way impossible to anyone except the very kind and the very wise."

The short stories in *Junior Miss* deal entirely with one young girl. Mrs. Benson got the idea for her first Judy story while riding on a Fifth Avenue bus and seeing a 13-year-old girl snubbed by her mother and her older sister when she dropped their fares. She began to tire of Judy very shortly, wanted to write about something else after one or two of the stories had appeared, but Harold Ross of the *New Yorker* told her to keep on, she couldn't do better. When in 1941 she heard that *Junior Miss* had been chosen as a Book-of-the-Month and 40,000 copies sold in advance, Mrs. Benson was grateful for the advice. She took a look at her check, swallowed, left her publisher's office, and in less than an hour a salesman was waiting for him to okay a bill for her new automobile. There has been some talk of the stories being used by Hollywood. She isn't too optimistic about that, however. "The poor things have no plot, no continuity as movie. . . What could be done with them I haven't the slightest idea." Two playwrights disagreed with Mrs. Benson, however. Jerome Chodorov and Joseph Fields have made *Junior Miss* into a play which opened on Broadway in the late fall of 1941 and charmed reviewers into recognizing it as a "new hit," as "a gay comedy about adolescence which should still be on Broadway a year from now." *Junior Miss* is also appearing as a coast-to-coast radio feature, with scripts written by Mrs. Benson herself.

Mrs. Benson has curly red bangs—wears her hair that way because her mother once told her her forehead was too high. Robert van Gelder says she is "as good company as you're likely to find and makes interview questions or work of any sort seem a bit drab." She is a person of violent likes and dislikes, and particularly detests "magazine women" of a certain type. That prejudice dates back from the time she went to visit Clare Boothe Luce at *Vanity Fair*. As Mrs. Benson tells it:

"There she sat, with her hat on, looking lovely. She told me how *Vanity Fair* had finally decided it might like to buy a story from me.

"So I said, crassly, how much?

"And she said $50.

"And I said, looking at her lovely clothes, because I don't go in for being smart, that I wouldn't write so much as a recipe for $50.

"And she smiled her beautiful smile and said so sweetly, 'But think of the prestige for you, my dear.'

"And I walked out."

No one in Mrs. Benson's immediate family seems to be particularly impressed with her success as an author. Her husband read one of her stories once, but only once. "Not bad," was the verdict. Her mother keeps saying that some day she will have to buy a copy of the *New Yorker*. Even her daughter, Barbara, who is five feet nine, quite thoroughly grown-up and "very pretty" ("She isn't Judy—at least she hasn't been for a long while"), remained uninterested until some Yale boys started asking about her mother. Only one of the stories is really about Barbara, Mrs. Benson says. "I remembered the era when she started reading all the cosmetic ads and nobody could get into the bathroom because she was always in the tub trying out some new kind of bubble stuff."

Writing about modern women is far from being all that Mrs. Benson does. In 1940 she published *Stories of the Gods and Heroes*, in which the stories of Greek and Roman mythology are simply and beautifully retold. "A book of rare distinction," wrote the *New Republic*. In 1941 she is finishing a book about home life in St. Louis, *Meet Me in St. Louis*, which is planned for publication in the spring of 1942. She also has a spare-time job reviewing mysteries for the *New Yorker*, averaging one a night. She spends so much time on mysteries, she says, because she prefers straight history to historical novels, "and then, too, I keep taking personal dislikes to authors. Why must all the men novelists get so damned virile, so chest-out, shoulders back, here-we-come girls, as soon as they hit a success? Why must they go trucking all over the world and slaver with delight at wars?"

BERG, GERTRUDE Oct. 3, 1899- Radio actress; author-producer

Address: h. 115 Central Park West, New York City

When *The Rise of the Goldbergs* in June 1941 added 30 new stations of the NBC's Red Network to its list of 23 CBS stations and MBS's WOR it obtained the "most thorough airing" of any radio show ever heard in the United States. Millions of listeners, most of them American housewives preparing meals, were reminded that this was the oldest of soap-operas. It was in 1929 that Mrs. Gertrude Berg's Mollie Goldberg, acted by herself, shouted her familiar and neighborly "Yoo-hoo! Mrs. Blo-om!" up the air shaft. In all those years Mrs. Bloom has been heard to speak only once, an exclamatory "Oy" murmured when her back was being rubbed with liniment. But the voice of Mollie Goldberg, of her husband Jake, and of their two children Sammy and Rosie, have been heard several thousand times, by an estimated 10,000,000 listeners daily.

In 12 years, we learn, "the family has moved to Park Avenue, to a Connecticut mill town, to innumerable rural communities, all the while solving multitudinous problems of unemployment, home training, budget, and social snobbery. . . [Mrs. Berg] decided while fictionally ensconced on Park Avenue that perhaps her 'typical family' was getting out of touch with 'life.' Next week's scripts saw Papa Goldberg lose a fortune, the family gain 'realism.' "

The highest paid triple-duty woman in radio, Mrs. Berg's salary has been estimated at $7,500 weekly for writing, producing and starring in her program. "Like her Goldbergs, whom 12 years have mellowed and enriched," observed one writer, "Mrs. Berg's own family has grown up and prospered. Her son Cherney Robert, 19 (of an age with Sammy), is studying music. Harriet, 15 (two years younger than Rosie), attends school. Mr. Berg, placid, bald, horn-rimmed, very unlike the irascible Jake, is a prosperous sugar technologist."

An only child, Mrs. Berg was born in the Harlem section of New York City on October 3, 1899, the daughter of Jacob and Diana Netta (Goldstein) Edelstein. She attended public schools and at Columbia University, where she studied writing and acting, she met Louis Berg, a young chemical student. They were married in 1918.

GERTRUDE BERG

Up to the time of her radio debut, Mrs. Berg's writing had found its chief outlet in the Jewish Art Theatre. The notion that her work might have radio possibilities did not occur to her until a friend suggested it. That was in 1929, a year in which her husband had suffered business reverses and also, Mrs. Berg recalled, "when my children were at school and housekeeping wasn't keeping me quite busy enough."

Her first radio script was *Effie and Laura*, which was a flop. When she heard one of Milt Gross' stories in dialect on the radio she sat down and evolved *The Goldbergs.*

Radio bigwigs were skeptical, commenting that her idea had about as much entertainment value as a telephone directory. But Mrs. Berg persisted and finally the National Broadcasting Company offered to try it out as a weekly sustainer at $75 per week, out of which she was to pay the cast. Thus on November 20, 1929 *The Rise of the Goldbergs* was first heard on the air. Four weeks later its author and leading actress had a throat infection and a substitute played the part of Mollie. More than 11,000 listeners wrote in demanding the return of the original, and the station's switchboard was jammed day and night.

Mrs. Berg's agent had "fallen in love" with the script, Actor-Producer Hyman Brown became interested, and in 1931 a soap sponsor was talking in terms of six programs a week. The prospect of having to write that many shows was frightening, but Mrs. Berg was persuaded that she was capable of it. At a memorable meeting of agent, sponsor, the advertising people and herself, she waited for someone to name a figure, not knowing enough about it to suggest one herself. A spokesman for the sponsor turned to her and said, "Mrs. Berg, we can't pay a cent over $2,000 a week." Said the creator of *The Goldbergs*: "I thought they were kidding. When it sank in that they were serious I fainted dead away."

Foresight and a belief in what she was doing contributed to her success. She visualized the

BERG, GERTRUDE—*Continued*

importance of unseen drama and developed the idea that became the family serial script—*strip* in radio parlance—as we know it today. "People are most interested in each other," says Mrs. Berg, and her own people are real. As one listener put it: "The characters come out sharply as definite persons, people one could conceive running the nearby grocery store or boarding house." Listened to by millions irrespective of race or religion, *The Goldbergs* ("Rags to Riches" with a Yiddish accent) has been called "one of the most potent forces in the land for inter-racial understanding." Mrs. Berg helps this along by making some of the characters Irish.

Mrs. Berg's day begins at 6 a. m., when she locks herself in the library of her comfortably furnished 10-room duplex on Central Park West to work on scripts until 5:30. They are prepared three weeks in advance, and for a long time her husband was the only person who could transcribe her penciled scribblings to the typewritten page. A story is told of how, when she first brought her idea to the National Broadcasting Company, she offered to read the script aloud because of its undecipherable writing. They humored her in this, not realizing that her real purpose was to put across the Jewish-American characters whose individualities were conveyed in subtle inflections of speech rather than in broad dialect. Once she began reading it was obvious to her listeners that Mrs. Berg should act the leading role herself.

Mrs. Berg is five feet four inches tall, inclined to plumpness, has brown hair, sloe eyes and an olive complexion. "Playing the part of Mollie Goldberg for so many years," we learn, "the radio authoress has become so closely identified with the characters as to look like the listener's mental image of Jake's wife. Short, dark, homey, and matronly, on the buxom side, only her flashing eyes reveal the genius within her."

Her method of work has been described as follows: "First she decides on a character or incident around which she mentally builds a tentative story sequence. Plotted on paper, she blocks it off into weeks, each of which is divided into five days. Each day's episode points to the climax at the end of the week (five days now), which is also so planned as to leave the listener guessing." She has so perfected her technique that she is able to write a 15-minute script in something over an hour.

Mollie's philosophies and characteristics are said to be based on those of Mrs. Berg's grandmother, whom she adores. And Jake, fiery tempered and financially erratic, is said to be partly descriptive of her father. As to the children, no one doubts that her own have colored the delineations of Sammy and Rosie. As a family, the Goldbergs might be said to be familiarly matriarchal, for though Jake is the nominal head of the family Mollie Goldberg is the one who holds it together and guides its destinies.

She also has time to guide the destinies of another serial called *Kate Hopkins* which the station describes as "the exciting story of a visiting nurse."

Mrs. Berg is a conscientious observer of people on subways, at movies, in theatre lobbies, department stores and wherever else they gather. She knows intimately the crowded life of New York's East Side, the apartment-house panorama of Morningside Heights, and resort spots in the mountains. Occasionally in casting the 100 to 200 major characters *The Goldbergs* has presented, Mrs. Berg has used real people in their real-life roles—elevator operators, grocery clerks, and once a very famous singer. On the professional side, she has a keen sense of talent and has "graduated" such fine actors as John Garfield, Allan Jones and Martin Wolfson.

Precursor of soap-opera realism, *The Goldbergs* is less on the fantastic side than most similar programs. Its realism consists not merely in the deft handling of characterizations and plot, but extends to sound effects. "If the script calls for Rosie to answer a phone," Katherine Best tells us, "Rosie picks up a real phone. If eggs are to be fried, real eggs are broken into real frying pans before the microphone."

When *The Goldbergs* went off the air temporarily in 1934 it was chiefly to permit the cast to make a personal appearance tour in vaudeville and Mrs. Berg to write and produce *The House of Glass* (NBC Blue Network 1935). The latter script was based on memories of summer vacations spent at a Catskill resort hotel owned by her father. While successful, it did not approach the earlier program in popularity rating. In 1937 Mrs. Berg collaborated on the Bobby Breen film, *Make a Wish* (RKO). She liked screen work and believed it to be good practice for television, which, she anticipates, may utilize strips of film somewhat in the manner of radio transcriptions.

In 1937 Mrs. Berg's radio serial got a new sponsor and a long-term contract. This, and her family life, do not allow her much time for hobbies, but she does find time to relax during the summer at her impressive Candlewood Lake estate in Connecticut. She likes velvet gowns and collects copper kettles and pewter ware. Her main enjoyment is parodying various radio shows in which she casts her husband and daughter. "Her favorite is *The Good Will Hour,* for her own version of which she makes up some pretty startling problems."

BERNIE, BEN May 30, 1891(?)- Orchestra leader

Address: b. c/o Station WBBM, Wrigley Bldg, Chicago, Ill; h. 50 E. 67th St, New York City

BEN BERNIE

For most orchestra leaders dialogue is the nexus between musical selections, but for Ben Bernie, "The Old Maestro," music is merely an interlude between snatches of talk. Bernie's suave and intimate patter has the pulse of the American public. His current trysts with the microphone rated first place in 1941 for daytime programs, according to the Crossley (see sketch this issue) popularity survey.

Bernie is five feet ten inches tall, weighs one hundred seventy-five pounds, has thinning hair and a bland face adorned with a cigar. (He smokes 25 of them a day.) His radio shows, like his person, reflect serenity and harmony, edged possibly by just a trace of condescension. Walter Winchell purports not to like him, but millions of other people do. One of radio's most effective virtuosos of patter, Bernie once seemed slated to become a second Kreisler.

Born Bernard Anzelevitz in New York City he was one of the 11 children of Julius and Anna (Melnick) Anzelevitz. Bernie attended Townsend Harris High School. After he had earned a local reputation as an infant wonder of the violin, his parents were convinced he was earmarked for immortality, and at the age of 14 his talents were displayed before a musically erudite audience at Carnegie Hall in a concert arranged by his mother.

One year later he was working as a "professor of the violin" at the short-lived Mozart

BERNIE, BEN—*Continued*

School of Music. When it closed its doors three months after opening them, Bernie, inexplicably, decided that he ought to be an engineer. He attended Cooper Union Institute and the College of the City of New York, but lavished more attention on collegiate theatricals and musicals than on his somewhat haphazardly selected profession. In these days he first used the genial "Yowsah," one of the inimitable ejaculations in the "Bible of Berniana."

Bernie's uninhibited chatter, his most useful commodity, was developed early. He used it to good effect when he was working as a violin salesman in a department store. One of the people who found him amusing was Joseph Schenck, the entertainment mogul. A conversation led to an offer of a 20-week contract at $35 per week on the Loew vaudeville circuit. Bernie appeared with another violinist named Charlie Klass; they were booked as the "Fiddle-Up Boys."

From 1910 to 1914 Bernie toured the country via the vaudeville route. His professional name was evolved, at the suggestion of a press agent, from his stage name of Bernard Berni. For a while Bernie played straight violin selections, reportedly discovering the value of his "gab" only during an exchange across the footlights with a heckling hillbilly.

Eventually his bookings became erratic, and Bernie had to content himself with "one-night hitches in the hinterlands" and impromptu solos for "throw money" in cheap cafes. Once he delivered some tunes on a train bound for Des Moines and passed the hat. On his return to the East he soloed for a time in the Haymarket Cafe, one of the Bowery's most dubious dives.

Bernie's first master-of-ceremonies job came with his appointment to the noted Reisenweber's Restaurant, rendezvous of many entertainment notables. He still liked vaudeville, however, and was soon planning a return. His decision led to an entertainment tie-up with Phil Baker, the accordion-and-chatter man. Bernie first met Baker, reportedly, when he was walking toward his parents' home in The Bronx in 1914. Hearing an accordionist playing in a nearby house, Bernie went over to introduce himself. This resulted in the Bernie-Baker team and the later independent radio careers of each. The partners first concentrated on straight music, but soon devised a better footlight formula in which repartee alternated with refrains. The routine gained considerable vogue until the First World War battered the vaudeville business.

Bernie then conceived the idea of starting his own band. Realizing that vaudeville was far on the down grade and that he would have to find another medium, Bernie thought of combining orchestra rhythms and his vaudeville gag technique. A visit to Paul Whiteman's band crystallized his determination, and in 1923 Ben Bernie started his band.

When the Roosevelt Hotel was first opened in New York, "Ben Bernie and All the Lads" was the first orchestra hired by the management. Engaged for a mere six weeks, the band remained for nearly six years, as the chatty Bernian manner became tremendously popular. The band followed its stay at the Roosevelt with a year's engagement in Europe, where it played in the swank Kit Kat Club of London. Bernie returned amid the ominous rumble of crashing stocks. Virtually all his savings were lost in the crash.

After another short stay at the Roosevelt, Bernie decided to try to recoup his losses by a trip to Hollywood. In the film center Bernie's band appeared in the Montmartre Cafe, the Catalina Casino and other night clubs and was featured by Paramount Studios in *Shoot the Works* and *Stolen Harmony*. Then, following a brief vaudeville tour with Maurice Chevalier, the band parked at the College Inn in Chicago, an engagement that led to Bernie's first radio appearance.

Bernie was a radio "natural," and he was sought by sponsors. He was aired over WJZ for Mennen's Shaving Cream and in 1931 he broadcasted for Pabst Blue Ribbon Beer from a pavilion at the Chicago Century of Progress Exhibition. A radio engagement for Half 'n' Half tobacco terminated in 1940 because Bernie didn't think the quiz program he was compelled to conduct was particularly suited to his talents. His first real opportunity to display unadulterated Berniana came with the Wrigley's Gum program, for which he presented 15-minute variety shows five days a week over the Columbia network from 5:45 to 6 p. m. The program combines orchestra rhythms, songs by the Bailey Sisters and Bernie's unfailing chit-chat.

Bernie's appeal is solid and unmystifying: comfortable camaraderie enriched with gags. Delivery of music and voice form a smooth synthesis; there is perfect coordination. Not all of the "Old Maestro's" gags are original: some he buys in the open market and some are written for him. Despite his preoccupation with gags, however, Bernie is a dead serious musician. He is a ruthless perfectionist who insists on the ultimate in performance, a hard taskmaker in rehearsal. Many of his programs are without benefit of script, being fitted into the allotted radio time during the actual performance by the simple device of having new numbers added if time remains, or of having his program faded from the air if time runs short.

Bernie married his second wife, Dorothy Wesley, a Florida society girl, while he was filling a Miami engagement. He has one child, a boy, by his first wife, Rose Harris Anzelevitz, whom he married in 1915 and divorced on a charge of desertion in 1935.

Bernie's major musical passion is Mozart, and he has been known to listen for hours to the works of this master. His unmusical likes include horse races, police dogs and bridge, in which game he is unusually competent.

BIDDLE, ANTHONY J(OSEPH) DREXEL, JR. 1897- United States Ambassador to Polish and Belgian Governments in Exile; Minister to Dutch and Norwegian Refugee Governments in London

Address: American Embassy, London, England

In February 1941 lean, suave Anthony J. Drexel Biddle, Jr., voted one of the 10 best-dressed men in the world by tailors, and in 1937 appointed United States Ambassador to Poland by President Roosevelt, was also appointed to serve in London as Ambassador to Belgium and as Minister to The Netherlands and Norway. He had been in the United States since August 1940. In Stephen Early's (see sketch this issue) words, this was an "unprecedented step" in United States history, and another precedent was broken when five months later Biddle added to his posts that of Minister to the Jugoslav Government in Exile. He serves without any increase in pay, $17,500 annually being provided for an Ambassador with a single responsibility.

Ambassador and Minister Biddle has not been at this business of diplomacy for a long time—only since 1935, when President Roosevelt appointed him Minister to Norway. Born in Philadelphia, Pennsylvania in 1897, he comes of the "internationally wealthy and honorable Drexel-Biddle banking family": there are somewhere in the neighborhood of 70 Biddles listed in Philadelphia's *Social Register* today. Anthony Biddle, Jr.'s mother was the former Cornelia Rundell Bradley; his father, Anthony Joseph Drexel Biddle, Sr., was at one time known as "Tim O'Biddle," at least in the ring. Among other distinctions, he was one of the best amateur boxers of his day, the founder of a movement known as "Athletic Christianity" in which boxing and Bible classes were somehow combined, and is the author of books which range from travel essays and boxing instructions to the *Froggy Fairy Books.*

Wide World
ANTHONY J. DREXEL BIDDLE, JR.

Young "Tony" Biddle, Jr., was educated at Philadelphia schools and then at St. Paul's in Concord, New Hampshire, from which he was graduated. He was president of his senior class, captain of crew and of football, and had as his history master John C. Winant (see sketch this issue), present Ambassador to England. Biddle didn't attend college; instead, at the age of 18, he married the Mary Duke who was later to fall heir to the Duke tobacco millions. It wasn't long afterward, when the United States entered the First World War that he joined the swank Squadron A cavalry. By the time the War was over he had advanced to the rank of captain.

The post-War years found Tony Biddle, Jr., dividing his time between business (mainly shipping), sports (mainly boxing, tennis and polo) and international society (mainly in France). Among other things, he bought a Belgian middleweight boxer, René De Vos, and introduced him at a hotel party at which the pugilistic guests slipped away with the silverware and wine and were ambitious enough to try to steal the piano. In 1929, too, he and some associates leased the Casino in the middle of New York City's Central Park, a project later abandoned because of protests at public property's being used as a rendezvous for the wealthy. Biddle was at home in Newport and Palm Beach society, belonged to the most exclusive and costly clubs in Europe and America, was a member of the American

BIDDLE, ANTHONY J., Jr.—*Continued*

court tennis teams of 1932, 1933 and 1934, which competed for the Bathurst cup, and in 1934 was the winner of the court tennis championship of France. In 1931 his first wife divorced him; not long afterward he married the heiress to the Boyce Thompson mining millions, Mrs. Margaret (Thompson) Schulze (who in 1941 wrote *Women of England*).

As the director of the Sonora Products Corporation, before that known as the Acoustic Products Company, Biddle became involved in a lawsuit in 1931 when the firm went bankrupt. When sued by Sonora's receiver on the charge that he and associates had appropriated a contract, the Federal District Court judge acquitted the owners of the charge; in September 1934, however, the decision was reversed by the Circuit Court of Appeals in the case of Biddle and three others. Biddle was in Paris at the time, and the papers were full of rumors that he was about to be appointed to a diplomatic post. He returned to the United States, but denied that there was any truth in the rumors. What is more, he said that he had no assets with which to pay the stockholders, that most of his office furniture was his second wife's property.

It developed, however, that Biddle had recently donated $25,000 to the Roosevelt campaign, $25,000 to the campaign of George Earle, Democratic candidate for the Governorship of Pennsylvania, $5,000 to the Democratic National Committee. He explained that this was his wife's money. In July 1935 he sailed to take up the post of United States Minister to Norway, having finally settled the claims against him out of court. He held that post until April 1937, when Mrs. Harriman was sent to Oslo and Biddle shifted to Poland as Ambassador. At first his Polish experiences were comparatively uneventful: he returned to the United States for a vacation in 1938, was given an LL. D. by Temple University, was awarded the Meritorious Medal of the State of Pennsylvania for "services to the people of America" in cementing Polish-American relations.

In August 1940, however, when Ambassador and Mrs. Biddle returned once more to the United States, they had a harrowing tale to tell. The life of an American diplomat in Europe had turned out to be one of "real adventure," Biddle said. In September 1939 the Ambassador and his wife had fled Poland, where their country villa had been bombed and their furniture and art treasures lost in the destruction of Warsaw. With Polish officialdom they had reached Romania, finally France. Months later the German *Blitzkrieg* on the western front reached them at Angers. Still with the Polish refugee government, they fled to Tours, then to Bordeaux; Biddle served as the Deputy Ambassador to France while Bullitt stayed in Paris; and when France fell the Biddles followed the Polish Government to London. They didn't return to their own country until August 1940—for a visit during which both Mr. and Mrs. Biddle made an extended speaking tour on behalf of the Democratic Party and President Roosevelt's candidacy. Mrs. Biddle said: "I am sincerely urging every one I address to get back of a larger and immediate defense program. . . I saw what could happen over there; I want to see that it doesn't happen over here."

Ambassador Biddle is described as "big, raw-boned, ugly," but lean and muscular, with a "superbly sloped pair of shoulders" that make him a tailor's delight. He has two children by his first wife.

Who's Who in America

BIDDLE, FRANCIS (BEVERLEY) May 9, 1886- Attorney General of the United States

Address: b. Dept. of Justice, Washington, D. C.; h. 1669 31st St, Washington, D. C.

Farm Security Administration

FRANCIS BIDDLE

"Fearless, brainy, freckle-browed" Francis Biddle is a Philadelphia lawyer who was once attorney for such great corporations as the Pennsylvania Railroad and the Atlantic & Pacific chain stores and who since 1934 has been a figure of considerable importance in the New Deal. Early in 1941, with Robert Jackson's elevation to the Supreme Court, he became Acting Attorney General of the United States and in August of that same year was nominated by President Roosevelt to succeed Mr. Jackson.

As one commentator put it: "Philadelphia plus law equals Biddle, and always has." One of Francis Biddle's ancestors was Edmund Randolph, America's first Attorney General. Biddle's only living son is named after him. His own paternal grandfather was George W. Biddle, who participated in the Hayes-Tilden controversy over the Presidency. His father, Algernon Sydney Biddle, who died when Francis was seven, was professor of law at the University of Pennsylvania. Francis Beverley Biddle was born in Paris on May 9, 1886 when his father and his mother, Frances (Robinson) Biddle, were spending some time in Europe. He was brought to the United States in his infancy.

His brother, George Biddle, the artist, has any number of anecdotes to tell about their childhood. He says: "I was the more prudent, he the more lively of the two. I had greater scruples and he a swifter imagination. I think of myself as the balance wheel and of him as the accelerator of this two-cylindered combination. His ardor often led him into crooked paths and consequently he was spanked more often." Francis was nine when he was sent to the Haverford School in Pennsylvania for four years. But that was not too young to be writing "poetry": a 34-verse epic of Sir Richard of Howeland, lyrics entitled *Spring* and *Fighting for Liberty*, an Odyssey of Olaf of Cedarwood which included these remarkable lines:

Remembreth thou the first Equarub,
And thine horse Ibantinub?
A! thou wert born in rough Balcinia,
Not to befriend but fight the cub!

Francis and George invented "new religions, monetary systems, maps, wars and Nordic aspirations for our heroes." According to George, they "were somewhat anticipating a similar but less innocent infantilism, which was to a great extent to engage the fantasy of Europe some 40 years later."

At Groton, which Francis Biddle attended from 1899 to 1905, he was champion boxer and captain of the gymnastic team. What is more, his scholastic record was excellent, and one Prize Day he took the prize for the best two-minute speech. During his six years at Harvard, where he received his B. A. *cum laude* in 1909 and his LL. D. *cum laude* two years later, he earned money tutoring and working on newspapers. From 1911 to 1912 he worked as private secretary to Justice Holmes of the United States Supreme Court, and then was admitted to the Pennsylvania Bar and became associated with the Philadelphia law firm of Biddle, Paul & Jayne. He remained with that firm for three years, until 1915; in 1917 he began to practice with Barnes, Biddle & Myers of the same city.

He was a highly successful lawyer. In 1922 he became a partner in his law firm and in that same year began a four-year term as special assistant to the United States attorney for the Eastern District of Pennsylvania. The next year found him a member of the Philadelphia County Board of Law Examiners, on which he was to serve until 1932, and of the committee of censors of the Philadelphia Bar Association (1923-25 and 1929-31). In 1927 he was admitted to practice before the Supreme Court of the United States.

Biddle was at this time a registered Republican, although he had voted for Theodore Roosevelt in 1912 and for Al Smith in 1928. In 1933, however, when a fellow Grotonian, Franklin Delano Roosevelt, became President of the United States, he changed to Democratic ranks. His tendencies had always been liberal, and now he became an ardent New Dealer. In 1934 a member of former Governor Pinchot's Commission on Special Policing in Industry, late that same year he also accepted the position of chairman of the National Labor Relations Board. To the job he brought "a lively sense" of the legal difficulties involved in investigating and adjusting controversies between employers and employees arising under the code-making section of the NIRA, Section 7a. By 1935 he was writing and speaking in favor of the Wagner collective bargaining proposal to abolish company unions, arguing that members of a company union are never in a position to bargain freely with an employer. His brother George painted his portrait into a labor scene in a Department of Justice mural, representing him as a champion of justice under the New Deal. He returned to Philadelphia after a year in Washington, however.

From 1938 to 1939 Biddle was a Class C director of the Federal Reserve Bank, and deputy chairman as well. In that same year, 1938, the Tennessee Valley Authority was being investigated by a committee, and he was hired as chief counsel. It was then that he uncovered the subsidizing of the *Free Press* by a subsidiary of Commonwealth and Southern—a discovery which brought about his claim in 1940 that Wendell Willkie had always been "on the side of the utilities, never on the side of the people," and which also brought about Senator Styles Bridges' charge that Biddle had abused his official position. It was then, too, that his inspection of the income and excess profits tax returns of the private utilities provoked Republican members of the committee into accusing him of conducting the investigation as if the utilities, and not TVA, were under fire.

In 1939 Biddle finally gave up his partnership in the firm of Barnes, Biddle & Myers to become a judge on the United States Circuit Court of Appeals, 3rd Circuit. But by January 1940 he was once more needed in Washington, and he left his life tenure post to accept that of Solicitor General of the United States at a salary of $10,000 a year, a cut in pay of $2,500. When in June 1940 immigration and naturalization activities were transferred to the Department of Justice, it was he who coordinated the work with the other services of the Department.

In charge of the Border Patrol, which seals United States borders against unwanted aliens, BIDDLE, FRANCIS—*Continued*

Biddle proposed strengthening it and coordinating it with the Customs Patrol, the Coast Guard and the National Park Rangers. Alien registration he defended as a measure which actually protects loyal aliens, but he did urge a more tolerant attitude on the part of the American public toward alien groups, warned against amateur sleuthing. Other statements of his won the praise of laborites and the distrust of conservatives: he attacked the bill then before Congress to deport Harry Bridges as a "bill of attainder"; he criticized contractors who refused to accept defense work except at an "exorbitant profit"; he took a whack at critics of the NLRB by his statement before a convention of the American Bar Association that judicial review of the work of the administrative agencies of the government "could not possibly be a success."

The Nation and the *New Republic* were a little startled by some of Biddle's later activities, however. In June 1941, speaking before the National Conference of Social Work in Atlantic City, he proclaimed his disturbance over opposition to the Hobbs "concentration-camp" bill and the Model State Anti-Sabotage Bill, called it "flabby thinking." "Washington and Samuel Adams and the Minute Men at Lexington surely did not discuss their loss of civil liberties when they chose to fight," he explained. That same month one of his first orders as Acting Attorney General brought about charges of seditious conspiracy against Trotskyist union leaders in Minnesota whose union had recently seceded from Daniel Tobin's and joined the CIO. And in August friends of Harry Bridges attempted to prove that Biddle had been responsible for having his phone tapped by the FBI.

On August 25 Biddle was nominated by President Roosevelt as the fifty-eighth Attorney General of the United States, and on September 3rd the Senate Judiciary Committee unanimously voted to report his appointment. It was confirmed two days later by the Senate.

Dreamy-eyed Mrs. Biddle, whom he married in April 1918, is almost as well known as her husband—as Katherine Chapin, poet, author of the moving ballad-poems *Lament for the Stolen, And They Lynched Him on a Tree* and *Plain-Chant for America.* And Biddle himself, who was chairman of the Philadelphia branch of the Foreign Policy Association from 1924 to 1939, is the author of one published novel. *Llanfear Pattern* (1927) is described as a society novel, the story of a Philadelphian who "makes a stand for individuality, and carries his rebellion over into his business and political activities. But the family tradition is strong and he eventually conforms to it."

BIGGERS, JOHN D(AVID) Dec. 19, 1888- Glass manufacturer

Address: b. Nicholas Bldg, Toledo, Ohio; h. 4365 Brookside Rd, Toledo, Ohio

At the beginning of 1941 John D. Biggers, president of the Libbey-Owens-Ford Glass Company, became head of the division of production of the OPM, Knudsen's "right-hand man" in the job of seeing that America produces for defense. Some months later, in July 1941, he was put in charge, too, of the newly set up commodity section, responsible for the steel, aluminum, magnesium, paper, pulp and chemicals vital to the defense program. The next month, in the rearrangement of powers of the defense administration, Biggers was given still another position: that of Special Minister to Britain, with the job of helping W. Averell Harriman (see sketch this issue) push lend-lease aid to Britain. After a month in England he returned to the United States, reported to the President and Mr. Hopkins and then set out, with the aid of lend-lease and OPM officials, to synchronize the facts he had ascertained with the American effort. In October 1941 he returned to private life on a leave of absence at his own request.

This tall, good-looking, carefully dressed industrialist who has been so active during the period of national emergency got his business start in Chamber of Commerce work. Even-tempered, always cordial, he is supposed to have still a little of the "Chamber of Commerce" manner. John David Biggers was born in St. Louis, Missouri, the son of William David and Emma Melvina (Fisse) Biggers, and received his preparatory education in St. Louis—at Smith Academy. In 1905 he went to Washington University in St. Louis but stayed there only a year before transferring to the University of Michigan, from which he was graduated in 1909.

Biggers' first position was that of advertising manager of Larned, Carter & Company in Detroit. One year later, in 1910, he became assistant secretary of the Detroit Chamber of Commerce. After a year's experience there he was made secretary of the Toledo, Ohio, Chamber of Commerce, and in 1912 he married Mary Isobel Kelsey. (They now have one son and two daughters.)

While still with the Chamber of Commerce Biggers came to the attention of Edward D. Libbey and Michael J. Owens, leaders in the glass industry, and in 1914 Libbey took Biggers from his position to make him assistant treasurer of his company. Biggers' rise from that point on was rapid. He was successively assistant treasurer, treasurer, assistant general manager and vice-president of the Owens Bottle Company until in 1926 he resigned to enter another field.

For five years Biggers was a member of the automobile industry, first as managing director of Dodge Brothers, Limited, in London for a year; then as vice-president of the Graham Brothers Corporation for six years, during one of which he was also vice-president of Graham-Paige International Corporation. In 1930, however, he returned to the glass industry as president of what had become the Libbey-Owens-Ford Glass Company, though he continued as vice-president of the Graham Brothers Corporation until 1933. This was a logical connection, for Biggers' glass company was a leader in the production of glass for motorcar windows and since 1931 has supplied practically all of General Motors' glass needs.

Biggers has long been an advocate of government and business teamwork. As he expressed his position back in 1937: if the government is to have an increasingly greater hand in business, business leaders should know more about government and take an active part in it. Nominally a Republican, he belonged to the Business Advisory Council of the Department of Commerce under Secretary Roper and he has aided President Roosevelt time and again, notably in 1937 when he directed the unemployment census.

To organize and manage this was a heavy assignment. Questionnaires were distributed by letter carrier and as the returns came in they were checked in various areas throughout the United States by a separate door-to-door census. The final number of unemployed was found to lie somewhere between the 7,845,016 who filled in blanks and the figure of 10,870,000 turned in by the supplementary door-to-door check. The census, it was felt, was not complete nor entirely accurate, but it was generally recognized that an important investigation had been accomplished efficiently under Biggers' direction.

Biggers first began to attack the defense problem in June 1940 when Knudsen drafted him to aid with the task of upping aircraft and aircraft engine production and overseeing and coordinating the letting of important contracts for Army and Navy equipment. As deputy commissioner of the National Advisory Defense Commission and later as production head of the Office of Production Management, he urged faster production and fuller cooperation before various groups throughout the country: before the National Association of Manufacturers, the Academy of Political Science, the Chamber of Commerce. I. F. Stone, however, called him "a shrewd and able man who represented the business point of view on every issue," and it has been said that he was sent to London because of the heavy artillery fire to which he had been subjected by New Dealers, some of whom felt that he was too strongly attached to the "business as usual" policy.

O. E. M. Defense

JOHN D. BIGGERS

Biggers has worked hard and successfully as president of the Libbey-Owens-Ford Glass Company, but he has not devoted his time and energies exclusively to the company. Not only has he served the government in various dollar-a-year positions but he has been active in many civic betterment movements, in church work (he is a Congregationalist), in discussing with other businessmen the policies and economic problems before industry as a whole. His civic interests have led him to become a member of the executive committee of the Toledo Community Chest, a trustee of the Boys Club of Toledo and of the Toledo Museum of Art, and to give liberally of his time and money to important causes as they arise. There has seldom been much time left over for playing. Someday, though, Biggers expects to be able to spend more time with his family and friends or even to get out on the tennis court again.

BISHOP, WILLIAM AVERY Feb. 8, 1894- Air Marshal of Canada; in charge of the Canadian Air Training Scheme

Address: b. Royal Canadian Air Force Headquarters, Jackson Bldg, Ottawa, Ontario, Canada; h. 5 Blackburn Ave, Ottawa, Ontario, Canada

Royal Canadian Air Force

WILLIAM AVERY BISHOP

Stocky, blue-eyed "Billy" Bishop is an air ace of the First World War whose daring exploits gave him every possible decoration for valor and a reputation possibly more dazzling than Richthofen's. Eddie Rickenbacker once said: "Bishop was the greatest. None could compare with him." It seemed completely appropriate when the Second World War found this "man absolutely without fear" in charge of the Canadian Air Training Scheme by which immense numbers of pilots were to be trained on the broad flying fields of Canada, far from any possibility of interference by the enemy: British, Canadians, American volunteers, Poles, Czechs and other Europeans who had escaped the clutches of Fascism.

His popularity with these tyro pilots can be easily accounted for by those who know his story. The son of William Avery and Margaret Louise (Greene) Bishop, born in Owen Sound, Ontario on February 8, 1894, William Avery Bishop had his early schooling at the Owen Sound Collegiate School and then entered the Royal Military College, Kingston, Ontario (the Canadian equivalent of West Point) in 1912. "A thin slip of a lad with blue eyes and a shock of sandy hair" who could already ride "any horse that could be saddled" and "knock the ear off a gnat at 50 paces with a rifle," he was in his second year at college when war broke out. He enlisted in Toronto with the 4th Battalion, Canadian Mounted Rifles.

His unit was promptly shipped to England—and arrived at a training camp during the rainy season. For days it was mud and rain—mud and rain. In his book *Winged Warfare* Bishop tells us: "I had succeeded in getting myself mired to the knees when suddenly, from somewhere out of the storm, appeared a trim little airplane. It landed hesitatingly in a nearby field as if scorning to brush its wings against so sordid a landscape; then away again up into the clean grey mists. How long I stood there gazing into the distance I do not know, but when I turned to slog my way back through the mud, my mind was made up. I knew there was only one place to be on such a day—up above the clouds in the summer sunshine."

Bishop applied immediately for his transfer to the Royal Flying Corps—and got it. A few months later he was in France. There he spent four months in action as an observer before being sent back to England, late in 1916, to train as a fighting pilot. During that winter of training he went through the usual steps from a ground school up to night flying and served on the Zeppelin patrols. Finally, in March 1917, he received instructions to report for a course at a special school where he was to learn to fly one of the small and extremely fast single-seater fighting planes. He practiced by taking baskets of tin cans up with him, tossing them over the sky, then diving and shooting at them. A few days later Lieutenant William A. Bishop returned to France to join the 60th Squadron.

It was March 25 when "Billy" Bishop shot down his first enemy plane, and it was not long after that when people began to realize that here was no ordinary pilot. In his first few weeks he downed 20 enemy aircraft, and on a single May day engaged 23 in combat. Said King George V, awarding him the D. S. O.

in 1917: "His courage and determination have set a fine example to others."

What was probably Billy Bishop's most famous exploit, however, took place at dawn of June 2, 1917, when he decided to make a singlehanded attack on a German aerodrome in the hope of surprising the enemy as they were preparing to take off for the morning's work. There he found seven German machines ready to take off. Swooping down, he destroyed two of them on the ground; and when he was attacked in the air he shot down two more. This feat not only earned him his V. C., the greatest of all decorations for valor, but a substantial home leave in Canada. While in Toronto in October he took advantage of it by marrying Margaret Eaton (today the mother of a grown son who has enlisted in the Royal Canadian Air Force, and a daughter). It was during their honeymoon in Dayton, Ohio, where Bishop served as member of a British air mission, that he wrote his first book, *Winged Warfare* (1918). He then recruited in Canada and instructed in England until the spring of 1918.

Back in France, with a price on his head, Billy Bishop kept on flying his silver machine with its easily-recognized blue snout into and out of tight places. Once his squadron actually lost eleven planes out of eighteen in one day. In May 1918 he formed his own squadron, No. 85, picking the cream of the pilots from the English, the Canadian and the United States Air Forces. But the next month the General Staff decided he was too valuable to run further risks, and he was given 12 days in which to prepare to leave for London to do administrative work and help with recruiting.

Up to that time Bishop had shot down the startling total of 45 German planes. In the next twelve days he shot down twenty-five more—a larger number than the entire RAF had downed during the first month of the War—five of them in two hours on his last day as a pilot! When Billy Bishop finally signed on as a first grade staff officer (lieutenant colonel) on the Canadian General Staff his record showed 72 enemy aircraft destroyed, 170 battles fought in mid-air, 10 well-earned decorations. The King suggested this time: "There are no more letters we can put after your name, so I suggest we put some before it, and call you 'Archbishop.'"

In the period between the two Wars Bishop mingled business and flying. First he went to the United States and traveled through the country lecturing, but he soon returned to England, where he lived for 10 years, "prominent in financial and polo circles." In 1922 this skilled airman, who during the War had once fallen 4,000 feet in a burning plane and who had often limped back home in his plane with scores of bullet holes in its fuselage, came nearer to losing his life than he ever had before. Injured in a civil flying accident, he nearly lost his sight; the plastic surgeons had to go to work on him; and, once restored to health, he did not pilot a plane for 12 or 13 years.

In 1931 Bishop came back to Canada to become vice-president of the McColl-Frontenac Oil Company, Limited, Montreal, one of Canada's largest companies. (His business career has included successful operations in investment banking, and he is a director of the English Electric Company of Canada.) By this time he had also attained the honorary rank of group captain in the Royal Canadian Air Force, and soon he was wanting to fly again. He asked a friend to lend him a ship. As he tells it: "In 13 years they'd made new rules in my game—had made flying a science. There was only one thing to do—I had to learn flying all over again."

After a few lessons from an expert, Bishop was as confident as ever. In 1936 he was promoted to the rank of Air Vice-Marshal, in 1938 to Air Marshal—and in August 1938 he was made a member of the Honorary Air Advisory Committee to the Minister of National Defense. He had previously written that Canada's aviation policy was one of "drifting," and had urged training an extensive air personnel and building machines of the best quality. Now he was to take an active part in carrying out his own advice. After Canada joined Great Britain in declaring war against Germany, on September 8, 1939 Bishop was called up for active service with the Royal Canadian Air Force, and not long afterward he was given the office of Director of Air Force Recruiting.

Today Bishop is "a short man with very blue eyes and a closely cropped mustache" whose formerly sandy hair has thinned out and grizzled, while his earlier slimness has given place to some increase in girth. Quentin Reynolds (see sketch this issue) calls him "an intelligent, cultured gentleman, a *bon vivant*, an extraordinary host, one of the keenest businessmen in Canada." His wife collects china dogs; his own "collection" hangs on his library walls, and includes the blue-snouted propeller of 1918 days and the wing tip of Richthofen's plane. In his library might also be found another book he has written since that War, with Rothesay Stuart-Wortley: *The Flying Squad* (1927). Among his most treasured possessions is a book presented to him by the Berlin Aero Club at a banquet in 1928, when Bishop, as their guest, was photographed with Goering (see sketch this issue). In it Goering and others have inscribed "greetings to a competitor from the other side."

Riding, golf, polo and tennis are Billy Bishop's sports. Of the usual Canadian winter doings this amazing man says: "No. I can't skate. It hurts my shins. As for skiing —say, I don't know where those fellows get the courage. The falls you take. I shiver every time I see one of them go down. I'd be scared stiff to try it!"

HUGO BLACK

Hugo Black took his position as Associate Justice of the United States Supreme Court in August 1937 after one of the most bitter and vigorous discussions of all time, after "an orgy of vituperation." Today lawyers and laymen alike are praising his "succinct, lawyer-like and pointed opinions" on this court, the "clarity, power and perspicacity of his dissents."

The man who holds one of the highest legal positions in the land never finished secondary school, never completed an undergraduate course at college. Hugo La Fayette Black was born in Harlan, Clay County, Alabama and spent the first five years of his life on a farm there, the next fifteen in the county's metropolis of Ashland, where his father and mother, William La Fayette and Martha Ardellah (Toland) Black, ran a general store. Summers he worked, winters he attended a "primitive sort of academy" called Ashland College. When his older brother, who was a doctor, decided that Hugo should become a doctor, too, he fell in with his wishes enough to complete a two-year medical course in one year at the University of Alabama. Then he decided to become a lawyer, switched over to the University's law school and in 1906 received his LL. B.

He went back to Ashland and opened a law office over a grocery store. Since the town's population of 500 didn't allow for much legal business, it was rather a relief to Black when the grocery store burned down and gave him an incentive for moving on to Birmingham. In Birmingham business was better. Black made connections with the trade-unions, representing the miners' union in its first Alabama strike and the carpenters' union in an important suit, and built up a general practice as well. Then, in 1910, he received his first judicial experience. Elected a police court judge, for 18 months he spent his mornings in a hot dingy courtroom disposing of defendants, mostly Negro, "hauled in for shooting craps, loafing, fighting and connubial incompatability." His next public position was that of solicitor for Jefferson County, Alabama and lasted from 1915 to 1917.

After the War, during which Black served as a captain in the 81st Field Artillery and as adjutant in the 19th Artillery Brigade, he settled down to private law practice in Birmingham and to home life with Josephine Patterson Foster, whom he married in 1921. Although Raymond Clapper has called him "a failure as a country lawyer," others have vouched for his ability in cross examination technique (his was always "the soft question which provokes the wrathful answer"), for his uncanny knowledge of the law's loopholes, for his success.

In 1926 Black decided to campaign in the primaries for the Senate seat of Oscar Underwood, who had announced his retirement. John Bankhead, since elected to the Senate, and three others decided to do the same thing. Undiscouraged, Black climbed into his Model T Ford and stumped the State, dressed in a wrinkled suit, sleeping at the home of any farmer who would put him up, speaking at every crossroads store "the right words to win both Ku Klux Klan" and A F of L support. This support won him the nomination and eventually the election.

Black made news in his first year in the Senate just once: he was "among those present" at one of Coolidge's famous White House breakfasts. The rest of the time he studied routine, made himself familiar with legislative business and kept discreetly silent. When he had thoroughly prepared himself he began to battle to restore Muscle Shoals to public operation—his first Senate speech was on this. He went on to fight with Senator Norris of Nebraska against the utility interests.

It wasn't until Roosevelt was elected, however, that he came into his own. During Roosevelt's first term Black voted for each of the 24 major measures of the New Deal program and consistently supported all labor legislation. He himself presented a bill in the Senate for a 30-hour week and got it passed, although it never became law in its original form. Instead it was incorporated in part into the NRA, which Black, incidentally, denounced, one of the few men in the Senate "who had the acumen and vision to perceive precisely what the NRA was and what it would be."

From the 30-hour-week fight, Black threw himself into the problem of merchant marine subsidies. He had been working on this ever since 1928, when he had held up an appropriation bill carrying Coolidge's salary in an attempt to force into it an amendment to limit the salaries of Shipping Board officials to $10,000 a year. In 1930 he again investigated the whole question of subsidies and by 1933 was conducting a full-fledged investigation. Sensational headlines resulted from his hearings. He wrung out testimony "by convincing those who take the stand that he already has the facts but merely wishes them confirmed for the record out of the mouths of the witnesses."

As Raymond Clapper described it then, "armed with stacks of letters and documents, Senator Black sits back easily in his chair, puffs slowly on his cigar, rolls his large open eyes quite innocently and with a wise smile undertakes to refresh the memory of a squirming witness." The disclosures of the Black committee were startling. Contributions from taxes, it was proved, "in great part found their way into the pockets of profiteers, stock manipulators, political and powerful financial groups, who never flew a plane, who never invented an engine, who never improved an airplane part. Huge subsidies paid by the government to build up a merchant marine have been diverted from that channel and have been largely spent in high salaries, extravagant expense accounts, highly paid lobbyists and huge dividends."

After "almost singlehandedly saving the Administration from defeat" in the Utility Holding Company fight of 1935, Black went on to stir up even larger headlines as head of the Senate Lobby Investigating Committee. This work wasn't new to him, for the late Senator Caraway of Arkansas had asked him to become a guest on his lobby committee back in 1929. Black plunged in with enthusiasm; not long afterward he was accused of violating the Fourth Amendment and severely taken to task by the District of Columbia Court of Appeals. He had ordered the Postal Telegraph and Western Union Companies to comb their files for all wires which smacked of high pressure lobbying methods and later had subpoenaed the complete telegraphic correspondence of more than 1,000 specified persons and groups. More than 5,000,000 wires were piled up, and with them the wrath of the newspapers, those being investigated, the public and the courts. Black's rejoinder was to call it all "a gross and malicious campaign of misrepresentation."

During Black's last year in Congress he drove the Wage and Hour Bill through the Senate at great risk to his own political neck, for his sponsorship aroused violent reactions among Alabama employers who would have made a determined effort to defeat him if he had run for a third term. Every weekday, in office hours from 10 to 2 and on Saturdays from 10 to 1, he met his constituents. Between sessions he rented a house in Birmingham and traveled around his own and neighboring states on speaking tours. But all this came to an end on August 12, 1937 when President Roosevelt nominated him for the position of Associate Justice of the Supreme Court.

Senator Ashurst asked for the Senate's unanimous consent. Senator Johnson objected, and a senatorial precedent to confirm the nomination of any member to office without reference to committee was shattered. Objections flew. Emphasis was placed on the fact that he was a partisan litigant rather than a calm, impartial weigher of opposing arguments; on his lack of judicial experience. Senator Henry Cabot Lodge, Jr., found him insufficiently "tolerant, liberal and judicial in his view of the religious faiths and racial equality of his fellow citizens"; *Commonweal* called the President's choice "an unfortunate impulse of the moment"; fellow Senators brought up legal technicalities against his appointment. Only the liberals and liberal magazines like *The Nation*, which once called him "a passionately sincere humanist guided throughout by his understanding of the fundamental truth of the new militant liberalism," applauded the choice. Yet Black received his commission and, unknown to the public, on the same day took his oath as Associate Justice. Then he sailed for Europe.

Less than a month later Ray Sprigle, a reporter for the Pittsburgh *Post-Gazette,* wrote a series of six articles for that paper and the North American Newspaper Alliance in which he showed that Black had joined the Robert E. Lee Klan Number One, Invisible Empire, Knights of the Ku Klux Klan on September 11, 1923 and resigned on July 9, 1925 on the eve of his campaign for the Democratic nomination for United States Senator; that he had been welcomed back and made a life member on September 2, 1926 and given a gold "grand passport." The outcry was almost unanimous. Black had "betrayed" Roosevelt, it was said; the whole was "a deplorable episode without precedent or parallel in the history of this Republic"; and Hugh Johnson asked: "What difference does it make if Hugo Black is a uniformed Kluxer? . . It was plain from his record that he is a born witch burner—narrow, prejudiced and class conscious." Black had his defenders, however. The *New Republic* explained Black's joining of the Klan as the error of years back, unimportant today; Max Lerner called it "simply a piece of political behavior," necessary for his election, and stated firmly: "Hugo Black is no Klansman. Everything that he has stood for in his 11 years in the Senate runs counter to what the Klan has stood for."

Black himself said nothing from abroad, and Roosevelt told the press: "I know only what I have read in the papers." Black returned to explain his actions in a radio speech. It began with a discourse on religious liberty and continued: "I did join the Klan. I later resigned. I never rejoined. . . I have never considered and do not now consider the unsolicited card given to me shortly after my nomination to the Senate as a membership

BLACK, HUGO—*Continued*

of any kind in the Ku Klux Klan. I never used it. I did not even keep it."

Black took his seat on the Supreme Court, his first official act to hear two separate but similar motions which challenged his right to the office. It was expected that from then on Black would go slowly, give himself a chance to mellow. He didn't. Although the cases assigned to him in his first year on the Court were small in number and narrow in issue, he managed to distinguish himself as a loud, lusty and lone dissenter. In less than eight months on the bench he had given out thirteen dissents. This was hailed by the *New Republic* as a sign of liberalism; by the late Paul Y. Anderson as revealing an attitude that "may well guide the Court out of the metaphysical wilderness into which it has wandered."

Marquis Childs, however, stated in magazine articles that Black's dissents were notable less for their liberalism than for their technical incompetence and went on further to say that Black's legal training and experience had been revealed as painfully unequal to his position on the nation's highest tribunal. His opinions, he stated, often had to be rephrased by colleagues to conform to Court standards. He himself had been unable to carry his share of routine work; his presence had been "an acute discomfort and embarrassment" to the other justices. Raymond Clapper corroborated this in his newspaper column, and the *Daily News* went so far as to say that Supreme Court members "had hitched up their judicial robes and in dignified fashion were in the process of putting the slug on their colleague." Denials then flooded the pages of newspapers, magazines, law periodicals. Walton Hamilton, professor of law at Yale, said Black had "courage almost to the point of audacity," praised his "eminently lawyer-like opinions" and prophesied that Black would be "an outstanding figure in the history of the court," for he "brings a breath of fresh air into a rather musty courtroom." Harold C. Havighurst of Northwestern University supported Hamilton, insisting with him that the dominant distinction between Black and his fellow jurists was his "insistence upon reality."

The controversy died down in the course of time, even though in 1941 Justice Black is still a frequent dissenter. Some of his decisions have been notable: in February 1940 he delivered a decision, freeing four Negroes who under torture had confessed to crimes, which was called "far and away the most direct, sweeping and brilliantly written application of the 14th Amendment to human rights that has come from our highest Court"; for this and for another denouncing the exclusion of Negroes from trial jury panels Black's name was added to the Honor Roll of Race Relations by the Schomburg Collection of Negro Literature in the New York Public Library in 1941. Later, in April 1941, he voted that Negroes had a right to receive equal train accommodations with whites.

In February 1941 Black had the triumph of participating in a Supreme Court decision certifying the constitutionality of the child labor provisions of the Wage and Hour Law which he had helped to get passed. In that same month he vigorously protested a Felix Frankfurter (see sketch this issue) decision upholding the right of state courts to issue injunctions against picketing "set in a background of violence." Somewhat removed from these cases was his opinion in March 1941 outlawing agreements by which manufacturers of hats and dresses sought to eliminate style "piracy" by registering new creations and penalizing anyone copying the designs.

There are many today who believe that Black is a "legislator among judges"; many who now agree with Walton Hamilton's summing up of his decisions: "There is no verbal display of priestcraft, no strutting of the higher pyrotechnics, no triumphant victory over difficulties of the jurist's own creation. Instead a recitation of the facts, a sharp definition of the issue, an argument that turns not to right or left but marches straight to its goal—and the trick is done. All the cases are disposed of deftly, simply, certainly, in accordance with justice and common sense."

Black, who was once a great joiner, former Grand Chancellor of the Knights of Pythias of Alabama and member (to his later sorrow) of almost every organization that asked him to join, doesn't go out much now except on family jaunts with Mrs. Black and their three children or to spend an occasional evening with a fellow justice or an Administration friend. He dislikes games and drinking and is reported to be happiest when reading works on history and economics at home.

BLAKE, DORIS Journalist

Address: c/o New York Daily News, 220 E. 42nd St, New York City

If it is a broken heart that ails you, there are many remedies you can seek, from the conclusive one of suicide to the sterner one of absorbing your ache in a new charity or hobby. What you are more likely to do, as 200,000 of your contemporaries do annually, is to write to Doris Blake in care of any one of the forty-five papers served by the New York *Daily News*-Chicago *Tribune* syndicate.

According to the nature of your problem, you will be advised to be less free with your kisses, to stay away from married men in the future, or to learn to flatter men's egos. Doris Blake also will help you to make decisions. "Should I tell her I was married and have a girl 1½ years old?" "You should certainly enlighten her as to your status."

If your problem is that of excess avoirdupois, acne or an inability to apply make-up properly, you will find the same lady a willing guide and mentor, this time under her real name, Antoinette Donnelly. "Beauty Answers" as well as the feature articles in the beauty column appear under her name in the papers of the same syndicate.

Antoinette Donnelly, of Irish-Catholic ancestry, was born a half century or so ago in Mount Forest, Ontario, one of nine children. Her father was Michael Donnelly, a station agent, and her mother was Maria (Furey) Donnelly, an avid reader of French novels, whence the "Antoinette." When Antoinette's father died her mother took the family to Buffalo, New York, where Antoinette managed to teach herself typewriting and shorthand and secure a position as a stenographer.

Her first newspaper work was writing obituaries for the *American Lumberman*. Her next job was that of assistant to the woman's editor of the Chicago *Tribune*. She was subsequently given the beauty column to write, and her skill inspired the editors to revive an advice-to-the lovelorn column which had previously been dropped. The name, Doris Blake, was selected for this project because it was "pure American and not too flossy."

During the First World War, as beauty editor of the *Tribune*, Antoinette Donnelly was active in the anti-hoarding-fat campaign. In competition with her colleague, Dr. William Evans, the health editor, she took a class of fat men to Grant Park everyday for reducing exercises. The doctor had a class of women. The men got thin first.

DORIS BLAKE

When Antoinette Donnelly-Doris Blake came to work in the New York office of the *Tribune-News* syndicate, her department was described as an "island of love, beauty and cosmetics amid the hurly-burly of one of America's most rowdy newspapers." She is more popular as Doris Blake than Antoinette Donnelly and besides answering questions individually, provides her readers with any one of a set of booklets which fit some of the more common difficulties. For a self-addressed, stamped envelope the reader may be edified by *Growing Up, For That Winning Personality, Getting and Keeping Boys Interested, Why Not Be Popular?, Don't Be Lonely, Love Quiz, The Technique That Wins Men, What About Petting?* and *How To Be Happy Though Married.*

Antoinette Donnelly's day is supposed to begin at 6:45 and end at 7 in the evening. Most of the letters are answered by her staff under her personal supervision. She keeps abreast, however, of the latest developments in her field, and her library contains many such titles as: *The Questions Girls Ask, How To Live Without a Woman, The Genteel Female, Ain't Love Gland?, Love Letters of Great Men and Women, Why We Love and Hate, No Nice Girl Swears, Live Alone and Like It, Wisdom for Widows, The Fruit of the Family Tree, Why Men Like Us* and *The Art of the Body.*

As Doris Blake, Miss Donnelly's advice to the perplexed is based on a series of fundamental beliefs: any young person can be popular; young people should not indulge in too much kissing and petting; newly-married couples should never live with their in-laws; women should not smoke (Miss Donnelly is a "chain" smoker); girls should not telephone boys; couples should not elope; and a woman's place is in the home fulfilling her natural functions of wife and mother. Among her descriptive

BLAKE, DORIS—*Continued*

headlines, many of which are nearly as long as the articles themselves, can be found: "DARK FUTURE SEEN FOR BACHELOR TOO SELFISH TO MARRY", "LAD IS TURNED DOWN BECAUSE OF PIMPLES BUT HE CAN YET WIN", "HE'D WED, THEN LIVE IN HER HOME, TOTING A BOTTLE WITH HIM," etc.

Antoinette Donnelly is also co-editor of the *Woman's Almanac* and a contributor to Catholic magazines. Her hobbies include piano study and interior decoration, and she is fond of swimming. Her husband, from whom she is separated, is a Canadian. His name is now "taboo in her presence." She lives with two adopted daughters, Mary and Josephine.

She has "dry bushy hair" and has been described as a "frowsy, gentle, jittery, earnest and overworked woman of some 50 years." The fact that she is not a good advertisement for her beauty column has proved a handicap in her few public lectures.

Her social world is largely composed of newspaper people who enjoy her company and her piano playing. Both her friends in the newspaper world and her daughters' friends not infrequently come to her for advice and comfort about their own love difficulties. They, like her readers, no doubt, take her suggestions when they happen to coincide with their inclinations.

BLAKESLEE, A(LBERT) F(RANCIS)

Nov. 9, 1874- Botanist; geneticist

Address: b. Carnegie Institution, Cold Spring Harbor, Long Island, N. Y.

A. F. BLAKESLEE

In December of 1940 Dr. Albert F. Blakeslee, director of the Department of Genetics of the Carnegie Institution of Washington and one of the nation's great biologists, completed his one-year term as president of the American Association for the Advancement of Science. He himself has contributed to that advancement by indulging his natural penchant for pioneering experiments in botany and genetics. In 1937 he discovered that colchicine, long used as a remedy for gout, could change the nature of plant heredity, thereby "prodding evolution." This discovery provides the first experimental evidence that "genes, the factors inside all living cells controlling heredity, and viruses, organisms which produce some diseases in plants and animals, can produce similar effects in plants. The discovery promises to open up new horizons in virus disease, which in man include the common cold, influenza, yellow fever and infantile paralysis. It also provides for the first time a link between heredity and environment, showing how environmental factors may produce the same effect as hereditary factors."

At Cold Spring Harbor, on the north shore of Long Island, New York, there are greenhouses and fields belonging to the Carnegie Institution's Department of Genetics. In them Dr. Blakeslee and his associates care for more than 150,000 rank-smelling jimson weeds. Using these plants as basic material, an effort is being made to find out how evolution occurs. The weed produces two generations a year and can be forced to produce four. As part of his experiments, Dr. Blakeslee soaked some of the weeds in colchicine solution. Almost immediately changes showed that something important had happened. The leaves roughened, the grains of pollen became larger, and a count of the chromosomes showed that the number had doubled.

From the viewpoint of economics, Dr. Blakeslee says, the process of soaking plants in the solution "offers the hope of making fertile hybrid plants which are often sterile" because of difficulty in proper pairing of the chromosomes. Doubling of the chromosomes (induced by the drug) naturally provides twice as many chromosomes to form pairs. From these chromosomes it is possible for the plant to breed a new race. In the past "such spontaneously doubled chromosome plants have produced some of the most desirable economic varieties in tobacco, wheat, cotton and timothy."

Sixty-five different kinds of plants have been shown to mutate by treatment with colchicine. Such plants as black-eyed Susan, phlox, portulaca, violets and many others have increased the size of their flowers. Independent breeders were quick to realize that such commercially important blossoms as giant-sized zinnias and marigolds find a ready sale. Fruits have developed healthier and stronger characteristics when their trees have been treated with the drug, although they have shown no size increase.

The Cold Spring Harbor laboratory workers believe that the speeding up of the evolutionary process has caused laymen to expect too much magic. Many people, reading in the papers of the drug, have written in to say: "If it will grow better plants, is it good for hair on the head?" Dr. Blakeslee says that the only answer is: "No results have yet been obtained in mammals."

Before these experiments the genial blazer of laboratory trails was already known in physiology and horticulture as well as genetics for his work on inheritance in jimson weeds, "a turning point in modern genetics." Before this he had "revolutionized our understanding of reproduction in all the lower plants" by discovering sexuality in some of the fungi. More recently, he has been probing at human inheritance with his "taste tests."

Dr. Blakeslee's mother was Augusta Mirenda (Hubbard) Blakeslee. His father, Francis Durbin Blakeslee, was at various times pastor, educator, lecturer, newspaper correspondent, university president. When his second son, Albert Francis, was born in Geneseo, New York on November 9, 1874, he was principal of the East Greenwich Academy, East Greenwich, Rhode Island. There Albert went to school until he was ready to enter Wesleyan University at Middletown, Connecticut. After receiving his Bachelor's Degree there in 1896 he taught science for four years, both at his father's school and at Montpelier Seminary in Montpelier, Vermont. In 1900 he entered Harvard for graduate work. While studying for the Doctor's Degree which he received in 1904 he continued to teach, as instructor of botany at Radcliffe College and as teaching fellow in botany at Harvard.

His first research work was sponsored by the Carnegie Institution where he is now department director. On a research grant he was able to spend two years in Germany with his fungi. After his return to the United States he became instructor of botany for a year at Harvard and at Radcliffe, then for eight years served as professor of botany (later of botany and genetics) at Connecticut Agricultural College, Storrs. During these years, in addition to becoming known as a "born teacher," he worked out a scheme of tree identification described in his book, *Trees in Winter* (1926); he produced one of the first hybrid pines achieved in this country; and he developed a "live museum" of growing trees.

On leave from the Connecticut Agricultural College during the year 1912 to 1913, he worked at the Department of Genetics of the Carnegie Institution, and in the fall of 1915 he returned there as investigator in plant genetics. In June of 1919 he was married to Margaret Dickson Bridges. He kept planning to get back to teaching because he liked it, but the Carnegie liking won, and he is still there—since 1936 as head of the department. He indulges his love of explaining and interpreting experimental results by conducting a large seminar every summer, and in 1938 Dr. Blakeslee and Dr. A. G. Avery, a co-worker in the Carnegie laboratory, wrote *Methods of Inducing Doubling of Chromosomes in Plants.*

Among Dr. Blakeslee's outstanding characteristics are a gray goatee, a genial twinkle and a well known readiness to help all scientific workers. His horticultural activities have raised for him a large crop of scientific honors here and abroad.

BLIVEN, BRUCE (blĭv'ĕn) July 27, 1889- Magazine editor

Address: b. 40 E. 49th St, New York City; h. 133 W. 11th St, New York City

Described both as a "progressive journalist with a rangy feel for the value and tempo of news" and as a "liberal who never knows his own mind," Bruce Bliven has been president and editor since 1930 of the *New Republic*, a weekly magazine. In the skyscraper editorial offices which he shares with three other magazines, offices designed by Lescaze in chrome steel and blue, streamlined and modern, Bliven does most of the editorial writing for the

BRUCE BLIVEN

New Republic and acts as the New York correspondent for the *Manchester Guardian*.

Bruce Bliven was born in Emmetsburg, Iowa, July 27, 1889, the son of Charles F. and Lilla C. (Ormsby) Bliven. He was graduated from Stanford University in 1911 with the degree of B. A. From 1909 until 1912, while he was still an undergraduate, young Bliven was a member of the editorial staff of the San Francisco *Bulletin*. During the next two years he was employed at intervals as an advertising writer. His name, meanwhile, was becoming known in American journalism through his contributions to various periodicals.

In 1914 Bliven combined pedagogy with journalism when he accepted the position of director of the Department of Journalism of the University of Southern California, a position which he held for two years, moving in 1916 to the editorial staff of *Printer's Ink*. From there he went to the editorial offices of the liberal daily, the New York *Globe*, where from 1919 to 1923 he was successively chief editorial writer, managing editor and associate editor.

He was connected with the *New Republic* in 1923 as managing editor, and seven years later he became president and editor. Under his direction the editorial policy of the *New Republic* has been consistently liberal. One of his colleagues on the *New Republic*, George Soule, said of him: "Bruce Bliven knows his United States from side to side and from top to bottom. . . There are few who can observe more closely what goes on in America, interpret it more accurately, or write about it more cogently." Although labeled "pinko" by *Time*, Bliven supported Roosevelt's policy of military preparedness and aid to Britain when those on the Left, before the German invasion of Russia, were shouting that this was an "imperialist war."

During the First World War the *New Republic*, founded in 1914 by Willard D. Straight and Herbert Croly, supported Great Britain and the policies of Woodrow Wilson, but after the Armistice the magazine turned against the League of Nations in support of Borah and Hiram Johnson and, disillusioned with the Versailles Treaty, took the position that America's entry had been a mistake. In 1924 it supported Robert M. La Follette, the elder, and the Third Party. After the death of Willard Straight, the controlling financial interest in the publication passed to his widow, now Mrs. Leonard K. Elmhirst, who has retained financial control without interfering with the weekly's editorial policies.

When the editorial policy came directly under the guidance of Bruce Bliven, it moved noticeably to the Left. In 1932 the *New Republic* supported Norman Thomas for the Presidency. The next year, however, it endorsed Roosevelt's policies and the NRA, and it has continued for the most part to support both his foreign and domestic policies. Before the present War, although it published articles by both isolationists and internationalists, its editorial position on foreign policy was that of opposing appeasement and attacking Chamberlain but at the same time expressing fear that full-fledged American participation in any collective security bloc would draw the United States into another war for which she was not responsible. After September 1939 it shifted gradually to the position of all-out aid to Great Britain without the reservation "short of war," but by August 25, 1941 was going a little further than Roosevelt in its leading editorial, which advocated immediate declaration of war on the Axis powers.

On the whole the *New Republic* appeals to the serious-minded reader. Its articles on economic, social and political questions and its reviews of literature and the arts are written by individuals well known in the field of liberal letters. Besides Bruce Bliven and George Soule, its editorial staff includes Malcolm Cowley and Stark Young. Its table of contents has listed names like Charles A. Beard (see sketch this issue), Heywood Broun, Harold Laski (see sketch this issue), Edmund Wilson and others.

Besides his arduous editorial duties for the *New Republic* and his correspondence for the *Manchester Guardian*, Bliven finds time to contribute articles to other magazines and to maintain an active directorship on the boards of the Twentieth Century Fund, the Consumers' League of New York and the Foreign Policy Association of the United States.

In the same 24-hour day Bliven is available for public lectures. Always current, some of his lecture topics are: "The Press and Public Opinion", "Politics and Democracy", "The Future of Liberty," and "Who Will Win the War?"

In February 1942 *Men Who Make the Future*, by Bruce Bliven, is expected to appear. Bliven has just signed a contract with Duell, Sloan & Pearce, Inc., for the book, in which he will survey new achievements in various fields of science, basing his studies on interviews with prominent men in each field. These interviews have been published in various issues of the *New Republic.*

Bliven's essay, *Public Opinion, the Case of Citizen Jones*, appeared in a volume edited by Harold Stearns, *America Now, an Inquiry into Civilization in the United States by Thirty-Six Americans*, published in 1938. In this essay Bliven discusses the effects of anti-democratic pressure groups on public opinion and comes to the conclusion that it would be "folly" to attempt to suppress them. "The cure for propaganda," he writes, "is more propaganda." Rather than attempt the futile task of silencing those who would undermine democracy, he feels that through education we should build in the individual a resistance to the wrong influences.

In 1913 Bruce Bliven married Rose Emery of San Jose, California. They have one son, Bruce Bliven, Jr., who writes timely articles for the *New Republic* as well as other magazines.

Of himself, Bliven writes: "I am five feet nine, and try not very successfully to keep my weight down to 180. My hair and eyes are brown. My favorite recreations are walking, swimming, very bad golf, driving a car, the theatre, movies, music, and reading."

BOOTH, EVANGELINE (CORY) Dec. 25, 1865- Former head of the Salvation Army
Address: h. Hartsdale, N. Y.

EVANGELINE BOOTH

Evangeline Booth, fourth daughter of General William Booth, the founder of the Salvation Army, and Catherine (Mumford) Booth, was born in London, England, on Christmas Day 1865. From her earliest days the spirit of militant religion was bred in her; childhood games consisted of leading meetings and making speeches. By the time most girls begin to think about clothes and beaux, Evangeline Booth was assisting her father in his work among the poor of London's East End.

With the expansion of the Salvation Army, she was given large responsibility and when still in her teens was appointed by her father captain of a Salvation Army Corps in the worst part of the East End of London. Opposition from the neighborhood toughs was fierce and brutal. Evangeline Booth devoted herself all the more to the slum and its people, and before long had won them over to the Army's message. The toughs even banded themselves into a bodyguard for her protection.

The same thing happened time and time again, perhaps most spectacularly in Torquay, the exclusive English seaside resort on the coast of Devon. There was a section of Torquay that definitely did not want the Salvaltion Army around; it set about fighting the Salvation Army's right to preach the gospel. A long legal battle followed with Evangeline Booth fighting it through to the Houses of Parliament and getting the repeal of the by-law forbidding preaching. As a special mark of the General's appreciation and the Army's gratitude, the rank of commissioner was given her.

For two years the new commissioner traveled through Europe, making speeches, leading songs and getting huge crowds to hear her. Then in 1888, at 23, she was appointed to the command of all Salvation Army operations in London, with the oversight of the International Training College thrown in. The immense gatherings she was able to address in this period are still quoted as peaks in Salvation Army achievement.

When changes in the higher commands left the leadership of Canada vacant, General Booth asked his daughter to take the position. Beginning in 1893 she worked there for nine years, expanding every branch of the Army's work. During the gold rush of 1898 she organized a mission and nursing corps, taking it herself to the Klondike and sharing the hardships of the pioneers.

In 1904 Miss Booth was appointed to the national leadership of the Salvation Army in the United States, a post which she held for 30 years. During those years hers was a single-minded devotion to her work. Faced, at the beginning, with problems of money and personnel, she revolutionized the financial system of the Army and strengthened its resources. The old hand-to-mouth system of "panhandling" was discarded and in its place was set up a dignified system of appeal to the public through Community Chests and special campaigns. She herself went around the country speaking to many groups of people, winning numbers of them over.

During the First World War, Evangeline Booth placed the resources of the Army at the disposal of the Government, and, at home and in France, Army women ministered day and night to the soldiers. As a mark of his appreciation President Wilson gave Miss Booth the Distinguished Service Medal. When the Armenian atrocities broke out, Miss Booth herself hurried there to shepherd whole companies to safety and peace. When famine ravaged India, she led the Army in sending thousands of dollars for relief. When the Japanese earthquake occurred, she raised money on a large scale.

During the latter years of her command in America, the members of the Salvation Army in other parts of the world insisted that General Booth visit them. Strenuous campaigns were made in Japan, England, Norway, Sweden, Denmark, France, Germany—campaigns in which she impressed large audiences with her eloquence as she gave such lectures as *The World's Greatest Romance, Rags, The Hand of God* and led in the singing of songs she had composed for the Army.

In November 1934 Evangeline Booth was elected general of the international forces of the Salvation Army and set sail for England. Her farewell to America was held in New York City's Madison Square Garden, where 20,000 people gathered to honor her for her 30 years of work. From then until her retirement in October 1939, General Booth was active at international headquarters in London and found time, too, to conduct services throughout the British Isles.

When she retired, it was to her home at Hartsdale, New York. There she plays the harp and continues to compose hymns and band music. A collection of her Army songs was published in 1927 and she is the author of a number of books as well: *The War Romance of the Salvation Army*, written with Grace Livingston Hill (1919); *Love is All* (1925); *Toward a Better World* (1928); and *Woman* (1930).

Evangeline Booth has been awarded honorary degrees by Columbia University and Tufts College; she has received the Distinguished Service Medal and the Eleanor Van Rensselaer Fairfax Gold Medal for "eminent patriotic services"; she has been awarded the Vasa Gold Medal by the King of Sweden and the Gold Medal of the National Institute of Social Sciences.

BORIS III, KING OF BULGARIA (bō′rĭs) Jan. 30, 1894-

Address: Royal Palace, Sofia, Bulgaria

In March 1941, when Nazi troops began marching into the Bulgarian capital, King Boris III was in his Sofian palace thinking his own thoughts. They must have been depressing. He had seen uprisings and insurrections, revolutions and counter-revolutions since the day he ascended the throne in 1918, but this was the first time he could no longer, except euphemistically, call his crown his own.

King Boris is only the second of his line to occupy the throne of Bulgaria. His father, Ferdinand of Coburg, was the fifth son of Prince Augustus of Saxe-Coburg and Gotha, a lieutenant in the Austrian hussars when a Bulgarian delegation, touring Europe in search of a monarch, offered him the throne. He ascended it in 1887. Boris' mother was Princess Marie Louise of Bourbon, the eldest daughter of Duke Robert of Parma. She died in 1899 when Boris was only five years old, and nine years later Ferdinand married Princess Eleanor of the House of Reuss. It was in this same year that Ferdinand, taking advantage of a Turkish crisis, raised his principality to a kingdom and proclaimed himself Tsar of the Bulgars.

Boris was born on January 30, 1894 and baptized in the Orthodox Church, of which he is still a devout member, in order to win Russian approval. He attended Sofia's military academy and university and was taught French, Italian, German and English by his tutors—so well that he later read newspapers in each of these languages, and in Bulgarian, in bed every morning. During these years Boris became passionately devoted to railroad engines: he became a member of the Bulgarian Railroad Engineers Union and is supposed to have begged King Ferdinand to allow him to go to America to become a railroad engineer. This devotion never diminished. A few years ago, when the royal train caught fire, King Boris dashed from carriage to carriage of the moving train, took the throttle from the injured engineer and piloted the train for the rest of the journey. Another time, dressed in grease-covered overalls, with his face

BORIS III, KING OF BULGARIA

smeared, he brought the express into Sofia two minutes late. The superintendent, who didn't recognize him, took him sharply to task, and Boris, the good engineer, apologized.

It was 1918 when Boris ascended the Bulgarian throne. The military defeat of Bulgaria in the First World War had brought the immediate abdication and flight of King Ferdinand, who had been largely responsible for his country's joining the Central Powers.

Boris was in a precarious position—the last member of a defeated dynasty. October 1919 found Stambuliski, the leader and founder of the Agrarian League, who had once been condemned to death by his father, in power. As Boris' Prime Minister he earned the enmity of conservatives by setting up a severe dictatorship of the "Green Left" and enforcing sweeping agricultural reforms and a labor service system. His foreign policy made enemies, too. Bulgaria had been the only Balkan loser in the First World War. The Peace Treaty of Neuilly, far from restoring the large sections of Macedonia and of Dobrudja which had been lost to her in 1913, had thrown her back from the Aegean and cut off a million Bulgarians from their homeland, and its disarmament portions had placed her at the mercy of her neighbors. The groundwork was thereby laid for a strong revisionist movement. Stambuliski nevertheless encouraged a policy of friendship with the other Balkan countries and worked for a union of South Slavs under peasant leadership, a policy which particularly antagonized the Macedonian revolutionaries.

Boris bided his time. Finally, on June 9, 1923, conservative elements, plus the discontented Macedonians and the Military League, overthrew Stambuliski by a *coup d'état* and murdered him. The man who now came to power as Boris' Prime Minister was Professor Alexander Tsankov, a Social-Democrat turned Fascist. Something resembling civil war followed, Agrarians, Socialists and Communists all participating in the ensuing riots. They were rigorously suppressed, especially after an episode in April 1925 when a bomb exploded in the Charles Cathedral of Sofia where government officials were attending a service. According to one source, during the two years of Tsankov's regime 10,000 peasants and workers were killed without trial.

How responsible Boris was for Tsankov's terroristic policies—or, for that matter, for later events—is uncertain. One story has it that when Tsankov reported to his King he was asked: "Why so few dead? You must give them a blood-letting they will never forget." This hardly accords with more familiar descriptions of Boris as a simple, mild man who once boasted that "there is no man in this country to whom I cannot talk as an equal," who spent one morning in the palace grounds netting butterflies because he was receiving an entomologist for lunch that day, and who commonly roamed the streets of Sofia alone, without fear because of his great popularity with his people. But there are many versions of Boris' character and true position. One has it that during most of his rule he was an amiable figurehead, and quotes him as having said: "It would not frighten me if I were to lose my throne. If that were to happen, I would go right to America and get a job as a mechanic." André Simone in *Men of Europe* insists that after 1923 he was an absolute autocrat, though an autocrat who was disarmingly clever at creating the impression that others were doing the ruling. And to Douglas Reed he was, "in kingship, what Cinquevalli was in juggling and Blondin on a tight-rope." Reed believed that by skill and guile Boris "outwitted all enemies, revolutionary plotters and military conspirators alike."

Whatever the truth, in January 1926 a more democratic form of government was restored under Liapchev. Although Macedonian terroristic activity continued unchecked in Bulgaria and in raids on Jugoslavia and Greece, the Agrarians were allowed to reconstruct their party, Parliament was permitted to complete a full term, and the May 1927 elections were "relatively free." But this period of relative political stability was not long. In 1930 the Cabinet was reconstructed for the second time, in 1931 for the third time, and the elections of June 1931 gave Liapchev the final blow. By this time, moreover, Bulgaria was facing a grave economic crisis. In September 1932 the Communist Party (which had been dissolved in 1924 and 1925, but which had since reappeared under various guises) won 19 of the 35 seats in the municipal council of Sofia, and in June 1933 the Government proclaimed a state of siege. Fascist activity also increased. Finally, on May 19, 1934, there was another *coup* by the Military League (outlawed but reconstructed as a secret organization) in collaboration with a nationalist-fascist group, the Zveno. At four a. m. on that day

Boris was forced to sign a manifesto overthrowing "the system": political parties and Parliament were once more dissolved, the constitution suspended.

The new military dictatorship promised certain reforms, and it is true that it brought about debt reductions and the temporary suppression of the Macedonian revolutionary organization, which had so jeopardized Jugoslavian-Bulgarian relations. But Boris could not be dislodged from power. He gradually divided the Military League, and upon the discovery of a conspiracy by the challenged leader, Colonel Veltchev, liquidated both the League and the Zveno. In November 1935 another Cabinet fell without having fulfilled its promise to promulgate a new constitution. The victorious King was now apparently determined to steer the country along a middle course. Although free speech, the right of assembly and the freedom of the press remained non-existent, in March 1937 the royal dictatorship granted suffrage to certain classes of women, and a decree of October 1937 called for parliamentary elections and extended the right to vote to all men over 21 and to women who had been married. The new Parliament then occupied itself with approving the authoritarian decrees which had been already enacted, but it did seem that Bulgaria might be moving hesitantly toward a revival of constitutionalism.

Foreign policy, however, indicated that the fate of this Balkan kingdom was inextricably tied up with the authoritarian powers. After the First World War, British bankers had invested in the reconstruction in the country, and before 1933 only about one quarter of Bulgaria's trade had been with Germany. But even that early Bulgaria's hope of recovering Aegean Sea outlets had placed her on the side of the revisionist bloc of Austria, Hungary, Germany and Italy. What is more, in 1930 Boris had married Princess Giovanna, the daughter of Italy's King Vittorio Emanuele III, and the Balkan powers had begun to suspect him of a secret alliance with Italy. He refused to join the Balkan Entente of Turkey, Greece, Yugoslavia and Romania, for that would have meant giving up all revisionist aims. Finally, when Hitler began rearming Germany, thus establishing a precedent for the defeated powers, and Bulgaria got permission to rearm, Bulgaria negotiated a barter agreement with Germany by which German arms deliveries could be paid for with Bulgarian products other than tobacco, and it was the German General Staff which drew up the plans for Bulgarian rearmaments and fortifications.

By 1938 Germany was the biggest buyer of Bulgarian exports, taking from 60 to 70 percent of her products, and only a slightly smaller percentage of Bulgarian imports came from Germany. German capital also got control of textile and sugar industries and several key banks. According to André Simone, the Western democracies gave tacit consent to this situation, and "since 1937 King Boris has known that even if he wanted to become an ally of the Western democracies, he would not be welcome." The king had few illusions about Chamberlain and Daladier. In August 1938, talking to a Czech envoy to Sofia about Lord Runciman's mission, he told him: "You will have to give in." Shortly afterward, about to set out on a farewell trip to Great Britain, he announced: "There will be no war." This visit, just before Munich, was played up by the British and French press as showing his sympathy for the democracies; only the perspicacious Pertinax revealed, in *L'Ordre,* that he was suspected of secret dealings with Hitler.

This pro-Axis policy was hardly agreeable to the majority of his people, for their historic, social and linguistic sympathies had always been for Russia. Boris had once asked a French envoy: "Don't you know that my peasants love Russia more than they do me? Are you going to protect me against them when they rise again? They nearly got me in 1923." The Soviet Union had broken off relations with the Bulgarian Government after the *putsch* of 1923, and until 1934 Italy had discouraged every attempt on the part of Bulgaria to resume negotiations, but that year the U. S. S. R. was recognized again. The popular demand was for an alliance with her.

This demand became stronger during the first part of the Second World War, when the airline Sofia-Moscow was constructed and Soviet sports teams and cultural delegations visited Bulgaria. In the summer of 1940 official thanks were extended to Russia for her support of Bulgarian claims on Southern Dobrudja, at that time ceded by Romania. Boris was in an impossible position, between the devil and the deep. For a long while Hitler's attempts to make Bulgaria an Axis adjunct were avoided by neat diplomatic sidestepping on his part and on the part of his Premier, Bogdan Philoff (see sketch this issue), who was, however, generally considered pro-Nazi. Both kept affirming and reaffirming their desire for both freedom and peace, as mass meetings demanded a "policy of neutrality in close collaboration with the Soviet Union."

But the conclusion was foregone. Finally, in March 1941, after more than one conference with Hitler, Philoff's signature to the Berlin-Rome-Tokio alliance was obtained in Vienna, and two hours later Nazi columns began rolling into Sofia. A Soviet protest came too late. Next, while Moscow and Belgrade were negotiating a non-aggression pact, Bulgarian territory was granted to Germany and Italy as a base for the victorious attack on Yugoslavia and on Greece, and after the German invasion of the Soviet Union, Bulgarian press attacks on the latter became vitriolic. On September 11, 1941 Moscow formally accused Bulgaria of acting as a full-scale base for the German-Italian attacks on the Soviet Union and of preparing to participate in them herself, and on September 20 a state of emergency was declared in Bulgaria. It was reported that thousands of Bulgarians were herded into

BORIS III—*Continued*

concentration camps to prevent open anti-Nazi outbreaks.

In the meanwhile, in his yellow palace—the long, unpretentious building where Boris lives with his wife, his children (Prince Simeon, born in 1937, is his heir), his unmarried sister Princess Eudoxies and his brother Cyril—Boris entertained Nazi officials. What these visitors saw was a man with a pale complexion, blue, appealing eyes with a kind of "doe-like softness," an auburn mustache, a high forehead made higher by receding hair, a long hooked Bourbon nose and a bold profile. What they found was an "expert handshaker and a good quiet listener." But what went on behind the charm of Boris' manners remained as mysterious as ever. And it seemed doubtful that Boris III, King of Bulgaria, would ever dare again to roam the streets of Sofia alone.

BOWERS, CLAUDE G(ERNADE) (bou'ẽrz) Nov. 20, 1878(?)- United States Ambassador to Chile; historian

Address: Department of State, Washington, D. C.; United States Embassy, Santiago, Chile

In the fall of 1939, when Claude G. Bowers sailed for Chile to become United States Ambassador there, it was with the hope that he would "be able further to contribute toward the mutual understanding and growing feeling of our friendship not only with Chile but all South American republics." Ambassador Bowers is far from being the usual career diplomat. Until 1933, when he was appointed Ambassador to the Spanish Republic, he had been known as a "newspaperman, editorial writer, historian and speech maker." An authority on Jefferson and on Jackson, he has also been called "the greatest living practitioner of what for want of a better term may be called personal history." He has not lost this reputation, but it is his record in Spain which particularly qualified him to represent the United States before the Popular Front Government of Chile.

Claude Gernade Bowers was born in Hamilton County, Indiana, the son of Lewis and Juliet (Tipton) Bowers. His lifelong interest in Jefferson he acquired, ironically enough, when he was a high school lad preparing a eulogy on Hamilton for a state oratorical contest. Just to be well informed he read Jefferson's side, too, and found that he agreed with him; but he went on and won the contest. His first newspaper position was acquired almost as accidentally: a friend writing editorials for the Indianapolis *Sentinel* wanted to go on a fishing trip, and asked Bowers, who was then studying law, to take his place. That was in 1901, and Bowers was to remain in newspaper work for a long time.

Until 1903 Bowers was with the *Sentinel;* then he found a position with the Terre Haute *Star* and stayed with that newspaper for three years. In the meanwhile he continued to be sought after as a speaker and by 1904 had been nominated for Congress from the Terre Haute District. A general Republican landslide prevented him from being the youngest man in the United States House of Representatives, but he contented himself with joining the Terre Haute Board of Public Improvements. In 1911 he spoke so convincingly to Sybil McCaslin that she was persuaded to marry him (they now have one daughter, Patricia), and in the same year he talked himself into a position as secretary to United States Senator John W. Kern.

It was 1917, the year after the publication of Bowers' first book, *Irish Orators,* when Senator Kern died, and Claude Bowers became editor of the Fort Wayne *Journal Gazette.* While editing that paper he also managed to find time for research and for the writing of his *Life of John Worth Kern* (1918) and *The Party Battles of the Jackson Period* (1922), and for attending more than one Democratic national and state convention. In 1920 he delivered his first keynote speech—at the Democratic State Convention. In the meanwhile several men had been instructed to keep on the watch for a good editorial writer for the New York *World.* Independently but unanimously they selected Claude Bowers after reading his leaders in the *Journal Gazette,* and in 1923 he went to New York City to accept the *World's* offer.

Bowers was with the *World* until 1931. That period saw the publication of *Jefferson and Hamilton* (1925), for which he received the Jefferson Medal at the formal dedication of Monticello to the nation on July 4, 1926. Bowers is convinced that it is his best book. After almost 20 years it is still selling and is used as supplementary reading in most universities. It was widely reviewed by leaders in Government, including Franklin D. Roosevelt.

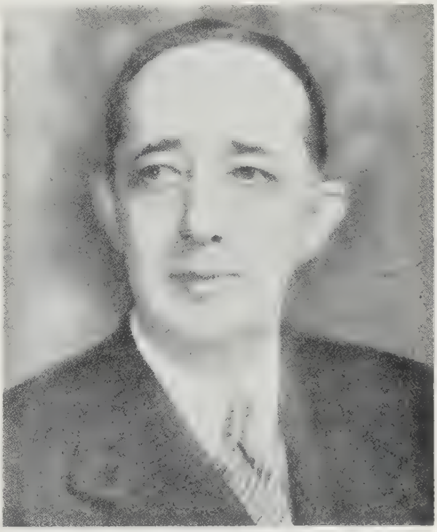
In 1927 the Governor of Tennessee appointed him member of a commission "to determine the true historical value of Jackson's triumph at New Orleans," and he was not only made honorary president of the Andrew Jackson Society, created "to foster more just treatment of Jackson in school histories," but also invited to give a Jackson Day dinner speech in Washington. (The next year found him delivering the keynote address at the National Democratic Jackson Day banquet.) Then, in the summer of 1928, Bowers gave the keynote address at the Democratic National Convention, proclaiming that "we [Democrats] battle for the honor of the nation besmirched and bedraggled by the most brazen and shameless carnival of corruption that ever blackened the reputation of a decent and self-respecting people" and crying: "To your tents, O Israel!"

The Tragic Era (1929), a Literary Guild selection, is no doubt Bowers' most famous work of "personal history." For three and a half years, while working for the *World*, he spent his lunch hours in The New York Public Library, since the newspapers of the period from 1865 to 1877 about which he was writing were available to readers only between nine in the morning and five in the afternoon. In this time he also managed to digest some 800 books, including diaries of the period, and on September 1, 1928 he was finally ready to begin the writing. *The Tragic Era* was completed nine months later, and Bowers could stop eating sandwiches for lunch. Critics called this book, subtitled The Revolution After Lincoln, "an unforgettable record of an unforgivable period in American history", "a vigorous, denunciatory, often entrancing book", "one of the most distinguished books of the year." It was criticized by some for its iconoclasm and even called reactionary in its viewpoint, but what seemed to a few critics prejudice and political bias appealed to others as "fire and feeling" and a desire to call spades spades. Its sale was "tremendous."

In 1930 *Civil and Religious Liberty*, a collection of Bowers' speeches, was published; in 1931 he began writing a daily political column for Hearst's New York *Journal*; the year 1932 saw the publication of his *Beveridge and the Progressive Era*. Then, in 1933 President Roosevelt appointed him Ambassador to Spain, where it seemed that he might find "relative quiet" as well as an opportunity to study the early days of a sister Republic. It was true that Bowers wrote his *Jefferson in Power* (1936) in his book-lined study on the second floor of the Madrid Embassy, but even foregoing afternoon siestas and most of the usual social life of an Ambassador didn't provide either much leisure or appetite for scholarly research after his first days in Spain.

During the Spanish War, Bowers was chairman of the Society for the Relief of Spanish Children, acted as an intermediary for the exchange of prisoners, and, when four Americans in Majorca managed to create an international incident, he won praise for his handling of the situation. In 1939 he returned to the United States. Surprisingly enough, *The Spanish Adventures of Washington Irving* (1940), "an engaging if not important book" that "recaptured the flavor of the past and restored a Spain that has gone," was the fruit of those tragic years. Mr. Bowers tells us: "It was finished just before the Spanish War and was intended solely for publication in Spanish in Spain as a gesture. The War ended reading in Spain, so I let my publisher here [in the United States] have it on his request." Bowers was later said to be at work on another book with the tentative title *Spanish Memories*.

When in 1939 Claude G. Bowers was appointed Ambassador to Chile, Freda Kirchwey of *The Nation* announced that he represented "the best of the New Deal expressed in terms of diplomacy." She said further: "By nature Mr. Bowers is no diplomat. He is a lot of other things, such as historian and newspaperman and Jeffersonian, old-style. He is plainspoken, sharp-witted, and, I should think, completely irreverent." She mentioned the fact that in October 1939 he had been the United States' delegate to a Pan-American housing convention, and there had spoken in behalf of all the Republics at the opening meeting. Together with the delegates from Chile, Mexico, Colombia, Panama and Cuba he had agreed that the best solution of the housing problem was to pay a decent living wage.



Harris & Ewing
CLAUDE G. BOWERS

This diplomat-historian smokes thick black cigars, and "his conversation, judiciously phrased and impressive in its dignity, is punctuated frequently by expressions of vigor for which his listeners are unprepared." He is physically rather unimpressive, however: a "thin man with mournful eyes." Bowers himself tells the story of an Irish politician who was waxing enthusiastic in his praise of a speech on Irish patriots that Bowers had made. "But," the Irishman finished ruefully, "he shurre is no *looker*!"

BOWES, EDWARD (bōz) 1874- Radio program director; corporation executive

Address: b. 1697 Broadway, New York City; h. Rumson, N. J.

To a radio audience estimated variously at from 15 to 37 million listeners, the mention of fate suggests *Major Bowes' Original Amateur Hour* and the "genial, slightly unctuous voice" of its master of ceremonies, Major Edward Bowes. His "Around and around she goes and where she stops nobody knows," might well be a paraphrase of Confucius' statement, "The Wheel of Fortune turns round incessantly, and who can say to himself, 'I shall today be uppermost'?"

EDWARD BOWES

The Wheel of Fortune has been kind to the Major. In 1939 radio gossip placed his net income at no less than $15,000 weekly. Other estimates brought it nearer $10,000. United States Treasury reports disclosed that the Major's income in 1937 as executive director of Edmar Enterprises was $427,817. In real estate and other business ventures for more than half a century, this phase of his career has been obscured by the figure of Major Bowes, radio impresario.

Edward Bowes was born in 1874 in San Francisco, the son of John M. and Caroline Amelia (Ford) Bowes. His earliest memory is of his father, a public official, weighing cargoes of spice, cotton and rubber on the San Francisco water front. His father died when Edward was six, leaving the support of himself and his three sisters in the hands of their mother. Formal education ended for him at 13 when he was graduated from Lincoln Grammar School. It was not long before young Edward got his first job, and from that time on enterprise marked his career in business, as it was to distinguish his rapid rise in radio. He quickly turned to advantage his job as usher at a National Education Association Convention by writing calling cards in flowing Spencerian script, decorated with fanciful birds, which he sold to visitors for 25 cents a dozen. His next job as office boy in a real estate concern at $3 a week catapulted him right into the real estate business and by 1900 he was a successful businessman. In 1903 he married an actress, Margaret Illington, and they enjoyed a happy, almost idyllic marriage until her death in 1934.

Major Bowes served on the grand jury which exposed local corruption in San Francisco in 1904, and was active in the successful anti-vice crusade which created such a stir nationally that Theodore Roosevelt sent William J. Burns, private detective, out to the coast to lend his assistance. With the subsequent trials over, Bowes made a pilgrimage to his ancestral home in the North of Ireland, where his grandfather had been a Methodist minister. He returned home just in time for the great earthquake of 1906. The fire that followed this destructive quake turned to ashes much of Edward Bowes' investments in real estate. It was a time to act fast or not at all. His reaction was to draw up plans for a new office building, choosing a location that he believed had a future. This decision turned out to be correct, and with business running smoothly, Bowes came to New York.

In the Eastern metropolis he went into business with John Cort and Peter McCourt. Jointly they owned and operated the Cort Theatre in New York and the Park Square Theatre in Boston. In 1918 he joined with Messmore Kendall in building the Capitol Theatre, a venture that led indirectly to the famous *Amateur Hour*—in 1922, when radio was young, a weekly broadcast called *Roxy and His Gang* was used to promote the theatre, and when Roxy left in 1925 the program continued as *Major Bowes' Capitol Family*. Into this program he injected bits of homely philosophy and an occasional poem that was highly sentimental and moral in tone. These verses were published in 1937 in a volume called *Verses I Like*. The concert orchestra featured at the Capitol is said to have influenced motion picture theatres all over the country.

During the 1920's Major Bowes was associated with the Selwyn Company in the production of plays, was manager of radio station WHN (owned by Loew's, Incorporated) and was also vice-president of Goldwyn Pictures Corporation. Thus until 1935 his business interests were far more important than his radio career. But in 1934 things had already begun to change, for in that year the Major quietly inaugurated an amateur hour over WHN. In 1935 he resigned as vice-president of Goldwyn Pictures Corporation and on March 24th of that year *Major Bowes' Original Amateur Hour,* sponsored by Standard Brands for Chase & Sanborn, had its debut over the 60 stations of NBC's Red Network.

Since that historic date more than 300 performances of the *Amateur Hour* have been given, presenting more than 8,000 hopeful amateurs out of an estimated 117,000 auditions (CBS figures). Of the 8,000 and more who have signed the Major's "amateur's oath"—bell ringers, toothbrush players, musical sawyers, jug players, tap dancers and vocalists—most went back home, taking with them the memory of one shining moment in show business. Twice as many men apply for auditions as women. Of those selected the majority are singers, then instrumentalists, mimics, vocal and instrumental combinations. A successful applicant usually receives $10 for his appearance, plus all that he or she can eat the night of the broadcast.

The program actually gets under way with the auditions. To these Major Bowes listens through a loud-speaker in his pretentiously Victorian office as the applicants are auditioned in various studios. When the program goes into rehearsal all visitors are barred from the studio. On one occasion NBC's vice-president in charge of production was almost forcibly ejected by the Major's chauffeur and bodyguard from the studio where the Major was at work.

During and after each broadcast telephone operators in New York and in the "honor city" of that particular week receive and record the votes for performers. Sometimes as many as 16 units of 20 to 25 amateur graduates are on tour at a time. Salaries for the performers range from $50 to $100 weekly. In addition to the road units and the managerial and travel expenses for them, a staff of 65 is maintained in New York. Overhead for the *Bowes' Hour* also includes bills for musicians, producers, coaches and unit booking.

When Bowes changed sponsors in 1936, going to the Chrysler Corporation on the CBS network, it was rumored that his new sponsor had enticed him with an offer of $15,000 weekly. To these rumors Major Bowes' office let it be known that the Major and the late Walter Chrysler were old friends and that his relations with his sponsor were "of the happiest." Speculation persisted, naturally enough, and in 1939 radio business covertly estimated his weekly (gross) income at $20,000 plus another $10,000 to $15,000 from theatres for his road company units. The reputation for being a shrewd executive this shift in sponsors gave him is borne out by the profitable sidelines that have mushroomed from his *Amateur Hour*—games, a magazine, two monthly film shorts (RKO), a Major Bowes alarm clock.

Many amateurs have graduated from the *Amateur Hour* to the professional world of theatre, radio and films. Among those who have since become famous are Clyde Barrie, talented Negro baritone, Doris Weston, who went into motion pictures, and Lucielle Browning, whose voice has been heard at the Metropolitan Opera House. Many, also, are the hopefuls who have been encouraged to develop their talents further, like thirteen-year-old Winfield Cook, Jr., who flunked the program three years ago but came back in 1941 with a set of imitations of sounds that easily won him first place.

Major Bowes is heavy-jowled but by no means flabby, dresses stylishly without being Broadwayish. "He still has most of his finely spun orange-blond hair," said *Time* in describing him, "and skin that seems to have been massaged, steamed and lotioned for days. From any angle his nose is mightier than Jimmy Durante's."

His offices and living quarters, a 14-room apartment in the Capitol Theatre building, are so cluttered with mementos that one writer compared them to a series of Atlantic City auction parlors. Here, or at his estate in Rumson, New Jersey, the Major admires his hundreds of paintings, his fine old silver, his numerous antiques, his collection of colored diamonds set in rings; and he occasionally entertains friends with the contents of a baronial wine cellar.

In his youth the Major's hobbies included yachting, a training stable and automobile racing. He won a 50-mile non-stop race in the days when every racing driver was a daredevil. Yachting remained a hobby until 1940, when he gave his yacht, *Edmar,* to the United States Navy. His interest in books is reflected in the fact that he is vice-president of the Shakespeare Association of America. Many churches and public-spirited organizations have benefited from his gifts. In 1939 he presented to St. Patrick's Cathedral in New York City 15 trees for the sidewalks around it and also an Andrea Del Sarto painting, and during the same year gave an entire estate to the Lutheran Church.

The *Major Bowes' Amateur Hour* is listed among the 10 most popular programs on the air and in this achievement Major Bowes' prestige is recognized to be a big drawing card. People still ask for "that good Major Bowes coffee" even though he left Chase & Sanborn back in 1936. From 210 honor cities, to one of which the program is dedicated each week, he has an array of more than 1,000 honorary titles to go with his Major (which comes from an obsolete Reserve commission of the United States Army).

BRACKEN, BRENDAN 1901- British Minister of Information

Address: h. 8 Lord North St, London, S. W. 1, England

BRENDAN BRACKEN

The fourth man since the opening guns of the Second World War to take over the job of Britain's Minister of Information, in the ministry which has been called "the graveyard of ministerial reputations," was "jerky, bespectacled, carrot-haired" Brendan Bracken. In July 1941 he replaced Alfred Duff Cooper (see sketch 1940 Annual) in that position. He had for many months been Parliamentary Private Secretary to Prime Minister Churchill, and in 1940 became a Privy Councillor.

Of Irish descent, Brendan Bracken was born in 1901, the son of the late J. K. A. Bracken of Ardvullen House, Kilmallock. He was educated at Sydney and at Sedbergh. Although he had admired and worked with Churchill politically since 1923, it was not until 1929 that he himself was elected a member of Parliament from North Paddington, running at that time as a candidate of the Unionist Party. (He is now a Conservative.) His name is even better known in journalism than in the political world. He has been editor, director or chairman of *Financial News*, *The Banker* and *The Economist* as well as director of a firm that prints Bibles. He has always taken a great interest in news, particularly as it affects the United States, and *The Nation* says of him: "As a publisher he understands news and newspapermen. Under his direction the London *Financial News* was resurrected to become a model of financial journalism—critical, courageous and objective. It was one of the first British newspapers to grasp and explain the military nature of Nazi economics."

As Churchill's disciple, Bracken had long been a scathing critic of appeasement. Conservative Party whips used to call him "the Red-Headed Beast" during the days when Churchill led an anti-Chamberlain Conservative group in Parliament known as "Winston's Glamour Boys." During the Second World War he continued to criticize; his *Financial News* was used "to harass Sir John Simon for not spending fast enough on British armament." It is said that he often expressed distaste for the Ministry of Information position, and it was at one time rumored that if he took it some head man would be transferred to that organization.

"Outspoken and direct in manner," Bracken "shares Churchill's taste for black cigars, voluminous reading, vigorous talk." And since he has been in office there has been a new dash of showmanship in British news and pictures. His words have also made headlines. In September 1941 he invited United States Congressmen to come over and see how lend-lease materials were being used. "We want the independents and the critics to come," he said. "But no peace mongers."

BRENNAN, WALTER (ANDREW) July 25, 1894- Film actor

Address: b. Samuel Goldwyn Studios, 1041 N. Formosa Ave, Hollywood, Calif; h. North Hollywood, Calif.

WALTER BRENNAN

At least one film actor who is a consistent winner of "Oscars," as Academy Award cups are affectionately known in Hollywood, has no reason to fear the march of time. In fact, another decade or so will probably serve only to perfect Walter Brennan's virtuosity in playing various old reprobates and lovable though spunky old gentlemen in a succession of other hits.

And he has no desire for stellar billing. "I'll take second and third billing any week," he told Maxine Cook of the New York *World-Telegram* in June 1940. "Besides, my role in *Come and Get It* got me the Academy Award for a best supporting performance, the first one given to a supporting player. Next year Joseph Schildkraut got it. Then I got it the second time for *Kentucky*. This year it went to Thomas Mitchell. I figure my role of Judge Bean in *The Westerner* might get it for me again, and I'd be the first to have three Oscars. Say, I'd spoil my chance by being a star." Brennan got the third Oscar, at the Academy dinner in March 1941.

Walter Brennan was born in Lynn, Massachusetts, July 25, 1894, the son of William John and Margaret Elizabeth (Flanagan) Brennan. From 16 to 20 he studied at the Swampscott (Massachusetts) High School, after a period spent roaming the states with "turkey shows," small-time comedies that tour the sticks, and working in Maine lumber camps. He was graduated from Rindge Technical School at nearby Cambridge in 1915, and when the United States entered the First World War spent 19 months (1917-1919) in France with the American Expeditionary Force in the 101st Field Artillery. In France he alternated stints at the front line with performances in a vaudeville act at soldiers' gatherings behind the front. According to Theodore Strauss, writing in the New York *Times*: "Mr. Brennan still respects the doughboys as the world's toughest audience. 'They defied you to be good.' "

BRENNAN, WALTER—*Continued*

Before the War Brennan had worked a while as messenger in the local bank, and his father, an engineer with numerous inventions registered at the Patent Office in Washington, had hoped that Walter would either follow in his own footsteps or continue working in a bank. Brennan did work for a time as an investment broker. He toyed with the idea of going to Guatemala until he learned of the sanitary accommodations there. Relinquishing any dreams of going into the pineapple business, he collected Mrs. Brennan, who as Ruth Caroline Wells had sat behind him all through grade school, and set out for Los Angeles. "As a salesman of suburban lots he chaperoned busloads of customers to the site of the proposed subdevelopments and there harangued them on the beauties of the countryside."

"I made $69 the first week, $79 the second and $89 the third," Brennan told Strauss. "And then for four weeks I didn't make a dime. Later on, in 1921 and 1922, I made a lot of money, until I decided in 1923 that I could make it a lot faster and lost my last nickel. For the next 10 years I was on my uppers. I sold stapling machines, insurance, anything. Now and then I'd make a try at the studios, but I hadn't thought of pictures as a career. No class or respectability."

According to Donald Hough of the New York *Herald Tribune,* Brennan's first break came when he brayed like a donkey for a harassed director, after the latter's real animal actor had been seized by a fit of temperament and refused to perform. The relieved director offered Brennan a bit part at $25 the next day.

"For some time after that he played small character roles until finally the part of Old Atrocity in *Barbary Coast* made him the most sought-after character actor in Hollywood. Parts came thick and fast after that. He made another hit as one of the principals in *The Three Godfathers*; then, in *Come and Get It,* in 1936, he won the Academy Award for the best supporting performance of the year. Then came *Banjo on my Knee, Buccaneer, The Texans*; and just two years after he had won the first supporting award, he won another for outstanding work as Uncle Peter Goodwin in *Kentucky.*"

Continues Hough: "When Brennan was walking the streets, back in his braying days, he got acquainted with a chap who was just coming into fame. A fellow from Montana, Gary Cooper [see sketch this issue]. They became friends—have been ever since; and it is more than accidental that they played in a number of pictures together. First there was *The Wedding Night,* later *The Cowboy and the Lady,* and [then] *The Westerner.* Brennan played a minor role for all it was worth in *Northwest Passage,* then carried the film *Maryland* on his own bent old shoulders." His last two pictures with Gary Cooper were *Meet John Doe,* and *Sergeant York.* In the three years prior to June 1940, Brennan appeared in seventeen films.

At home on his ranch, he told Maxine Cook, he has one of the finest wives a man can have, and three children: a daughter named Ruth Caroline and two sons, Arthur Wells and Walter Andrew Brennan, Jr. "I don't go out nights. I get through with one picture, start on another, and with a wife and children and a nice home I don't need anything else. Besides, the man who saves his money out there doesn't have to worry about slipping back. I watch these fellows make a few dollars, get all puffed up and first thing they know they're out in the cold. I work for it, save it, and, I tell them, that's why I've got it. I could stick a pin in some of these stuffed shirts."

An important reason for Brennan's success is that he is always in character when on the lot. With Alexander Kahn, a United Press writer, he went to lunch one day while working on *Maryland.* "He walked to the cafe with the labored walk of a man [of 70], eased his apparently creaking bones into a chair and ordered his meal in a semi-senile voice. 'If you knew what a job it is to assume an aged character like this,' he explained, 'you would understand why I don't dare step out of it during the day. If I stepped out of character during the lunch hour, I would have a heck of a time getting back into it during the first few scenes after lunch.' "

Though Brennan is well over six feet tall, he can appear as short as five feet four, especially when dumped down into one of the assortment of old pants which he keeps hanging in his garage. By removing all or parts of his set of artificial teeth (his own went when he was gassed in the War; what were left were accidentally knocked out by an extra man's boot) he can push his face into varying shapes. "I wear misfits in all my pictures. Have a hard time getting past the gatemen at any stage I'm working on without my make-up because I wait until I get dressed up to stand up straight. Why, I've never played myself in a film."

Standing up straight, however, Walter Brennan is a pleasant-looking man with light blue eyes and few gray hairs in his head. "Good parts, that's what I want. I'm satisfied with second or third billing," he told Theodore Strauss, adding with a wink: "After all, there isn't any romance for the public in a guy with a pan like mine."

In February 1941 Brennan's unmistakable voice was heard over the air in *Destry Rides Again,* on the Columbia Network's *Screen Guild Theatre.* He played Washington Disdale, the town drunk who is elected sheriff and appoints Destry his deputy.

BREUER, MARCEL (broi'yĕr) May 21, 1902- Architect; educator

Address: b. 1430 Massachusetts Ave, Cambridge, Mass; h. Woods End Road, Lincoln, Mass.

Although perhaps best known as the inventor of tubular steel furniture in 1925 and more recently (1935) of furniture in plywood, Marcel Breuer has won a reputation among architects in America equal to that of Walter Gropius and Frank Lloyd Wright (see sketches this issue). Born in Hungary, trained in Germany, Breuer has lived in the United States since 1937, when he became an associate professor in the Department of Architecture at Harvard University, where he works in partnership with Gropius. He is particularly interested in the adaptation of modern architecture to American needs and technical possibilities.

Internationally educated in the living tradition of modern architecture from its beginning, Marcel Breuer was born in Pécs, a Hungarian provincial capital, May 21, 1902, the son of Jacques and Franciska (Kan) Breuer. He was graduated from the local Gymnasium in 1920. His father was a middle-class doctor; but at 18 young Breuer had ambitions to be a sculptor. He went first to the Art Academy in Vienna, and soon found the teaching there inadequate. Later, while working in the office of an architect, he heard about the newly established school of arts, the Bauhaus, at Weimar, Germany.

Architect Walter Gropius, reorganizer of the Bauhaus, held a concept of the crafts as technics in his theory of education; besides "experimental" artists, like Klee and Kandinsky, he welcomed the cooperation of students such as Bayer, Albers and Breuer. As a student Breuer advanced so rapidly (he received his Master of Architecture degree in 1924) that he soon became qualified as a professor (1925) in the newly founded Bauhaus at Dessau. His earliest published work was in the Bauhaus yearbook for 1923. His chief work at this time was in the carpenter shop at Dessau.

In 1925 Breuer's analysis of the modern furniture problem led to his invention of the tubular steel chair in its original form. An essentially new idea in furniture design, it was an important contribution toward the adaptation of modern technics to human needs. This steel furniture by Breuer was executed in the Dessau shop; it did not go into commercial production until 1928.

Breuer was in private architectural practice in Berlin in 1928, at which time he began his studies on pre-fabricated, low-cost housing. His aim was low cost plus a high quality of design in color, form and materials. His first published architectural project was for a small, pre-fabricated steel house, *Kleinmetallhaus Typ 1926,* having as constructive principle a light metal skeleton, window and other units set in, to be erected in two or three weeks.

MARCEL BREUER

In Berlin, however, times were difficult for an ambitious young architect. Breuer's metal furniture began to bring him in a fairly good income, but the political and economic crisis in Germany forced him to leave the country. From 1931 to 1935 he traveled—in Spain, North Africa, Greece, England and the middle of continental Europe—working now and again at various jobs and on various publications. He took part also in the organization of the International Congress of Modern Architecture.

He had entered designs for private interiors at the Paris Exhibition at the Grand Palais in 1930, and in the Berlin Bauhaustellung of 1931. But more important in his development had been his larger, purely architectural projects, notably one for rebuilding the Potsdamerplatz in Berlin in 1928. In this he made independent use of the clover-leaf intersection which was to become, in later years, the major technic of advanced highway design. Other projects of this period (1929-30) had been for a large hospital, a factory and the Kharkov Theatre. The hospital "took startling advantage of skeleton construction to produce a thin-terraced building of which the rising stories projected at the rear as they receded at the front. This ingenious device for hospitals has since been introduced by other architects."

From his travels in Spain and Morocco in 1931 Breuer gained, architecturally, what one of his critics, Mr. Henry-Russell Hitchcock, Jr., calls "greater suavity" and "more Latin clarity" of form, in contrast to the "extreme articulation" of the Russian Kharkov Theatre and other earlier achievements. Hence his first important executed work, the Harnischmacher house in Wiesbaden in 1932, shows differences: the creation of a markedly independent architectural personality, making original use of varying levels. "This first house of Breuer's justly took rank at once as one of the finest modern houses in the world."

BREUER, MARCEL—*Continued*

Photographs of it were widely published in the periodicals of many different countries.

The next year saw Breuer's construction of the blocks of flats in the Dolderthal, Zurich. Studies of these, published in the *Architectural Record* (October 1936) and in the *Architectural Review* (February 1937), show "an ingenious and agreeable use of oblique forms" that vary and enhance the main rectangular forms; a structural expression "combining in a wholly personal synthesis the articulation of the North and the unbroken surfaces of the South." Like the Wiesbaden house, these flats were also accepted as a "classic of contemporary architecture." Breuer is said to be most pleased, however, by the fact that they were soon 100 per cent rented, while others nearby were only 70 per cent occupied.

Two new types of furniture, following his steel tube furniture, were produced by Breuer: aluminum, first designed in 1933, and plywood, initiated in 1935. The latter, together with the work of Aalto in the same medium, constitutes an important contemporary achievement. It has as many or more structural advantages as steel, and represents a return to the use of traditional, more acceptable, material.

In 1935 Breuer went to England, where he entered into partnership with F. R. S. Yorke in London. Notable among his British commissions was his project for a "Garden City of the Future," exhibited at Olympia, of which the most original unit was the Shopping Center, "consisting of a continuous spiral ramp, with the individual lines of shops along the ramp projecting out at the rear so that all may be approached from the open front terraces as from a street." The Ganes Pavilion at the Royal Horticultural Exhibit was also largely the work of Breuer. In this he employed glass screens of wall height and internal screen partitions of plywood.

The work that now engages Breuer in this country has commanded much interest. That interest on the part not only of architectural experts but of the general public was aroused by his exhibition at Harvard's Robinson Hall in July 1938, where many models and photographs of his designs were shown. According to a report in *Time* (August 1, 1938), "visitors were impressed most by the variety and ingenuity of architect Breuer's projects. They range from a great 'Garden City of the Future' to chairs made of plywood. They include his multiplying glass window—a group of small round windows, each curved like a camera lens, so that the same scene appears in a different focus, or from a different angle, in each panel. Associated with Gropius in designing houses as well as in teaching, Breuer is considered the more imaginative and intuitive of the two architects, Gropius the more logical and precise."

Breuer's work has appeared in three books published in London: *The Modern Flat* (1937); *Circle;* and *The Flat* (1939). As Gropius' partner, buildings and interiors designed by him include: in Massachusetts, the Gropius house in Lincoln, the Hagerty house in Cohasset, the Chamberlain house in Wayland; furnishings for a dormitory at Bryn Mawr College, Pennsylvania; project for the Black Mountain College in North Carolina; the Pennsylvania exhibition at the New York World's Fair; and the New Kensington, Pennsylvania, defense housing project consisting of 250 units, built in 1941.

With short-clipped brown hair, keen blue eyes and the figure of an athlete—not always a physical characteristic of architects—it is not surprising that Breuer's outdoor hobbies are skiing and tennis. When not busy at his desk with plans for building, Breuer paints. He was married in 1940 to Constance Crocker Leighton. The Breuers live in a house of his own design in Lincoln, Massachusetts.

BROOK, ALEXANDER July 14, 1898- Artist

Address: c/o Rehn Galleries, 683 Fifth Ave, New York City; h. 14 Factors Walk, Savannah, Ga.

To most minds the Odyssey of success in art, as in other fields, is marked with struggle and drama. The career of Alexander Brook appears to have little of either. In Hollywood in 1940 he did a full-length portrait of Katharine Hepburn. Thoroughly modern, it also suggested traditional figure portraiture, and it was widely hailed as another triumph in the career of this artist.

Recent successes have revived the concept of Brook as "the unstruggling artist." In the surface flow of events there has been much to support this contradictory appellation. Brook himself has said: "I haven't jumped any freight cars, I haven't had any desire to go roaming about. I have had no adventures. I find that my life, like my painting, can be realized on the back porch." A person of tremendous vitality, he looks upon life, as one writer put it, "with the gusto of a hungry man about to eat a large dinner." His blunt attitudes are the opposite of those of a professional portrait painter, and through his career runs an undercurrent of determination. Of portraiture he says quite characteristically: "If I don't like it I'll destroy it. If you don't like it I'll keep it and sell it as a painting."

ALEXANDER BROOK

Alexander Brook was born in Brooklyn, New York, of long-lived antecedents. His great-grandmother died at the age of 113, while dancing at a wedding, and one of her daughters lived to be almost 100! His father was O. Gregory and his mother Eudoxia (Gelescu) Brook. Alexander had five older sisters. When he was nine his family moved to Manhattan. At the age of 12 he was stricken with infantile paralysis, as a consequence of which he still has a slight limp. Bedridden for months, he asked for a set of paints with which to occupy himself. These were brought to him, along with the palette he uses today, by a Van Dycked and frock-coated neighbor who made his living painting portraits in oil from photographs. Under the old man's direction young Alex did his first oil on canvas, a picture of a battleship and a spot of land. His career was decided upon. He would be an artist.

His teacher, he wrote, "came two or three times a week and sketched for me, in the twinkling of an eye and with the assurance of a statistician, a sunset, a turgid sea or some poetic autumnal scene, all flourishingly signed, which I in turn copied as accurately as possible." Nor was faith hard to come by. "Every child who chooses to paint at the age of 12," he put it, "invariably shows a great aptitude and remarkable ability. I was no exception. At that time, and in the vernacular, painting was a cinch."

Apart from a short stay at the Pratt Institute in Brooklyn, New York, Alexander Brook's training in art got under way when he went to the Art Students League in 1915. At the League he won a scholarship and almost every prize within reach of a student. His principal teacher was Kenneth Hayes Miller, whom one critic calls the "tutorial father of modern American art." One sees the erstwhile pupil of this teacher in the statement of Brook that a working credo might be: "To add more to the quality of a picture

BROOK, ALEXANDER—*Continued*

and produce more," and: "A picture should represent a surprising experience completed; the more succinctly it is realized, the greater pleasure it will give to the sympathetic beholder."

A sensitive, long-haired art student, Brook did a self-portrait that contrasts strikingly with the Neroesque person who went to Hollywood in the summer of 1940 to paint Dick Powell's two children. He pointed to this change himself when a critic contrasted the robust quality of his mature painting with the pale figures of his youthful work. "I guess it's because I used to be thin and pale myself. Now I'm fatter and more robust, so things naturally look fatter to me."

Halfway through the League in 1917, Brook made his first sale. At an auction at the Penguin Club, a painting called *The Widow* fetched $12.50, and its buyer was Jules Pascin, a gratifying detail to an art student. His second sale, two years later, was a landscape. This went for $50 to an anonymous purchaser who later turned out to be one of America's leading painters. In 1920 he married Peggy Bacon (see sketch 1940 Annual) and took to the uncertain business of trying to make a living at his vocation. Here again was a period of illness and suffering, about which Brook doesn't talk much.

When his health improved Brook resumed painting. One of his canvases at an Independents' exhibit caught the attention of Brummer, connoisseur and art dealer, and in 1923 a joint exhibit was arranged for Brook and Peggy Bacon. Since then he has exhibited constantly. Harry Salpeter estimated that in museums throughout the country Brook had had more one-man shows than any other living American, and that many of his single paintings had been shown five and six times apiece. In 1923 Forbes Watson, editor of *The Arts,* asked to do an article about him. Brook countered with the proposal that he himself do an article—at space rates. That first article was on Toulouse-Lautrec and contained an attack against studio preciosity. Today he himself has to look back upon a period when he was regarded as a studio painter. "I think it's true," he once admitted. "But I can't help it. A painter can be a good painter if he's true to himself. Then it doesn't matter whether he's a studio painter, an outdoor painter, or a social painter."

A valuable contact was his meeting with Juliana Force (see sketch this issue), now the director of the Whitney Museum of American Art. Under her, he was assistant director of the Whitney Studio Club from 1924 to 1927. And if, in this capacity, his enterprise, interest and friendliness toward the work of other artists put them in his debt, it also placed him squarely in the front ranks of young Americans. He had background and creative vigor. But often these virtues never make themselves known. In this sense, perhaps, Brook was better placed than many artists. It was he who could help Raphael Soyer (see sketch this issue), from this practical point of view, and not vice versa.

A successful artist at 30, it was nevertheless possible for Brook to say in 1936—when he was 38—that in his entire career he had sold only 100 paintings. (Of course, this is by no means extreme. Van Gogh could count his lifetime sales on his fingers.) For some years he supplemented this uncertain income with teaching jobs, principally at the Art Students League. But beginning in 1929 economic need was no longer foremost. In that year he won a $2,500 prize at the Chicago Art Institute—which also honored him with a one-man show. In 1930 at the Carnegie International (Pittsburgh) show he won second prize as well as the Albert C. Lehman Award, a total of $3,500 in addition to the purchase price of the painting. In 1931 he was given the Temple Gold Medal (PAFA) and went to Europe on a Guggenheim Fellowship. His only other trip abroad was a holiday jaunt. But he has been up and down and around America, painting the lush landscapes of Woodstock, New York, the sardonic loneliness of a pasture north of San Francisco and the mute human poverty of a Georgia jungle.

In his approach to subject matter Brook has always had three distinct phases in his work. First, there is the studio phase, whether of still life or of posed models. Second, there are the portraits. He first got into this field by doing studies of friends, such as his portrait of George Biddle, and charmingly informal canvases of his growing children, Sandy and Belinda. He also did several portraits of Peggy Bacon, from whom he was divorced in the year 1940. A third phase of his work consists of landscapes. These are brighter today, less somber in tone, but he still sees a mood in a landscape.

In the 1930's, particularly under the influence of Miller—who had taught many of them—a number of American artists adapted the technique of under-painting. (The revival of this technique is credited generally to the European theoretician, Max Doerner.) Brook describes his method of painting as follows: "My method or technique is a simple one. On a canvas prepared with a white ground, I apply a thin, transparent warm tone or veil; I then make my drawing in charcoal on the toned canvas. Then I paint with either an egg or casein emulsion, using only white, depending on the tone for shadows and form. The completed under-painting is complete in every way but for the color. When it is thoroughly dry I paint as thinly and as directly as I can with oil paints, using to advantage whatever happy accident the under-painting offers."

In recent years critics speak of the increased richness of his palette, its complexity, its gradations of tone and refinements of color. To this might be added the more commonplace observation that in the late 1930's Brook got away from the studio, looking at life with renewed freshness, putting into practice his own words: "We are becoming interested in ourselves and our surroundings, in our own particular brand of civilization."

On the negative side, critics have suspected Brook now and again of being "fluent rather than explorative" (New York *Sun*), and Jewell once pointed out that certain pictures —*Children's Luncheon,* for example—"expose themselves to the criticism that opulence has lured the artist into over-diffused, insufficiently disciplined statement."

Although Brook recently completed a mural for a Washington, D. C. postoffice and has done some graphic work, he is best known as an easel painter. He lives in Savannah, Georgia, with his second wife Libby (Berger) Brook, whom he married in California in 1940. Normal social interests and a zest for living characterize him, but if you asked Brook his favorite hobby it would probably be that of many artists—throw an easel and a box of paints in the back of the car and just drive off aimlessly until something new and interesting in the landscape induces one to stop.

In his early 40's Alexander Brook is vigorously youthful, a little Roman in appearance, with clear blue eyes and closely cropped sandy hair. In her incisive prose Peggy Bacon spoke of him as: "Big hooked nose like a weapon. Fierce blue eyes beneath a cliff of brow, with the black look of an animal glaring from its lair, a violent stare compound of rage and gaiety, slightly berserk. Bull neck, broad shoulders and an air of force and energy. Mercurial, overbearing and intense. A stiff proposition."

Widely exhibited, Alexander Brook is also represented in the permanent collections of 21 museums throughout the country, including the Metropolitan Museum of Art, Museum of Modern Art and Brooklyn Museum in New York City; Art Institute, Chicago; Corcoran Gallery of Art, Washington, D. C.; Museum of Fine Arts, Boston; and the San Francisco Museum, San Francisco. He is affiliated with the Modern Artists of America and with the Society of Independent Artists.

BROOKE, SIR ALAN (FRANCIS) July 23, 1883- Commander in chief of the British Home Forces

Address: Government House, Salisbury, England

SIR ALAN BROOKE

Whether or not the Germans will ever attempt an invasion of England is known only to the gods and Hitler—and perhaps only to the gods. But if they ever do, the British Army will immediately spring into action under the command of Sir Alan Francis Brooke, since July 1940 commander in chief of the Home Forces. He is an officer whose chief reputation rests on his skill in artillery, but has served in cavalry, commanded infantry and had the kind of experience which makes him "the best all-round officer in Britain."

In his years in the Army, Brooke, whom the soldiers call "Wizard," has taken what the Liverpool *Daily Post* calls "the most modern and scientific view of warfare." He has been responsible for many advances in artillery practice and in large part for the mechanization of the British Army. In action, he won a knighthood for his efficiency in carrying out the retreat from Dunkirk—"it was due to his rapid decision and energetic action that a defensive flank was formed to meet the situation created when the Belgian Army ceased fighting." And the "job he did in one week, of whipping together the Southern command out of tens of thousands of exhausted men who were landed back in England, scattered at different ports when Germany was expected to follow them across the Channel at any moment, was called 'the major feat of organization in British Army history.' "

Like many another important British soldier, Brooke comes from Ireland, from the Ulster Protestant county of Fermanagh, where there is a family seat at Colebrook belonging to his nephew, Sir Basil Brooke, Minister of Agriculture in the Government of Northern Ireland.

BROOKE, SIR ALAN—*Continued*

His father, the late Sir Victor Brooke, baronet, was an Irish landowner who couldn't live in the damp Irish climate because of a lung infection and moved to Pau in France. Here, for many years, he was master of the local hounds, a pack supposed to be descendants of hounds hunted by the Duke of Wellington's officers in the Peninsular War.

Alan Francis Brooke was born at Baguères de Bigorre, France, and sent to a private school in Pau. However, he spent his holidays in Ireland, where he learned to be an excellent angler and one of the ten best shots in Great Britain. He received his elementary soldiering education at the Royal Military Academy in Woolwich, from which, in 1902, he passed as a subaltern into the Royal Field Artillery. After four years' service in Ireland, Brooke went to India, was transferred to the Royal Horse Artillery in 1909 and stayed there until the outbreak of the First World War. In India he reveled in sports, especially pigsticking, and he is "one of the few men who can claim to have ridden down and speared a wolf from horseback."

In September 1914 Brooke, then a captain, landed at Marseille with the Secunderabad Cavalry Brigade, in command of an ammunition column. By February 1915 he was adjutant of the second Indian Brigade, R. H. A.; in November of that year he became brigade major of the 18th division of artillery; and by February 1917 he was a major with "red tabs"—on the staff of the Royal Artillery Canadian Corps. In July 1918 he rose to be general staff officer of the first grade and he served with the Royal Artillery of the First Army until March 1919. During the War, Brooke invented a barrage map for directing artillery fire which came into wide use. Seven times he was mentioned in dispatches, and he won the D. S. O. with bar and the Belgian Croix de Guerre.

Home again in England in April 1919 Brooke was sent to take an instruction course at the Staff College at Camberley. From 1920 to 1923 he was general staff officer, second grade, to the Northumbrian division of the territorial army and from 1923 to 1927 he was at the Staff College with the same rank. Then, in 1927, he went to the Imperial Defence College as army instructor and for the next seven years he was engaged entirely in the study and exposition of modern strategy and tactics and artillery work, first at the School of Artillery and later at the Imperial Defence College again. He was a first-rate teacher—"he has a supple mind; his views are broad and he puts a premium on the ability to think for oneself."

Since January 1923 Brooke had been a full colonel and in June 1935, when he was in command of the 8th Infantry Brigade, he was raised to the rank of major general and transferred to the War Office as inspector of the Royal Artillery. It wasn't long before his teaching ability got him promoted to the position of director of Military Training at the War Office. Then, in 1937, an entirely new Mobile Division was formed, and because of his specialization in mechanical warfare Brooke was an obvious choice for its first commander.

The international situation was already becoming blacker and blacker, and one of Britain's main concerns was anti-aircraft protection. In June 1938 Brooke was made a lieutenant general and placed in charge of the Territorial Anti-Aircraft Corps. A year later he was for a short time general officer commanding the Anti-Aircraft Command; in 1940 he was made general officer in charge of the Southern Command.

As soon as the Second World War broke out and until the evacuation from Dunkirk in which he figured so brilliantly, Brooke was on service in Belgium. Before his command went out he told his staff: "You have all read your military text books, and don't ever forget what's in them; but you must think for yourselves, for this is a war of new methods." During the first months of comparative stagnation he wasn't merely a military-minded officer—he used to require one of his staff officers to give a talk on the world situation each week. After Dunkirk, after days of sharing perils with his men, he was given the post he now holds.

The London *Daily Telegraph* describes Brooke as having "a firm lip and far-seeing eye," and according to the London *Daily Mail* "he looks like a businessman. He has a clipped mustache and horn-rimmed glasses and a sense of humor. And that's just what he is—a soldier who still believes in the methods of business." He is married to Benita Pelly Lees and has four children, one son and daughter being the children of his first marriage to Jane Mary Richardson.

On December 25, 1941 he will succeed Sir John Dill (see sketch this issue) as chief of the British Imperial General Staff.

Who's Who

BROOKE-POPHAM, SIR ROBERT (MOORE) (brŏŏk-pŏp'-ȧm) Sept. 18, 1878- Air Chief Marshal of the R. A. F.; British commander in chief in the Far East

Address: General Headquarters, Singapore, India

Sir Robert Brooke-Popham arrived in Singapore on November 14, 1940 to take command of all the British forces in the Far East. After transferring Singapore to a military powerhouse, after consulting informally with American Army and Navy chiefs at Manila and defense leaders in Australia and the Netherlands East Indies, he was able to announce firmly: "We're ready for anything and anyone." In December 1941 Brooke-Popham and the forces under him were better prepared than ever when Japan declared war on Great Britain and the United States.

When he took over this command at the age of 62, Brooke-Popham had a longer record of service with the R. A. F. than any other man engaged in the Second World War. One of the earliest of all British pilots, his royal Aero Club certificate No. 108, he was one of the first pilots to cross the German lines in the First World War. He has been a fighting pilot, instructor, production expert, staff college commandant, officer commanding air regions both at home and abroad and member of air missions to Canada and to South Africa.

Born at Mendlesham, Suffolk, Robert Brooke is the son of the late Henry Brooke of Wetheringsett Manor, Suffolk, and his wife Dulcibella, daughter of the late Reverend Robert Moore. (He assumed the additional name of Popham by Royal Licence in 1904, only to find himself christened "Brookham" by his colleagues.) Brooke-Popham was educated at Haileybury, a well known public school, and went from there to Sandhurst, the military college, from which in 1898 he entered the Oxfordshire Light Infantry as a subaltern. By the outbreak of the First World War he had reached the rank of captain.

Before then, in 1912, he had combined with other adventurous young officers to form an Air Battalion of the Royal Engineers, this at a time when airplanes were rickety contraptions of wire and canvas, liable to crash on the slightest provocation. The War Department, which felt, and rightly, that flying was a desperate adventure, refused any official recognition to these men, but did smile tolerantly at them. Despite gentle tolerance, before long the Royal Flying Corps had been formed from this nucleus, its function to look after land operations while the Royal Naval Air Service dealt with operators over the sea. Brooke-Popham was made an instructor in the R. F. C. and when the War broke out was sent to France.

As early as November 1914 Brooke-Popham had won the Legion of Honor for gallantry, and early in 1915 he won his majority and the D. S. O. Throughout the War he continued flying with great daring, accumulating further decorations, including the Order of St. Stanislaus and the Air Force Cross. In the great 1918 retreat he managed to get cut off at headquarters and was forced to hide for days in a place singularly ill-adapted for normal human habitation. He managed to get out and rejoin the British at Amiens only after great trials.

Brooke-Popham emerged from this earlier War with a reputation for being "the best administrative brain of all our airmen." He was made a Companion of the Order of St. Michael and St. George in 1918 and a Companion of the Bath the following year, and was immediately put to building up the new R. A. F. First he acted as controller of the technical department, which was responsible for aircraft production; then, after a short time, he became director of research at the Air Ministry. In 1921 he became commandant of the R. A. F. Staff College at Cranwell. There he remained for five years, and it has been said that "like a great headmaster he left an indelible stamp upon the rising generation of airmen."

SIR ROBERT BROOKE-POPHAM

In 1926 Brooke-Popham took over the air command of the fighting area of Great Britain and remained in charge of it for two years. Since that time much has been done by other hands, but to Brooke-Popham belongs much of the credit for the organization which has proved its worth in the War. He was knighted as K. C. B. in 1927 and from 1928 to 1930 was air officer commanding in the Iraq area. From 1931 to 1933 he returned to the supervision of instruction, as commandant at the Imperial Defence College, and then from 1933 until 1935 took over the British defence areas again. He was principal air A. D. C. to the King from 1933 to 1937.

Brooke-Popham acquired an additional order of knighthood, the G. C. V. O., in 1935. In 1935 and 1936 he acted as Inspector General of the R. A. F., and then in 1937 he was put on the retired list. He didn't withdraw to private life, however, but took on the job of Governor of Kenya and distinguished himself as the most successful Governor this province ever had. The day the Second World War was declared he rounded up every German in the country, commandeered every plane and worked out a plan for keeping the farms of this agricultural country running.

But he was needed in England and brought home for duty. Less than a month after the War began he was in Canada on a special mission which established the Empire Air Training scheme. This was followed by a similar mission to South Africa before he returned to the Air Ministry in June 1940. Here he established a useful and unconventional "ideas pool" to make the best use of "wrinkles" evolved by all ranks of flying personnel out of actual air fighting experience.

BROOKE-POPHAM, SIR ROBERT—*Continued*

He presided personally at round-table meetings where flying officers, radio operators, gunners, mechanics, navigators and maintenance men met to put forward their ideas.

It was in mid-November 1940 that Brooke-Popham was made the first British commander in chief of the Far Eastern Station, his duties "to consult and cooperate with the Navy in Far Eastern waters, to keep in touch with the commander in chief of India, and to communicate with the Commonwealth and Dominion Governments of Australia and New Zealand." This command marked the first time that an air force office had been given seniority over the other two services and constituted, some commentators felt, a formal recognition of the vital part that air operations now play in warfare.

Brooke-Popham is a lean, hard man with "sandy hair, a rugged face and a penetrating voice" who speaks in "clipped, astringent" accents. He is very methodical, exacting the utmost from his subordinates while still managing to be a good mixer, and is personally popular. He is an excellent horseman. In 1926 he was married to Opal Mary, second daughter of Mr. Edgar Hugonin, and the couple have one son and one daughter.

Who's Who

BROOKS, MATILDA M(OLDENHAUER) Physiologist

Address: b. University of California, Berkeley, Calif; h. 630 Woodmont Ave, Berkeley, Calif.

In 1933 a young man in San Francisco took cyanide of potassium with suicidal intent. This is the swiftest and most deadly of poisons—as any detective story reader knows. Hitherto there had been no effective antidote. But this young man was promptly given an injection of methylene blue—and he recovered. (Later he went away and took cyanide again where nobody could find him, and died; but that was not the fault of the treatment!)

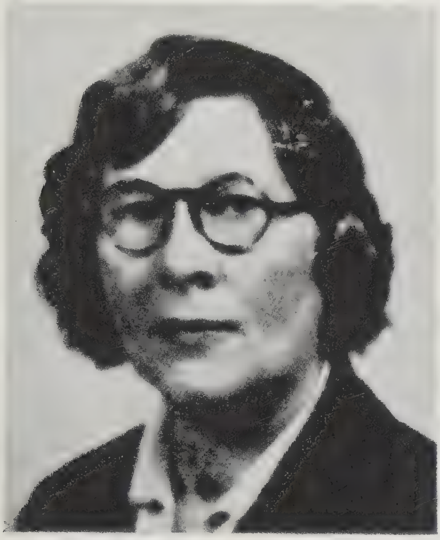
The discoverer of the methylene blue treatment in both cyanide and carbon monoxide poisoning is Dr. Matilda M. Brooks, research associate in biology at the University of California. Her findings were first published in 1932, and ever since then other research workers have been trying to claim the credit for them. The theory had been known since 1919, but no one before Dr. Brooks saw the application to human poisoning cases; there is not the slightest doubt that she was the first to publish the suggestion. She is working now, and has been for several years, on the mechanism of the action—that is, it has been proved that methylene blue does act as an antidote to cyanide and carbon monoxide, but it has not yet been established *how* it acts.

Dr. Brooks was born Matilda Moldenhauer in Pittsburgh, Pennsylvania, toward the end of the nineteenth century. Her parents were both of German descent; she speaks German fluently, has spent much time in Germany, and has had scientific articles published there. She is nevertheless as authentically American as corn on the cob. Her father, Rudolph Moldenhauer, died when she was a child, and her early years were spent struggling to obtain an education. When she was about 15 she moved with her mother, Selma (Neuffer) Moldenhauer, and brothers to Philadelphia, where she was graduated from the Girls' High School. At this time she was a painfully shy, spectacled, almost inarticulate girl with light hair strained back from her forehead, who led her classes in spite of the fact that it was agony for her to recite her lessons in public. Those were hard, dull years; after school she taught music to children at 25 cents an hour, or served in small stores as a salesgirl.

After her graduation the family returned to Pittsburgh, where she received her B. A. and her M. S. degrees at the University of Pittsburgh. Then she went to Harvard University, which gave her a Ph. D. in 1920. Before that, however, in 1917, she had worked as bacteriologist at the Research Institute of the National Dental Association, and that same year had been married to Dr. Sumner Cushing Brooks, a New Englander born in Sapporo, Japan, the son of an agriculturist who helped found the first agricultural college in Nippon. He is now professor of zoology at the University of California.

Ever since their marriage both have worked in close association, though independently. From 1920 to 1924 Dr. Matilda Brooks was assistant biologist in the hygienic laboratory of the United States Public Health Service, and for two years after that associate biologist. Her appointment at the University of California followed, in the same year as her husband's, 1927. From 1927 to 1932 she held a Bache Grant of the National Academy of Sciences, and did research in Bermuda and in the South Seas. In 1930 and 1931 she held the grant of the National Research Council at Naples, also holding the Naples Woman's Table in 1931. She has, besides, made several long tours with her husband—once around the world—and there are very few portions of the planet with which she is not familiar. During 1934 and again in 1936 Dr. Sumner Brooks was very ill, and his wife closed her laboratory and took over his entire course of lectures at the University. The University has a ruling which forbids both husband and wife to hold salaried positions on the faculty; therefore, though all her expenses are provided and her assistants paid, her work as research biologist is purely a gift to science.

Dr. and Mrs. Brooks spend nearly every summer at Woods Hole, where they have long owned a cottage, and where Mrs. Brooks is a member of the corporation of the Marine Biological Laboratory of which her husband is a trustee. During the autumn, winter and spring they live in a house situated in North Berkeley, just on the dividing line between Alameda and Contra Costa Counties. They were their own architects, with very successful results: the heart of the house is a huge living room, with a large fireplace at one end, and flanked by two bedroom wings. Over the garage, which forms an ell, is a large study. Both husband and wife are ardent gardeners, and there is always at least one cat, usually an extremely pampered one. At least one of these was a refugee from the laboratory, where its engaging ways saved it from becoming an experimental animal.



DR. MATILDA M. BROOKS

The animals used by Dr. Brooks in her own experiments are white rats. She tells one story about the time when she returned from a research trip to the South Seas to find that the assistant left in charge had suddenly gone insane and released all the animals, mixing infected and control rats, so that the work had to be done all over again. Before she began her present line of research she did much work in problems of respiration, the antagonism of salts, the effects of arsenic on cells, the permeability of cells and oxidation reduction. In fact, she says, "my work in general is on oxidation reductions in living cells."

In 1940 the Radcliffe chapter of Phi Beta Kappa elected Dr. Brooks to honorary membership. She is also a member of the scientific fraternity, Sigma Xi, and of the Bermuda Biological Corporation, the American Physiological Society, the Society of Experimental Biology and Medicine, and the American Association for the Advancement of Science. She was vice-president of the Western Society of Naturalists in 1929.

This all sounds very formidable, but actually Matilda Brooks is anything but a dry, professorial person. She is tall and robust, with wavy light hair, looks much younger than her age, and in spite of a markedly forthright and direct nature has a touch of childlike naïveté which endears her to her friends. She is very musical, plays the piano well, but her chief avocation is painting, and she is a not-at-all-bad landscapist. Her hobby is attending furniture auctions, where she is a passionate and shrewd bargainer. She is also an unusually good tennis player and demon car driver, is a member of the Sierra Club, a California mountain-climbing society, and is keenly interested in political and economic questions. Somehow she finds the energy to spend all day in the laboratory, do her own housework and cooking, hold open house on Sunday at tea time for faculty acquaintances, and yet get in all these other things that interest her. An hour and a half every evening, for instance, are sacred to a concert of classical music broadcast by a Berkeley radio station. The Brookses lead a very quiet life between work and home. Very early in life, Mrs. Brooks learned the industry, organization, patience and quiet perseverance which in the old days were basic parts of the German character.

BROOKS, VAN WYCK (văn wīk) Feb. 16, 1886- Author; critic

Address: h. Westport, Conn.

Known today as America's most distinguished literary critic and historian, with *New England: Indian Summer, 1865-1915* (1940) Van Wyck Brooks continues the classic study of the American cultural scene which he began in 1936 with *The Flowering of New England, 1815-1865*. This further assessment and analysis of the American cultural cycle has been called "the richest, most penetrating and significant of his books." The two books are merely the beginning of "a 16-year job of examining the writers of all America," however. Brooks plans to fill four books, giving himself four years for each, and at present is at work upon *The Age of Washington Irving,* which will precede *The Flowering* as the first of the series. Before its publication, in November 1941, however, *The Opinions of Oliver Allston,* first printed in the *New Republic,* appeared and was hailed by Hendrik

BROOKS, VAN WYCK—*Continued*

Willem Van Loon as "the wisest book that has been written on this side of the ocean for many a year." *Indian Summer* was a strong contender for the Pulitzer Prize in 1941, and if chosen would have repeated the record of *The Flowering of New England* in 1937. It was, in fact, the first choice, in the history category of the book reviewers who were asked by the *Saturday Review of Literature* to state their nominations for the Pulitzer Prize.

Van Wyck Brooks was born in Plainfield, New Jersey, February 16, 1886, the son of Charles Edward and Sarah (Ames) Brooks. "I am not myself a New Englander, except in part by heredity and in part by adoption," he says in an introduction to *Indian Summer*. His forefathers were an interesting mixture: both grandfathers were Vermonters, both grandmothers were New Yorkers. He says he has never actually felt at home in New England as he has in New York State and in the Hudson Valley. He began writing, however, about Emerson, and one New Englander led to another. With his book on Washington Irving, he feels that he will be on more native ground.

V. Semler

VAN WYCK BROOKS

At the age of 12 he went abroad for a year with his parents. This trip awakened his interest in France, an interest continued throughout his life, and its influences are discernible in his numerous translations from the French and in his own literary style. Upon his graduation from Harvard in 1908 with Phi Beta Kappa honors, he joined the editorial staff of Doubleday, Page & Company, where he remained for a year.

In 1909 he wrote his first book, *The Wine of the Puritans*. It was important because therein he first examined the issues upon which his life's study was to be based. Beginning his search for the "usable past," he stated the concept which he later illustrated in his well-known biographical critiques: that all great art must have roots in a receptive native soil. Almost immediately his contemporaries recognized a fresh and lucid mind at work on significant cultural problems. It continued at work. In 1911 Brooks began teaching at Leland Stanford University, and in the following years came his studies of *John Addington Symonds* (1914); *The World of H. G. Wells* (1915); and *The Malady of the Ideal* (1913), "a collection of essays on European writers . . . in which he dwelt upon figures who were products of a richer, older civilization than ours, yet whose lives illuminated the problems we faced." Finally, when in *America's Coming of Age* (1915) Brooks returned to explore American civilization, he spoke his thesis with an authority and maturity that put him at the head of a new school of criticism.

Called by Stephen Vincent Benét a literary *J'Accuse*, this last work made profound inquiries into the American cultural past and future, both of which had been somewhat fatuously taken for granted. Brooks found that somehow his country had failed as a fertile soil for the seeds of genius, "that in American literature something has always been wanting, that a certain density, weight and richness, a certain poignancy, a something far more deeply interfused, is simply not there." This thesis was further pursued in his *Letters and Leadership* (1918), a study of the hollowness of our culture, the unsatisfying grossness of our life, the deceptiveness of our pursuit of the false goddess Success. Brooks, moreover, followed his reasoning to its logical conclusion: self-fulfillment as an ideal had to be substituted for self-assertion. "On the economic plane," he wrote, "this implies socialism; on every other plane it implies something which a majority of Americans in our day certainly do not possess." He berated the over-extended adolescence of the American mind.

These statements of austere pessimism and rebellion became the platform of a school of liberal and radical writers and critics of the '20s, and their author won a leading position in modern criticism. The young men who read him found him exciting and stimulating, admired the lofty standards he set. "For good or bad," as Bernard Smith said in 1937, "something of Van Wyck Brooks seeped into almost every American critic under fifty." Curiously sensitive to every tendency in literature, he predicted the restless crosscurrents of the '20s. Yet for the past 20 years his main project has been the writing of a synthesis of American culture.

Most of the critical studies of nineteenth century personalities that Brooks wrote during that time applied his familiar thesis to single writers. *The Ordeal of Mark Twain* (1920) and *The Pilgrimage of Henry James* (1925) probed the shadowy sense of unfulfillment sensed in their writing and illustrated the moral that an American artist is inevitably thwarted by American life—directly thwarted if he stays here (as did Mark Twain, who compromised with success), indirectly if he is uprooted from his native soil, as was the expatriate Henry James. But by 1932, when his *Life of Emerson* was published, Brooks had found a solution in the complete and creative life of the transcendentalist sage.

Like many another writer who began as an opposition critic, with his *Life of Emerson* (1932) Van Wyck Brooks had lived to become a popular author (to the great disappointment of many admirers who liked to feel themselves a small eclectic group who understood Brooks). In the meanwhile he had gone also into the editorial field. He held a position with the Century Company from 1915 to 1918; he was assistant editor of the brilliant but short-lived *Seven Arts* in 1917; he collaborated on *The Freeman* from 1920 to 1924. Criticism was still his forte: in 1923 he had won the Dial Prize of $2,000 for distinguished critical work. But to understand Brooks it is necessary to regard him as more than a literary critic. Though his works are literary masterpieces in themselves, he stems from an older line of artist historians. He has always regarded literature as rooted in social and communal factors, and his probings of the American mind have been aptly described as "a history of New England society as reflected in its cultural activities."

Published in 1936, *The Flowering of New England* won the 1937 Pulitzer Prize and the Limited Editions Gold Medal Award in 1938. Carl Van Doren, expressing the consensus of critical opinion, described it as "not only the best history of American literature, but one of the best literary histories in any language." Malcolm Cowley wrote of it: "More than any other writer, Brooks makes us feel the strength and richness . . . of American literature during its one great period." Almost the sole deprecating statement came from Bernard Smith, who apparently preferred the rebellious to the mellowed Brooks: "In many ways it is the finest portrayal ever made of the artistic and intellectual life of New England's 'golden age.' But it is wholly lacking in analysis. It explains nothing, neither causes nor consequences, and therefore it truly estimates neither the significance of the 'flowering' nor its ultimate value."

The zenith of New England's glory—when "there is a springtime in the air . . . a moment of equipoise . . . a widespread flowering of the imagination"—was brilliantly captured in *The Flowering of New England*. In contrast, the mood of the *Indian Summer* is somber and autumnal. Ghosts walk across its austere landscape fitfully lighted by the flaming goldenrod. The book opens with William Dean Howells coming to Boston to receive the "apostolic succession" of Lowell and Holmes. Together with Henry James and Henry Adams, he dominates the host of countless minor littérateurs who attend New England's waning glory; and there is a promise of the resurgence of spring only with the coming of Robert Frost, Amy Lowell, Edwin Arlington Robinson, Edna St. Vincent Millay and others. Rootlessness, colonialism, pedantry, temporary feminine monopoly of literature—those were some of the characteristics of the twilight of New England. In contrast to the New England of *The Flowering* it evinces centripetal tendencies, a taint of disintegration and of decay. Van Wyck Brooks shows himself still a master of the telling phrase (he describes Emily Dickinson as "always in the act of disappearing," condemns Horatio Alger for making "virtue and purity odious"). Polished and gracious to the smallest footnote, his book "is one of the key books of our period, which places us in time and space and tells us what to think of ourselves."

Van Wyck Brooks lives quietly in Westport, Connecticut, with his wife (the former Eleanor Kenyon Stimson, whom he married in 1911) and his two sons, Charles Van Wyck and Oliver Kenyon. He remains a strangely reticent and mysterious personality even to those who know him best. John Hall Wheelock, the poet who has been his lifelong friend (the two published a book of undergraduate poems jointly), says that the first impression one gets of Brooks is "a feeling of extreme sensitivity, of something fastidious, holding in check an extraordinary vehemence of thought and feeling." Wheelock further describes him as gentle, genial, with a fine sense of humor, an amazing memory and talk that is individual, gay and exciting. He cares more than most people about books, ideas and the rightness and wrongness of things. In politics he has always been a Socialist—is perhaps the only member of the American Academy of Arts and Letters to have belonged to that party. He is strongly anti-Hitler, and in September 1941 was one of the 1,100 signers of a telegram asking President Roosevelt to urge upon Congress the immediate declaration of war against Nazi Germany.

"In appearance," writes Stephen Benét, "Mr. Brooks is a trifle difficult to describe. He looks a little like a reasonable and unterrifying dean—a little like a reassuring consultant who is going to make sure that you are comfortable, even if you do have the operation. Of medium height, gray-mustached, thick-haired, he is neat without being precise and wears good clothes easily."

Robert Van Gelder, writing of Brooks' method of work, says that he reads six hours a day, goes through about nine hundred books in preparation for each of his New England histories. Of his writing method: "As he reads he makes notes on the margins of the pages. . . He then copies these notes. Browsing through them when the reading is finished, he comes to a few that fit together and makes this the basis for the sketch of an incident."

BROOKS, VAN WYCK—*Continued*

After some 50 of these sketches he plans his book, starts writing, very slowly, "only about a page a day." He goes on rewriting, cutting, polishing, with the result that his finished style has been called one of the most perfect in contemporary literature. He is also a distinguished and polished translator from the French, having translated 31 books in his lifetime, among them works by André Chamson, Romain Rolland and H. F. Amiel.

Van Wyck Brooks' opinions of present-day literature and its chances of survival can be found in *On Literature Today,* an address delivered at Hunter College in October 1940 and published in 1941. In it he analyzes the pessimism of the American writers today as a sort of "inverted idealism" and sees "on all sides a hunger for affirmations, for a world without confusion, waste or groping, a world that is full of order and purpose, and for ourselves, in America, a chance to build it." He himself has made a journey similar to the one he describes—from rebelliousness to faith in the American destiny.

BROWN, CHARLES H(ARVEY) Dec. 23, 1875- Librarian

Address: b. Iowa State College, Ames, Iowa; h. 317 Lynn Ave, Ames, Iowa

"The failure of the world today, the failure of civilization, is to a large extent the failure of the book; the failure of our populations to read and to think; the failure to learn from past events," said Charles H. Brown at the annual meeting of the American Library Association in Boston on June 24, 1941. Addressing the Association as president-elect, he asserted that the colleges and universities of America are isolated from life and from each other. America, he believes, cannot have a coordinated system of education while its colleges and universities continue to duplicate services and engage in rivalry and competition for students. He proposed "Education for Defense" for the A. L. A. program for 1942, suggesting that librarians make a special study of the place of libraries in the educational system with stress on the library as a medium for cooperation with other educational organizations. For the past year he has been chairman of an A. L. A. committee to conduct a cooperative study, "The Use of Books in Specific Courses of Instruction," which is part of a movement to bring about a closer relationship between school faculties and libraries.

Dr. Brown—"who objects to being called Dr.," and who writes: "How about a plain Mister?"—has been studying the problems of "learning through reading (for those who know how to read)" for many years. His father, the Reverend James H. Brown, was a Methodist clergyman who had married a Methodist clergyman's daughter, Mary E. Smith, and Charles Harvey was born in Albany, New York, on December 23, 1875. After being graduated from Wesleyan University in Connecticut in 1897 he continued with his studies and took a Master's Degree in mathematics in 1899. He received his Doctor of Letters from the same institution in 1937, and was elected an honorary fellow by Stanford University in 1941.

While studying for his graduate degree at Wesleyan (1897-99), Mr. Brown worked as assistant librarian at the University library, and after leaving school he enrolled in the New York State Library School. After two years as a student of library science he worked as an assistant in the Library of Congress; in 1903 he joined the John Crerar Library staff in Chicago, first as classifier, and then, in 1904, as reference librarian. In 1909 he became assistant librarian at the Brooklyn Public Library, where, for a period of 10 years, he was active in New York State and New York City library affairs.

Mr. Brown combined his duties at the Brooklyn Library during the First World War with work in the Army and Navy posts on Long Island in the Library War Service of the A. L. A. "So distinguished was his work in this field" that he was called by the United States Navy to serve as library specialist. He served as adviser to the Department on Naval Libraries for three years; then became librarian of Iowa State College in

November 1922. In the 20 years he has been there the library has increased from 80,000 to 315,000 volumes; the appropriations have more than doubled; the use of the library, as measured by outgoing loans, has increased more than 400 per cent; he has built up an "outstanding staff" equipped to render exceptional services to the faculty, including translations from all European languages. During the period from 1933 to 1938 he taught summer courses in college libraries at the Columbia University School of Library Service.

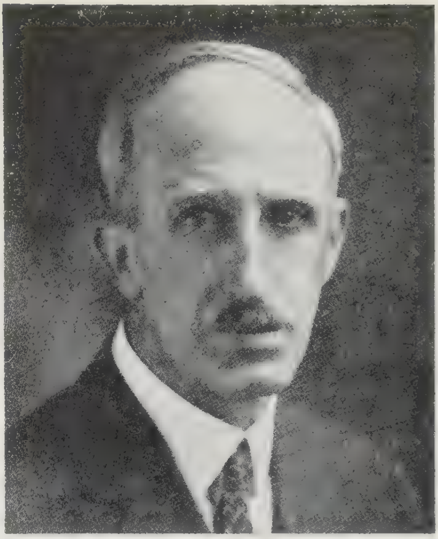
While carrying on his administrative duties with distinction, Mr. Brown has done important committee and organization work for the A. L. A. as a council member from 1923 to 1926; for various state associations; and for college and research libraries. He was consulting expert for the *Land Grant College Survey* (1928-30) for the United States Bureau of Education; from 1928 to 1929 he was president of the Iowa Library Association; and he has been chairman of many A. L. A. committees (Reorganization Committee College and Reference Section 1937, Periodicals Committee 1938, Committee on Boards and Committees 1941, etc.).

In 1933 *Circulation Work in College and University Libraries,* written in collaboration with H. G. Bousfield, was published. This "exhaustive analysis of the problems connected with circulation work in the institutions of higher learning" is a "real contribution to library science" into which has gone "much thought, investigation and hard work." Other publications include a report to the Iowa State Planning Board on *Library Service in Iowa* (1935) and numerous articles in leading library, educational and scientific periodicals.

Mr. Brown has long been active on periodicals committees. In 1935, as chairman of the A. L. A. Committee on German Periodicals, he made a trip to Europe. Ten days in Germany conferring with a committee of the Börsenverein and the various officials and publishers resulted (with the aid of a Government subsidy) in a 25 per cent reduction in the export prices of German books and periodicals.

Mr. Brown was also chairman of the A. L. A. Third Activities Committee out of which grew the revised constitution of the Association. This Committee was responsible for remodeling a constitution which had originally met the needs of a membership of 1,500 but which was hardly geared to meet the needs of an organization of 15,000 nor the needs of the 12 library organizations which had sprung up since the formation of the A. L. A. The Committee worked on a plan to revise the structure of "our national library association, its constitution and by-laws; its organization into boards and committees; its relation to other national organizations of librarians, affiliated and independent."

Dynamic, balding Mr. Brown is six feet tall, weighs one hundred sixty pounds, is blond and has blue eyes. Mr. Spaulding wrote in 1937: "When asked what his hobby was, he [Mr. Brown] replied that it was the development of college and university libraries from the standpoint of use and in an attempt to obtain the point of view of both faculty and students in their instruction and research." But, Mr. Spaulding is inclined to think, Mr. Brown's chief hobbies are actually much less academic—"his wife [Julia W. Heath of Chicago, whom he married in 1909], his son Robert Heath [associate professor at Clark University], and his son Charles Howard [until recently a practicing physician at Los Angeles and now a lieutenant (medical) in the Air Corps of the United States Army]." Mr. Brown himself says his hobbies are "tennis [he belonged to the now defunct Sterling Tennis Club in New York City from 1910 to 1917] and mountain hiking—not climbing." There is a fourth opinion, held by many fellow librarians and educators, that his hobby is a "search for frankness and discussion . . . that to find the truth it is necessary to argue passionately on both sides of all questions . . . and that one must face facts, however disagreeable."



CHARLES H. BROWN

BUCK, GENE Aug. 8, 1885- President of the American Society of Composers, Authors and Publishers

Address: b. American Society of Composers, Authors and Publishers, 30 Rockefeller Plaza, New York City; h. Kensington, Great Neck, N. Y.

Bulletin: On October 29, 1941 the dispute which had kept ASCAP songs from being broadcast over NBC and CBS for ten months was ended with the signing of new contracts, making 1,250,000 tunes available to the networks. (MBS had returned ASCAP tunes to the air in May.) According to Gene Buck, the ten-month fight had "cost ASCAP something over $4,000,000 in lost revenue which we did not collect this year."

From February 1941 issue:

"I care not who writes the nation's songs, so long as I can get the boys some money for it." Maybe Gene Buck said that and maybe he didn't; at any rate, they seem like appropriate words to put into the mouth of the president of the American Society of Composers, Authors and Publishers (ASCAP). It was New Year's Day of 1941 when the battle between ASCAP and the recently-formed Broadcast Music, Incorporated (BMI), a subsidiary of the National Association of Broadcasters, culminated in an air-boycott by the broadcasting chains of all ASCAP music.

The networks claim that ASCAP is a monopoly which asks an undue amount of money for its members in return for the privilege of playing their music over the air, that their own BMI has acquired 250,000 or more tunes and "is prepared to supply every type of music the public demands," and that listeners don't miss the music of Mr. Buck's boys, anyway. ASCAP claims that it merely submitted a contract which would reduce the fees to individual stations and require the chains, who had never paid anything for music before, "to assume their just proportion of the cost"—that the chains "want to control music, not pay for it." In the meanwhile the United States Department of Justice, with sublime impartiality, proposes to start an antitrust suit against everybody—ASCAP, BMI, NBC, CBS—and ASCAP has a plan for licensing radio advertisers directly for use of its music.

Eugene Edward Buck, who calls for a "fight to the finish," is used to fighting. He was born in Detroit, Michigan on August 8, 1885, the son of George William and Katherine (McCarthy) Buck. He started early as an artist, song writer and playwright, a producer of school shows (among them *John's Myth—Pretty Pocahontas* and *Bing, Bang, Boom—Dewey Did It*!) and then went on to the University of Detroit. His father had died when he was a youngster and he couldn't afford to complete college, but after he left he found himself a job as messenger for Detroit's Dime Savings Bank (salary $2 a week) and in the evenings studied at the Detroit Art Academy.

He soon put to practical use a talent for improving on the "Gibson Girl," and became a designer of scrolls and borders for the publishers of sheet music. The illustrated cover was his invention, as a matter of fact, and he had designed several thousand of them before he was "fired for going blind through overwork." He spent several months in a dark room before he recovered. Then, in 1907, he packed up and went to New York, ambitious to become a great artist. He spent four years at it before, one day in 1911, he gazed at one of his most ambitious paintings and muttered his lifetime motto: "Don't kid yourself." He didn't. He decided to become a great song writer instead.

Gene Buck's first song began, "Daddy has a sweetheart," worked up suspense, and finally ended, with surprising morality, "and mother is her name." After it was thrown out of Ziegfeld's *Follies* along with the actress who was going to sing it, Buck brought both to

Oscar Hammerstein's theatre in an act which he directed and whose setting he designed. They made a hit; Ziegfeld called and apologized; and in 1912 Buck became principal librettist for the Ziegfeld *Follies*, eventually writer of themes and songs for more than 30 of Ziegfeld's productions.

A particularly successful year was 1914. Buck organized the *Midnight Frolic* for Ziegfeld on the New Amsterdam Roof, invented the cabaret-with-stage show, the use of exploding colored balloons for decoration, the mingling of the chorus with the audience. Only prohibition could close the *Midnight Frolic*, and it did, in 1922, after Buck had written 16 editions of it. But in the meanwhile it was there that Buck introduced Will Rogers to New York night life (persuading him to liven up his rope-twirling act with a running fire of comment on the news), and Ziegfeld finally left to Buck the problem of finding male talent for most of his shows. The song writer "helped to thrust fame upon" Ed Wynn, Eddie Cantor (see sketch this issue) and many others. He brought Joseph Urban, painter of stage settings, to the popular theatre. (Urban showed his gratitude by doing the interior decorating for the $100,000 estate at Great Neck, Long Island, which Buck bought after his marriage to Helen Falconer, Fred Stone's prima donna, in 1919.) He kept peace between Ziegfeld's actors "thirsty for each other's heart blood"—among them the late Frank Tinney and Leon Errol. He wrote hundreds of songs, among them *Hello Frisco, Tulip Time, 'Neath the South Sea Moon.* And it was as Ziegfeld's right-hand man that he helped to launch the battle against the song pirates.

In the days before ASCAP, no one paid the writer or composer simply for playing his music in public. It was, in fact, considered a favor to the song writer: his song was getting free advertising. "The result of receiving favors from everybody was that the song writer was in danger of death by starvation. It is true that the pirates popularized the song, but they popularized them chiefly with other pirates." One day, before the First World War, Victor Herbert walked into Shanley's restaurant and heard the orchestra playing one of his copyrighted pieces. He wondered why they shouldn't be paying him something. He sued, and while the suit was still pending he proposed founding a society which would protect the interests of authors and composers. Buck was one of the group who thought it a good idea, and from 1914 to 1924 he served as its president without compensation. Nathan Burkan donated his legal services and represented ASCAP in the courts; but it was 1921 before the income from royalties that legal battles won for ASCAP's members amounted to more than the cost of collecting them. The friendship between Gene Buck and Victor Herbert was a close one: later Buck was to be the executor of Herbert's will and to have erected the monument to the composer which today stands in Central Park, New York City.

Harris & Ewing

GENE BUCK

In 1922 Buck heard a radio for the first time —and what he heard was someone playing his own *Tulip Time* and *'Neath the South Sea Moon.* He sent word to his fellow-members that here was new work to be done. As the radio industry became bigger, ASCAP brought one suit after another for royalties. They weren't too successful at first. A national association of broadcasters was formed to fight them, and the courts kept deciding against ASCAP. One Federal judge even held that broadcasting was strictly private.

In 1926 Buck left Ziegfeld to become an independent producer. He produced *Yours Truly* (1926) and *Ringside* (1927), and kept right on writing songs. As a matter of fact, between his ASCAP duties, his song writing, and commuting from his Great Neck home, he was so busy that he tried to retire from the presidency of ASCAP in 1929. They wouldn't let him, and after that he received a regular salary for his services. Since 1931 Buck has confined his activities almost entirely to ASCAP, although he returned to Ziegfeld temporarily for the *Follies* of 1931.

Not until September 1932 did ASCAP force the radio business to come to terms by threatening to order jazz and popular music off the air after its contract had been declined. When the contract was actually signed with the broadcasters' association it provided $960,000 for ASCAP, plus three per cent of the gross income from advertising in 1933, four per cent in 1934, five per cent in 1935. By 1939 ASCAP had made five appearances before the Supreme Court, listed around a thousand top-flight composers and song writers among its members, and collected five or six million a year from hotels, motion picture theatres, showboats, ocean liners, night clubs, restaurants—and, of course, the radio. Members were divided into eight

BUCK, GENE—*Continued*

classifications according to the "quality, vogue and popularity" of their compositions (there were quarterly promotions and demotions), and received shares of ASCAP's income proportionately. Radio stations applied at the daily licensing bureau at ASCAP's offices for permission to play songs, and if an application for a certain song was rejected, the song simply wasn't played. By 1940, however, the chains were so rebellious that they refused to negotiate with ASCAP for licenses. There were also composers who, like Aaron Copland (see sketch this issue), resented ASCAP's attitude toward serious music—others who, having been refused admission, called ASCAP a "closed corporation."

The president of ASCAP is a man with graying hair, eyes that are pale blue and usually smiling, and lean, bony hands. He is voluble, profane and sentimental—sentimental about the disappearance of the parlor piano, among other things. He has been "confidant and counselor, oracle and guide, to thousands" of Broadwayites. The speaker at a Lambs' Club dinner once became more than a little sentimental about *him* and described him as possessing "the soul of a Sister of Charity and the efficiency of a Schwab."

Gene Buck has two sons: Eugene Falconer and George William. He is a Democrat and a Catholic; a clubman (New York's Dutch Treat, Players, Lambs') who has never tasted liquor in his life; a member of the board of American Dramatists and of the council and executive committee of the Authors' League of America. His motto, as mentioned before, is, "Don't kid yourself." As for his definition of a good song, it's "a perfect marriage between words and music, so perfect that you can't think of one without the other." He thinks ASCAP members have written far too many of those for the radio public to accept tamely their disappearance from the air.

BUDENNY, SEMYON M(IKHAILOVICH) (bo͞o′yô′nê sê-mjôn′ mê-khī-lô-vĭch) Apr. 25, 1883- First vice-commissar of defense of the USSR

Address: Moscow, Ul. Granovskovo 3, Ap. 78, Russia

Marshal Semyon M. Budenny, whom *Time* called in one issue the "toughest and ablest military man in Russia" and in a later issue characterized as "a cavalry noncom of incredible dash and dumbness," was in July 1941 put in command of the Southern sector of the Soviet forces then protecting Kiev and the Ukraine, where some of the most stubbornly fought battles between the Soviet and German Armies have since taken place. Nearly every German victory in that region while it was under his command was followed by a Nazi report that he had been executed at Stalin's order, captured or shot; and his armies were almost daily disorganized, surrounded and even annihilated in DNB dispatches. Early November found both Budenny and his armies still very much in existence, however, although the Ukraine defenders had by this time been pushed back to the gates of Rostov. It was only then that Marshal Timoshenko (see sketch this issue) was sent to replace Budenny, while the latter was reported assigned to the creation of new reserve armies as the Nazis pressed on in the great offensive designed to break the back of Russian resistance before winter. Before long the Russians were on the offensive, at least temporarily.

"Rather short and stocky, of muscular build, with big, blazing black eyes and an air of command, augmented by his untamed mustache—about eight inches on the beam," Budenny not only looks but fights like a Cossack. He was, however, born of non-Cossack parents in a Cossack district, the settlement of Koziurin in the Salsk District of the Don Oblast which Sholokhov's novels have made famous. His mother and father were poor peasants, and Semyon began to work as a cattle herdsman and peasant-laborer at the age of nine. He taught himself to read before being conscripted into the Czar's Army in 1903, fought as a private in the Russo-Japanese War (1905-07) and eventually became a non-commissioned officer in his Cossack cavalry regiment, living on starvation pay and almost literally starving in intervals between feasts. (He had, and still has, a voracious appetite.)

The First World War found Budenny still with the Army. During the February Revolution of 1917 elected a member of the squadron's Soldiers' Committee which voiced the opinions of the common soldiers, and then chairman of his Regimental Committee, he was in conflict with the old regime but not yet a member of the Bolshevik Party of Lenin. He took an active part in the October Revolution, however, and, having left his regiment without bothering about its being demobilized, started back to his native village from Minsk. Along the way (according to one story) he and six deserters, two of them his brothers, encountered a detachment of Denikin's troops sleeping in a wood. The deserters' arms were an old rifle with 4 cartridges, a revolver with 7 bullets, and a sword, but, whooping through the woods, they frightened the sleeping men into flight and captured 275 horses, 360 rifles, 16,000 bullets and 8 men, who joined them. Back home with their spoils, Budenny joyously cried: "Proletarians, to horse!"

This was the beginning of the spectacular role during the civil war which made Budenny the hero of countless Soviet folk tales and songs and which made the mere mention of his name throw terror into the Whites. He and his guerrillas, living in the forest and emerging at night to fall on Denikin's men, formed the nucleus of the Bolshevik cavalry army. They grew to 100 in the first real attack against counter-revolutionaries in August 1918; they became a regiment; they became a division. When Budenny first asked to form that division into a cavalry army the Bolsheviks told him that cavalry was "outdated" and "of no military importance." But he soon proved that they were wrong. In the second half of 1918 his men took part in the defense of Tsaritsyn against the Whites and won a series of victories over Krasnov's infantry and cavalry. At the end of 1919, the year when Budenny joined the Communist Party, they took part in Stalin's plan for the defeat of Denikin and were finally allowed to become the 1st Cavalry Army. They then rode to the sea of Azov, mopping up the remnants of Denikin's forces, and by the end of March 1920 the entire Northern Caucasus was cleared of White Guards. Red Marshals Timoshenko and Voroshilov (see sketch this issue) were both among Budenny's lieutenants at the time.

But the fighting was by no means over. In May 1920 Polish troops invaded Russia from the Baltic almost to the Black Sea. Rushing to the relief of Kiev, within a month Budenny had driven them back to the neighborhood of Pinsk, in east Poland. At the same time the Soviet Armies in the north were preparing a drive. They broke through the Polish lines and with Budenny's forces advanced to the gates of Warsaw, where, however, they met defeat at the hands of Weygand. Then it was east and south to the Crimea to wipe out General Wrangel, who had tried to take up where Denikin left off the year before.

There are many stories about the fierce, hard-riding, uneducated Budenny of this period. Trotsky praised him for his frankness and openness, but mourned to Lenin: "I see right into Budenny's soul, and I wish it were not so rough and rude." He was noted not so much as a commander of thought and careful decision but as an intuitive and daring fighter who never kowtowed to anyone—not to Trotsky or Stalin or Lenin himself—and to whom the capture of a city always meant a raid on its supply of liquor.

Sovfoto

SEMYON M. BUDENNY

Four times the press of the world reported that he and the 1st Cavalry Army had been wiped out; four times the report was contradicted by their miraculous appearance in some other sector. Lenin said: "I don't understand him, but he fights." Once he sent Budenny a short summary of what Marx had said so that he would know exactly why he was risking his life so recklessly. It was never read. Inquired the puzzled Lenin: "Comrade, suppose you were asked what you were fighting for—what would you say?" Replied Budenny: "Comrade, I would say that Lenin knows." Another time Trotsky scolded him for not having sent in a written report about a certain battle. "But I won it!" Budenny protested. "How am I to know that?" asked Trotsky. "I brought my army back! Whenever I go out to battle and fail to bring my army back you will know that I lost."

Budenny's recreations were wild races on horseback, fencing without guards, revolver shooting (he could put out a lighted candle with his revolver at 40 paces). It is said that his wife was one of the best rifle shots in Russia, too, and that she rode and fought with him. But it is also said that she was one of the best cooks in Russia, and that the otherwise untamed commander was so much under her thumb that at home he would shave, put on respectable clothes, attend church and spend most of his time tending his flower garden and his apple orchard quite contentedly. He maintained a horse-breeding farm after the civil war, and encouraged others to do the same.

With the Soviet Republics at last free from the invaders, Budenny's rise in the Army was rapid. In 1920 he was elected to the Russian Central Committee, in 1923 to the Central Committee of the Soviet Union, and the next year he became inspector of cavalry of the Red

BUDENNY, SEMYON M.—*Continued*

Army. Finally, in 1928, at the age of 46, the untutored peasant who had once said, "I never read—it gives me a headache" was sent to the Moscow Military Academy to get his first formal education. Three years later he became a member of the Commissariat of Agriculture, and in 1932 he was graduated from the Military Academy with honors. In 1935 he became one of the five marshals of the Soviet Union; surviving the army purge of 1937, he was made commander in chief of the Moscow District; in 1938 he joined the Presidium of the Supreme Council, in 1939 the Central Committee of the Communist Party; and since August 1940 he has been first vice-commissar of defense. He played an outstanding role in the final victory over the Finns in 1940.

The "fierce, outspoken, dare-devil, vodka-loving, horse-smelling, barrel-chested, mustache-proud" Soviet Marshal is now married to a famous actress of the Mali Theatre in Moscow. In 1925 he mourned the death of his first wife, killed accidentally while cleaning a rifle.

International Who's Who

BUDGE, DONALD June 13, 1915- Former professional tennis player

Address: b. Budge-Wood Service Launderers, 1160 Madison Ave, New York City

In June 1941 tennis lost its most popular figure. Redheaded, lanky, likeable Davis Cup champion Donald Budge, after a Forest Hills professional tournament for British War Relief, gave up barnstorming to devote his time and energy to Sidney Wood's laundry business in Manhattan. Once the property of Wood and Frank Shields, it is known as the Budge-Wood Service.

Walter L. Pate, captain of the United States Davis Cup team, considers Budge the supreme player of all time, though admirers of "Big Bill" Tilden dissent. But Budge didn't always like tennis. He had to be coaxed to play and went to the courts only to please his older brother, Lloyd. Baseball, football, basketball, hockey, bicycle riding, roller skating and marbles appealed much more to him. In fact, he was frequently scolded by his father, who had once suffered a serious injury playing soccer in Glasgow, for spending so much time in the streets with football.

Donald Budge's parents, John and Pearl (Kincaid) Budge, were Scotch-Irish and in modest circumstances when he was born in Oakland, California on June 13, 1915. Besides being an athletic boy, Donald was handy with tools and liked to make things out of wood for himself and his sister, Jean. For four years, from the ages of 11 to 15, he would not go near a tennis court, and his elder brother Lloyd reconciled himself to being the only tennis player in the family. Ironically, Lloyd never became a great player, although he has made a name for himself as a coach.

One night in June 1930, at the Budge family dinner table, Lloyd asked Donald, with mild sarcasm, why he did not brush up on his tennis and enter the California state boys' championship, a week away. Donald failed to join in the general laugh at his expense, but on the following day was out on the courts practicing. "The succeeding week he was in the field that started out in the California state boys' championship, and he went straight through to the finals—in corduroy pants. On the day of the finals, he appeared in new white ducks, as spotless as though they had just come from the laundry which his father managed in Oakland. He played Paul Newton and defeated him by a score of 6-0, 6-4. He had won the first tournament in which he had ever competed." His success came to him as a fifteenth-birthday present.

Don decided then and there that he would keep on playing tennis and that he would become a champion. In 1933 he became the first player in years to win both the state junior and senior championships in the same season. Encouraged and helped by his amazed but gratified brother Lloyd, Don made further strides, and was sent by the Northern California Association to play in the national junior championships at Culver, Indiana. "For the first time now they were beginning to visualize in this serious-minded, rapidly growing youngster another California Comet," for although "he was not a volleyer, nor was he an abnormally hard hitter," he was playing a steady, back-court game. He had, in fact, a dread of going to the net, quite different from the later smashing style of attack which ran his opponents ragged. (His backhand, however, has not changed: he still hits with both hands on the handle, exactly as if he were using a baseball bat. Originally the shot was a slice, but he now hits into the ball instead of down.)

Budge won the national junior title at Culver, and the player he defeated in the finals was Gene Mako of Los Angeles, later his Davis Cup partner, who was to share with him the winning of the national and Wimbledon championships. It was 1934 when Budge joined forces with Mako in doubles to carry off the Pacific coast sectional championship at Santa Barbara, then set off for the East, stopping off at Chicago for the national clay court championship. At his Eastern "unveiling" at the Seabright Lawn Tennis and Cricket Club in New Jersey, onlookers were impressed by his similarity to Ellsworth Vines, who had created a sensation there in 1930, but Budge's only notable conquest of the season in the

East was his victory over Bryan ("Bitsy") Grant in the championship at Forest Hills.

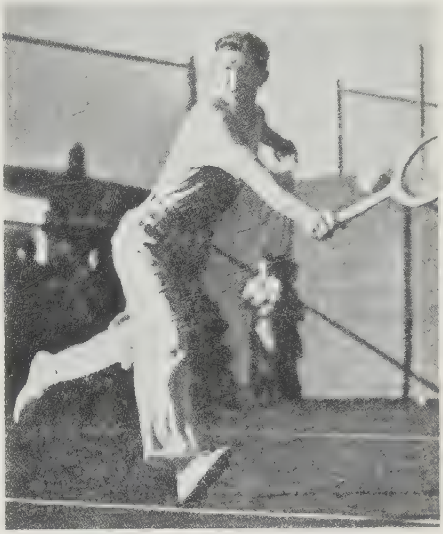
Returning to California, rather dissatisfied, Budge corresponded with Sidney Wood, Wimbledon champion in 1931, who had played there with both Lloyd and Donald, and decided to change his grip. (The so-called Western grip was the one he had been using.) Tom Stow, coach of the University of California tennis team and the Claremont Country Club, thereupon taught him a grip that was halfway between the Eastern and the Continental, and in the spring of 1935, while he was with the Davis Cup team in Mexico, Walter Pate advised Budge to use the flat Eastern. He has used it ever since, until by 1937 he felt the same confidence in his forehand as in his backhand.

In 1935, only a year after he had played on Eastern turf for the first time, Budge gained the stature of an international player. The Davis Cup had been lost to France in 1927, and all efforts to bring it back had failed. The committee which selected the Davis Cup team decided that new blood was needed to bring back the cup established by Dwight Davis in 1900. Budge, although he ranked ninth, was chosen with Wilmer Allison, No. 1 player, for the singles.

By this time his partner Mako's "affable, breezy manner and irrepressible good nature" had helped Budge to overcome his shyness when meeting people, especially girls, to such an extent that there are some who swear, no doubt falsely, that at Wimbledon that year he waved his racket at Queen Mary when she entered the Royal Box and received an amused wave of the hand in return. (By that same year he could follow Mako's example in taking over the traps of Benny Goodman's or Tommy Dorsey's band.) As for his tennis, in the Davis Cup challenge with Great Britain Budge lost both of his matches to the English stalwarts, Fred Perry and "Bunny" Austin, but he defeated the German baron, Gottfried von Cramm, by taking three straight sets after losing the first at love.

Back home again, Budge proceeded to win an unusually fine Newport, Rhode Island tournament from Frank Shields, and he was also a finalist with Mako in the national doubles championship. In the national singles, however, Bitsy Grant defeated him again at White Sulphur Springs in the spring of 1936. By the summer of 1936 Budge had improved his short-court attack so much that Perry was the only player who could defeat him on turf all season. His fatigue and evident physical distress during some of the games were later revealed to be the result of an over-indulgence in drinking malted milks late at night! (Budge is still fond of them, although wary of over-indulgence before a big match.)

On July 27, 1937 the Davis Cup was regained for the United States at Wimbledon after an absence of ten long years, six of which had been spent in France and four in England. Writes Fenno: "America's victory was carved out primarily by the devastating racket of Donald Budge. In him the United States had not only a representative who took his place as the world's foremost singles player of that year by winning all his Davis Cup matches against Japan, Australia, Germany and England, as well as the Wimbledon, American and Australian singles championships, but she had also a strong doubles player who was the vital cog in the Budge-Mako combination which won all its Davis Cup doubles contests." Budge participated in 12 winning cup matches that year and lost none. And "not only his prowess with the racket but his flaming red hair, his ingratiating smile and his thorough sportsmanship and lack of affectation on and off the court won him a lasting place in the hearts of sports followers at home and abroad."



DONALD BUDGE

In England Budge had won over Baron von Cramm in an unbelievably brilliant game. If the latter had won the Davis Cup would have gone to Germany for the first time, and his defeat reportedly had something to do with his later imprisonment by the Nazi Government on a morals charge! In protest, Budge refused to play in Germany in 1938, although he went to France, England and Yugoslavia. In that same year, besides other triumphs, Budge led the United States in the successful defense of the Davis Cup against Australia at the Germantown Cricket Club, Philadelphia. And in October of that year he had the privilege of refusing an offer of $75,000 annually to turn professional, asking $100,000. But terms were finally arrived at amicably, and, with the blessing of the United States Lawn Tennis Association, Donald Budge left the amateur ranks. "Amateur officialdom showed how it felt toward him in turning out *en masse,* along with some 16,000 others, for his professional debut at Madison Square Garden the night of January 3, 1939." Con-

BUDGE, DONALD—*Continued*

trary to predictions, he readily adapted his game to the conditions of indoor play and won handsomely, as he did against Perry in March.

Since then Budge has toured all over the country; his two books on tennis, *How Lawn Tennis Is Played,* written with others (1937), and *On Tennis* (1939), are best sellers in the field; he had a business connection with Wilson's Sporting Goods Company in San Francisco; and now he has the Budge-Wood Service.

Among Budge's proudest possessions is the James E. Sullivan Memorial Trophy which he received as the outstanding amateur athlete of the United States in 1937, presented to him in August 1938. He is a Protestant and a Republican, and his favorite recreations are swing music and basketball. He is no longer an eligible young bachelor, however: on May 26, 1941 Budge was married to Deirdre Conselman, a sophomore at Stanford University and daughter of the late Bill Conselman, creator of the "Ella Cinders" comic strip.

BURLEIGH, HARRY T(HACKER) (bûr'lē) Dec. 2, 1866- Singer; composer
Address: h. 823 E. 166th St, New York City

"The first time a Negro song became a major theme in a great symphonic work" was in 1893, when Antonin Dvořák's *New World Symphony* was played. Part of the credit, though he denies it, for that inspiration must go to Harry T. Burleigh, who impressed upon Dvořák the beauty of the Negro songs. During the course of a full life he has continued to spread their beauty.

The grandson of a blind slave discarded by his Maryland owners when his usefulness had ceased, Harry Thacker Burleigh was born in Erie, Pennsylvania. His mother, Elizabeth (Waters) Burleigh, a college graduate, became janitress of a public school after the death of her husband, Henry T. Burleigh. Young Burleigh worked as a lamplighter, as desk steward and at many other jobs. He also sang in various church choirs in Erie, and sang so well that later it was suggested that he try for a scholarship at the National Conservatory of Music, New York. Mrs. MacDowell, mother of the composer, Edward MacDowell, and a member of the staff of the Conservatory, learned of Burleigh's interest in music and helped him to get the scholarship. He spent four years at the Conservatory, for two years assisting in the teaching of piano and solfeggio. He studied harmony with Rubin Goldmark and counterpoint with Max Spicker. He joined the Conservatory Orchestra, playing double bass and, later, timpani; and he was also librarian of the Orchestra. One summer while he was at the Conservatory he worked as a waiter in a hotel at Saratoga, New York. The next summer he returned to Saratoga, but as baritone soloist in the Episcopal Church.

In 1900 Burleigh joined the choir at Temple Emanu-El, New York City. He held that post for 25 years, the only Negro ever to have sung in this synagogue, one of the largest in the country. He has also sung on the concert stage, here and abroad, having appeared in a command performance before King Edward VII as well as before many other notables, including Theodore Roosevelt, the Archbishop of Canterbury (see sketch this issue), Prince Henry of Prussia, Paderewski and Anton Seidl. He was a pioneer in introducing Spirituals on the concert stage and also a pioneer in setting down on paper Negro folk songs that had been preserved only orally. He made arrangements of these songs so that they could be sung with accompaniment. Alain Locke, in his *The Negro and His Music,* says that "more than any other single person, Mr. Burleigh as arranger, composer and baritone soloist played the role of a pathbreaking ambassador of Negro music to the musically elect." The contribution that he made in the preservation of these songs was invaluable, for he came along at a time when there was danger they would be lost because many of the Negroes wanted to forget them and the conditions out of which they had grown.

Burleigh has arranged more than 100 Spirituals, among the best known *Deep River; Nobody Knows the Trouble I've Seen;*

Couldn't Hear Nobody Pray; Let Us Cheer the Weary Traveler; Were You There? He has also composed more than 250 original songs, mostly semi-classical ballads, for some of which he wrote the words as well as the music, and several anthems and pieces for the violin. Among the well known songs which he has set to music are: Walter Brown's *Little Mother of Mine;* Rupert Brooke's *The Soldier;* Walt Whitman's *Ethiopia Saluting the Colors;* and *The Young Warrior,* by James Weldon Johnson, the last made popular during the First World War by Pasquale Amato of the Metropolitan Opera. His arrangement of *Little Mother of Mine* was included in John McCormack's repertoire for many years, and McCormack became such a close friend that he once quit his rooms at the Ritz-Carlton because Burleigh was asked to use the freight elevator.

In the meanwhile Burleigh had been singing at St. George's Church, where in 1894 he had applied for a position as baritone soloist and in competition with 60 candidates won out. Although not all the people of the Church welcomed a Negro in the choir, the rector disregarded objections—he was interested only in Burleigh's magnificent voice. Later the elder J. P. Morgan, for 28 years senior warden of St. George's, requested that Burleigh sing *Calvary* at his funeral. And today, although Burleigh has retired from concert work, he is still singing in the choir of St. George's. In addition to the regular services he sings at an annual service of Spirituals, which has been held at the Church each year since 1923 and which is made up for the most part of many of his own arrangements. The first solo that he sang in the choir was Fauré's *The Palms,* in 1895, and he has sung it on every Palm Sunday since then. The choirmaster, George W. Kemmer, said three or four years ago that he expects that on Burleigh's fiftieth anniversary at St. George's he will sing *The Palms,* and as richly as ever. When and if he does give up his choir duties the veteran musicologist plans to roam through the South to salvage old folk melodies that are dying off. "If they'd only *let* me retire," he pleads. For a number of years he has been musical editor for G. Ricordi and Sons, New York City music publishers, once an ASCAP firm but now a BMI affiliate.

A. Walter Kramer, the music critic, in an appraisal of Burleigh's life and work said: "This man is a composer by divine right, and what is more, he is a thinker, a man who writes music not because he enjoys seeing his name on the program of some singer, but because he feels deeply, profoundly in the language of tone... Burleigh is contributing to American art-songs examples of creative music that deserve world-wide attention and respect."

In 1917 Burleigh received the Spingarn Medal (awarded each year for an outstanding contribution to Negro life) for distinguished achievement in music. Atlanta University has conferred upon him the honorary degree of Master of Arts, Howard University that of Doctor of Music, and he is a charter member of the American Society of Composers, Authors and Publishers, for whose board of directors he was nominated in August 1941, the first Negro to be so honored. He married Louise Alston in 1898; they have one son, Captain Alston Waters Burleigh.

BURNHAM, JAMES Nov. 22, 1905- Author; educator

Address: b. New York University, Washington Sq, New York City; h. 137 E. 73rd St, New York City

Critics reading James Burnham's *The Managerial Revolution* (1941) couldn't decide exactly what they had there. To Lewis Corey it was "the Olympian defeatism of a doc-

JAMES BURNHAM

trinaire radical gone sour," to Peter Drucker "one of the best recent books on political and social trends" and probably "the Bible of the next generation of neo-Marxists," to Ordway Tead a book "worth reading . . . not for the conclusions it imparts but for the disturbance to habitual thought patterns which it will engender." No one at all found the predictions in this book anything but gloomy, but most found it absorbing, and with masochistic thoroughness Ralph Thomson of the New York *Times* devoted two separate days to reviewing it. His estimate of its importance was apparently shared by others.

Burnham says he has excluded "all moral and emotional considerations" when he writes that the trend of the times is toward an economy ruled by the technical and managerial middle classes, more efficient but far more ruthless than capitalism, and just as much an exploiting economy. He sees its fullest development in the Soviet Union; he sees it in Germany, which to him is a "young, new, rising social order"; he sees it foreshadowed in the New Deal, whose "historical direction . . . as a whole runs entirely counter to the ideals and aims of liberalism." He is equally clairvoyant about the War. The United States will enter it in 1941, too late to save Britain but in time to seize much of the British Empire, will be gradually transformed by the crisis into one of the managerial states described, and will swallow most of the rest of the western hemisphere. By this time the rest of the world will consist of two superstates, with their centers of industry in western Europe and eastern Asia, respectively. There can follow only a series of endless wars between the three superstates in their bids for world power.

Ralph Thomson comments that some of Mr. Burnham's ideas sound like Hitler's, but that Hitler didn't invent them any more than Mr. Burnham did, "and it is proved every time an acorn sprouts or an oak falls of its own weight in a forest." Burnham's ideas are related to those of Robert Michels, Gaetano Mosca, Vilfredo Pareto and Max Nomad.

James Burnham was born in Chicago, Illinois on November 22, 1905, the son of Claude George Burnham, British-born executive vice-president of the Burlington Railroad at the time of his death in 1928, and of Mary May (Gillis) Burnham. When he took his B. A. at Princeton in 1927 he was the Latin Salutatorian (the equivalent of "first scholar") of his class. He continued his education at Oxford University in England, where he received a B. A. in 1929. Since that time he has been a member of the Department of Philosophy at Washington Square College of New York University, where he is now an assistant professor.

For four years, from 1930 to the end of 1933, he was co-editor with Philip E. Wheelwright of *The Symposium,* a critical review published quarterly. In 1932, the year he received his M. A. from Oxford, he and Wheelwright published *Introduction to Philosophical Analysis,* a textbook for college students which, according to S. K. Langer, writing in the *Journal of Philosophy,* was a book "written in the spirit of modernity—a book with an unacademic metropolitan atmosphere: alive, rapid, colloquial. . . On the whole, the *Introduction to Philosophical Analysis,* despite many shortcomings due to the extreme difficulty of its task, is a full and right-minded book; could the detailed elaboration of the work only have equalled in excellence the general conception, it would have been a pedagogical masterpiece."

It was in 1933 that Burnham first became associated with the political group known as "Trotskyists" or "Fourth Internationalists." As he himself puts it: "The official names of the group changed frequently; and the changes would hardly be intelligible without a supplementary history of radical politics during those years." Between 1933 and 1940 he was a frequent contributor to the *Partisan Review* and to "labor and radical" publications; at one time he was co-editor of *The New International,* the theoretical magazine of the United States Trotskyists; and in 1937 he was author of a pamphlet entitled *Peoples' Front; the New Betrayal,* attacking the Communist conception of a "peoples' front against Fascism."

But his quarrels with Trotsky himself soon became almost as bitter. In 1939 he was carrying on a bitter polemical struggle with Trotsky, then still alive and in Mexico, and early in 1940 he broke definitively with the Trotskyists. "The basic reason for the break," he says, "was my conclusion that Marxism is false, and that Marxist politics in practice lead not to their alleged goal of democratic socialism but to one or another form of totalitarian despotism." (In his book, however, he expresses his certainty that socialism is impossible "of achievement or even of approximation," and that in any case the particular form of totalitarian despotism which he calls the managerial society is more than probable.) Since the break with Trotsky, he says, "I have had no politics."

Mr. Burnham contributed one of the ten essays which comprise the book, *Whose Revolution?*, published in 1941, and in November of that year an article by him called *The Coming Rulers of the United States* appeared in *Fortune.* Away from the classroom, writing does not occupy all of his spare time, however. He and his wife, the former Marcia Lightner, whom he married in March 1934, and their children, Marcia and James Bernard, spend as much time as they possibly can in the country, where they raise flowers and vegetables. His brother, David, is the author of four novels, and another brother, Philip, is an editor of the Catholic weekly *Commonweal.*

BUTLER, NEVILE (MONTAGU) Dec. 20, 1893- Junior British Minister to the United States

Address: British Embassy, 3100 Massachusetts Ave, Washington, D. C.

Allied News

NEVILE BUTLER

When in 1939 the late Lord Lothian came to the United States as Ambassador, efficient, publicity-shunning Nevile Butler was selected to be his assistant as the Counselor of the British Embassy. A few weeks before Lord Lothian's death Mr. Butler received the rank of Minister; it was he who was sent to read Lothian's last speech at the Farm Bureau Federation in Baltimore the night before his chief's death; and until the appointment of Lord Halifax as new British Ambassador he served as chargé d'affaires in Washington. Since Halifax has taken up his duties, Nevile Butler has been junior British Minister to the United States.

Nevile Montagu Butler is the son of a scholar—Henry Montagu Butler, D. D., late Master of Trinity College, Cambridge—and of Agnata Frances (Ramsay) Butler. The "old school tie" which he wears is that of Harrow, and he received his university education at Trinity. Then came the First World War. From 1916 to 1918 young Butler was to be found variously in the Scottish Horse, the Household Battalion and finally in the British Intelligence Corps; and in May 1920 he entered the Foreign Office.

After serving his apprenticeship there, Nevile Butler acted as private secretary to the successive parliamentary under-secretaries of state for foreign affairs from February 1924 to June 1927, and then for two months acted as private secretary to Viscount Cecil of Chelwood, at that time Chancellor of the Duchy of Lancaster. From October 1927 to June 1929 he was private secretary to the

BUTLER, NEVILE—*Continued*

late Lord Cushendun, and from 1930 to 1935 to the late Prime Minister Ramsay MacDonald. During that period he was appointed Commander of the Royal Victorian Order, in 1933, and after MacDonald's fall from power was sent to Persia to serve as Counselor at the British Legation at Teheran. It was from Persia that he was called to the United States in 1939.

In 1923 Mr. Butler married Oonah Rose McNeile, and they have two daughters. The new Minister enjoys walking, riding, lawn tennis and golf—when his duties at the Embassy permit any recreation at all.

BYERS, MARGARETTA Dec. 2, 1901- Fashion designer; author

Address: b. c/o Simon & Schuster, Inc, 1230 Sixth Ave, New York City; h. Pukka Purchase, Shackamaxon Drive Extension, Westfield, N. J.

Harlen Byers

MARGARETTA BYERS

Fashion may be spinach, but "spinach" may also take the form of palatable advice on careers in the lucrative realms of women's wear. Margaretta Byers' *Help Wanted—Female* (1941), on the business of making good in the fashion industry, is written from the author's own practical experience. It seems that there are hundreds of varied and interesting positions open to attractive, intelligent young women in the how-to-be-beautiful field. Mrs. Byers tells the aspiring fashion expert in workaday terms just what and what not to do. She helps the novice analyze her own personality through concrete tests and self-quizzes, so that she can find the position best suited to her individual talent and ability.

As one who came up "the hard way" to her top-flight position in the fashion world, Margaretta Byers says: "My new book, *Help Wanted—Female*, turned out to be more autobiographical than I should like, since, of necessity, in telling job-hunters what not to do, it related many of my more egregious blunders. Aside from the incidents related therein, I'm afraid my life has not made very good reading. Born [December 2, 1901] under the sign of Sagittarius, I seem always to have been shooting hopefully at pretty unattainable goals. I suppose I shot so many arrows into the air that some of them were bound to be bull's-eyes. And in such cases, I was always the last to believe that there hadn't been some mistake."

Margaretta Manning Byers was born in Albany, New York, the daughter of Samuel and Mary Kellogg (Seymour) Manning. "In my early teens I did win a contest for composing a school theme on some patriotic subject. This was during the late War. The school telephoned the unbelievable news and summoned me to meet the photographers pronto. Not being as grownup as my theme must have sounded, I was discovered building a bridge over a brook. Always over-enthusiastic, I had just fallen in! Even then, clothes were a great source of concern to me. Of course, I had to borrow a complete costume—which, to my unspeakable satisfaction, was infinitely more grown-up, sophisticated and altogether glamorous than anything afforded by my adolescent wardrobe."

She attended Radcliffe College, where she received her B. A. degree in 1923. "At Radcliffe I took a shot at the Sargent Prize, offered to Harvard and Radcliffe students for a metrical translation of a Horatian ode. Confidentially, I took *two* shots. The second came close—won honorable mention. To my disgust, a Harvard man walked off with the money!"

After graduation she secured a position on the woman's page of *Today in New York*, where she remained until it folded in 1929. Then came fashions and gossip for "The Sportsman Pilot," a shopping column for *Holiday*. In between times she wrote verses, too. Her poetic flight began when, early in her career, she was "a brow-beaten secretary. . . My boss, who fancied herself as somewhat of an efficiency expert, had just perpetuated mayhem upon me for using an unnecessary flip of the wrist in tying the knot of one of her parcel-post packages. The things she said to me sent me dashing into the stockroom, muttering:

I'd rather be a dentist
psychoanalyst or thug
than an energetic woman
with the organizing bug!

"I sent it to the *New Yorker* a few days later, and they took it, seeming to like the genuine viciousness of this and other similar verses of mine later printed by them."

Thus, like Margaret Fishback (see sketch this issue), with whom she was to work as assistant in institutional advertising at Macy's in New York (1930), she found an outlet also for her talents in light verse. But it seems that Mrs. Byers soon concluded that her particular forte in authorship was prose, and began writing articles about clothes and fashions for various national magazines. Meantime she was busy gathering further advertising experience at Lord & Taylor's, Gimbels, Saks Fifth Avenue, and in the special beauty shops of Elizabeth Arden and Margery Wilson.

Designing Women (1938), her first book, written with Consuelo Kamholz, tackled the fine points of the art and technique of being beautiful at little cost. Of this advice on how to be economically attractive most reviewers approved. Elizabeth (*Fashion Is Spinach*) Hawes (see sketch 1940 Annual), however, rather frostily commented that while some readers might pick up valuable hints, "most of them will emerge just where they started or maybe a little more balled up."

But *Designing Women* bids fair to gain immortality. As Mrs. Byers says: "The publishers very cleverly got it buried in the Westinghouse Time Capsule [at the New York World's Fair] on the grounds that it would serve as 'a record of the aims of contemporary women with regard to fashion and beauty.' Before the capsule was sealed we went and squinted down into the hole in the ground and wondered if anyone would ever dig up my brainchild, though Mr. Schuster [see sketch this issue] assured me 'posterity is just around the corner.' Later, in his comic strip, Buck Rogers proceeded to dig up the capsule. We read that episode eagerly. But Buck seemed to take no interest whatsoever in that musty little volume on feminine foibles, dimly entitled *Designing Women*. Or perhaps he thought the title risqué."

A slim, attractive young woman who has made the most of her brown hair and green eyes in practicing what she preaches, Margaretta Byers is known as one of the best-dressed women in a city of best-dressed women. She is no parlor socialite, however. She is devoted to the theatre, having been an active worker in Professor Baker's "47" Workshop while at college. Married in 1929 to Harlen Hatch Byers, a photographer, she likes best to go with him on his picture-taking trips. On these junkets "we both take a busman's holiday—he photographing, I writing the captions. That would be the ideal job, we think, making travelogues of out-of-the-way places, delving deep into the woods stalking small game with a camera, or nosing out stories like the one about that inn in the mountains so reminiscent of the Tyrol which we discovered had been a spy rendezvous, with documentary evidence to prove it." In 1941, however, Mrs. Byers was not as busy discovering the haunts of spies as she was conducting her fashion column for the Des Moines *Register and Tribune* Syndicate.

BYRNES, JAMES F(RANCIS) (bûrns) May 2, 1879- Associate Justice of the United States Supreme Court

Address: b. United States Supreme Court, Washington, D. C.; h. Spartanburg, S. C.

JAMES F. BYRNES

Bulletin: On June 12, 1941 James F. Byrnes' nomination to the United States Supreme Court was unanimously confirmed by his fellow Senators. On July 8 he took the oath of office.

From June 1941 issue:

There have been only eight justices on the United States Supreme Court since Justice James McReynolds resigned on January 31, 1941. If President Roosevelt has been slow about naming McReynolds' successor, most people believe it is because he plans to name South Carolina's James F. Byrnes—and these days Byrnes is a hard man to spare from the Senate, invaluable there as a Democratic leader and liner-up of votes. Southern Senators and Republicans are alike unanimous in supporting Byrnes' claims, and as late as April 29 the President cheered a South Carolina reporter by his announcement that when the ninth justice is finally named he hoped there would be no disappointment in South Carolina.

James Francis Byrnes is described by Joseph Alsop and Robert Kintner as "a small, wiry, neatly made man, with an odd, sharply angular face from which his sharp eyes peer out with an expression of quizzical geniality." They say his enemies call him the slyest, his friends the ablest, member of the Senate. Not a great speechmaker, "to see him at his best, he must be watched getting McNary's promise not to object, conciliating the prideful House leaders and craftily waiting his chance on the Senate floor to drive one of the great defense bills to immediate passage." He knows the political

BYRNES, JAMES F.—*Continued*

situation in every state; he knows the prejudices, the weaknesses, the enmities of all the Senators, by what margin and by what groups they were elected, who are their chief opponents. His knowledge and his ability to use it make him and Pat Harrison a smoothly working team when it comes to taking a poll. There are greater scholars and more profound thinkers in the Senate, but it is still true that almost never has President Roosevelt "lost in the Senate on an important bill when Senator Byrnes was with him; almost never has he won when Senator Byrnes was against him." For Byrnes, in *Time's* words, is "a politician's politician as other men are poet's poets or engineer's engineers."

The Senator from South Carolina is very quotable. "Most big issues are partly political, and where there's politics there's got to be compromise. . ." "You've got to sacrifice your opinion to your party on minor questions, or you'll lose all your influence on big issues. But if you start giving in too much on the big issues you may as well go home." And he is as energetic as he is shrewd. Yet, according to Alsop and Kintner, "he is a man of nervous constitution, ill-fitted to carry the double burden of public business and the endless petty tasks of politics. . . All South Carolina batters daily at his doors, demanding everything from postmasterships and free seeds to housing projects, more CCC camps and $50,000,000 dams." And at present he is in a position where he is "doing many of the jobs of leadership without an official leader's authority."

Byrnes was born in a "little, sagging-galleried frame house in King Street in old Charleston" on May 2, 1879, the son of James Francis and Elizabeth E. Byrnes. His father had died a few months before, and his mother was left penniless with a large household to support. She managed by going into the dressmaking business. Her children delivered dresses almost as soon as they could walk, and learned shorthand almost before they had conquered the three R's.

James was a brilliant student who won scholarships, but he had to leave school at the age of 14. He found a position as office boy in a law firm, did stenography after closing hours, and before he was out of his teens was making enough money with these two jobs for his mother to quit working. In 1900 he entered a competition for official reporter which he won; he moved with his mother to Aiken, South Carolina to take up the position. In the meanwhile he had been studying law under the supervision of a friendly judge and was soon ready for his Bar examination. After being admitted to the Bar in 1903 he continued as court reporter, however, and also bought the Aiken *Journal and Review,* which he paid for in two years and edited for four.

In 1908 Byrnes resigned his court reporter's job to run for solicitor of the Second South Carolina Circuit, a position equivalent to district attorney. He was elected, and after having cleaned up Barnwell County decided to run for Congress in 1910. "I campaigned on nothing but gall," he said later, "and gall won by 57 votes."

In Washington, where he arrived in 1911 for the winter session, Byrnes lived in an old hotel near the Capitol, a hangout for Congressmen. There he made friends, "learned there was more to the United States than the Second South Carolina District." One of the first things he did was to force the formation of the House Committee on Roads, from which grew the present Federal road-aid system. ("We fellows in Congress have mostly got to promise our people something from the Treasury, and in the old days in the South and West we generally used to promise Federal roads," he explained.) Later he was appointed to the Banking and Currency Committee, and went enthusiastically after the "money trust" during the Pujo Investigation.

Nevertheless Byrnes, who learned fast, soon learned that preoccupation with money trusts was no way to hold his constituents, who were incidentally charging him with endangering "white supremacy" by supporting a constitutional amendment for direct Senatorial primaries. When he returned for his second term he therefore began doing jobs for Democratic leaders instead of trying to be a statesman right away, and before long he had his reward: an appointment to the House Appropriations Committee. He handled his first bill long before the First World War, and by the time the United States entered it he was a member of the deficiency subcommittee of the Appropriations Committee, one of three men who had the chief power of the purse over the nation. The principal government officials appeared before them, publicly or privately, to ask for billions for one purpose or another; President Wilson himself consulted them. It was at this time that Byrnes made the acquaintance of Franklin D. Roosevelt and of Bernard Baruch (see sketch this issue).

Toward the end of the War, Byrnes went abroad with Representative Richard S. Whaley and Senator Carter Glass (see sketch this issue), celebrating the Armistice in Edinburgh; after he returned his first act was to present a bill repealing seven billion dollars in contracts appropriated for, and seven billions in cash authorizations. But the Republicans had captured the House. Byrnes, who didn't particularly enjoy being in opposition, by 1924 was willing to risk an attempt to get himself elected to the Senate. Defeated, he went back to practicing law in South Carolina not too reluctantly, for there was no year of law practice in which he didn't take in several times his Congressional salary. By 1930, when the Republican tide had ebbed, he was ready to return to the Senatorial race. This time he won, and his rise in the Senate was rapid. He lined up South Carolina's delegates for Roosevelt, and in the 1932 Presidential campaign moved into "brain-trust headquarters" at the Hotel Roosevelt to advise on budgetary matters.

Immediately after he came into office Roosevelt began using Byrnes for jobs that the late Senate chieftain Joe Robinson didn't want to handle. Byrnes' efficiency at them made him Senate spokesman for the White House, and in his campaign for re-election he stuck to the proposition: "Roosevelt will be elected and so will Jimmy Byrnes." (He had opened the campaign with the pithy comment: "What South Carolina needs is not a good political campaign but a good rain.") In any case, his record was consistently pro-New Deal. He had fought for legislation to abolish the abuses of the stretch-out system in the cotton mills of the South; he had put through Congress a resolution making it a felony to transport strike breakers in interstate commerce.

It was not until Roosevelt's second term that Byrnes formed an active alliance with some of the "moderates" in the Senate who opposed many New Deal measures. Conservative by nature, he undoubtedly regretted having managed the $4,800,000,000 relief bill of 1936, was disillusioned by its results. And the political wind was changing. In 1937 he gave the first indications of his new orientation when he attempted to cut appropriations for the La Follette Civil Liberties Committee and authored the anti-sit-down strike amendment to the Guffey Coal Bill. By 1938 he was insisting that the budget be balanced, fighting the anti-lynch bill, asking for the immediate repeal of the undistributed-profits tax and modification of the capital-gains levy, trying to force the House to defeat the wage-hour bill which he had opposed in the Senate the year before; and he also helped his colleague, "Cotton Ed" Smith, when Roosevelt wanted to "purge" him in the 1938 primaries. In 1939 he battled for reductions in WPA appropriations.

Byrnes had no quarrel with Roosevelt's foreign policy, however, and he and the President speedily made up. Since that time he has captained the Senate Democrats in many difficult fights: over the repeal of the arms embargo, the extension of the trade agreements, the emergency defense appropriations and most of the subsequent features of the defense program. (In matters of national defense Byrnes has no "economy" psychosis.) In the spring and summer of 1940 he was being frequently mentioned for the Democratic Vice-Presidential nomination, with Bob La Follette commenting, dryly: "I like Byrnes, but I must say I hope to God he doesn't get it. We have a hard enough time now, but with the President in the White House again and Byrnes running the Senate, bills will go through here so fast we won't even have a chance to offer an amendment."

Though Wallace got the Vice-Presidential nomination, Byrnes fought hard for Roosevelt's re-election, speaking over the radio to endorse the third term, replying to Willkie's "campaign oratory." Since that time he has more than once delivered vigorous public speeches in favor of aid to Britain, and "it is now established that the lease-lend law came through the Senate so well as it did chiefly because of the able management of Byrnes . . . who made the checks, talked to the waverers, soothed the grumblers and shepherded the doubters into line . . . who deftly arranged the remarkable compromise on the Ellender Amendment." His next job was to be one of the floor managers for the seven billion dollar appropriations bill. It is not surprising if the President hates to lose him.

Mrs. Byrnes is the former Maude Perkins Busch, of Aiken, South Carolina, whom he married in 1908, joining the Presbyterian church that same year. Her husband's favorite recreations are "good fellowship, the study of human nature," telling long, "saltily humorous" anecdotes. Outside of politics, his wants are satisfied by "two tailor-made suits a year, three meals a day, and a reasonable amount of good liquor." And he "needs only two or three to make a quorum for *Carolina Moon, Keep Shinin'*." Maybe he will find them in the Supreme Court; maybe he won't.

CAMPBELL, E. SIMMS Jan. 2, 1906- Cartoonist; artist

Address: Saw Mill River Rd, White Plains, N. Y.

Readers of *Esquire* are no doubt familiar with the signature of E. Simms Campbell, for each issue of that magazine contains 10 or 12 full-page cartoons by him. Campbell is the first Negro artist to work for national publications and national advertisers. He has contributed to the following periodicals: *Cosmopolitan, Red Book, New Yorker, Collier's, Saturday Evening Post, College Humor, Judge, Life, Delineator, Opportunity* (organ of the National Urban League). He has done full pages of cartoons for the New York Sunday *Mirror*, the black and white illustrations for Jack Kofoed's *Great Dramas in Sports* in *Life* Magazine, the cover called *Into the Light* for the brochure in honor of and promoting the fiftieth anniversary of the Y. M. C. A., and is in 1941 under contract with *Esquire*, for which he has done pages and pages of drawings ever since that periodical first came out in 1933. His women approximate a Yale junior's ideal of female desirability in the moments when the "Petty Girl" begins to pall, and probably only the pink-pated magnates and Eastern potentates who usually lurk somewhere in the background make Campbell's water colors less popular than Petty's for college walls.

Philadelphia Society for Negro Records & Research

E. SIMMS CAMPBELL

Campbell was born in St. Louis, Missouri. His father was a chemistry teacher and assistant principal in a high school there; his mother did water colors for her own satisfaction. He went to Chicago, and there attended the Englewood High School, where he drew cartoons for the school paper. In 1923 he won a nationwide contest for the best cartoon in a high school paper, an Armistice Day cartoon. For a year he attended Chicago University, and then went to the Art Institute of Chicago for three years, meantime starting work for a humorous magazine.

When the magazine failed Campbell returned to St. Louis. Unable to find work there as an artist, he took a job as a waiter on a dining car. About this part of his experience he has said: "I was a good waiter." But between times he drew caricatures of the people on the train—the passengers, the other waiters and the train officials. On one of his return trips to St. Louis he succeeded in showing these drawings to J. P. Sauerwein, manager of the Triad Studios, one of the largest commercial art studios in the Midwest. The Triad Studios hired him, and he worked with them for a year and a half, until he left of his own free will to go to New York City to try his luck there.

It was Elmer Carter, editor of *Opportunity*, who had challenged Campbell to come to New York. Campbell by request had sent Carter a cover for *Opportunity* and had remarked that he did not like the covers on that magazine. Carter thought that the young artist was good, but wrote that if he were really good he ought to be able to meet the competition in New York, where it was "hot," and be able to draw for any of the magazines, not just for *Opportunity*, which is a Negro publication. In New York, Campbell did not find it easy to get established. For a while he worked for an advertising agency at one-eighth the salary he had been getting in St. Louis. He also sold "gags" to other artists, sometimes 50 a week. Then one day he met Ed Graham, a former school friend of his, who had become one of America's outstanding cartoonists. Graham took him to the editors of some of the humorous magazines, and soon Campbell was receiving plenty of commissions. Shortly thereafter *Esquire* was started and with it his assignments from that magazine.

Campbell is a hard worker. He draws about 300 full-page cartoons a year for magazines, at least one each day in transparent water colors, in addition to cartoons for advertising agencies. He also does drawings for other publications—in 1936 he won a $1,000 prize offered by a large Chicago newspaper for the best cartoon depicting the tax grabber. Unlike many other artists, he writes his own "gags." He sits up all night drawing under a strong light, drinking coffee to keep awake. He said that he seldom drinks liquor because anything he can do drunk he can do much better sober. A great deal of fan mail comes to him, much of it from aspiring artists, often very young, or from parents who are eager to know whether their children possess talent. All of this mail Campbell answers. He is very generous in giving his time to young artists, inviting them to his home for criticism and advice, making connections for them in the commercial art world, encouraging them as once he needed encouragement.

CAMPBELL, SIR GERALD Oct. 30, 1879- Director general of British Information Services

Address: British Information Services, 30 Rockefeller Plaza, New York City

On January 15, 1941 the British Foreign Office announced that Sir Gerald Campbell, at that time in Ottawa as High Commissioner for Great Britain, had been appointed British Minister to the United States. Five months later, on June 3, 1941, it was announced in London that he would in the future act as director general of British Information Services in the United States. According to the official statement, the new appointment was "in response to the increasing demand in the United States for fuller and more complete information concerning Britain's war effort and for the improvement of the supply of news from British sources."

Gray-haired, ruddy, genial Sir Gerald had already lived 19 years in the United States as consul general in Philadelphia, San Francisco and New York until 1938, and is supposed to have considerable knowledge of American economy. At his first press conference after a three weeks' visit to England in July, his first since the War began, he defined the chief function of his office as the provision of interpretation "against the British background" of news and pictures obtained by correspondents to American editors, columnists and radio commentators. One of the principal things he wanted to accomplish was to show American working men the great effect their work was having in a grateful Britain.

SIR GERALD CAMPBELL

Sir Gerald was born on October 30, 1879, the son of the late Reverend Colin Campbell of Weston-super-Mare. He was educated at Repton and at Trinity College, Cambridge, where he received his B. A.; he entered the British diplomatic service in 1907 as vice-consul at Rio de Janeiro. From 1908 to 1913 he was in the Belgian Congo, from 1913 to 1915 in Venice and from 1915 to 1919 served as consul at Addis Ababa.

It was not until 1920 that he came to the United States to be consul general at Philadelphia; a year later he was appointed to the same duties at San Francisco. In 1923 he was made a Companion of St. Michael and St. George. He came to New York City in 1931 as consul general and in 1934 was knighted as Commander of St. Michael and St. George. It was in 1938 that he became High Commissioner for the United Kingdom in Canada.

CAMPBELL, SIR GERALD—*Continued*

When Sir Gerald left the United States he left behind him "an indelible impression compounded of friendliness, intelligence and a most engaging humor." Nearly a thousand people attended a farewell dinner arranged to do him honor, for he had been rated as New York City's busiest public speaker.

In 1911 Sir Gerald married Margaret C. Juler, and they have three daughters, one of whom was born in Addis Ababa. He has received numerous honors: possesses an honorary LL. D. from Queens, McGill and Toronto Universities in Canada, Rutgers University, Union College and New York University in the United States. He is also an officer of the Order of St. John of Jerusalem, a fellow of the Royal Geographical Society, and wears the Star of Ethiopia. On May 28, 1940 he received the first award of the Canadian Club of New York "because of accomplishment in the line of duty over a long and honorable career." His recreations are hockey, golf, tennis—and telling funny stories to an appreciative audience. He is very quotable. What is more, he can be witty in more than one language: he knows "Portuguese, Spanish, French, Italian and, in a pinch, Kiswahili and Amharic."

CAMROSE, WILLIAM EWERT BERRY, 1ST VISCOUNT June 23, 1879- British newspaper publisher

Address: b. Daily Telegraph Offices, Fleet St, London, E. C. 4; h. 25 St. James's Pl, London, S. W. 1, England

Lord Camrose has never been so spectacular a Fleet Street personality as the late Lord Northcliffe, but his holdings in British newspapers have probably been just as great. Northcliffe was an innovator who made news sensational, ran stunts, awarded prizes. Camrose, though he took over financial control of a large part of the great organization Northcliffe built up, is associated in British public opinion chiefly with the *Sunday Times* and the *Daily Telegraph,* both dignified and non-sensational organs of opinion. And throughout the years he has almost consistently refused to change the established policy of the papers he has acquired.

Lord Camrose spent all his working life up to 1937 in close association with his brother Lord Kemsley (Gomer Berry), and the history of the one man is in large part the history of both. These brothers who control an $80,000,000 publishing empire owe their huge wealth, their prestige and their titles to sheer ability and hard work, coupled, perhaps, with some good luck. William Ewert Berry was born in Gwaelodygarth, Merthyr Tydfil, Wales, the son of the late Alderman John Mathias Berry, a realtor. He was brought up in modest comfort, which did not include a public school education, and quit school altogether at the age of 14 to work on the Merthyr *Times.*

For five years William Berry stayed in South Wales, as office boy and reporter on various local papers, until in 1898 he went to London as a reporter on the *Investor's Guardian,* at $7 a week. He had a hard time, punctuated by periods of unemployment, one of which lasted three months, and not much relieved by the low salaries he earned when he had newspaper positions. Tired of working, or not working, for others, in 1901 he started his own weekly paper, the *Advertising World.*

Berry wrote most of the paper himself, canvassed for advertisements and laid out the paper himself. He made a profit from the start. Before long he brought up his younger brother, Gomer, from Wales, and from that time on the fortunes of the brothers ran together. William looked after the policy and contents of their papers while Gomer supervised the finance and management. In 1905 they sold the *Advertising World,* bought a publishing business and founded the journal *Boxing.* Other papers were soon founded or acquired by them, and they began to make money.

The acquisition of the *Sunday Times* in 1915, however, was the first time the Berrys became first-class publishers. This paper has no connection with *The Times* itself, but resembles that august organ in its dignity of news presentation, its chastity of format and its highly expert treatment of literature, art and music. Berry took it over almost by accident. He was lunching with the financier, Jimmy White, when, in the words of Bernard Falk, "West de Went Fenton, traveler and journalist, sauntered up to the table. Having secured an option on the *Sunday Times,* he wanted White to come in and help find the money. He was told that the man he should address was the guest—William Berry."

Fenton was bought out and the principal owner, Herman Schmidt, ratified the option. Then Berry had to deal with the actual holders, who included Sir Basil Zaharoff, the Greek armaments magnate, and Sir Arthur Steel-Maitland, one of the Conservative Party chiefs. Neither of these men wanted Berry to take the paper over, and it was only after a tussle that he won out. The Berry brothers quickly followed up their success here by purchasing the printing works at which the paper was set up, St. Clement's Press, and this purchase gave them control, too, of the *Financial Times,* the leading investors' paper.

During the next 10 years the Berrys went on from success to success, buying up publishing, newspaper, printing and paper concerns right and left. A big buy was that of the fashion house of Weldons, which ran about 20 dress magazines for women. Another was that of Kelly's Directories, which publishes most of the local directories in England. Still another was that of the *Graphic* group, consisting of the *Sunday Graphic* and the *Bystander.* Then the Berrys launched out into the provinces and in 1924 took over the Hulton group of Manchester; in 1925 they bought the Newcastle group, the Glasgow group and papers in South Wales, Sheffield and Aberdeen. All over Britain were Berry papers, weeklies, dailies, monthlies. William Berry was made a baronet in 1921; in 1929 he was raised to the peerage as Baron Camrose of Long Cross; and in 1941 he was made a Viscount, his name leading the King's honors list.

LORD CAMROSE

Meanwhile, in 1926, a further Napoleonic deal had taken place. William and Gomer bought the whole business of the Amalgamated Press from the executors of Lord Northcliffe, a business which comprises more than 100 daily, weekly and monthly papers, ranging from boys' comics through technical journals, women's papers and general journals to encyclopedias. Then, on January 2, 1928, the Berry brothers took control of the *Daily Telegraph.*

This old established morning paper belonged to shareholders, chief of whom was Lord Burnham. It had solid traditions and a price of four cents a copy, as opposed to the standard price of two cents. Burnham saw that the concern was losing money and was hopelessly out of date, but saw, too, that it was impossible to modernize it and make it profitable without foregoing dividends over a long period, a sacrifice which his fellow shareholders could hardly afford So he sold out to Lord Camrose, who took over not only as proprietor but as editor in chief. Lord Camrose carried out the necessary modernization, reduced the price to two cents, built palatial offices in Fleet Street and trebled the circulation in five years.

In the control of the *Daily Telegraph,* Lord Camrose was associated with his brother and Lord Iliffe, but early in 1937 the three split up because the high joint holdings were cumbersome. Lord Camrose's chief interest remained with the *Daily Telegraph,* the Amalgamated Press and the *Financial Times.* In the summer of that same year another old and famous paper fell to Lord Camrose, the *Morning Post,* the last stronghold of die-hard Toryism in the country. Since die-hard Toryism had sunk in popularity until it had a very small following indeed, the *Morning Post* was sick and ailing. Lord Camrose amalgamated it with the *Telegraph* within two months. His latest venture was *War Illustrated,* which

CAMROSE, WILLIAM, 1ST VISCOUNT —*Continued*

came out as soon as the Second World War was declared. (For a time in this War he also assisted the Government at the Ministry of Information.)

Lord Camrose has always believed in playing a major part in the direction of his principal papers, and he has fine offices in the Telegraph building itself. "Attached to his suite of rooms is a luncheon apartment, where he often entertains a few friends. . . His punctilious habits call into being a picturesque ritual. The lift is at his floor the moment he signifies his departure. On entering it, he is helped on with his overcoat. By the time the ground floor is reached, his motor car has drawn up opposite the main entrance and the door is open ready to receive him—all so much clockwork."

This newspaper magnate is a healthy, happy man who dresses quietly, avoids "society" and is liked by his employees. He has been responsible for a number of generous philanthropic gestures and takes a lively interest in the fine arts. His hobby is yachting, and he is a member of the Royal Yacht Squadron. In 1905 he married Mary Agnes, eldest daughter of the late Thomas Corns of London, and the couple have four sons and four daughters, the heir being the Hon. John Seymour Berry, born in 1909.

CANTERBURY, ARCHBISHOP OF *See* Lang, C. G., Archbishop of Canterbury

CANTOR, EDDIE Jan. 31, 1892(?)- Radio, stage and screen actor

Address: b. Station WEAF, 30 Rockefeller Plaza, New York City; h. Beverly Hills, Calif.

"Gentlemen," Eddie Cantor told his radio sponsors who begged him to avoid controversial topics, "long after I'm through as a comedian, I'll still be a man." "After that," he told John T. McManus, "I was court-martialed, only in my case they stood me up against a wall and took my contract away from me."

Radio sponsors, for obvious reasons, prefer that their actors refrain from offending any possible purchaser of cigarets, toothpaste, coffee and the like, and not many radio performers are willing to jeopardize their careers even to preserve their personal integrity. Eddie Cantor, however, has apparently never weighed speaking his mind or espousing a cause against its possible effect on his pocketbook. At times his philanthropic gestures may seem so covered with bathos and his devotion to democracy so steeped in sentimentality that the over-critical listener fails for the moment to be swayed. Cantor's sincerity and wholeheartedness, however, have never been questioned.

Eddie Cantor was born Edward Israel Iskowitz, the son of Russian immigrant parents, Michael and Minnie Iskowitz, on Eldridge Street in New York City's lower East Side. Orphaned at the age of two, he was raised by a maternal grandmother known to her family and friends as "Esther." Esther managed a none-too-prosperous domestic employment agency and tried to provide as well as she could for her grandson. Eddie attended a public school and Wood's Business School in the Williamsburg section of Brooklyn.

At home and at the Surprise Lake Camp to which his grandmother had petitioned the Welfare Board to send him, Eddie was popular for his mimicry and impersonations. His talents were used also "to hold the attention of street corner crowds with political orations while his confederates picked the spectators' pockets."

When Eddie was fourteen he met Ida Tobias, "the belle of Henry Street," and eight years later they were married despite the objections of her family, who felt that Eddie would never amount to anything. Their honeymoon trip to Europe was interrupted by America's entry into the First World War, and Cantor returned to participate in the sale of Liberty Bonds and the entertainment of the A. E. F.

Although Eddie Cantor has still to reach the half-century mark, his has been a long and varied career. His first stage appearance was made at the notorious Miner's Bowery Theatre, where amateurs rose and fell at the whim of one of the severest audiences of all time. Eddie did not get the "hook": he won applause and five dollars.

Heartened by this dramatic success, Cantor got a job as a singing waiter at Coney Island, where he formed a lasting friendship with the saloon's pianist, Jimmy Durante. In 1912 he played a black-faced butler in Gus Edwards' *Kid Kabaret.* From then until 1916 he played in vaudeville and burlesque. His first real opportunity was in the 1916 *Midnight Frolic* at the Amsterdam Roof. Included in the *Ziegfeld Follies* of 1917, 1918 and 1919, he toured as Sam Beverly Moon in *Canary Cottage* and, in 1920, made his first starring appearance in *The Midnight Rounders.* In the same year he appeared in *Broadway Brevities* and, in 1922, in *Make It Snappy.*

From 1923 to 1926 he starred in *Kid Boots* and in 1929 in the record-breaking *Whoopee.* The screen version of *Kid Boots,* made in 1926, was his first screen appearance. He has since played in such films as *Special Delivery;* the 1927 *Follies; Glorifying the American Girl* (1929); *Whoopee* (1930); *Palmy Days* (1932); *The Kid From Spain* (1932); *Roman Scandals* (1933); *Kid Millions* (1934); *Strike Me Pink* (1936); *Ali Baba Goes to Town* (1937); and *Forty Little Mothers* (1940).

As a radio comedian, Cantor has been active since 1931. His first National Broadcasting Company network appearance was made in February 1931 on Rudy Vallee's program, and in September of the same year he starred in a program of his own for Chase and Sanborn coffee. After five years on the same program he moved to the Columbia Broadcasting System in 1935, where he starred on the Pebeco, Texaco and Camel programs. He then left radio for a season, returning for Sal Hepatica and Ipana, on whose programs in 1941 he is heard Wednesday at nine.

Eddie Cantor's comedy is known for its combination tear-and-smile approach and for its use of his protruding eyeballs as well as his ad libbing talents. (It is safe to say that many of the best lines in everything in which he appears are due to his impromptu wit.) He claims to be an innovator in several fields of his varied activities. For one thing, he introduced the "announcer-stooge," using the sponsor's representative in the script. He was the first to bring the studio reaction into the home: in the early history of variety programs, studio audiences had been told to maintain a rigid silence. Furthermore, as one of the few performers to preview programs, Cantor treats a preview audience to a double script two days before the program is scheduled to go on the air. The reaction to the jokes is carefully checked and items which fail to get laughs are eliminated. Experience has given him an unshakable conviction that insults are the very backbone of humor, and Eddie has been waiting for a long time to spring one of his own, now filed away in his Hit Parade of Insult Classics. When chubby Alexander Woollcott (see sketch this issue) finally tells him that things are not going well with him, Eddie will look him straight in the eye and say, quick as a flash: "Chins up, old boy!"

EDDIE CANTOR

Exceptionally active in discovering new talent for the screen and radio, Cantor counts among his "finds" Burns and Allen, Deanna Durbin (see sketch this issue), Bobby Breen and Parkyakarkus.

In 1928 Cantor dictated his autobiography to David Freedman, and the homely sentimental tale of the trip from Eldridge Street to Broadway and Hollywood called *My Life Is In Your Hands* was serialized in the *Saturday Evening Post* and published in book form. Other articles written by Eddie Cantor include *Yoo Hoo Prosperity!; The Eddie Cantor Five Year Plan; Caught Short; Your Next President; Does Hollywood Make Bad Pictures on Purpose?*; and *Dear Ida, A Wedding Anniversary Letter to the Mother of My Five Daughters.*

As a philanthropist and generally public-spirited citizen Cantor's reputation is second only to his reputation as a comedian. In 1936 he originated the successful scheme of the March of Dimes, based on the notion that people are thrilled to send money to the President; he is the founder of the Eddie Cantor Camp Committee which sends poor and undernourished boys to the country; and he is active in both Jewish and Christian

CANTOR, EDDIE—*Continued*

charities, frequently appearing in more than 100 benefit performances in a single season.

He also performs for draftees, broadcasts comedy by short wave to Britain, and is otherwise active in national and patriotic movements, although his efforts are not always successful. In January 1936 a $5,000 scholarship which he offered for an essay on *How America Can Stay Out of War* was won by a boy who submitted a plagiarized article and resulted in publicity more unfavorable than otherwise.

Eddie Cantor is president of the Jewish Theatrical Guild of America and of the American Federation of Radio Artists. He is a Mason and a member of the board of directors of Surprise Lake Camp, where he spent part of his own underprivileged youth.

Besides his busy activities on the radio and his patriotic and charitable pursuits, Eddie Cantor returned to the stage late in 1941 in a musical comedy, *Banjo Eyes,* a musical version of *Three Men on a Horse* and "the biggest show of the season." Its two dozen scenes were played on two turntables, and in the finale Mr. Cantor returned to the blackfaced role with which he was associated in his early vaudeville days. The expenses of the production, estimated at about $100,000, were to be divided between Cantor and Warner Brothers, who expect to convert the show into a film in 1942.

Eddie Cantor stands five feet, seven and one-half inches tall. His hair is black and his "taw" eyes, a pair of characteristics on which he has capitalized throughout his career, are brown.

His five daughters, whom he has never allowed his audiences to forget, are: Marjorie, Natalie, Edna J., Marilyn and Janet. He has one grandchild, a son, born to Natalie and Joseph Metzger in the fall of 1939. Eddie was on a personal appearance tour when the news of his grandfatherhood reached him in Boston. "Boy, oh boy, am I happy!" he shouted to an audience of 5,000 persons. "Is that perfection!"

CAREY, JAMES B(ARRON) Aug. 12, 1911- National secretary of the Congress of Industrial Organizations

Address: b. 261 Fifth Ave, New York City; 1106 Connecticut Ave, N. W., Washington, D. C.; h. 5924 Worthington Dr, Lee Boulevard Heights, Falls Church, Va.

When James B. Carey and six other men at the radio factory in Philadelphia where he worked began to organize a "fishing club" no one, least of all Carey himself, could have known that this was the first step that would bring him to the national secretaryship of the CIO at the age of 27. For one thing, there wasn't any CIO. For another thing, Carey was merely an exceedingly youthful electrical worker without any union experience.

James Barron Carey was born in Philadelphia on August 12, 1911, one of the eleven children of John C. and Margaret (Loughery) Carey. His father was a paymaster at the United States mint and a friend and admirer of the conservative Sam Gompers, first president of the American Federation of Labor. Young Carey attended St. Theresa's Parochial School and was graduated from high school in Glassboro, New Jersey in 1929 before getting his job in the radio laboratory of the Philco Radio Corporation in Philadelphia. In the evenings he studied electrical engineering at the Drexel Institute. Then the Phil-Rod Fishing Club was started, with seven members. In 1931 Carey dropped his studies at the Drexel Institute and enrolled at the Wharton Evening School of the University of Pennsylvania for courses in the management of industrial enterprises, business forecasting and finance. These subjects, he thought, would help him in handling the problems of the growing organization of sports lovers, for the Phil-Rod Fishing Club was really a union.

In 1933 the National Industrial Recovery Act was enacted, stimulating a move in many places toward collective bargaining agreements between employers and employees. Carey's company set up a "Company Congress" for this purpose, and the "fishermen" elected their members to it. Soon the Philadelphia Storage Battery Company found itself with a strike on its hands. At one strike meeting Carey called upon the men to insist on a single plant-wide union—an independent union, if the A F of L wouldn't take them on those terms. He was thrown off the platform, but the strikers voted for his program, and he helped negotiate a settlement with the company for them.

In October of that same year he was sent as a delegate from his local to the A F of L convention in Washington. There the decision as to what was to be done with the workers all over the country who were felt to want organization was postponed until January 1934. In December 1933, in preparation for that January meeting, representatives of 12 Federal and independent unions in the electrical industry met in New York and formed the Radio and Allied Trades National Labor Council. Twenty-two-year-old James Carey was elected president, and given the hopeless job of convincing the A F of L leaders that the Council should be chartered as a separate international union for the radio and electrical manufacturing industries—an industrial, not a craft, union. In July 1934 he left his job as a radio worker when appointed general organizer for the United States by the A F of L, but a year later he quit this job in order to take the presidency of his local union at a salary of $40 a week. By this time he and the other officers of the Council were persuaded that they could not make the A F of L see things their way, but they were determined to make a last stand at the A F of L convention in Atlantic City that year.

It was an historical convention. The Radio and Allied Trades National Labor Council opened headquarters in Atlantic City for all delegates who were "friends of industrial unionism." Carey spoke, charging that the A F of L leaders were more interested in holding down comfortable jobs than in organizing the unorganized. "For a while we had them worried," he said later. "We had a considerable number of delegates and we made a lot of noise. It took the Old Guard a couple of days to realize that while we might make the noise, they had the votes." John L. Lewis, of course, was the leader of the insurgents; he congratulated Carey on the work he was doing. When, the day after the convention, the Committee for Industrial Organization was set up by Lewis and associates, Carey was kept in touch with all developments and advised on his own course of action.

When the A F of L would not allow the Radio and Allied Trades to have an international industrial union charter, 28 locals finally set themselves up as an international industrial independent union: the United Electrical and Radio Machine Workers of America. Carey was elected president. Only six months later the UERMWA came into the CIO, of whose governing committee Carey was already a member. He had also been elected vice-chairman of the American Youth Congress.

JAMES B. CAREY

Two years later, in November 1938, came the constitutional convention in Pittsburgh at which the Committee for Industrial Organization became the Congress of Industrial Organizations. There was talk of peace with the A F of L, on terms which would split the UERMWA into fragments. Carey spoke. "The CIO wants peace—without pieces," he said. With the support of Lewis he was chosen national secretary of the CIO at that convention, and then he hurried home to Long Island, where his wife, the former Margaret McCormick (they had been married in January), was expecting a baby. It was a son, James Barron, Jr.

Before September 1939 there were none of the serious battles within CIO ranks over national foreign policy that were to come later. James Carey was known as a follower of John L. Lewis. He addressed American Student Union conventions, assailed the Dies Committee before the American Congress for Peace and Democracy, explained resolutions of the American Youth Congress. Late in 1939, when he acted as an International Labor Office Regional American Conference delegate, he was himself assailed by Luigi Antonini of the American Labor Party's Right wing for not having defended the "good neighbor" policy from Conference attack. As late as July 1940 he ridiculed Gene Tunney's attacks on the American Youth Congress and opposed the Kramer totalitarian governments' resolution there. In September 1940 he was elected general president of the UERMWA with the support of all factions.

Inter-union struggles grew more intense, however. In the 1940 election Carey supported Roosevelt and Roosevelt's foreign policy, and relations between Carey and Lewis and Lewis' supporters grew increasingly cool. Early in 1941 Carey was appointed a member of the nine-man Production Planning Board

CAREY, JAMES B.—*Continued*

of the Office of Production Management and an alternate member of the National Defense Mediation Board, but remained critical of the defense setup. He backed Philip Murray's (see sketch this issue) plan for industrial councils of labor, management and government; in speeches he placed most of the blame for strikes on the greed and the law violations of great corporations, most of the responsibility for delay in defense production on "business refusal to plan for expansion." Later he was to concur with other officers of the UERMWA in a report which condemned the OPM as a "super-government" dominated by "big business" and announced that labor representatives in the OPM had been relegated to the function of "glorified office boys, given a few errands to run from time to time." And even later, in November 1941, he was to join other CIO members in resigning as a NDMB alternate in protest at the Board's decision refusing the union shop to the captive miners. In September 1941, however, when the convention of the UERMWA met, finally united on foreign policy, and passed a resolution calling for all-out aid to Great Britain and Russia, Carey was not ready to make his peace with John L. Lewis' former supporters. His effort to push through the resolutions committee a resolution specifically condemning Communism was repudiated by a majority of the delegates, and in the ensuing battle Carey failed to be re-elected as president. It was said that his defeat came from a coalition of those who thought his job as national secretary of the CIO occupied too much of his time, those with unpleasant recollections of Martin Dies (who had once called Carey a Communist), and some out-and-out Left wingers. Carey himself was quoted: "I've been arbitrary as hell—that had a lot to do with it." He said he would, however, continue to fight for a constitutional change giving local unions autonomy to ban Communists as officers. Even opponents of his resolution praised his leadership of their union, which had, during his regime, gained more than 100,000 members, doubled its dues collections, established itself as one of the five largest unions in the CIO, and yet engaged in fewer strikes than many old-line A F of L unions.

At the annual convention of the CIO in November 1941 Carey was re-elected national secretary, and since then he has frequently been the spokesman of the CIO in matters involving labor as a whole. It was he who, with Philip Murray and William Green, protested against the passage of any legislation banning strikes; he who accused Secretary of the Navy Knox of backing "mob violence" against "lawful union activity."

Slight, tense, with hazel eyes and "abundant, dark, tousled hair" which is seldom covered by a hat, James Carey looks even younger than he is. *Time* once described him as "a short-sleeve union boss, a good swing maestro or trap drummer in a different setting, juggling telephones and barking out orders through a 16-hour work day." He smokes a short-stemmed black pipe, which he clenches in his teeth when nervous. Besides being national secretary of the CIO, he is an executive officer of the United Construction Workers and of the Utility Workers Organizing Committee, chairman of the CIO's committee on unemployment, a contributor to labor journals, and has had the singular honors of having spoken as official representative of the CIO on a Labor Day broadcast with President Roosevelt, of having delivered talks on union aspects of industrial management at Princeton University, and of having received the 1940 award of *Parents'* Magazine for service to youth. Away from a union office, though, he is happiest when boxing, playing basketball or tennis—or trying to get a candid camera shot of James, Junior's, young sister, Patricia Ann.

CARMICHAEL, HOAGY (kär'mī-kl) Nov. 22, 1899- Song writer

Address: c/o Elie Leslie, 9441 Wilshire Blvd, Hollywood, Calif; h. 626 N. Foothill Dr, Beverly Hills, Calif.

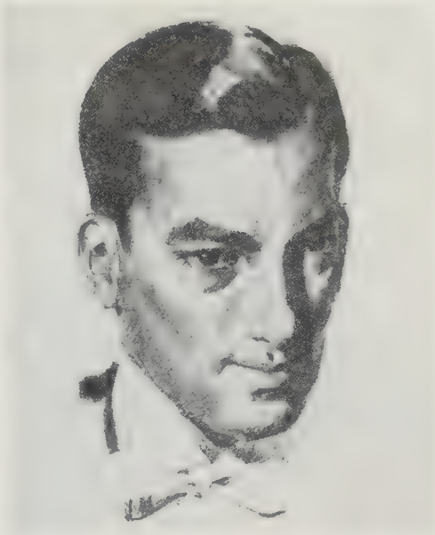
One of America's leading jazz song writers, Hoagy Carmichael and his compositions are known wherever jazz music is played. In the United States numbers such as *Stardust* are known to the trade as "swing standards" and in England "hot" music fans refer to them as "Evergreens." Hoagy has been a prominent ASCAP member since 1931. In the midst of the BMI-ASCAP controversy that barred music of ASCAP publishers from the air, Hoagy's *Rockin' Chair* and *Georgia On My Mind* were played almost as often as Jeanie-of-the-public-domain. The mystery was cleared up when it was discovered that these two numbers were published by a firm not affiliated with ASCAP.

Hoagy's first compositional efforts were inspired by a piano player of the "strictly barrelhouse" school, and some of his best-known tunes were created on the player piano of a Greek candy store just off the Indiana University campus. Since it was completely unliterary, students dubbed this place The Book Nook. "There was a player piano in the back room," said Hoagy, "where we used to feed ice cream to our best girls. I had composed several pieces on that old hurdy-gurdy—*Washboard Blues, Riverboat Shuffle,* and *Rockin' Chair* among them." From jazz and jazz bands he went on to the popular music field, first to Broadway and then to Hollywood, where he has been writing music for pictures since 1935.

Hoagy didn't start out to be a song writer. There was a long period when he was sure he was going to be a lawyer, perhaps one with a strong liking for and interest in jazz, but a lawyer nonetheless. Hoagland Howard Carmichael was born in Bloomington, Indiana, the son of Howard and Lida (Robison) Carmichael, and grew up there. His mother taught him to play the piano, but he first became interested in jazz when he heard a Negro piano player named Reggy Duval. "He showed me the art of improvising," said Hoagy—"using the third and sixth of the chord as a basis for arpeggios." With his solid bass, complex rhythms and stress of the afterbeat, the playing of this pianist fascinated young Hoagy, whose musical training up to that point had been along thoroughly conventional lines.

Hoagy also recalls a crude and raucous jazz band: "It was disjointed music, unorganized, but full of screaming notes and a solid rhythm." But while he liked it he was not sure that he could play it. Then, up at Northwestern at a party, he heard Bix Beiderbecke playing with musicians of his acquaintance. His enthusiasm brought Bix and The Wolverines to the Indiana University campus, to play for the spring (1924) dances at the Kappa Sigma fraternity house. "Hoagy went nuts," a fraternity brother recollected. "He and Moenkhause began the Bix cult that had the band back on the campus 10 week ends in a row."

Hoagy confirms this story himself: "When they [The Wolverines] started off with *Tiger Rag,* I froze to a spot in front of the band. . . Bix's breaks were 'hot,' and he selected each note with musical care. Then I realized that jazz could be musical." The *"break"* in jazz is similar to the cadenza in classical music, though it is always brief—at most eight bars—and usually permits of solo improvisation against the rhythm. Hoagy had written a number that "offered the possibility of four *'breaks'* in the main theme." He called it *Free Wheeling* and offered it to Bix and The Wolverines to record out at the old Gennett studio in Richmond, Indiana. The boys liked everything but the title, which Bix changed to *Riverboat Shuffle.*



McClelland Barclay

HOAGY CARMICHAEL

Hoagy formed his first band, The Collegians, in the fall of 1923. He later forsook the study of law temporarily to organize another band. In that period he recorded his *Washboard Blues* for Gennett. Those were the days of acoustical recording, and the disc now sounds both sadly waxed and somewhat dated as to performance. But in the middle of it there is a piano passage by Hoagy, and out of it, startlingly, emerges the phrase that later inspired his song hit *Lazybones.* However, the music business didn't work out and Hoagy went back to college, staying there until 1926, when he got his LL. B.

His first step toward becoming a lawyer was to work for The Equitable Trust Company in New York City. He followed this up with a trip to Florida, where he tried unsuccessfully to start a law practice. Then he returned to Indiana to work for Bingham-Mendenhall, Attorneys. His progress in law was again cut short by an offer to join Jean Goldkette's Orchestra. A few months later he organized another band of his own in Indianapolis. Then with completed manuscripts of *Stardust* and other songs he set out for Hollywood; he found the film industry cold to beginning song writers, and turned eastward again.

In New York he got a job in a publishing house as an arranger. By this time his songs were becoming known. When Paul Whiteman heard the old Gennett record of *Washboard Blues* he kidded Hoagy about it but asked him to sing the number on a 12-inch disc. This was the first time the verses were recorded. They have something

CARMICHAEL, HOAGY—*Continued*

of a folk quality, and were written by a stonecutter in an Indiana quarry.

The musical idea for *Stardust* came to him while he was on a visit to Bloomington in 1928, and the first rough outline was worked out on the player piano of The Book Nook. The title was suggested by a friend. "I had no idea what it meant," said Hoagy, "but I thought it would make a gorgeous title." Lyrics were supplied by a writer on the staff of the publisher, and the number, brought out in 1931, has sold close to 1,000,000 copies—three times the present number of a hit tune. *Lazybones* came out in 1933, with Johnny Mercer contributing the lyrics. From then on Hoagy continued to write numerous successful songs and worked on piano scores in classical forms as well, convinced that jazz lore might be crystallized in such a medium.

Hoagy Carmichael has written Broadway show music, having contributed *Little Old Lady* to *The Show Is On*, a revue that starred Beatrice Lillie. More recently he did the score for *Walk With Music* (1940). In Hollywood he has attained the kind of success that the undergraduate might have sometimes dreamed about over the yellowed keys of that old piano in The Book Nook. His contributions to films included music for: *Anything Goes* (1936); *Topper* and *Every Day's A Holiday* (1937); *Sing, You Sinners, College Swing* and *Thanks For The Memory* (1938); and *St. Louis Blues* (1939). He appeared in the role of pianist-composer in the short film *Paramount Presents Hoagy Carmichael.* Jack Teagarden, who has worked on many record dates with Hoagy, also appeared in the film.

When he was at Indiana University a classmate once handed Hoagy some verses with the remark that they'd make a good song. Hoagy worked on the idea and years later when he dug it out of his trunk he decided it was worth publishing. But he had no idea who the author was. He read the lyrics over the radio and, he tells us: "The plot thickened. Forty-eight people claimed to have written the thing." The author was finally located, however, and the fact established that the poem had appeared years before in *Life* Magazine, signed *J. B.* Its author was Mrs. Jane Brown Thompson of Philadelphia. But she never heard the music. She died January 18, 1940, the day before the tune, *I Get Along Without You Very Well,* was sung over the air for the first time, by Dick Powell.

Five feet seven and one-half inches tall, Hoagy has been described by Michel Mok as "a dark-haired, brown-eyed fellow with foxy features, a dry, business-like manner and a nasal Indiana drawl." When reminiscing about jazz, however, Hoagy's manner is anything but dry. He is a most enthusiastic partisan. On March 14, 1936 he married Ruth M. Meinardi. They have two children, Randy Bob, "named after nobody," and Hoagy Bix, "after the great Bix Beiderbecke." Through the 1920's Hoagy and Bix remained close friends. In 1931, shortly before Bix's death, Hoagy got together a recording band that featured Bix and other jazzmen. Hoagy had been in the studio when the youthful Bix recorded at Richmond, Indiana, with The Wolverines. And it was with Hoagy's recording band in an RCA-Victor studio on East 24th Street, New York, that Bix blew the last recorded note from his silver cornet. When he died, Hoagy says: "My interest in music dropped 50 per cent."

Hoagy likes to play tennis and confesses that "carrying baggage across the country seems to be one of my hobbies."

America's Young Men
International Motion Picture Almanac
Ramsey, F. and Smith, C. E. eds. Jazzmen 1939

CARNEGIE, DALE Nov. 24, 1888-
Author and public speaking instructor

Address: b. 50 E. 42nd St, New York City; h. 27 Wendover Rd, Forest Hills, Long Island, N. Y.

Sometimes Dale Carnegie bewails the fact that in his youth he was denied the benefit of a book such as his own ubiquitous *How To Win Friends and Influence People*, but it seems to have done him no harm. America's leading apostle of self-help is a household word in the country today; his books, radio talks and newspaper columns have reached millions, and his classes are a cross section of national frustration. Among thousands of bewildered salesmen, aging executives and hapless housewives as well as among the public at large Carnegie has certainly won friends and influenced people.

Dale Carnegie, a small, bouncing man with erect posture and alert eyes behind rimless specs, probably never dreamed during his boyhood in Maryville, Missouri, where he was born on a farm on November 24, 1888, that he would become so eminent. Neither, probably, did his father, James William Carnegie, who had to wage a losing battle with the One Hundred and Two River—a stream which, year after year, inundated his farm land and kept the family in a state of chronic poverty. Mrs. Carnegie (Amanda Elizabeth Harbison), a devout Methodist, wanted her two sons, Dale and Cliff, to become missionaries.

Dale liked to recite. And he was by no means backward about displaying his oratorical wares at Sunday-school recitals and local festivals. Later he was further encouraged by Nicholas M. Souder, a schoolteacher who boarded with the family and who liked using fancy words like "psychology" and "philosophy" in his conversations with Dale.

Getting an education at the State Teachers College at Warrensburg, Missouri was a hard struggle for young Carnegie. He was one of the four students in the school who couldn't afford to board in town, and he had to ride to and from school on horseback. This had its compensations, however, because Carnegie could try out his recitations on the horse. Carnegie is remembered as a slight and insignificant youth in ill-fitting clothes who joined the debating team because his physique barred him from sports. Notwithstanding his experience, Carnegie was a flop as a debater until he happened to hear a Chautauqua lecturer. The talk on that particular day was a lachrymose personal testimony describing how the speaker had pulled himself up from his humble beginnings by his own bootstraps. He studied carefully the speaker's gestures and his colloquial vocabulary; then, with practice, he adapted them for use in his own debates.

After graduation from college in 1908 Carnegie had to earn his keep. Quite naturally he turned to salesmanship, traveling to Nebraska as a representative of the International Correspondence Schools. To a telephone company linesman who was unable to leave his post on the top of a telephone pole, Carnegie sold his first and last correspondence course. Then he got a job managing a hinterlands route in South Dakota for Armour and Company, and was successful in building one of the most backward sectors into one of the most profitable.

At this period he undoubtedly began to apply the technique that he eventually exalted into a formula of success. One slight indication of this is that he had acquired the habit of signing his name without removing his pen from the paper. This was a peculiarity of his boss, Rufus E. Harris. In Carnegie's eyes anything a man of importance said or did was important, even if it was only the way he signed his name.

But salesmanship failed to assuage Carnegie's irresistible desire for recognition, despite the fact that his achievement resulted in the offer of an executive post. With $500 he had managed to save from his earnings, he decided to realize a long-standing ambition to become a Chautauqua lecturer. Then a casual conversation with a minister on a train convinced him he would make a better actor than speaker, and Carnegie detoured to New York to attend the American Academy of Dramatic Arts in 1911. His record as an actor was not outstanding; he played the role of Dr. Hartley in a road show of *Polly and the Circus,* and that terminated his career before the footlights.

In 1912 Carnegie found himself in New York, jobless and without prospects. Somewhere in his voluminous writings he says that at one time he contemplated suicide, but whether this was the time or not is unrevealed. At any rate, Carnegie decided, with the sort of resoluteness that he now teaches in his classes, to take an unprecedented step: he would teach public speaking. When he carried his proposal to the YMCA on 125th Street the manager was more than skeptical, but told Carnegie that if he insisted on exercising his talents he was welcome to do so at a party planned for the following week. Much to the manager's surprise Carnegie accepted with alacrity; he appeared at the party and his recitations were an instant hit. Then the manager became more interested. He allowed Carnegie to conduct the first night classes in public speaking ever held in the YMCA, and after a preliminary argument over Carnegie's demand for a $2-per-night fee it was agreed that the instructor would get 80 per cent of the net proceeds of the classes.

DALE CARNEGIE

Pioneering at 24 in a field that has since become a major American industry, Carnegie had to learn as he went along. Even in his first session he accidently made some important discoveries. For example, after a lengthy introductory survey, Carnegie suddenly found himself destitute of things to say and in his desperation urged the students to get up and deliver impromptu talks. When they complained that they didn't know what to talk about, Carnegie told them to think about something that made them angry. The results were gratifying, for the students actually found themselves able to speak before an audience.

In essential outlines the Carnegie method hasn't deviated from this maiden session, although, of course, the founder has since learned a good deal more about the art of teaching. Gradually, too, he came to discover the tremendous desire of most American people to express themselves and to gain self-confidence. Carnegie had a commodity of incalculable appeal. So successful did his courses become that soon he was drawing $25 a session, and by 1914 his earnings mounted to $500 weekly.

He was lecturing to packed houses, and in 1916 he hired, for the first time, Carnegie Hall. His choice of this particular hall was no accident: Carnegie was not unaware of the publicity value of names. His own name had been spelled Carnegey, as a matter of fact, when he lived in Missouri, despite his father's claim to distant kinship with the millionaire Andrew

CARNEGIE, DALE—*Continued*

Carnegie. The son changed it because, he said, it was foolish to confuse the public with divergent spellings of the same name.

As business increased Carnegie was physically unable to handle it all himself. He opened an office near Times Square and hired substitute instructors to take care of his widely scattered classes. Meanwhile, in order to standardize his methods in each of the classes, he began publishing pamphlets, never dreaming his literary effusions would one day wind up on the best-seller lists. Eventually he collected his writings into book form, and the volume that resulted was called *Public Speaking; a Practical Course for Business Men* (1926), later published as *Public Speaking and Influencing Men in Business* (1932). This soon became a standard text for many public-speaking classes and sold quite well.

In the midst of his manifold enterprises the dynamic ex-salesman somehow managed to find time to take courses at Columbia and New York Universities and at the Baltimore School of Commerce and Finance. He thus garnered a trailer of formidable degrees and titles to follow his name on the title pages of his books. They include B. Pd, B. C. S., Litt. D. and F. R. G. S., the latter bestowed on him by the Royal Geographic Society as the result of his extensive travel throughout Europe, Africa and Asia while lecturing on various topics.

It was at the behest of Lowell Thomas (see 1940 Annual), the radio commentator (then a college teacher of English), that Carnegie first took to travel abroad. Carnegie's admiration for Thomas verges on reverence, and although the latter reciprocates with no small measure of regard, he has had occasion to refute the widely held idea of a teacher-pupil relationship.

The future news analyst first got in touch with Carnegie because he wanted some help on a talk he was scheduled to deliver at the Smithsonian Institute. Pleased with the speech instructor's suggestions, Thomas once again sought out Carnegie when he needed a business manager to direct a lecture tour which he planned to conduct in Great Britain. The two men thus began a business relationship that proved highly successful for a number of years. Thomas lectured on "With Lawrence in Arabia and Allenby in Jerusalem" with the use of colored slides and was such a sensation that he assigned Carnegie to preside over a second company to present the lecture simultaneously in other parts of the country.

There had been a hiatus in Carnegie's breakneck rise to success when the nation's entry into the First World War interrupted his career, but after a period at Camp Upton, Carnegie returned to post-War New York, and reassembled his classes. With characteristic energy he began the new phase of his career. After his lectures in Great Britain, he hired an assistant to do research work on famous men; he traveled throughout the country interviewing the nation's prominent. Out of this emerged two collective biographies written in the breezy, slam-bang sentences characteristic of his lectures and rather reminiscent of newspaper and bill-poster headlines. They are *Five Minute Biographies* (1937) and *Little Known Facts About Well Known People* (1934). He also wrote a book about his favorite hero called *Lincoln, the Unknown* (1932), which, a critic says, "will never rank as a major contribution to Lincolniana."

How To Win Friends And Influence People first appeared in 1937 and within a few months had gone through 17 editions. It was a more popular version of his earlier text on the same subject. The sales were fabulous: the book was soon being described as the most popular work of non-fiction in modern times, although it was not too favorably hailed by critics, and sales demand continued to exceed supply in bookstores. Eventually it was printed in mass quantity in a 25-cent paper-covered form, and bids were even solicited from the publisher for supplying copies to the inmates of Leavenworth, Atlanta and Alcatraz Federal Prisons. Concurrently, Carnegie's fame and fortune increased, for the book helped to publicize Carnegie's classes, while his classes, in turn, brought the attention of additional thousands to the book.

Never loath to seize an opportunity, Carnegie began inserting full-page ads in the metropolitan newspapers inviting the public to free demonstrations of the Carnegie method in huge halls; and new classes mushroomed throughout the East. In the meantime his services were in demand by the radio networks and by newspapers. His weekly programs over the air were question-and-answer periods devoted to solving domestic as well as business problems of the public. The application of Carnegianism to domestic problems was a new and extremely profitable facet of his career, since it increased by tenfold his potential audience. It was foreshadowed by the chapter in *How To Win Friends And Influence People* called "Seven Rules For Making Your Family Happy." To stabilize his enterprises Carnegie established the Carnegie Institute of Effective Speech and Human Relations. Carnegie himself is unmarried and prefers to be regarded as a bachelor lest his divorce of his wife several years ago reflect on his integrity as a dispenser of connubial advice.

Carnegie's newspaper column has been called "a growth rather than a column." It has appeared through syndication in 71 daily newspapers. The columns are capsule preachments on success illustrated with anecdotes from Carnegie's fabulous collection of trivia about great men.

With all his success Carnegie is said to retain a pristine faith in his own formulae, which, according to Sinclair Lewis, can best be summed up as " 'yessing' the boss, and making Big Business right with God." He retains his devout affection for men of standing, even for Sinclair Lewis, whose satirical hammer has pulverized many a Carnegian platitude. Carnegie is ready to prescribe the famous Carnegie formulae for virtually all the world's ills, from wars to dental decay. In an article a few years ago, for instance, Carnegie provided an engagingly simple solution to a problem that has long baffled world economists. Depressions, he said, can be overcome by confidence.

Carnegie is a man with simple tastes who still responds with intermittent wonder to the extent of his own success. He likes to point out his lowly beginnings and to demonstrate that his own career, no less than that of many another public figure, proves the possibility of success for even the humblest.

Who's Who in America

CARTER, JOHN FRANKLIN, JR. *See* Franklin, J., pseud.

CASTILLO, RAMÓN S. (käs-tē'lyō rä-mōn') Nov. 20, 1873- Acting President of Argentina

Address: Casa Rosada, Buenos Aires, Argentina

Since the day when illness forced President Roberto Ortiz to retire temporarily from his duties, Argentina has been in a state of tension. The key to this lies in the fact that ever since their accession to office in 1938, the President and the Vice-President of Argentina have been "on the opposite sides of the political fence." President Ortiz is a Radical, a member of a political group credited with vaguely New Dealish tendencies; Vice-President Castillo is a Conservative, is supposed to be supported by the once all-powerful ex-President (or, as some put it, ex-dictator) General Augustín Justo, and to believe in government by the privileged. But it is Señor Castillo who is in 1941 the man in Argentina's Casa Rosada (its White House, which is really pink) and who, in spite of having promised to follow the policies of the incapacitated President, has some very strong ideas of his own.

Ramón S. Castillo was born on November 20, 1873, in Catamarca, Argentina, the son of Rafael and Mariá (Barrionueva) Castillo. He attended elementary and secondary schools in his native town but went to study law in the National University of Buenos Aires, and was graduated in 1894 with the degree of Doctor of Jurisprudence. Soon after that he became secretary of the Commercial Court of Buenos Aires and in 1903 he got the judgeship of the city's Criminal Court. In 1905 he was appointed to the Civil and Commercial Board of the province of Buenos Aires and in 1907 occupied the bench of the Commercial Court. Throughout his career he seems constantly to have divided his activities between the civil and the criminal branches of the law. He was on the Criminal Court of Appeals from 1910 to 1913 and on the Commercial Court of Appeals from 1913 to 1918.

Argentine Information Bureau
RAMÓN S. CASTILLO

Señor Castillo became well known as an authority on commercial law. He contributed articles to many magazines and was the author of two books on bankruptcy: *Procedimiento Preventivo de la Quiebra* (1910) and *Proyecto de Ley de Quiebras* (1917). He taught law at his Alma Mater from 1907 to 1912 and at the University of La Plata during summer sessions. On the advisory board of the Buenos Aires University from 1915 to 1928, he taught law and social sciences and from 1923 to 1928 was the dean of the law school. Throughout his academic career he wrote numerous monographs on law, commerce and various cultural subjects, and his lectures were subsequently published in textbook form. He has an honorary degree from the Universities of Heidelberg and Rio de Janeiro, is a member of the Spanish Academy and vice-president of the Argentine Commission for Pan-American Commercial Arbitration.

In 1929 depression hit Argentina. The restrictive measures taken by the Irigoyen Administration in order to combat it brought on an uprising of conservative elements, led by General José F. Uriburu. The constitutional government was overthrown by force. Ramón Castillo and Roberto Ortiz found themselves in the same camp. When Augustín Justo was put into power in a steam-roller election of the kind that was to prevail in Argentina thereafter, Ortiz was his Minister of Public Works. Castillo was a member of the Constituent Assembly in 1931. The next year his native district of Catamarca sent him to Congress.

Castillo began forging his way to the top. The Justo Administration appointed him Minister of Justice and Public Instruction in 1936. That same year, while temporarily the Acting

CASTILLO, RAMÓN, S.—*Continued*

Foreign Minister, he made headlines by urging the Madrid Government to spare the life of José Antonio Primo de Rivera, the captive pro-Fascist son of the former Spanish dictator. In 1937 he was Minister of the Interior, a post which he gave up to participate in the Presidential elections. A shrewd, canny politician, he was by that time considered one of the most trusted conservative leaders, nicknamed *El Zorro*, the Fox. It was only natural to put him on Roberto Ortiz's ticket to represent the Conservative element of the Conservative-Radical coalition that put the present Administration into power. Among the pledges put forward by Ortiz were promises to build up the armed forces of Argentina, to preserve democracy by insuring honest elections—a pledge which the Conservatives disregarded, since the 1937 elections were conducted in the usual style, with such devices as quarantining entire districts, jailing political opponents and incapacitating opposition poll watchers by liberal libations of the Argentine variety of "Mickey Finn."

It was nevertheless on the rock of honest elections that the Ortiz-Castillo harmony ship finally split. Argentine politicians soon found President Ortiz no pliable tool, found him favoring democratic decentralized government and eager to cooperate with the United States. Señor Castillo, on the other hand, was always for strong central authority and was a loyal party man. The ultimate test came in February and March of 1940 when Ortiz re-ran questionable provincial elections in Catamarca and Buenos Aires and ousted the Conservative candidates supported by the Vice-President. Castillo objected, openly expressing sympathy with the ousted candidates, and the result was a quarrel which almost ended in his own resignation as Vice-President.

Ortiz's plans, however, were prevented by illness. Stricken by diabetes, half blind, on the advice of physicians he turned over the executive power to Castillo for an indefinite period. The question with which Argentina was now faced was how much President Ortiz's policies would be modified by the Acting President. Castillo himself underwent some extremely tense moments after his induction into office. In August the Ortiz Administration, as represented by the Cabinet, was put into a rather ticklish situation by an investigation into a doubtful land deal which was traced to the doors of the War Ministry. A deputy shot himself, and Ortiz, though admittedly having nothing to do with the scandal, offered his resignation to the Congress. The latter's unanimous refusal to accept it was said to have foiled a Fascist plot to take over the Government. It was after this that Castillo voiced his decision to follow internal and foreign policies initiated by Ortiz. His appointments to the reorganized Cabinet seemed to bear out the promise. For a while it looked as if Ortiz were coming back and, at any rate, was keeping his hand on the executive reins.

This impression faded gradually as Ortiz's health showed few signs of improvement. Castillo, solidly backed by the Conservatives, consolidated his position. Ortiz's friend Julio Roca resigned from his post as Minister of Foreign Affairs, and Ortiz publicly voiced his disapproval of Cabinet changes made by Castillo, who on his part claimed that he was under no obligation to follow undeviatingly in his predecessor's footsteps. The crisis deepened when the Radicals in the Congress charged fraud in the provincial elections of Santa Fe and Mendoza, won against all expectations by the Conservatives, and clamored for an official investigation. Señor Castillo, for whom victory in these provinces meant 130 electoral votes in the 1944 elections, turned a deaf ear to their pleas. As a result, in January he was faced in the Chamber of Deputies with a legislative boycott that left Argentina without legislation for the next five months. By April 1941 only six out of some forty bills had been voted on, and the Castillo Administration was unable to win even the Chamber's approval of the budget. On April 26 President Castillo announced that he would govern Argentina by decree for the time being. On May 7, the Radical Party, having abandoned its original hope that Ortiz would recover his health sufficiently to return to his post, voted to put an end to the legislative boycott, thus removing the reason for Castillo's rule by decree.

Señor Castillo is a lean man with a lined ascetic face and silvery-white hair. He gives the impression of being a scholar rather than a politician, but this fools no one; he is recognized as an astute and tough fighter. He is married to Mariá Delia Luzuriaga, has five children and one of his sons is now working for him as a secretary. Castillo has at least followed Ortiz's policy of building up an army. At the end of 1940 he opened a campaign to train 5,000 civilian fliers in three years and also proposed to spend a lot of money on military aviation to make Argentina supreme in the air over South America. It is not known, however, whether his intention is to attempt to pursue an independent imperialist policy designed to dominate the rest of South America or to continue the policy of solidarity with the United States. American observers found him reluctant to move from his position of strict neutrality and not too enthusiastic about the need for naval collaboration that President Roosevelt and the United States Navy think desirable.

In June 1941, in his Annual Message to Congress, Castillo merely reaffirmed Argentina's "firm and loyal neutrality," announcing that Argentina was "foreign to" the causes of the War. He refused to support a Congressional investigation of fifth-column activities and disassociated his Administration from a vote of censure passed by the Chamber of Deputies against German Ambassador Von Thermann, in spite of a growing popular demand that the Nazi political and economic machine in Argentina be broken up. As a result of his apparent Nazi sympathies, when in September 1941 word of a seditious plot participated in by Argentinian Army officers began to leak out in the press, many wondered about Castillo's role in it. He, however, minimized its importance, announced that everything was under control—and continued to ignore popular opposition to his policies. In October he was responsible for what was generally condemned as a "dictatorial" and "unconstitutional" act when his Cabinet dissolved a democratically elected Municipal Council and replaced it with a board of Government appointees, and the next month his ban on some 3,000 scheduled meetings of the pro-Ally Accion Argentina resulted in the heaviest storm of indignation and criticism in years. An earlier refusal of haven for 86 anti-Hitler refugees was also widely condemned.

CECIL OF ESSENDON, ROBERT ARTHUR JAMES CECIL, 1ST BARON (sĭs'-ĭl") Aug. 27, 1893- British Secretary of State for the Dominions

Address: 25 Charles St, Berkeley Sq, London, W. 1, England

From the days of Queen Elizabeth and William Cecil, Lord Burleigh, the Cecil family has been one of the most famous in Great Britain and its members have often taken a prominent part in public affairs. The third Marquess of Salisbury was for long Prime Minister in late Victorian days, and Lord Cecil of Chelwood has since the First World War been the chief upholder of the League of Nations. Lord Cranborne (as Baron Cecil of Essendon is usually called, since his peerage dates only from January 1941) has not as yet shown quite the statesmanship of the latter, who is his uncle, but his interests have been similar. Best known as the faithful friend and lieutenant of Anthony Eden, he was appointed Dominions Secretary in October 1940.

LORD CECIL OF ESSENDON

Lord Cranborne is the eldest son and heir of the fourth Marquess of Salisbury. He was educated at Eton and at Christ Church, Oxford, and at the beginning of the First World War took a commission in the Guards. He fought in France, winning the Croix de Guerre, was invalided home in September 1915, and that same year married Elizabeth Vere, eldest daughter of Lord Richard Cavendish (brother of the Duke of Devonshire). He took no part in public life until 1929. After the War he went into bill-broking in the City of London, with the firm of King and Foa, and early in 1933 he was made a director of the Westminster Bank.

Meanwhile, at the election of 1929, he had been returned to the House of Commons as Conservative member for South Dorset. (He was to be re-elected by the same constituency in 1931 and 1935, and to remain in the Commons until December 1940, when he was elevated to the peerage.) It was 1934 when he was first picked out for minor office. Eden was at that time Lord Privy Seal and later Minister without Portfolio, his main duty the supervision of all matters connected with the League of Nations. Cranborne was appointed his parliamentary private secretary, went with him to Berlin and Moscow, and apparently saw eye to eye with him in all he did. His own oral and written work at Geneva was said to have been "masterly," and when, in October 1935, Eden succeeded Sir Samuel

CECIL OF ESSENDON, ROBERT, 1ST BARON—*Continued*

Hoare at the Foreign Office, Cranborne became Parliamentary Under-Secretary of State for Foreign Affairs. There were some murmurings of "Tory nepotism" and of favoritism toward a hitherto rather undistinguished member of the Cecil clan, but Stanley Baldwin, speaking at the time, explained that "Mr. Eden and Lord Cranborne had worked together with great sympathy and success in Europe for a long time, and they would be an extremely strong pair for the work that lay before them."

This proved to be true. But although a staunch Tory (in 1934 he said of the National Government that no government of modern times could show such a record of success), Cranborne, like Eden, was soon at odds with the more violent advocates of appeasement within his own party. In February 1936 he had a talk with the Cambridge University branch of the League of Nations Union. "For many years I have gone about preaching disarmament," he said, "but in the existing situation the League nations have to arm against the others." Two years later, on February 20, with Chamberlain urging immediate negotiations with both Germany and Italy and with the other apostles of an entente with Berlin pressing the Foreign Minister to the wall, Eden resigned, and Cranborne with him. And on February 21 the latter followed Eden's speech of "personal explanation" to the House of Commons with a bolder one of his own. Although the differences that had caused the two men to resign were not merely over the issue of the Anglo-Italian talks, it was that issue that was emphasized.

"I have found myself forced to resign," Lord Cranborne said, "because I am in the very fullest agreement with my right honorable friend. I am bound to him, not only by those natural ties of affection which will be felt by anybody who has had the privilege of working with him, but also because I believe him to be absolutely right." It was a matter of principle, the principle of good faith in international affairs. If the Italians really had such good faith they could have shown it by stopping anti-British propaganda in the Near East and withdrawing some of their troops from Libya and Spain—neither of which they had done. "I am afraid," he went on, "that for his Majesty's Government to enter on official conversations would be regarded not as a contribution to peace, but as a surrender to blackmail." At the end of February he also explained his resignation to his constituents, who fully endorsed his action.

For the next two and a half years (except for a brief period in the minor office of paymaster general) Cranborne was an ordinary Member of Parliament, still maintaining a critical attitude toward the policy of appeasement and urging the vital necessity of rearmament. His views of the totalitarian countries were at no time flattering. At a Canford School speech-day in July 1938 he referred to them as places where men "are driven along like cattle with whips, and . . . do not exist as individuals. They do what they are told, not because they think it right but because they are not allowed to think at all."

His most memorable speech, however, came two months later. It was immediately after Munich, in the House of Commons. Speaking of Chamberlain's talk of "peace with honor," Cranborne was bitter: "Peace he certainly brought back to us, and there is not one of us who will not wish to thank him with a full heart for that priceless gift . . . but where is honor? I have looked and looked but I cannot see it. It seems to me a wicked mockery to describe by so noble a name the agreement which has been reached." These were again far bolder words than Eden's. Nevertheless the implication was not that England should have declared war. When shortly after, Cranborne was put on the carpet by his South Dorset constituents and asked to explain a reference to Czechoslovakia as "a country thrown to the wolves," he explained that he had intended no reflection on the honor of Neville Chamberlain, that in his opinion Great Britain ought to have dissociated itself from the Czech question altogether. But that same month, speaking of policy, he announced: "It is a very simple thing—rearm, rearm and rearm."

Early in October 1940 Cranborne took office as Secretary of State for the Dominions, and at that time expressed his satisfaction that all the Dominions (with the exception of Eire) were finally playing their part in the British struggle against Hitler. In a world-wide broadcast delivered on December 10 he had bitter and apposite words to say about the latter's vaunted "new order." "It represents not a step forward in the history of the world," he said, "but a very long step back. It is naked tyranny, the triumph of force over liberty, of cruelty over kindness, of deceit over good faith."

In debate Cranborne has "many of the mannerisms and gestures of the Cecils, but speaks less jerkily than his father." Since he is a young man as statesmen go and has shown a capacity for public affairs unsuspected for a long time, it is possible that he may yet do as much in the political sphere as the most distinguished of his ancestors. He himself has two sons, who have not as yet followed him into the political arena.

Who's Who

CERDA, PEDRO AGUIRRE See Aguirre Cerda, P.

CERF, BENNETT A(LFRED) (sûrf)
May 25, 1898- Publisher
Address: b. 20 E. 57th St, New York City; h. 132 E. 62nd St, New York City

Bennett A. Cerf has been called "the reader's unknown benefactor." His 95 cent Modern Library reprints, started with Donald Klopfer in 1925, had sold 10,000,000 copies by the fall of 1941. The list averages about 200 titles, besides the double-size "Giants," and Cerf keeps weeding out those which don't sell well and adding new titles, trying always to keep a small, active list of books that sell at least 1,000 copies a year. Just now, he says, the trend is toward the classics—the real classics, Plato, Aristotle and Homer. "We like it," he told an interviewer. "These are the authors who never kick about new jacket designs or cause any trouble at all. Yes, you may say we are very well pleased with Aristotle!"

Bennett Alfred Cerf is a born New Yorker, the son of the late Gustave and of Fredericka (Wise) Cerf, of French-Jewish descent. He was educated at Columbia, from which he received his B. A. in 1919 and in 1920 his Litt. B. from the School of Journalism. College was followed by a short period as a reporter on the New York *Herald Tribune* and this in turn by a stretch in a Wall Street brokerage house. But by 1923 he was through with stockbroking and became a member of the staff and one of the many vice-presidents of Boni & Liveright, the publishing house.

It was not until 1925 that he started out in the publishing business for himself. "Fairly well-heeled, heir to some wholesale tobacco money," he and Donald Klopfer, his friend of many years, bought from Boni & Liveright for a whopping sum the Modern Library, a series of staple books that hadn't been a particularly lucrative sideline for his old firm. Immediately the two young publishers got to work, and by the time three years had passed had earned back their original investment. They had the books redesigned by Elmer Adler and Rockwell Kent, they got a new printer, they started a new selling and advertising policy. Modern Library books rolled off the presses and into people's homes all over the country. Then, in 1931, Cerf and Klopfer began issuing the Modern Library Giants, at a slightly higher price, but still, according to the New York *Times*, "the greatest book bargain in the United States today."

Random House, the other venture of the two partners, was started in 1927, soon after it was clear that the Modern Library was going to be a profitable venture. Cerf and Klopfer, as their first move, got the exclusive American agency for the Nonesuch Press, an English firm specializing in beautiful limited editions. Then they proceeded to work on beautiful editions of their own. The first Random House book was issued in 1928, a limited edition of Voltaire's *Candide* illustrated by Rockwell Kent, and other elegant books followed. Cerf himself was a collector of "firsts" and fine editions in those days and has continued to be.

Ray Platnick
BENNETT A. CERF

But this was luxury trade, and with hard times it dwindled. The firm began to pay more attention to its infant trade publishing department and in 1933 began publishing trade books on a broad scale with the signing of contracts with Eugene O'Neill and Robinson Jeffers. In 1936 the firm of Harrison Smith and Robert Haas, Incorporated, was made a part of Random House. Today Bennett Cerf is president of Random House and Modern Library, as he has always been; Robert Haas is vice-president and Donald Klopfer is treasurer. Cerf leans toward the literary side of their publishing and Klopfer toward the business side, but the two men collaborate closely on every problem. They've worked at adjoining desks, face to face, for many years now, and Cerf says they've never had a fight in all that time. And that, he adds, is quite a record among publishers.

Cerf, particularly, is concerned with Random House's authors, who include Vincent Sheean (see sketch this issue), William McFee, André Malraux, Mignon Eberhart, John Strachey, Margaret Kennedy and many other important writers here and abroad. But he recognizes that they are a problem sometimes. "When I first entered the publishing business," he once said, "it was my childish belief that publishers and authors were one happy family together, living as one in a beautiful world of literature and dreams, but that illusion was shattered at the very outset by my employer the day I went to work for him. 'The first thing that you will have to remember in this business,' he told me, 'is that authors must be treated differently from all other human beings. The fact is, you see, that they are all slightly batty.'" Bennett Cerf admits he has found this out

CERF, BENNETT A.—*Continued*

for himself occasionally, that authors can often be a severe trial to a publisher trying to make money for himself and them, but he nevertheless insists that he likes them, enjoys knowing and working with them. And, he says, "in my years of publishing, I am proud to say that my house has never lost an author that it really wanted to keep."

The president of Random House, which is the American publisher of James Joyce, which has presented the complete works of Havelock Ellis and Marcel Proust to the country, which publishes (besides novels, fiction, biography, travel books and books of every other kind read in America) plays and juveniles, is an authoritative spokesman on other topics than authors. Very frequently he speaks for the book trade as a whole on problems of selling, distribution and on the many questions that concern him and his fellow publishers in journals like *Publishers' Weekly* and the *Saturday Review of Literature*. He is, too, an editor who has a number of books to his credit, including *Great German Short Novels and Stories* (1933); *The Bedside Book of Famous American Stories,* with John Angus Burrell (1936); *The Bedside Book of Famous British Stories,* with Henry Curran Moriarty (1940); *Three Famous Murder Novels* (1941); *Arabian Nights, or, The Book of a Thousand and One Nights* (1941); and *Sixteen Famous American Plays,* with Van H. Cartmell (1941). With Cartmell he has also collaborated in editing *Sixteen Famous British Plays,* to be published in 1942. He is especially interested in the short story form and was formerly a director of *Story* Magazine, which he was instrumental in bringing to America.

On October 1, 1935, Cerf and Sylvia Sidney, the motion-picture star, eloped from Hollywood in an airplane and were married in Phoenix, Arizona. But the marriage did not last long; the following April Miss Sidney sued for divorce, charging that her husband objected to her career and that he "did not understand motion-picture people." On September 17, 1940, he was married for the second time, to Phyllis Fraser, a cousin of Ginger Rogers, the screen star. Miss Fraser had formerly been a radio actress and at the time of her marriage was radio story editor for a large advertising agency. The ceremony was performed by Mayor Fiorello H. LaGuardia in the "Summer City Hall" at the New York World's Fair. They have one son, born in late 1941.

Brown-eyed, tall, dark, bespectacled, with smooth dark hair, a frank, friendly face and what has been described as a "prep-school-teacherish" manner, Bennett Cerf for the most part lives and breathes publishing—he calls it his "favorite vocation and avocation." Still, he does get away from authors and manuscripts and the presidency of his firm occasionally for a game of tennis and even more occasionally for a whirl at New York's social life. There's no doubt that he is the most frequently mentioned publisher in columns like Leonard Lyons', but undoubtedly many would not entirely agree with this description of him: "Bennett Cerf, the socially conscious-minded publisher at Random House, is never seen at anything but the most de luxe and snobbish cocktail levées and house parties."

Most people who know Cerf, however, would agree that he is socially conscious: his struggle against censorship benefited all publishers and established a principle of freedom of writing; recently he has been very active in securing relief for anti-Nazi writers who face the difficulties of exile; and his own firm has long been considered one of the most progressive and liberal-minded in the country.

CHEN CHENG 1900- Chinese military leader

Address: Chungking, China

General Chen Cheng, in command of China's Sixth War Area, is one of the most important military leaders in the fight against Japan, and has been considered by many as the probable successor to Chiang Kai-shek (see sketch 1940 Annual). Chiang Kai-shek himself has done much to bolster up that opinion: he introduced Chen Cheng to his second wife, Miss Tan Chang, daughter of the late President Tan Yen-kai of the Executive Yuan; he addresses Chen Cheng, as he addresses no other generals, by the Chinese diminutive *ti,* "little brother"; and Chen Cheng and General Hu Tsung-nan, also considered a candidate for the succession, are the only two generals in China permitted to receive orders direct from the Generalissimo without the counter-signature of Ho Ying-chin, Minister for War.

This dapper little General has been associated with Chiang Kai-shek ever since 1924. He was born in Ching-Tien, Chekiang in 1900 and received his military training at the Paoting Military Officers' College, the school which turned out eight classes of men to implement the Revolution of Sun Yat-sen. From Paoting, Chen Cheng went to the Whampoa Military Cadets' Academy, under the direction of Chiang Kai-shek, in 1924, as an instructor to the first class enrolled there. This period of teaching, according to *Time,* was when Chen Cheng "hitched his wagon to Chiang's star." Their reporter adds that he "has been riding high ever since."

From Whampoa, Chen Cheng went into the army as company commander and later field commander of the Nationalist Revolutionary Forces and rose to fame in Chiang Kai-shek's northern campaign of 1926. He left field activity not long afterward to become chief of the military education bureau of the Military Council and then departmental director in the Canton Military Government.

In 1930 Chen Cheng returned to active fighting again as commander of the 18th Nationalist Army and within a short time was shifted to the position of commander of the Fourth Nationalist Division with headquarters at Nanchang, Kiangsi. In 1932 he married his present wife, after having obtained a divorce from his first wife. Then, in 1934, he became field commander of the Northern Route of the Communist Suppression Forces for the provinces of Kiangsi, Kwangtung, Fukien, Hunan and Hupeh.

China Institute in America
CHEN CHENG

After participating in almost all the battles of the northern punitive and anti-rebel expeditions, Chen Cheng in 1936 became director of the Military Readjustment Committee of the Wuchang Provisional Headquarters of the President of the Military Affairs Commission. Later, with China united against Japan, he continued in a supervisory position—political minister of the National Military Council and right-hand man to Chiang Kai-shek. As such he announced, in 1939: "Before 1941 Japan will be begging for peace."

Long before that peace seemed possible, however, Chen Cheng was back in the field. In the summer of 1939 Ichang fell to the Japanese, and Chen Cheng was blamed by some for the bad strategy which lost that key city. He gave up his job in Chungking as chief of the Army's Political Training Department and went to the front, publicly vowing not to return until he had retaken Ichang. At the front he has proved himself a skillful soldier, personally able to lead divisions up mountainsides, well aware of tactics of silent deployment, timely retreat, ambuscade, and a master of China's most important technique: the skillful use of great superiority in numbers to compensate for shortages of equipment. It was in recognition of his ability that Chiang Kai-shek chose him to defend the Gorges, which meant defending Chungking, which, in turn, meant defending Chiang Kai-shek.

CHESTER, EDMUND 1897- CBS Director of Foreign Broadcasting

Address: Columbia Broadcasting System, Inc, 485 Madison Ave, New York City

EDMUND CHESTER

Since November 1940 Edmund Chester, veteran foreign correspondent, has been CBS's director of broadcasting to foreign countries. As head of CBS's greatly expanded Latin-American operations, it is his job to bring the daily life of the United States more sharply to the attention of its southern neighbors, as well as to Europe.

Chester has eight years of South American experience to aid him, and many more years of press training. Born in Louisville, Kentucky, his first newspaper position was that of reporter on the Louisville *Courier-Journal*. He left his home in 1915 to join the Army for the Mexican border expedition under General Pershing, returned to Louisville after his military experience but stayed there only a short time before he was called to service overseas in the artillery.

Back from the First World War, he continued in Louisville, doing general reporting and writing special stories. By 1930 he was covering the Harlan coal strikes for the Associated Press. His work there, and the fact that he knew Spanish, led to his transfer and promotion to Latin-American editor of the Associated Press in the New York office. Two years later, on six hours' notice, he was off to Cuba for the revolution. This marked the beginning of eight years of traveling in which he covered 250,000 miles. By 1937 he was head of the Associated Press' Latin-American Division, a position he held until he took up his duties at CBS.

Chester covered South America, Central America and Cuba. He was the first newspaperman on the scene to report the horror and tragedy of the Chilean earthquake in January 1939 which brought death to 35,000 people, and among his other assignments were the Lima Pan-American Conference in 1938 and the Havana Pan-American Conference in 1940.

Chester is wiry and short, with curly gray hair and bushy black eyebrows. He was honeymooning in the States when he joined CBS after having just been married to Enna Rogers Moreño of Chile.

CHEVROLET, LOUIS 1879(?)—June 6, 1941 Pioneer motorcar designer and auto racer; in first race in 1905 defeated Barney Oldfield; experimented on racing cars and drove them on various tracks throughout the country; associated with motorcar company bearing his name from 1911 to 1915; later associated for a short time with the Stutz Automobile Company and then organized the Chevrolet Aircraft Company.

CITRINE, SIR WALTER (MCLENNAN) (sĭ-trēn') Aug. 22, 1887- General secretary of the British Trades Union Congress

Address: b. Transport House, Smith Sq, Westminster, S. W. 1, London, England

In November 1940 the general secretary of the British Trades Union Congress, "hulking, grizzled" Sir Walter Citrine, arrived in the United States to participate, among other things, in the New Orleans convention of the American Federation of Labor. He was kept busy. He told reporters that if England wins "Labor will be stronger than ever," that in Great Britain "much of the restrictions upon Labor are voluntary and have been made for the good of the country," and that "in the course of this War, Labor has enhanced its position in the community." He asked the A F of L Convention for American and British Labor solidarity in bringing about a British victory. He told a Columbia network audience about the "major issues of the War and achievements of British workers during the emergency." And in general he found enthusiastic and sympathetic audiences everywhere, although he failed to make contact with CIO leaders. In *My American Diary* (1941) he tells of his three months in the United States and Canada, describing not only "the busy round of a travelling speaker" but also American production, labor and social problems.

John Gunther (see sketch this issue) begins a sketch of Sir Walter Citrine by quoting from A. J. Cummings, writing a few years before: "For my part, I would rather rely on Sir Walter Citrine, archpriest of British trade unionism, than on Mr. Baldwin, the Conservative Prime Minister, to keep the present system intact. There is today no Toryism more fearful and immovable than that which is enshrined in the ideals and practice of the trade-union leadership."

The general secretary of the Trades Union Congress, says another writer, "is in a position to censor virtually any program the Labor Party brings forward. . . Like all trade-union officials, he has a substantial stake in the existing order." There are between five and six million British workers in the Congress, whose president is elected for only a year but whose general secretary holds a permanent position, and although it is the general rule that Congress chieftains should stay outside active politics, they control Labor Party policies because of their control over the Party's funds. Sir Walter Citrine is, therefore, one of the most influential men in Great Britain today. Ernest Bevin, who as Minister of Labor cooperates closely with Churchill, has often been called "Citrine's mouthpiece." At the annual Trades Union Congress in Britain in 1940 it was Sir Walter's duty to reply on behalf of the General Council to the innumerable resolutions of the 650 delegates. He is known for the "skill, knowledge and good humor" with which he performs this responsibility, only one of the many which fall on his shoulders.

They are very capable shoulders. "During the past decade he has turned British trade unionism into Big Business. He is the granddaddy of all organizers—a man who habitually travels with two brief cases, a secretary and a card index. From his desk in Transport House he runs his allied unions exactly as he might direct the regiments of a well-drilled army." John Gunther even calls him a "filing Robot," and tells a story about his being invited to an informal discussion of Party business among some Labor intellectuals. Sir Walter took along his files and a secretary that time, too, and the secretary took down everything he said—presumably so that he couldn't be misquoted!

SIR WALTER CITRINE

Born in Liverpool on August 22, 1887, Walter Citrine hardly achieved his present position through influential family connections. He came of a working-class family, and after attending elementary schools found himself a job as an electrician in Lancashire, earning £1 18s a week. In his spare time he was active in the electricians' union, and in 1914, the year after he married Doris Slade, he became Mersey District secretary of the Electrical Trades Union. He held that position until 1920, but in the meanwhile found himself also a member of the Liverpool Trades Council (1915); president of the Federation of Engineering and Shipbuilding Trades for his district (1917-18), and from 1918 to 1920 its secretary; parliamentary candidate for Wallasey in the 1918 election; in 1919, chairman of the Wallasey Labor Party. It was 1920 when he became assistant general secretary of the Electrical Trades Union; in 1924 he was appointed assistant secretary of the Trades Union Congress; and in October of the following year his efficiency was rewarded with an appointment to the position of acting secretary. He brought with him long experience with the problems of the shipbuilding, ship repairing and general engineering trades as well as a genius for organization. And one of his followers in 1940 could still claim proudly: "Walter could do a bit o' wiring as well as any lad today—that 'e could!"

The years during which Sir Walter Citrine (he was plain "Mr." until 1935, when the National Government "shrewdly" knighted him) has guided Labor policy have been among the most difficult and dangerous years in history. Although he had visited Russia in 1925 and his comments had not been entirely unsympathetic, he made himself "the chief opponent of the Party radicals," rejecting for the Labor Party any united front with the Communists against either the Na-

CITRINE, SIR WALTER—*Continued*

tional Government or foreign Fascism. In 1933 he introduced into the Trades Union Congress a document called *Dictatorships and the Trade-Union Movement*, the gist of which was: "We must oppose equally all dictatorships whether of the Right or of the Left." In 1934, however, he raised a fund to help the Austrian workers, and, with his colleagues, tried to arrange for a supply of arms for the Austrian Socialists. "When your constitutional right is taken away from you, when you are proceeding along the path of democratic procedure and the Government blocks that way to you, then you would be less than men if you did not take what remedies were open to you," he stated, firmly—a policy which the radicals also approved. After a second visit to the Soviet Union in the fall of 1935, which resulted in a book, *I Search for Truth in Russia* (English edition 1936; American edition 1937), he returned to the Congress more convinced than ever that there could be no collaboration with the extreme Left, and the Congress followed his advice in voting.

At that same session of the Congress in 1935, Sir Walter pointed out the necessity of opposing Italian aggression in Abyssinia by the application of sanctions (at this time nearly everyone assumed that this was also the policy of the National Government); the Labor leaders berated the pacifists in the Labor movement and dismissed the late George Lansbury from the leadership of the Labor Party for not following the same line. Nevertheless, when the Government abandoned sanctions, Labor was quiescent, and in 1936 at the meeting of the Congress shortly after Franco had struck in Spain, Sir Walter, in the name of the General Council, persuaded his organization to support the British Government's adherence to the non-intervention pact.

Sir Walter has continued to battle with the Communists. In June 1939 he became a member of the Privy Council. He threw the support of British Labor wholeheartedly into the War, and in December 1939, after a flying visit to the French Minister of Labor, agreed to a proposal by the then Chancellor of the Exchequer Sir John Simon that pay increases in Britain be stopped. The London *Daily Worker* thereupon published a series of articles accusing him and his colleagues of "plotting with the French Citrines to bring millions of Anglo-French Trade Unionists behind the Anglo-French imperialist war machine." Sir Walter sued for libel, and in court accused the *Daily Worker* of taking orders and money from Moscow. He was awarded damages of £300. In all, he has won three actions against the *Daily Worker*. And in September 1941, when the Trades Union Congress approved the organization of an Anglo-Russian Trade Union Council, he made a speech in which he announced: "We are not prepared to collaborate in any measure or in any degree with the British Communist Party."

In addition to leadership of the Trades Union Congress, Sir Walter holds office in the International Federation of Trade Unions (president since 1928); from 1930 to 1933 was a member of the Government Economic Advisory Council; is a member of the British Broadcasting Company's General Advisory Committee; and was an original member and governor of the National Institute for Economic and Social Research. These are merely a few of his varied responsibilities. He is the author of several books and booklets: *The Labour Chairman*; *The Trade-Union Movement of Great Britain* (1926); *Labour and the Community* (1928); *I Search for Truth in Russia* (1937); *My Finnish Diary;* and *ABC of Chairmanship*. He keeps careful journals, which he often brightens up with pencil sketches of persons and scenes; he is an excellent stenographer; he has been an expert swimmer since boyhood; and the Japanese remember him for a bit of verse he directed their way in 1938:

Yankee talks a lot of bunk
When his ships are bombed and sunk;
Jap knows Yank is in a funk
Afraid of war in China.
John Bull, he is sitting tight,
Can't decide which side is right;
A little scared of Jappy's might;
Afraid of war in China.
Far away in Tokyo
Cafe lights are all aglow,
Geisha girls sing soft and low;
There ain't no war in China.
From each busy city street
Comes the sound of marching feet.
Why do war drums loudly beat?
There ain't no war in China.

John Gunther characterizes this British Labor chieftain rather unflatteringly: "He is cold, precise and incredibly efficient; he never had a live idea in his life; and his speeches are 'like a drizzle of incessant rain.'" There are many others, however, who find him better described in the terms of the *Christian Science Monitor's* correspondent: "A fine sense of realities, moderation, calm wisdom and courageous resolution." He has two sons, and is greatly helped in his work by his wife, who usually accompanies him on trips, although she was not with him during this latest visit to the United States. Her chief interest is not trade unionism, however, but music.

CLAIR, RENÉ Nov. 11, 1898(?)- Film director

Address: c/o Universal Pictures Corp, Universal City, Hollywood, Calif.

For many years René Clair, the French film director, has been decidedly lukewarm in his enthusiasm for Hollywood. He has admired the speed, precision and scene per scene economy of its best films, but has at the same time deplored its tawdriness, type casting, its hasty adaptations of stage plays, its wanton spending of money. Yet, impelled by the Nazi invasion of France, he has been in Hollywood since August 1940 and he has been making films under the Hollywood conditions he once scorned.

His first presentation was *The Flame of New Orleans* (1941), and to Clair admirers it was a sad disappointment. What had become, they asked, of his Gallic wink, his verve, his inventive humor? And what had happened to all those tenets of film making he had held by ever since he started directing? For years René Clair had worked alone; he had written the stories of his films, constructed the scenarios, directed the production and supervised the cutting, undisturbed by story conferences, by producers' relatives or the opinions of women's clubs. The result had been singularly personal work, combining satire and slapstick with occasional flashes of sentiment.

Unlike Hollywood producers Clair had been able to ignore the pleas of the writers who sometimes work for him—"they can't know a story nor its correct treatment as a director does"; he had avoided complicated plot material; he had avoided using "stars" and had succeeded always in making his actors' portrayals and appearance as natural as possible; he had been content with the cheapest and simplest sets; he had never depended on camera angles to express particular moods. "I prefer," he once said, "to combine box office with artistic values." So far, Clair fans believe, Hollywood hasn't allowed him to follow the style, the patterns, the methods for which he became famous, but they are hopeful that he will be able to work out some kind of a compromise between his ideas and Hollywood's that will give the American public the sustained pleasure his European films have so long given.

This most famous of French directors was born René Chomette in Paris and brought up there by his parents, Marius and Marie Chomette. He attended the Lycée and would have gone to the university if it hadn't been for the War. At the age of 18 he enlisted, but he served for only a few months until an attack of illness laid him low for more than a year. When he was well he joined the staff of the Paris newspaper *L'Intransigeant*. By 1921 he was a well known and contented journalist on this paper's staff and would have remained such if one of those accidents that change careers and men hadn't occurred. It happened one night when René Chomette was dining with convivial friends at a cafe on the Champs Élysées and learned that they were going out the next day to act bit parts in a film just for the fun of it. He had the day free and went along. Almost overnight, René Chomette, the journalist, became René Clair, the actor.

RENÉ CLAIR

He appeared as an extra in *Parisette*, played in the Loie Fuller *Le Lys de la Vie*, in some of Protazanov's films, in some of the pictures the Gaumont film studios were making. The producers, conscious of his interest in films, offered him a writing assignment on the strength of his reputation as a journalist, but René Clair turned it down to take, instead, a position as assistant director. For many months he was assistant to Baroncelli, the veteran French director, months in which he learned screen technique, and then he was asked to direct a picture of his own. There was no money to work with, little technical equipment, no staff. Clair didn't mind; he had a story he had written, he gathered actors and he made a picture.

It was a short experimental film, produced in 1923, called *Paris Qui Dort.* Fantastic, satirical, it appealed to the Parisian public and was followed the next year by *Le Fantôme du Moulin Rouge*, a less fascinating film which told the story of a soul which separates itself from its body. That same year, however, came *Entr'acte*, with music by Erik Satie and a scenario by Picabia, the whole a sort of dream without subject or plot in which incongruous images freely succeed one another. A great *succès de scandale*, by its fantasy it prepared the way for *Le Voyage Imaginaire* in 1925, a fairy tale with wonderful glimpses of Paris and some Mack Sennett chases.

Already with this picture Clair was emerging as the portrayer of his city, already he was showing a sophisticated charm, an ability to create a "delicate softness of contour with which he endows Paris—the roof tops, squares and even people, who become generalized into

CLAIR, RENÉ—*Continued*

something like timeless abstractions." Already he was showing his feeling that everything there was enormously amusing, wonderfully good. This film was followed in 1926 by *La Proie du Vent*, where that technical ability which distinguishes Clair's work was apparent even through a mess of intricate plots. This was the year, incidentally, in which his only novel, *Adams*, published in England as *Star Turn*, appeared.

All these films made before 1927 were experimental, training grounds for discovering the uses of the camera. While making them Clair studied other directors' work, other films. Chaplin was his idol, and every aspect of his pictures was carefully studied; from the speed of Mack Sennett comedies Clair learned much, too. He was ready to produce a full-length film. Since 1925 he had had a contract with Albatross-Sequana and it was for them that he completed in 1927 *Le Chapeau de Paille d'Italie* (*The Italian Straw Hat*), a delightful farce taken from Labiche's work which enraged all of comfortable middle-class France with its social satire. Clair had to wait a whole year, until the rancor against this film subsided, before Albatross-Sequana would allow him to make another picture. On his own he made *La Tour*, a poetic documentary film, and then, restored to grace, produced *Les Deux Timides*. It was with this picture, distinguished by trick photography, by clever montage, especially of the "contrast" type, that the critics began to speak of the "Clair touch."

By this time sound pictures had come in, and René Clair sadly commented: "Sound is the death of film." He himself, nevertheless made a sound picture, *Sous les Toits de Paris* (1930), which established his reputation internationally. Here was a new talking picture technique which startled the world by its simplicity and its brilliant blending of sight and sound, which exploited impressively the idea of making music the binding continuity of the visual action, making it clear that "the film as a form of art must not be confused with the necessarily static stage play."

The plot itself was simple; dialogue was used sparingly; the effect was achieved through stylized realism, achieved through the constant variation of perspective, composition and light, through the use of motion itself—motion of facial expression and body. Here René Clair attained what has been considered characteristic of his work, "the finest kind of balance maintained between the ridiculous and the delicate, between the false and the true, between exaggeration and exquisiteness," so well that in the words of Mark Van Doren *Sous les Toits de Paris* "came as near to perfection as any conceivable film of its kind."

Its successor was *Le Million* (1931), the first speaking vehicle of Annabella, and the picture on which her stardom was founded. The "gayest of Clair's pictures, rich in minor characters, conceived without a trace of exaggeration and seeming . . . as fresh and unruffled as dolls in a shop window," it is the story of a chase after an old coat containing a lottery ticket. With beautiful fluidity it moves forward through fantasy, achieved not through tricks of setting or photography but by the mobile use of the camera, toward an ending rich in irony. Like its predecessor it is rich in fresh twists of continuity devices that employ sound as well as the visual image.

Le Million caused Clair to be attacked as a Communist by the extreme Right and as a Fascist by the extreme Left. He shrugged the epithets away. "I have no political opinion. I am just French," he said then, and later. That he did have a social point of view, however, was demonstrated in his next picture, *À Nous la Liberté* (1932). Called "one of the rare European masterpieces of the comic cinema" and "the most complete expression of Clair's genius," this film tells the story of two friends in prison who plan to escape; the one of them that does get out sets up a large phonograph factory. In portraying the factory, Clair's satire plays sharply on rationalization and factory methods, delicately and ironically on the characters he creates. Here are the stylized realism of *Sous les Toits de Paris* and the fantasy of *Le Million*, with implications as well as events allowed to assume dramatic and convincing shape. And here, according to Margaret Marshall, is a technique "closer to the technique of music than of any other art."

It was after the production of this picture that critical praise was richly lavished on Clair. His work, according to the New York *Sun* critic in 1932, is "something that takes the best features of silent picture technique, the best features of talkie technique, the best features of sound, the best features of music, the best features of words. It somehow merges them into what I feel is the ideal talkie." And *Vanity Fair* commented: "René Clair is one of the few motion picture directors whose adult and civilized influence is gradually beginning to leaven the soggy lump which has hitherto been the cinema industry." Clair himself was skeptical of the extent of this influence, and while praises continued to pour in delivered himself of a stinging indictment of the film industry, where innovators weren't allowed a free hand, where directors seldom had ability, where the ruling powers were guided by mere crochets, where routine standardization and mass production combined to kill the goose that lays the golden egg. Four years later, in 1936, he didn't feel much improvement had taken place. "So much talk as there now is on the screen puts me to sleep," he complained.

In 1933 he followed up the great success of *À Nous la Liberté* with *Quatorze Juillet*. Until this picture, he said, his work was "too cerebral"; with this film he eschewed all technical tricks and told a simple story of a pretty little flower girl and a handsome taxi driver, smoothly developed—yet, audiences felt, mannered like a Clair pattern. By some it was called "utterly delightful", "slyly intelligent", "the best of his films to date"; by others it was considered "primarily an item for Clair collectors."

There was little critical argument about its successor, *Le Dernier Milliardaire*; Clair's admirers were disappointed. "A tremendous failure," Clair called it, but hastened to explain why. It opened in Paris at the time of the Stavisky affair and since there was a similarity between the film's material and current events, disapproval was inevitable. In some places where it was shown there were riots, even, and it had to be re-called. Where it was allowed on the screen, box-office returns were painfully light. Nevertheless, it won second prize at the First Soviet Cinema Festival.

It was in 1936 that René Clair for the first time really aimed at a mass audience, for the first time made a film in English (for Alexander Korda), for the first time let someone else do his screen story (Robert Sherwood). Made in England, this story of the Glourie Spook who has to haunt his castle until he can tweak the nose of a MacLaggan and compel him to admit that one Glourie can thrash fifty MacLaggans gave the critics a hard job. Most of them thought *The Ghost Goes West* brilliantly funny, gayly urbane, sly, adroit and darn good fun, but they felt it important to state, at the same time, that it wasn't "pure Clair." Mark Van Doren went even further than that. "There is no lack of nice things here and there along the way," he admitted, "and there is always the reminder that this man once held a precious secret in his hands. But," he sadly added, "he has lost it."

Those who saw a Hollywood touch in *The Ghost Goes West* hastened to say "I told you so" when Clair came to the United States for the first time, shortly after it was released. But he disappointed them greatly by not going near Hollywood and by stating that he was in America for three simple reasons: to meet an American "reportaire" in the flesh and blood; to see an American "gangstaire" in real life; to watch American audiences react to his film. He also didn't hesitate to inform the public that there had been no improvement in motion pictures in the past five years, no experimentation, no going forward. He softened his censure, however, by saying, "I would go to Hollywood if it would give me the same facilities Europe does. I mean I don't want to work by order. . . If I do not find a story which interests me as an author I am afraid I cannot make a good picture." It was four years and some pictures later, after his filming of *Air Pur* had been half completed and then abandoned, that Clair arrived in the United States with his wife and 14-year-old son, two steamer trunks and a few suitcases. He reached Hollywood just as Universal acquired the script of *The Flame of New Orleans* and was offered the directorship of it by Joe Pasternak. He accepted, and not many months later his own dicta were tossed back at him.

Sober looking, yet with a quick spasmodic smile, René Clair is fairly tall and frail. His face is thin, his features serious and ascetic, his manner shy, and even in tweeds he is elegant. Like many Frenchmen he is a seasoned gourmet, but one who indulges in no nonsense about wines. "If he wants red wine with the fish," his friend Robert Sherwood says, "he will damn well take it."

Who's Who

CLARK, BENNETT CHAMP Jan. 8, 1890- United States Senator

Address: b. Senate Office Bldg, Washington, D. C.; Paul Brown Bldg, St. Louis, Mo; h. Ladue Village, Mo.

BENNETT CHAMP CLARK

To understand Bennett Champ Clark, one of the leaders of the "peace bloc" in Congress until the Japanese attack on Pearl Harbor, it is necessary to go more in detail into his family history than into that of most men. The keynote of Senator Clark's temperament and career is his clannishness and his adoration of his father, the late Speaker Champ Clark, the "Little American."

The first Clarks came to Connecticut in 1639. As far back as they can be traced they were stubborn, independent individuals. The Senator's paternal grandfather was known in Kentucky, where he eventually settled, as "the

CLARK, BENNETT CHAMP—*Continued*

Contrary Old Gentleman," and he lived up to the name from the time when, at 14, he ran away from his home in New Jersey rather than be apprenticed to anyone and lose his freedom. His grandson has inherited many of his tendencies. He worships the memory of his father, and has never forgotten or forgiven the Democratic Convention of 1912, when Champ Clark had a majority of votes for nomination as President, but was defeated by the two-thirds majority rule and by the defection of William Jennings Bryan, who switched over to Woodrow Wilson. In 1936 Champ Clark's son was to lead the fight for abolition of the two-thirds rule.

Bennett Champ Clark practically grew up in the Capitol at Washington, where his father had become a Representative when the boy was only three. (Incidentally, he was christened Joe Bennett Clark, but changed his name when he was a college student, since a brother named Champ had died in infancy and he thought the ancestral name should be perpetuated. His oldest son is also named Champ.) At that time Congressmen's children were given the freedom of the House floor, and he and his sister Genevieve (who as Mrs. James M. Thomson, wife of the publisher of the New Orleans *Tribune* and *Star*, has been one of his chief political aides) were, to quote Raymond Moley, "educated as much in the Capitol as at school and college." He started campaigning for his father when he was little more than a child, and was a precinct captain at 14. Politics and the Democratic Party are part of his lifeblood.

Bennett Champ Clark was born in Bowling Green, Missouri, and received his B. A. at the University of Missouri in 1913. He then studied law at George Washington University in Washington, D. C., got his LL. B. in 1914, and was admitted to the Missouri Bar. He has since had honorary doctorates from Missouri, Washington and Lee, Marshall, and Bethany. After practicing for a short time in Bowling Green, he became a member of a law firm in St. Louis which specialized in corporation law. He was never very active as an attorney, however, his interests from the beginning being primarily in politics. Nevertheless, when he was appointed to the United States Senate in 1933, his only previous experience in office had been as parliamentarian in the House of Representatives, from 1913 to 1917, when his father was Speaker.

Clark, like his father, was opposed to America's entry into the First World War. But when war was declared, he was one of the first to enlist. He entered the Army as a captain in the United States Reserve, was sent to Fort Myer, in Virginia, and then overseas as a lieutenant colonel in the infantry. A characteristic story comes from his days at Fort Myer. The first night he knelt by his bed to say his prayers. (He is a devout Presbyterian.) Somebody gave a catcall. The praying officer rose to his feet, offered, with suitable profanity, to "bust the ———'s head in," and having thus mastered the situation finished his prayers without further interruption. In 1919 he was promoted to a colonelcy and transferred to the General Staff. He raised heaven and earth to try to stay in active service, enlisting the help of his father, but to no avail. After the War he was one of the 17 charter members of the American Legion, and he is its past national commander; but when the Legion at its 1941 convention came out for abandonment of the neutrality law, Clark called its present attitude a "disgrace" and said it had repudiated all it originally stood for.

In 1933, when Harry B. Hawes resigned as Senator from Missouri, Clark was appointed to fill his unexpired term. He has since been twice elected to that office, though at his first election the betting against his nomination was three to one. He was opposed both by a dry candidate (he was a Wet) and by a representative of the then powerful Pendergast machine. Thanks to his early rearing, he did not have to undergo the tongue-tied period which afflicts most new Congressmen. In July 1933 he headed a group of Missouri admirers who presented a horse to President Roosevelt as a symbol of the New Deal; but from the beginning he showed his independence from it. He backed Roosevelt's monetary policy, but opposed his economy act of 1933, fought the NRA, the AAA, the government and Supreme Court reorganization bills, and in January 1939 backed the WPA fund cut.

What is more, he was a consistent isolationist. Soon after beginning to serve on Senator Nye's (see sketch this issue) Senate Munitions Committee in 1934 he drafted a plan for the elimination of war profits; and he has always urged the invoking of the Neutrality Act in the Sino-Japanese War, denounced munitions sales for use in civilian bombings, favored the war referendum. In April 1939 he was appointed to the Senate Foreign Relations Committee, and with the deepening of the European crisis and the outbreak of the Second World War he became even more closely affiliated with the group of aggressive self-styled anti-interventionists in the Senate. Having opposed repeal of the arms embargo in September 1939, he soon began to quote Charles Lindbergh (see sketch this issue) on the floor of the Senate, to attack aid to Britain, the draft bill, the lend-lease bill and subsequent measures. (In May 1941, however, his suggestion that the United States take over by force French possessions in the Western Hemisphere outdid a few "interventionists.")

Three things actuated him in his stand, according to a friendly commentator: hatred of war, hatred of Communism and a burning belief that Congress, not the President, should make the laws and create the policies of the United States. He is also by nature a conservative, with a dubious eye for any fundamental economic changes. In 1940 he was prominently mentioned among possible Democratic Presidential nominees; but he was a close friend of Vice-President Garner, and when the Convention sheered away from Garner and the conservative Garner group, Clark also lost out. He repeatedly declared his opposition to a third term for President Roosevelt, although he came out for him at the last moment. He was, however, one of the few isolationists who has not been personally on bad terms with the President, and he was not one of those named in the Roosevelt "purge" in 1938. In 1936 he favored a six-year term for United States Presidents—but that suggestion may have been in the class with his bill, introduced in 1934, proposing a two and one-half cent coin.

In the fall of 1941 Senator Clark was much in the public eye as co-sponsor of the resolution calling for an investigation of the movies which resulted in the appointment of a Senate subcommittee to determine if the investigation should be held. The entrance of Russia into the War had made him even more firmly isolationist than before. "I hereby charge," he thundered at one of the hearings, "that a handful of men have gotten possession of both the radio microphone and the moving picture screen. . . Dozens of pictures . . . are used to infect the minds of their audiences with hatred, to inflame them, to arouse their emotions and make them clamor for war. And not one word on the side of the argument against war is heard." Fight for Freedom, Inc., described the investigation as "the most barefaced attempt at censorship and racial persecution."

Mrs. Clark shared her husband's ideas. She is the former Miriam Marsh, a tall, auburn-haired Iowa girl whom he married in 1922. She is a talented musician who had studied architecture as well, but whose heart, like her husband's, was in politics. (Her father had been treasurer of the Democratic National Committee.) Mrs. Clark was even more of an isolationist than is her husband, and was active in the America First Committee. She was once quoted: "Politics is the most fascinating of all games. I love it!" They have three boys, the two younger being twins. They still keep their house in Ladue Village, Missouri, but have also bought one in Washington, where Mrs. Clark has indulged her talent for interior decorating. The heart of the house is the library, which is large and well-selected. It is the Senator's own special study, but since he is devoted to his family and likes to have them around him, usually all of them gather about the big fireplace in the evening.

Senator Clark is really a scholar. He is perhaps the only Congressman who before his election had read the entire file of the *Congressional Record!* He has "a capacity for working hard at any task that tickles his fancy," and in 1932 he produced a very creditable biography of John Quincy Adams: *Old Man Eloquent.* He also compiled the *Constitution Manual and Digest of Practice of the House of Representatives* from 1913 to 1916, inclusive, and he was co-author of *Social Studies* (1934).

A large man, over six feet tall and more than two hundred pounds in weight, Clark has been described as "bulgy, hearty, eupeptic." Robert McCormick remarked that he inherited from his father his "barrel chest, broad shoulders, rectangular jaw, and thin mouth," though in general he does not much resemble his father physically. He has what McCormick calls "a magnificent set of vocal cords"; but it has also been said that in argument he sometimes uses them "almost like a schoolboy." His boyish grin and penchant for "kidding" his opponents somewhat abandoned in these grim times, there remains "a genius for public rudeness" that is almost as useful. Jack Alexander once called him an "impolitic politician" who was "born without tact," and in 1941 Frank Sullivan nominated him for an All-American Stuffed Shirt Team; but there are others who think of him quite differently. In 1932 a commentator thought him "incapable of making and keeping enemies," and outside of politics he is still amiable and easy-going—a man who enjoys his friends, goes fishing with them and sleeps while they fish, is a passionate baseball fan and an authority on baseball history.

CLINCHY, EVERETT R(OSS), REV.
Dec. 16, 1896- Clergyman
Address: b. 300 Fourth Ave, New York City; h. 46 Prospect St, Madison, N. J.

Bachrach

THE REV. EVERETT R. CLINCHY

To the Reverend Everett Ross Clinchy religious liberty is the "keystone of democracy." The director of the National Conference of Christians and Jews believes that today, more than ever before, "we must be on our guard. . . At this particular time a better understanding among the people of all religions becomes of the utmost importance. All are threatened and all must live together as friends, working together for the welfare of a common country."

There are few men in America who have fought more fiercely against religious intolerance than this "tall, rangy man with the fire of belief in his deep-set eyes"; few Americans who are better informed about relations among the various racial and religious groups in our population. And yet, by his own admission, Dr. Clinchy was brought up to look on people of religions other than his own with suspicion. He was born in New York City, the son of James Hugh and Lydie (Stagg) Clinchy, both staunch Scotch Presbyterians. "I was brought up," he remembers, "with the idea that Catholics were different from us. I would not have ventured into the Catholic cathedral for anything. My father was a fine, God-fearing man who would have willingly harmed no one. . . Yet I was imbued with a distrust of other worthy citizens. The result was that I mingled only with my own group. The world, as far as I was concerned, was a small back yard enclosed by a high fence which I did not dare to climb." When he heard, for instance, that a Mormon missionary had visited his grandmother, he was shocked.

This feeling persisted during high school and even in his first years of college. It was in 1916 that he entered Wesleyan University in Middletown, Connecticut, earning his way by selling sandwiches through the dormitories in the evenings. A year and one-half later he was a member of a field artillery unit. Two years later he was in France. Before he left, however, he had sent a wire to Winifred Mead in Denver, Colorado asking her to marry him and she, a bishop's daughter, had wired back the words of Ruth to Naomi: "Whither thou goest, I will go, and where thou lodgest I will lodge." On September 21, 1918 they were married, and a short time afterward Everett Clinchy went abroad.

Dr. Clinchy went from a buck private to commissioned officer in the United States Field Artillery. More important, he came out of the War believing that all men, regardless of their religious beliefs, are brothers. He had seen Protestants, Catholics and Jews working, playing, firing and fighting together, "a basic human and divine unity among them." The Scotch Presbyterian had lost his narrow outlook and developed tolerance. It was with this new outlook that he returned to college—this time to Lafayette College in Easton, Pennsylvania, which awarded him a Bachelor of Science degree in 1920.

The next year Dr. Clinchy spent studying at the Union Theological Seminary and at Columbia University in New York City. With a Master's Degree from Columbia, which he received in 1921, the year he was ordained, he took up his first pastoral duties at the Fairmount (New Jersey) Presbyterian Church. For two years Dr. Clinchy was associated with this church, while at the same time continuing his graduate studies at Yale University (later graduate work won him his Ph. D. in 1934 from Drew University). Then in 1923 he was called to the Church of Christ at Wesleyan University.

At Wesleyan his home was a place where the students used to gather to play with his son and daughter (there has been another daughter since then), to eat waffles and to discuss their life problems. For five years Dr. Clinchy stayed in Middletown, and one of his great accomplishments there was the building up of round-table discussions among students of different faiths. Other religious men had begun to see the importance of this sort of activity, and a Good-Will Committee of the Federal Council of Churches of Christ in America was establishing contact with a similar committee of the Conference of American Rabbis. The kind of work Clinchy was doing became known to the Federal Council of Churches of Christ in America, and in 1928 he became its secretary.

Dr. Clinchy stayed with this organization until 1933, and it was at the beginning of his association with it that the National Conference of Christians and Jews was formed, with the Council's blessing. Behind the new movement were important men like Charles Evans Hughes (see sketch this issue) (given the Conference's Inter-Faith Award in 1940) and Dr. S. Parkes Cadman, but the "active living force," most clergymen agree, "has always been Dr. Clinchy." It was to give his full time to this organization that he left the Federal Council.

The National Conference of Christians and Jews holds community meetings all over the country, maintains organizations in many cities, supervises discussions on college campuses, broadcasts programs, sends out news releases, all in the interest of creating tolerance among Catholics, Protestants and Jews. It also sponsors the Williamstown Institute of Human Relations conferences. And Dr. Clinchy's part of its work is that of organization, of giving leadership. He himself travels widely over America and has made frequent trips abroad—thousands of miles to spread his gospel of good will. (In September 1941, for instance, Dr. Clinchy, along with a Roman Catholic priest and a Jewish rabbi, made a trip to London to study and to report on the religious and social trends among the organized religious groups in the British Isles. On his return he proposed a peace expeditionary force to spread the doctrine of Americanism in Europe following the War.) He has also written many articles for both religious and secular periodicals, a book, *All in the Name of God* (1934), and "Prejudice and Minority Groups," a chapter in *Our Racial and National Minorities* (1937).

In Dr. Clinchy's writings there are warnings to the American people, warnings that intolerance is growing, that "the religious people of America must translate their faith in the fatherhood of God and the brotherhood of man into a working, democratic economy." There is also hope and faith in "a love for America so great that no one will be able to hate any group in the American neighborhood." What Dr. Clinchy writes is not academic; it is based on what he has known and seen and sought out. When he enters a town he doesn't visit only the ministers and rabbis, the schools and churches; he tries to get the reactions of taxi drivers, waitresses, clerks, gas station attendants, laborers. Once, it is told, his investigations along these lines were a little less successful than usual. As told in the Lafayette College *Alumnus* of May 1938, Dr. Clinchy and Rabbi Morris Lazaron were once returning from an evening meeting in New York and it was about 11:30 when they stopped at the Commodore Hotel to have something to eat. Interested in learning something about working conditions there, Dr. Clinchy asked the attractive hat-check girl: "What time tonight do you stop work?" The girl looked him over and replied: "At midnight; what have you got in mind?"

COHEN, BENJAMIN V(ICTOR) Sept. 23, 1894- Counselor to the American Embassy in London; lawyer

Address: b. American Embassy, London, England; h. 119 E. 47th St, New York City

The famous law team of Corcoran (see sketch 1940 Annual) and Cohen, considered by many the Administration's real "Brain Trust," has finally split up. Thomas Corcoran was, in 1941, still in Washington, D. C., and

Wide World

BENJAMIN V. COHEN

Benjamin V. Cohen was with Ambassador Winant (see sketch this issue) in London, Counselor to the Embassy there. But many who knew these two lawyers and their work feel that this split is probably only a temporary one—they have complemented each other too long and too well to end it all.

Since 1933 they have been working together, drafting legislation for the New Deal, attacked as a "menace to American Government," praised as "patriotic citizens who have worked unremittingly over long years to try to make this country a better place for its people." They have written speeches for Congressmen, conferred long and privately with the President, helped drive measures through Congress. Their exact duties have been called everything from those of "shock troopers who go where the fighting is hottest" to those of the "Führer's tutors." They themselves said they were merely catalysts, agents who cause reactions to occur without themselves being altered.

The less conspicuous member of this "conjunction of dreamy intellectual Jew and effervescent Irishman" has been Benjamin Cohen, a "naturally shy and retiring man" who has been content to do the actual drafting of that legislation for which he and his partner are responsible while Corcoran buzzed around seeing people, putting ideas across, getting ideas. Cohen was born in Muncie, Indiana, the son of Moses and Sarah (Ringold) Cohen. His was a comfortable middle class home: his father was an ore dealer who had fled from Poland in 1868 and settled down in the Midwest. Benjamin's youth was uneventful—he is said to have been a serious child who "neglected marbles for Descartes and Spencer."

From high school in Muncie, Cohen went to the University of Chicago and was called by Professor Harold Moulton, later head of the Brookings Institution, "the most brilliant student I ever taught." He received his Ph. B. in 1914 and a year later a Doctor of Jurisprudence degree, after making the highest marks ever recorded in the law school. Cohen then decided on graduate work at the Harvard Law School. For one year he studied there, coming under the influence of Professor Felix Frankfurter (see sketch this issue), and was graduated with the degree of Doctor of Juridical Science in 1916. Immediately afterward he was admitted to the Illinois Bar.

Cohen's first position, after law school, was that of secretary to Judge Julian William Mack of the Federal Circuit Court in New York City. Almost every important receivership case came up at one time or another before Judge Mack, and Cohen learned much about the complexities of the law on corporate reorganization. Mack was pleased with Cohen's work—"I never had a better secretary," he used to say. After a year Cohen resigned to act as an attorney for the United States Shipping Board during the War, when his weak eyes kept him out of active army service.

When the War was over, Cohen spent two years, from 1919 to 1921, as counsel for the American Zionists negotiating the terms of the Palestine mandate at the Peace Conferences. It was while he was abroad that he met the economist John Maynard Keynes (see sketch this issue), who interested him in the theory that a national depression could be combated by priming private industry through a public works program. It was abroad, too, that he is supposed to have developed concretely a theory of securities control.

Back in New York, Cohen entered into law practice, his clients mostly lawyers who brought him their knottiest problems. Corporate reorganization was his specialty, and many of New York's corporations sought him out for advice. At the same time Cohen, who has always had a sincere feeling for the oppressed, was the unpaid counsel of the National Consumers League and for them drafted a model minimum wage law for New York State. He was also speculating in Wall Street during the '20s and is supposed to have done well for himself, though part of what he made disappeared in the crash of 1929.

It was in 1933 that Cohen first went to Washington. This was the year when the bill designed to regulate the selling of securities was being put together. There were hitches all along the way until, after a hurry call for advice, Frankfurter sent James Landis, later head of the SEC, and Ben Cohen to Washington. These two rewrote the first "Truth in Securities" Act and Congress passed it. So carefully drafted was it that years later lawyers were looking for loopholes without success.

In 1933 Cohen was made general counsel to the Public Works Administration in charge of railroad loans; he held this position until 1934, when he became counsel to the National

Power Policy Commission, a job he kept until his appointment to England. Corcoran at this time was counsel to the Reconstruction Finance Corporation. But both lawyers were active in drawing up legislation for the New Deal. They had met over the Securities Act of 1933, and together they wrote the Securities Exchange Act of 1934. The Public Utility Holding Company Act of 1935 was "their baby from start to finish." They drafted it, helped enact it and, as special assistants to the attorney general, defended it against 81 suits brought by holding companies.

Together Corcoran and Cohen were responsible for plans for the Federal Housing Administration, for the TVA, for the Wage and Hour Law, for extensions of the RFC, for plans for the Electric Farm and Home Authority, for regional conservation bills and some say, for the court packing plan. And Cohen by himself, in his position as counsel to the National Power Policy Commission, largely conceived most of the Commission's plans. "Every bill but one that Cohen and Corcoran drafted is now the law of the land," due mostly, it is agreed, to Cohen's skill as a legislative draftsman—the most skillful one in the country, many lawyers think.

The two men worked wonderfully well together. Bachelors, they even took an apartment together so that they would be able to spend 16 or 18 hours a day working. For a while they lived with several other young government lawyers in Georgetown and then in 1938 they moved into an apartment on K Street, an arrangement that lasted until Corcoran was married in March 1940. At work and away from it they were entirely different: Cohen pessimistic where Corcoran was optimistic, Cohen interested in detail, slow working, thorough, Corcoran more mercurial. And Cohen, tall, slouched, with spectacles perched on a long nose, with his high forehead under receding dark hair, was physically very unlike his out-of-doors-loving collaborator.

It was generally known in Washington that Cohen and Corcoran were in the very inner circle of the circle around Roosevelt, that they were responsible for much of his legislation, that they provided the ideas, facts and figures for much of his activities. In Washington they used to call them "The Gold Dust Twins" ("Let the Gold Dust Twins do your work"), Frankfurter's "two chief little hot dogs", "the Brain Twins." Yet outside of Washington their names weren't much known, for they were content to stay in the background. They didn't talk much in public, write books or try to get their names in print.

Extremely important in 1936, 1937 and 1938, there were rumors in the summer of 1940 that Corcoran and Cohen were on their way out, rumors that grew as the months passed. Their supporters denied this, pointing out that since the Administration had taken the emphasis off new reforms to place it on national defense, actually Cohen's special talents as a draftsman and Corcoran's as a pusher-through-of-legislation were less needed in Washington than they had been. These rumors died down, to be replaced by one that Corcoran was slated to be Assistant Secretary of the Navy in charge of Air (as yet unconfirmed) and another that Cohen was slated to go to England in a legal capacity (which has been confirmed).

His task there is to design legal machinery for closer British-American operations during the War, and his major assignment has been reported to be the drafting of a plan that will enable the British to pledge their assets in foreign lands as security for loans to be made under the Lend-Lease Bill. "Whatever he does, Mr. Cohen's influence is certain to be great," and undoubtedly his slouching figure, his drawl, his habits of dressing like a tramp, gobbling food absentmindedly and sleeping in the office when work presses will become as well known abroad as they have been for eight years in Washington.

COLLIER, JOHN May 4, 1884- Commissioner of Indian Affairs

Address: b. 4160 Interior Bldg, Washington, D. C.; h. Janney's Lane, Route 2, Alexandria, Va.

In 1933 John Collier took office as Commissioner of Indian Affairs with an aim unique among political appointees: the gradual diminution of his own power and authority. The appointment itself was unusual in its selection of the person who up to that time had been the most caustic and effective critic of government policy and practice.

U. S. Indian Service

JOHN COLLIER

For the previous decade, as executive secretary of the American Indian Defense Association, Incorporated, Collier had been conducting an ardent crusade on behalf of the vanishing red man, whose property and rights were also vanishing. From 133,000,000 acres in 1887 the land holdings of Indians had decreased to 47,000,000 in 1933; and the Allotment Act of 1887 continued to implement those interests intent upon acquiring whatever natural resources they still retained. The Institute of Government Research described the reservations as "islands surrounded completely by sharks"; and the Defense Association in its report declared the situation "so bad as to be spectacular, so spectacular as to be incredible."

Collier's purpose was to increase the self-sufficiency of the Indians and eventually the degree of self-government granted to them. In 1934 a tremendous step toward this goal was achieved with the passage of the Wheeler-Howard Bill (Indian Reorganization Act), designed to establish their political and economic home rule, to bulwark them against the encroachments of unscrupulous whites, to improve their educational opportunities.

This Indian Reorganization Act, which forms the legal basis of his program, was to a large extent Collier's own work, framed with the aid of two Interior Department attorneys. It marked the first time in history that the associations chiefly active in defense of Indian interests had agreed on a policy; nevertheless it was highly controversial. Ardent advocates hailed it as our nation's greatest Indian reform. Opponents argued that it marked a regression for the Indian to a less civilized state and paved the way for a renaissance of Indian culture and race pride that might lead to a rebirth of paganism and a weakening of Christian influence. Adversaries in Congress tried to discredit it by pointing out that Collier was on speaking terms with officers of the Civil Liberties Union and that among the many poems he had published was one about a dancing woman named "Eyesadore" Duncan.

Despite these obstacles the Reorganization Act and a number of sustaining bills were passed which by 1935 had enabled 258 individuals to enter college and 141 to be placed in vocational schools. Among the most ardent supporters was Tony Luhan, Indian husband of Mabel Dodge Luhan; he went about among the Indians urging them to accept the optional arrangement provided by the bill, explaining that Commissioner Collier was their friend and would help them gain political freedom and economic security. Seventy-six tribes rejected it, convinced—the proponents claimed through misrepresentation and misunderstanding—that it would deprive them of their rights as American citizens. The only large tribe among the dissenters, however, was the Navaho. One hundred and seventy-six adopted the new scheme of tribal ownership, tribal council, local constitution. By 1940, as one indication of progress, half the employees under the Department of Indian Affairs were Indians, in contrast to the negligible fraction formerly employed; and the caliber of the white employees and agents was very different from what had formerly been the rule.

The New Deal emancipator stems from the land of slavery. He was born on May 4, 1884, in Atlanta, Georgia, a city of which his father, Charles A. Collier, was at one time Mayor. His mother was Susie (Rawson) Collier. Probably Collier's earliest knowledge of Indians came through stories of the grandfather who once fought against them. His feeling for the underprivileged is hardly based on personal experience, for he grew up in an environment of prosperity. His college education began at Columbia University, which he attended from 1902 to 1905, and continued for a year at the Collège de France, in Paris. In the fall of that year, 1906, he was married to Lucy Wood of Philadelphia. Their children are Charles Wood, Donald and John, Jr.

Before he had finished his schooling, in 1905, Collier was doing social work with immigrants in Atlanta, Georgia; and since graduation his work has always been in behalf of some group or groups. In 1907 he became a staff member of the People's Institute in New York, and from 1909 to 1919 he served that organization as civic secretary. While holding this position he helped to organize the National Board of Review of Motion Pictures in 1910, acting as secretary until 1914; he served as director of the National Training School for Community Centers from 1915 to 1919; and he helped to establish, and served on the board of, the Child Health Organization, later called the American Child Health Organization.

In 1919 he moved to California, where he directed community organization under the State government. The following year he began extensive traveling throughout the Southwest, where he studied the Indians and their conditions, piling up the knowledge and the indignation which made him their foremost defender. In 1923 he became executive secretary of the American Indian Defense Association, Incorporated, a position he held until he entered the Federal Government.

These were the years in which he became familiar to liberal weeklies as a crusader, and to certain business and political circles as "that dangerous lobbyist." He waged a bitter fight for religious liberty when the attempt was made to forbid the performance of ancient Indian rituals and ceremonies. More acclaim and more enemies were won by his vigorous part in defeating the Bursum Bill which would have opened the way for further preying on Indian properties. The point of view he developed in the Southwest and pounded home in Washington, D. C., found further expression in the magazine, *American Indian Life,* which he edited and to a large extent wrote during his last seven years with the Association.

Collier still fathers a publication devoted to the Indian—*Indians at Work,* published monthly by the Indian Affairs Office. It is circulated on reservations, at Indian schools, among libraries and various institutions throughout the country, and goes to many individual anthropologists. Collier, in fact, is the first Commissioner of Indian Affairs to regard the anthropologist as more than a bookworm armed with a shovel. Although the Bureau of Ethnology had been studying the Indian since 1870, formerly there was little systematic effort on the part of the administrative branch to make practical use of its researches. Collier has also gone outside the Bureau proper, sending out anthropologists who had worked on Indian reservations a questionnaire asking for observations and suggestions based on their experience, and inviting their cooperation.

The great prerequisite to Indian home rule is education, and on this the Commissioner from the first has centered serious effort. He has eliminated most of the boarding schools which were a scandal to liberty loving Americans and has substituted day schools where small children could begin their education without being torn from their often protesting parents, subjected to shocking conditions, and so forcibly wrenched from their native roots that in many cases they were forbidden to talk their own language even on the playground.

In contrast to the former Government policy of "civilizing" the Indian by trying to make him forget his background, Collier has stimulated interest in Indian art and music, folklore and custom. The formation in 1936 of the Indian Arts and Crafts Board, headed by René d'Harnoncourt, has resulted in new life and considerable publicity for this phase of Indian culture. Museums throughout the country begin to realize that Indian paintings are art as well as specimens; and popular interest in their songs and folklore begins to awaken.

The Indian's most militant defender is a "soft-spoken" man, blond, spare, quiet, slightly stooped; with eyes "so blue they make you gasp." He is the author of six volumes of verse, privately printed, and has contributed articles to many magazines, among them *The Nation, New Republic, Survey Graphic.* Like most men in public office he has weathered blasts of criticism, but unlike most he has yet to experience aspersions on his sincerity or integrity. Many feel that his program has to a degree sentimentalized the Indian; that its methods, even its aims, are not always realistic. Some say it attempts to move too fast. Yet those who have studied the situation are overwhelmingly of the opinion that Collier's administration has at long last begun to win the rights of citizenship for the first Americans. "Since Collier came in," declared a man who has known the Indians under several regimes, "you can at least go on a reservation without feeling ashamed to be a white man."

COMPTON, KARL T(AYLOR) Sept. 14, 1887- Physicist; president of the Massachusetts Institute of Technology

Address: b. Massachusetts Institute of Technology, Cambridge, Mass; h. 111 Charles River Rd, Cambridge, Mass.

In November 1940 Columbia University awarded Dr. Karl T. Compton a Doctor of Science degree for his contributions to the physical sciences and his successful administration of the Massachusetts Institute of Technology. In doing so it merely underlined

KARL T. COMPTON

facts that have been well known for many years.

Dr. Compton belongs to that famous Compton family whose members include his father, Elias Compton, a Presbyterian clergyman and professor of philosophy and psychology at the College of Wooster; his brother, Arthur Holly Compton, worker in cosmic rays and professor at the University of Chicago; his brother, Wilson Compton, lawyer, manager of the National Lumber Manufacturers' Association, economics adviser to the United States Department of Commerce and a professor of economics at George Washington University; and his mother, Otelia (Augspurger) Compton, who received an LL. D. from Western College at Oxford, Ohio "for outstanding achievement as a wife and mother." Mrs. Compton says she raised her children "on the Bible and common sense."

Karl Taylor Compton was born in Wooster, Ohio, spent his boyhood there and did his undergraduate and part of his graduate work at the College of Wooster, from which he received a B. A. degree in 1908 and an M. S. in 1909. Immediately he was given an appointment at his Alma Mater to teach chemistry. For one year he was an instructor and then left to attend the graduate school of Princeton University. There he studied under Professor O. W. Richardson, the pioneer investigator of thermionics, and was awarded a Ph. D. in 1912.

In 1912 Dr. Compton began a two-year period as instructor in physics at Reed College, Portland, Oregon, at the end of which he returned to Princeton as assistant professor of physics. He proceeded not only to teach but to engage in researches "which have contributed greatly to our understanding of the great variety of complex processes which occur in electrical discharge through gases." These researches into atomic physics were interrupted by the First World War, in which Dr. Compton was first an aeronautical engineer for the Signal Corps and then a scientific attaché at the American Embassy at Paris.

When the War ended Dr. Compton returned to Princeton as full professor and remained there until 1930, becoming Cyrus Fogg Bracket Professor of Physics and, in 1929, head of his department. Under his guidance was gradually assembled a large group of experimental research workers engaged in the study of many problems in fundamental atomic physics. He himself made important contributions to our "knowledge of the photo-electric effect, investigation of the structure of crystals by X-rays, fluorescence and dissociation of gases and thermionic emission." From 1927 to 1929 he served as president of the American Physical Society and was associated with the work of the National Research Council and the National Academy of Sciences.

While he was contributing to pure science Dr. Compton was always interested in the fundamental scientific problems of technology. In 1930, when M. I. T. was looking for a president, he was a "natural" for this college, "which is a rigorous training school for science as the handmaiden of industry to produce men whose combination of technical background and point of view will steer them toward the administration desks of high industrial affairs."

In his years at M. I. T., Dr. Compton "has brought the Institute's prestige to a new high." He has greatly broadened the curriculum, adding many new courses and rearranging others to meet the needs of industry in a changing world. He fostered the formation of a well-developed Division of Humanities and introduced a five-year plan of study combined with industrial cooperation which is designed to give students some idea of the social and economic implications of their professions. Under Dr. Compton, too, there has been brought about at the Institute a close integration between fundamental science and technological studies, realized most recently in several research projects for United States' defense that M. I. T. is undertaking.

Dr. Compton's interest in his school has not been entirely scientific—he has been concerned with the students' social welfare as well as with their academic opportunities. Under him the Graduate House was built and new facilities for extra-curricular activities were started. The Institute's system of student government which administers undergraduate affairs flourished under his guidance.

Despite his administrative duties Dr. Compton has found time to keep in close touch with the work of the physics laboratory, to explain the achievements of atom smashers in public lectures and to supervise his own program of experimental work in spectroscopy. And he has continued to be active in the scientific field as a whole. From 1931 to 1933 Dr. Compton was consulting physicist for the Department of Agriculture and the General

Electric Company. From 1931 to 1936 he was chairman of the governing board of the American Institute of Physics. In 1937 he was elected president of the American Association for the Advancement of Science. He was president of the American Academy of Arts and Sciences in 1935 and 1936 (in 1931 he was awarded the Academy's Rumford Medal), and has long been an active member of most of this country's scientific societies.

Dr. Compton has also contributed a good deal of time to public activities, convinced that the municipal, state and federal governments offer technically trained men broad opportunities for raising the standards of public service. As chairman of the Science Advisory Board, appointed by President Roosevelt in 1933 to consider the relation of science to the activities of the Federal Government, he was charged with working out a scientific program for the New Deal. As a member of a joint civilian and army commission appointed in 1934 he also gave much time to a study of the United States Army Air Corps, and during that same year served on the visiting committee of the United States Bureau of Standards and as a member of the Business Advisory and Planning Council of the Department of Commerce. In Massachusetts, Dr. Compton has taken an active interest in the establishment of a compulsory system of unemployment insurance and has served as chairman of the New Products Committee of the New England Council.

Dr. Compton was married to Margaret Hutchinson in 1920 and they have three children. After many years of service to science, M. I. T. and the public, Dr. Compton is still broad-shouldered, of average height and weight and able to beat most of his faculty at tennis. And despite years of research into higher mathematics he is still able to understand the simple arithmetic of balance sheets and the simple rule of psychology that make it easy to run a large institution. As one colleague said: "He's awfully good at drawing teeth." Or as another put it: "When I talk to Compton I come closest to telling the truth."

CONANT, JAMES B(RYANT) (kō'nănt) Mar. 26, 1893- President of Harvard University; chemist

Address: b. Harvard University, Cambridge, Mass; h. 17 Quincy St, Cambridge, Mass.

Since 1933 the president of Harvard University has been an unassuming man who looks like a professor in a New England university (which is exactly what he was). James B. Conant is a gangling six-footer with a permanent stoop to his shoulders, blond hair with an inclination to hang down over his forehead, confident blue eyes behind pedagogic steel-rimmed spectacles. In February 1941 Harvard's lanky president was among those who testified in the Senate for the Lend-Lease bill, H. R. 1776; and on February 15 he sailed for Lisbon on his way to England as head of a three-man commission created by President Roosevelt to confer with British scientists and transmit directly to Washington recent scientific developments of importance to national defense. He returned two months later. The duty of the National Defense Research Committee, of which Dr. Conant is a member, is to "correlate and support scientific research on the mechanisms and devices of warfare," and other scientists from this committee may be sent to England in the future.

Conant was born in Dorchester, Massachusetts, a rather unfashionable suburb of Boston, on March 26, 1893. His mother was Jennett Orr (Bryant) Conant; his father, James Scott Conant, was a photoengraver. Even as a youngster he showed an interest in chemistry, and his father built him a small lean-to to use as a laboratory. Later, "a towhead with a Dutch cut and a broad collar," he studied chemistry under the guidance of Professor Henry Black at the Roxbury Latin School while preparing for Harvard.

Bachrach

JAMES B. CONANT

Young Conant entered Harvard in the fall of 1910, more interested in chemistry than ever. He acquired his B. A. in only three years, and also membership in Phi Beta Kappa, Sigma Xi and Alpha Chi Sigma. During the next summer he worked in the laboratories of a steel company and seriously contemplated entering business, but returned to Harvard, and in 1916 received his Ph. D. for chemical research. He was an instructor in the Chemistry Department when the First World War

CONANT, JAMES B.—*Continued*

interrupted his teaching career. In 1917 he was doing research for the Chemical Warfare Service in Washington, D. C., with the rank of lieutenant; by the end of the War he was engaged in establishing a large-scale gas production unit in Cleveland, Ohio, with the rank of major. Earlier in 1918 he had discovered that G 34, or lewisite, the most deadly gas in existence, could be manufactured in a laboratory, and he had been sent immediately to this factory for its manufacture—a factory that was called "The Mousetrap" because no one who entered was allowed to leave until the War was over.

After the War, Dr. Conant left The Mousetrap for Harvard—this time as an assistant professor of chemistry. In 1924 he was a visiting lecturer at the summer school of the University of California in Berkeley. In 1925 he spent nearly eight months in Germany studying methods of research and instruction, and upon his return to Harvard became an associate professor. In 1927 there were a few months as research associate at the California Institute of Technology at Pasadena and a promotion to full professorship at Harvard. In 1929 he was elected to the Sheldon Emery Professorship of Organic Chemistry, and in 1931 to the chairmanship of the department. *Organic Chemistry* (1928); *The Chemistry of Organic Compounds* (1933, revised edition 1939); and *Practical Chemistry* (written with N. H. Black, and published in 1920) are among his publications.

In the meanwhile he had been doing extremely important work in his field—work that doubtless would have eventually earned him the Nobel Prize if he had been able to complete it. He had made significant discoveries in the field of "free radicals" and hemoglobin; he had become a world authority on the substance and chemical structure of chlorophyll. His work on chlorophyll, published in 1932, revolutionized the subject of photosynthesis in plants and brought him the William H. Nichols Medal of the American Chemical Society, and Columbia University's Chandler Medal. Other recognition had come with his election to the American Academy of Arts and Sciences and to the Board of Scientific Directors of the Rockefeller Institute. Dr. Conant was still almost unknown outside his own scientific world, however—not considered important enough even for a trusteeship of his own Roxbury Latin School—when in June 1933 the choice of the Harvard Corporation for Harvard's new president was announced. The quiet and retiring professor of chemistry was the choice of its members.

So it was that Dr. Conant "abdicated from chemistry" at the age of 40 to become one of Harvard's youngest presidents, and the only president, with the exception of Dr. Eliot, who had been a scientist. A few wondered about his qualifications for a position that required a man who was not only an educator but also a super-salesman, financial expert, super-executive, administrator. Others were afraid he would prove to be more interested in the laboratory than in the present-day world. Since that time there has of course been a certain amount of criticism of President Conant, as of every man in his position, but hardly for the reasons anticipated.

His first words of acceptance were stirring: "I promise to govern according to the statutes of the University and in conformity with that spirit of freedom which has marked our past and must guarantee our future." And Conant continued to speak out for the preservation of free inquiry, for greater flexibility in the college curriculum, for greater interdepartmental cooperation—against narrow specialization. He created the Harvard Council of the Faculty of Arts and Sciences, with 60 representative professors, and became chairman of the Council. He introduced new University professorships which enabled their holders to move freely from one department to another as their research inclined them. He established the Harvard National Scholarships, awarded on merit rather than financial need. He established a program for the extracurricular study of American history. He made changes which gave students greater freedom of choice in courses; he established new schools; he revolutionized teaching methods in certain departments. Without any previous experience in public speaking, he managed to gain and hold the attention of both the academic and non-academic worlds through the vigor and liberalism of his ideas. In 1934 and 1935 he was bold enough to turn down Nazi scholarships and to criticize the "teacher's oath." He proved that he had a sense of humor, too—students liked that. And his capabilities as a "super-salesman, financial expert, super-executive, administrator" must have amazed even himself.

At the 1936 Harvard Tercentenary, President Conant fearlessly demanded that we "build an educational basis for a unified, coherent culture suited to a democratic country in a scientific age." Later, an undergraduate wrote in the *Harvard Advocate*: "Many must remember the sigh that rolled over the Tercentenary theatre when President Conant, with a slightly raised voice, declared that scholarship must probe the innards of the economic structure as well as the innards of the atom. That sigh represented much more than frightened selfishness." The implications aren't quite clear, but the writer was apparently among those who feel that President Conant's liberalism has grown somewhat less ardent since that time. Another critic went so far as to say that Conant, "enthusiastic in 1935, became cautious in 1937, fearful in 1938, despairing in 1939, tyranically jittery in 1940." He gave as one example the dismissal of two active members of the Cambridge Union of University Teachers in April 1937, the recommendation of a committee of nine senior professors that they be reinstated after a year's investigation, and President Conant's subsequent announcement that the recommendation be ignored.

Other concrete examples are not numerous, however, and it seems certain that the most bitter criticism of Conant has come from students and others who oppose his views on the present War. He was a very early, very active member of the Committee to Defend America by Aiding the Allies, and testified before the Senate Military Affairs Committee in favor of the Burke-Wadsworth Bill. He has never made any proviso that aid to Britain must be "short of war." All Harvard students are not of like mind, and as early as the fall of 1939 the undergraduate daily, the *Harvard Crimson,* denounced him as among those "earning an unenviable place in the road-gang that is trying to build for the United States a super-highway straight to Armageddon. . . The lofty positions of these men give their words weight beyond their worth." In January 1941 Conant himself inquired: "How can we give all possible aid to the country in this hour of peril without jeopardizing unduly our fundamental mission, which by its very nature requires long-range planning?" But he also believes that "to assume that under the stress of war we shall destroy our form of government or plunge our land into social chaos is to deny the virility of our birthright." In May 1941 he joined the Fight for Freedom Committee.

President Conant was married in April 1921 to Grace Thayer Richards, the daughter of his old chemistry professor, and they have two children: James Richards and Theodore Richards. He is far better versed in literature, history and economics than the average scientist; he enjoys tennis, sailing, mountain climbing; he isn't very fond of the movies. Cigarets he smokes only occasionally, and he never drinks anything stronger than beer. His well-tailored appearance is probably the result of a strong sense of responsibility toward his position, since it is a definite change from his comfortable chemistry days. He has a nice wit. One story about him tells of the time when he was a guest at the Signet Club. A professor began scolding him (in Latin) for having recommended the elimination of that language as a B. A. requirement. Retorted Conant: "I thought we had come to praise the Signet, not to bury Caesar."

CONN, BILLY Oct. 8, 1917- Former light-heavyweight champion of the world; referee

Address: c/o Twentieth Century Sporting Club, 1619 Broadway, New York City

"I lost my head and a million bucks," said Billy Conn in his dressing room at the Polo Grounds in New York City on the night of June 18, 1941. It was just 10 minutes after Joe Louis (see sketch 1940 Annual), heavyweight champion of the world, had sent a depth-bomb into the challenger in round 13 of their scheduled 15-round battle before a crowd of 54,487 wildly excited fight fans who had paid $450,000 for the privilege of watching the heavyweight championship bout. Conn's share of the gate was $77,202.40.

The famed Brown Bomber came close to being toppled from his throne in his eighteenth defense of the title he had won from Jim Braddock in 1937 in Chicago. For the first two rounds, The Kid jabbed and danced away like an elusive shadow. In the third round, after Louis had nailed him but failed to knock him down, Conn began to grin scornfully at the Champ. In the fourth, Billy began to tattoo him with lightning-quick pokes. By the end of the twelfth, Conn's sustained attack had the crowd on its feet, yelling. "The fleet-fisted Kid had confounded, dumbfounded and dazed the title holder," and most observers believed that the title would change hands. Swaggering, Conn came out for the thirteenth. "I got you, Joe," he taunted. Then he did just what he had been warned not to do: he sailed into Shufflin' Joe and began exchanging punches. That was what the Dark Destroyer had been waiting for, and before the overconfident youngster knew what had struck him he was staggering under a bombardment of rights and lefts. Two seconds before the bell he curled up on the canvas for the count. Ironically, Louis, who is four years older and twenty-five and one-half pounds heavier, had called the turn before the fight when he said: "If Conn will keep his head he will give me one of my toughest fights."

William David Conn became a contender for the heavyweight crown by climbing the lightweight, welterweight, middleweight and light-heavyweight rungs of the boxing ladder. He was born in East Liberty, a suburb of Pittsburgh, Pennsylvania, and attended the Sacred Heart Parochial School. There are a number of legends about his beginnings in the fight game. According to one, Johnny Ray was running a tumble-down gymnasium for fighters when he was asked by William Robert Conn, an Irish plumber, to give his son a few boxing lessons. "He's having a

Cosmopolitan

BILLY CONN

lot of trouble with some of the tough kids on our block. I want him to be able to take care of himself." Another story has it that Billy used to hang around the gymnasium and ridicule the fighters until challenged by Ray to put on the gloves. He did! "When Billy got off into a corner by himself and started shadow boxing," writes Ray, "so help me, I fell in love with him." Ray became his trainer, manager, friend; calls him "My boy Billy", "Junior."

After two years of sparring in the gymnasium Billy's career began with trooping through nearby coal towns; he was fighting for money by the time he was fifteen. He got $2.50 for his first professional fight; lost his first decision to Dick Woodwer in 1935. Milton Jaffee, a Pittsburgh sportsman, became interested and provided backing.

Since that time Billy has had 65 fights: 13 knockout victories, 44 won decisions and 8 lost decisions. In 1935 he won nine matches and lost four. In 1936 he won 19 and lost none. In 1937 victories were scored over Babe Risko, Vince Dundee, Teddy Yarosz, Oscar Rankins, Young Corbett, III, and Ralph Chong. That year he lost to Young Corbett, III; then to Solly Krieger of Brooklyn. It is said that Conn got very little recognition in New York for that last fight, which went 12 rounds. But in 1938 he got a 12-round return match in New York for which his backer had to pay $50, and which he won.

In 1938 there were six other fights: one knockout (Ray Actis), four won decisions and one lost. After July 25, 1938, the date when he dropped a 12-round decision to Teddy Yarosz, Conn remained unbeaten in the ring, however. In 1939 he beat Fred Apostoli, recognized by the New York Athletic Commission as the world's middleweight champion, and he repeated the victory a month later. Then he drubbed Krieger again, but was unable to claim the championship because he was growing fast and was a few pounds over the limit.

Next, in the light-heavyweight class, Conn won eight victories. He acquired the championship on July 13, 1939, when he whipped Melio Bettina, the southpaw from Beacon, New York, in Madison Square Garden, and he defended it against Melio's challenge two months later in Pittsburgh. A knockout decision over Gus Dorazio in Philadelphia followed. On January 10, 1940 he engaged Henry Cooper, whom reporters say he outclassed, in Madison Square Garden. In September came Bob Pastor to challenge him; Bob was flattened in 13 rounds. Decisions over Al McCoy in Boston and Lee Savold in Madison Square Garden also came in 1940.

After successfully defending the light-heavyweight title in a 15-round match against Gus Lesnevich in Detroit in the fall of 1940, Conn voluntarily gave up the title in order to challenge Louis.

The 1941 record shows four victories: all knockouts, all non-title bouts, all in the heavyweight class. Ira Hughes in Clarksburgh, West Virginia in the fourth round on February 27; Dan Hassett in Washington, D. C. in the fifth round on March 6; Gunnar Barlund of Finland in Chicago in the eighth round on April 4; Buddy Knox in Pittsburgh in the eighth round on May 26. Then, on June 18, Billy joined Al McCoy, Red Burman, Gus Dorazio, Abe Simon, Tony Musto and Buddy Baer as a member of Louis' "Bum of the Month Club." Later in the fall he acted as referee for several fights.

Billy has won one decision over Joe Louis, however. William Taub, arbiter of men's fashions, has crowned Conn the No. 1 dude among the nation's 10 best-dressed men, with Max Baer holding second place and Louis third. "Conn is terrific," says Taub, "with the accent on light shades, sports stuff, and armhole vests." Another title, "Fighter of the Year," was awarded Conn in 1940 by sports editor Nat Fleisher in his rating of the 40 leading athletes. "My boy" is the title crotchety, crusty, childless promoter Mike Jacobs has assigned to Conn. "He is Uncle Mike's crown prince," reports Jack Miley. "A father-son relationship developed. . . Billy spent his spare time at the Jacobs' country show place on the Shrewsbury River at Rumson, New Jersey. He vacationed at Uncle Mike's Miami Beach estate. He shared the promotor's Central Park West duplex. He was chauffeured about in Mike's town car. He wore expensive suits built by Mike's tailor, silk shirts and $5 cravats that his benefactor bought him. He drove a flashy cream-colored roadster that was also a gift from Uncle Mike."

The curly-haired, broad-shouldered young man with the toothpaste-ad grin who is "Hollywood's idea of what a prize fighter should look like and Tenth Avenue's notion of how one should act" starred in a Republic film, *The Pittsburgh Kid,* with Jean Parker, released in late 1941.

Billy is the eldest of five children. (His mother, Margaret [McFarland] Conn, died June 27, 1941.) And although the family now lives in a home purchased by Billy in the Shadyside district of Pittsburgh, on the right side of the tracks, there were objections to his proposed marriage to Mary Lou Smith. Her father, Greenfield Jimmy Smith, retired National League infielder and now a well-to-do Pittsburgh night club owner, is reported to have said: "If that fellow don't stay away from my daughter, I'll punch hell out of him." Billy and Mary Lou were married July 1, 1941, in Philadelphia.

CONNALLY, THOMAS TERRY *See* Connally T.

CONNALLY, TOM Aug. 19, 1877- United States Senator from Texas; chairman of the Senate Foreign Relations Committee

Address: b. Senate Office Bldg, Washington, D. C.; h. Marlin, Falls Co, Texas

Tom Connally, newly appointed head of the Senate Foreign Relations Committee, claims that he has "been in more wars and done less shooting than anyone else in the Senate." In 1898 he volunteered for the infantry and was on his way to Puerto Rico when the Spanish-American War ended. In 1917, when he was elected to the House of Representatives, his first act was to vote for a declaration of war against Germany and his second to join the Army. When the First World War ended, however, he was still at Camp Meade.

"I'm not an especially religious man," Connally said of that first vote for declaration of war on Germany, "but I sure did pray over that." When the Second World War was declared in September 1939 he remarked that "the first and most important thing . . . is that the United States must not get into this frightful and brutal War." More recently, however, he modified that first pronouncement. "We don't desire war," he said in 1941, "but the world might as well know that we have rights and possessions for which we are ready to fight if it's necessary for their security."

Bachrach

TOM CONNALLY

Thomas Terry Connally was born in McLennan County, Texas, on August 19, 1877, the son of Jones and Mary Ellen (Terry) Connally, both originally from Georgia. He was educated in the public schools of Eddy, Texas, and received his B. A. in 1896 from Baylor University in Waco, Texas. Before beginning his law studies he worked for a few months as a reporter for the Waco *Telephone,* then attended the University of Texas, which gave him his LL. B. degree in 1898. He was admitted to the Texas Bar that same year.

After he took his law degree Connally volunteered for service in the 2nd Texas Infantry Volunteers, but was soon mustered out of the Army. Entering early into Democratic Party politics, his experience in the private practice of law was brief. In 1901 he was elected to the Texas House of Representatives, an office which he held for two terms, until 1904. In 1906 he became prosecuting attorney for Falls County, Texas, a position which he held until 1910. He was a member of the 65th to 70th Congresses, 1917 to 1929, as Representative from the 11th Texas District, and he has been United States Senator from Texas since 1929.

During his many years of Congressional experience Connally has deviated from "orthodox Democracy" just once on a major issue. In 1937 he joined Senator Burton Wheeler in his fight against President Roosevelt's plans for reform of the Supreme Court and, as

CONNALLY, TOM—*Continued*

a member of the Senate Judiciary Committee, helped to kill it. That same year he also led the filibuster against the anti-lynching bill, and he fought hard for Southern differentials in the Wage-Hour Law. He has served on many committees, and as chairman of the Senate Committee on House and Grounds he has been instrumental in improving the appearance of the nation's Capital. He promoted legislation favoring reduction of the gold content of the dollar, earmarking 30 per cent of customs receipts for export bounties on agricultural exports, and regulating income tax schedules. He is also responsible for the Connally Hot Oil Act and, with Senator Barkley (see sketch this issue) framed the Barkley-Connally Amendments to the Neutrality Act which would permit United States ships to be armed, to enter belligerent ports and to cross combat zones and which was passed in November 1941.

Connally has been an ardent supporter of all phases of Roosevelt's foreign policy. He fought for the repeal of the arms embargo and for the enactment of the Lend-Lease and Selective Service Acts. He defended Roosevelt's course in sending troops to Iceland and has been active in the movement for "hemisphere defense." In July 1941 he was designated chairman of the Foreign Relations Committee, although remaining an important member of the Finance and Judicial Committees, on which he has served for a long time.

When Connally was informed of his appointment to this important post, he said: "I'll have to buy some spats now, and maybe a cane and swallow-tailed coat." In a less frivolous vein he told reporters that he felt that "a vigorous and firm foreign policy is essential to secure respect for our rights abroad and the security of our people at home." On June 7, 1941 Connally introduced an amendment to the Selective Service Act to permit President Roosevelt to take over and operate any defense plant where production is delayed because of labor disputes or other causes. In August 1941 he suggested a billion dollar increase in the House-approved Tax Bill, and in a radio broadcast that same month declared that Hitler's desire to rule the world was the only "reason why this peaceful nation" is arming itself at unprecedented speed. "Modern aircraft and modern warfare," he declared, "can span the Atlantic in far less time than it took Columbus to reach the shores of the New World. . . We arm to resist the enthronement of the sword as the ruler of the world."

Besides attending to his legislative duties Connally served as delegate to the Democratic National Convention in 1920, 1932 and 1936. He was a delegate to the Inter-Parliamentary Union when it met in Geneva in 1924, in Washington, D. C., in 1925, in London in 1930 and in Istanbul in 1934. He is a member of the Knights of Pythias, having acted as the grand chancellor of Texas in 1913 and 1914, and a member of the Freemasons, Shriners and Odd Fellows.

In 1904 he married Louise Clarkson of Marlin, Texas, who died in 1935. Their son, Ben Clarkson, born December 28, 1909, is now an attorney in Houston, Texas. In 1936 Connally's Alma Mater, Baylor University, awarded him an LL. D. degree, and in that same year he received an LL. D. degree from Howard Payne University.

Connally is tall, dynamic and "physically striking in the Bryanesque mode." He is known as the "best rough and tumble debater in the Senate." A picturesque figure, well known in Washington, he wears his graying black hair long in the back, gold studs in his shirt front, a string tie around his neck and a black sombrero on his head. Walking, fishing and hunting are his favorite sports, but he also enjoys watching baseball and football games. He is known to be fond of dancing and "he shakes," as they say in Texas, "a smart hoof."

COOLIDGE, ELIZABETH SPRAGUE Oct. 30, 1864- Music patron

Address: h. 2400 16th St, Washington, D. C.

ELIZABETH SPRAGUE COOLIDGE

Elizabeth Sprague Coolidge is without doubt the "fairy godmother of music and musicians." Throughout this country and throughout the world there are orchestras, chamber music groups, composers and performers who have been able to present important new and old music because of her generosity. But Mrs. Coolidge hasn't just given money. She has "entered directly into the musically creative life of her time, has had an influence in directing the stream of contemporary musical composition and has brought significant works into being."

Mrs. Coolidge has been interested in music all her life. She was born in Chicago, Illinois, the daughter of Albert Arnold and Nancy Ann (Atwood) Sprague, and began to study the piano at quite an early age. She never went to college—the lack of a degree has since been remedied by honorary ones from half a dozen—and shortly after she left private school was married, in 1891, to Dr. Frederic Shurtleff Coolidge of Boston. She has one son, Albert Sprague.

Mrs. Coolidge began early to exercise "the fine art of paying the bill." Among her gifts was one to establish a pension fund for the Chicago Symphony Orchestra and a contribution to construct the Sprague music building at Yale University. Then, in 1918, came her interest in chamber music, an interest which was to support this art for many years. It was in that year that, at the suggestion of Frederick Stock of the Chicago Symphony, she engaged a house quartet to help her during days over which sickness, the death of her husband, grief and loneliness had cast shadows.

From this house quartet the Berkshire Festivals were born, and until 1924 a series of public concerts was given at her estate on South Mountain outside Pittsfield, Massachusetts. The performers at the Festivals included her own quartets and others, some brought over from Europe especially for the Festivals, and Mrs. Coolidge herself, who occasionally played the piano in ensembles. The programs were made up of the classics of chamber music and of modern compositions, many of them played for the first time, many of them commissioned by her. There were prizes offered for new chamber music in competitions open to composers of all nationalities. In November 1941 a string quartet by Mrs. Coolidge was performed in Washington. The concensus of critical opinion was that it was not an outstanding composition.

By 1924 the Festivals had attracted a good deal of attention, and Mrs. Coolidge moved them to Washington, built a chamber music hall adjoining the Library of Congress and endowed the Elizabeth Sprague Coolidge Foundation which is administered by the Music Division of the Library. This move "inaugurated a new era for America's national library—it engaged the Federal Government, at last, directly and definitely in the affairs of music and musicology." Mrs. Coolidge at that time explained her gift and the creed by which her donations have been made: "I have wished to make possible through the Library of Congress the composition and performance of music in ways which might otherwise be considered too unique or too expensive to be ordinarily undertaken. Not this alone, of course, nor with a view to extravagance for its own sake; but as an occasional possibility of giving precedence to considerations of quality over those of quantity, to artistic rather than to economic values and to opportunity rather than to expediency."

At the Coolidge Foundation festivals are given, international prize competitions are sponsored, there are occasional concerts given in the library and elsewhere. And the festivals there have become the most important chamber music event in America. "They have come to serve as a sort of musical weather vane. They show us how the mind is set in contemporary music as well as any single set of concerts can do."

During her long life as a music patron this "portly, good-natured, partly deaf widow"

COOLIDGE, ELIZABETH SPRAGUE—*Continued*

has presented many of the world's best-known chamber music players—Roth, Gordon, Kolisch, to mention only a few. She has commissioned works by Hindemith, Prokofiev (see sketches this issue), Bartók, Respighi, Schoenberg, Stravinsky, Bloch and others, and in giving commissions has attached no strings. The composer has been and is free to write what he pleases, "provided the result comes under the elastic category of chamber music." Only once or twice has she stipulated the form or instrumentation—as in the case of Arthur Bliss, whom she commissioned to write an oboe quintet because she wanted something for the oboist Leon Goossens to play.

Although Mrs. Coolidge is not connected with the Coolidge Foundation, she has, since she presented it to the Library of Congress, continued to hold festivals, prize competitions and concerts on her own, and there are few cities in the United States which haven't at one time or another heard concerts which she has sponsored. For her services to music France has awarded her the Légion d'Honneur; Belgium has given her the Order of Leopold and the Order of the Crown; Frankfort has made her an honorary citizen; and the Cobbett Medal "for services to chamber music" was awarded her by the Worshipful Company of Musicians of London.

COOPER, GARY May 7, 1901- Film actor
Address: h. 7511 Franklin Ave, Brentwood, Calif.

There are all sorts of legends current about Gary Cooper, chief of which is that he came to the screen from the range, that he is a transformed cowboy. As a matter of fact, though he was born in Helena, Montana, and though his father did own a small cattle ranch where he learned to ride, shoot and punch cows, that was the most incidental part of his boyhood. His father, Charles Henry Cooper, was a lawyer from Bedfordshire, England, who came to Helena and married a Montana girl, Alice Louise. Besides managing his ranch, Charles Cooper continued to practice law and eventually became a justice of the Montana Supreme Court. The son (christened Frank James Cooper) went to high school for a while in Bozeman, Montana. Then the Coopers moved to England, and the boy attended Dunstable School there for two years. It was not one of the more important "public" schools, but it had plenty of snobbery in it. Young Cooper was sent to Coventry for degrading himself by having a fight with a newsboy! Upon his return to the United States he attended Wesleyan College in Helena, and also studied at Grinnell College, in Iowa, for three years, from the fall of 1920 to the spring of 1924. He had wanted to be a surgeon, but this was not a very serious ambition; actually his chief interest was in cartooning, and while in high school he had taken four hours of drawing lessons every day.

It was at Grinnell that he tried out for the dramatic club and was unhesitatingly turned down. He had stage fright so badly that he stuttered—and did that in a whisper! As a matter of fact he has never had any dramatic training, and still stands in awe of the technical tricks of experienced actors. He says his only concern is to try *not* to play himself. But it is the fact that he does play himself, that he underplays and is completely natural, which has brought him to the outstanding position he now occupies in the films.

He was not graduated from Grinnell, but went back to Helena and tried to make a living drawing cartoons for a local paper. The paper took them and let him sign them, but didn't consider them worth paying for. The rest of the time he punched cattle for his father. But he soon grew dissatisfied with that sort of existence and went to Chicago to try his hand at commercial art. He failed completely. Almost broke, he made his way to Los Angeles, not because he had the movies in mind but because he had decided that he would rather starve where it was warm than starve and freeze, too. He got a job selling electric advertising signs but was fired because he sold exactly none. Then he did turn to the motion pictures, and for a while lived a precarious life as a cowboy extra. Two-bit dinners were a luxury, and Cooper is a big man—six feet two and three-quarter inches, weighing one hundred eighty-one pounds—who likes plenty to eat.

From extra work he progressed to bits in "horse operas" produced by Samuel Goldwyn. His first real chance came when he was engaged as the second male lead with Ronald Colman in *Winning of Barbara Worth,* at $75 a week. He seemed doomed to being "typed" as a cowboy before he finally broke the spell, in Paramount's production of *Wings.* It was finally discovered that, trained or not, Gary Cooper was an actor. For more than 10 years now he has been one of the most dependable of motion-picture stars. Among the pictures in which he has taken the lead are: *A Farewell to Arms* and *Design for Living* (1934); *Lives of a Bengal Lancer* and *Peter Ibbetson* (1935); *Desire* and *The General Died at Dawn* (1936); *Mr. Deeds Goes to Town* (1937); *The Adventures of Marco Polo* and *Bluebeard's Eighth Wife* (1938); *Beau Geste* (1939); *Northwest Mounted Police* (1940); *Meet John Doe* and *Sergeant York* (1941), which the real York permitted to be filmed only if Cooper portrayed him. He was prominently mentioned for the film version of *For Whom the Bell Tolls*—in fact it was he who sold the film rights for Ernest Hemingway, a personal friend.

But to the average picture fan, Gary Cooper is Longfellow Deeds and John Doe. In two pictures, *Mr. Deeds Goes to Town* (1937) and *Meet John Doe* (1941), Cooper played the sort of role which is peculiarly his own—that of the "little man" (socially, not physically) pitted against the more deplorable aspects of society. They are roles particularly dear to his heart; he himself is socially-minded, strongly democratic and anti-Fascist. It is not for nothing that the Veterans of Foreign Wars bestowed on him in 1941 its Distinguished Citizenship Medal. Yet he is anything but a "pink"; he is not even a New Dealer, having voted for Wendell Willkie in 1940, though unalterably opposed to the Old Guard and the reactionary wing of the Republican Party. Many people think he resembles Lincoln in appearance, and Lincoln is his ideal as a citizen.

The Gary Coopers are among the movie couples who never provide columnists with scandal. In the late 1920's he played around a bit with Clara Bow, with Lupe Velez, with the American Countess Dorothy diFrasso (he traveled to Europe and Africa with gay parties she organized); but in 1933 he met and married Veronica Balfe, Social Register debutante, and settled down for keeps. Miss Balfe, known on the screen as Sandra Shaw (her husband calls her "Rocky"), was the stepdaughter of Paul Shields, governor of the New York Stock Exchange. After their marriage she retired from pictures. In 1938 their daughter Maria was born. The three of them live in a white Georgian house with three and a half acres around it, with a swimming pool, tennis courts, dogs, ducks, chickens, vegetables and a citrus grove. Their summers they spend on a Long Island estate where their friends are members of the social set.

Cooper is a hearty eater, but drinks very little and smokes denicotinized cigarets. He likes to play tennis, bridge and backgammon, but most of all he likes to sleep: he is always taking naps both at home and on the lot. He is crazy about guns and knows a great deal about them in a technical way. He likes to get into comfortable old clothes on every possible occasion. His wife, a striking brunette, enjoys the same things he does, and they are constant companions. He is not yet used to being famous and rich; there is still a touch of naïve surprise in his attitude. "You can't take anything for granted," he says. "It's fatal." He detests and avoids premières and has done so ever since the opening of *Design for Living,* when his clothes were torn off his back and he had to be rescued by a squad of policemen.

With his rangy height, his brilliantly blue eyes, his one-sided smile, he is at heart, as someone has remarked, "an extremely good-natured Montana sportsman." His celebrated taciturnity is more of a defense against intrusion than anything else: he can talk readily enough among his friends, to whom he is "Coop," a swell guy with a touch of seriousness about him. To the picture-going public, he is something more—"the cinema's epitome of a natural American."

GARY COOPER

CORNELL, KATHARINE Feb. 16, 1898- Actress

Address: b. 1270 Sixth Ave, Rockefeller Center, New York City; h. 23 Beekman Pl, New York City

"He is a very great man," Katharine Cornell said recently of George Bernard Shaw. "I suppose no dramatist has drawn women more

Vandamm

KATHARINE CORNELL

sympathetically or more humanly—but he always gives them a hint of mystery. That is the Shavian touch; it saves him from admitting how much he likes them." The First Lady of the American theatre has been notably successful in depicting three of Shaw's women: Candida, Saint Joan, and Jennifer Dubedat in *The Doctor's Dilemma,* a role which she played as recently as 1941.

When she assumed the leading role in Shaw's *Candida* in 1924, the famous Irish dramatist wrote her: "I don't think I was ever so astonished by a picture as I was by your photograph. Your success as Candida, and something blonde and expansive about your name, had created an ideal suburban British Candida in my imagination. Fancy my feeling on seeing in the photograph a gorgeous dark lady from the cradle of the human race! . . If you look like that, it doesn't matter a rap whether you can act or not. Can you? Yours, breath-bereaved, G. Bernard Shaw."

That she could act was attested to at that time by leading American savants of the theatre. Hammond found her the "most promising of the younger actresses." In 1926 the museum of her native city, Buffalo, commissioned home-town artist Eugene Speicher to do a full-length portrait of her, posed in the warm red gown that had been designed for her role as Candida. Hand-on-hip gesture and eyebrows arched in surprise recall an old family photograph of the star as a beribboned child, aged four, with an overly large mouth and brooding dark eyes.

In 1918, when family friend Jessie Bonstelle wrote to Dr. Cornell that his daughter had been signed for the Bonstelle stock company, he replied, "Are you crazy?" While "Kit" had had a few small parts with the Washington Square Players, her father did not, at that time, take her acting seriously. To him she was still the lanky girl roller-skating through the lobby of his theatre, getting in the way of people who wanted to buy tickets for Sothern & Marlowe. But "Kit" had been won over to the stage when she saw Maude Adams in *Peter Pan.* "If I could just walk out on the stage," was her memory of how it began.

A three-pound baby, Katharine Cornell was born of American parents on February 16, 1898, in Berlin, Germany, where her father was doing postgraduate work in medicine. Her parents were Dr. Peter Cortelyou and Alice Gardner (Plimpton) Cornell. A few years after returning to Buffalo the doctor became "Doc," as Miss Cornell's father became part owner and manager of the Star Theatre. Aside from kindergarten plays, however, little Katharine's first stage appearance was strictly a walk-on. She had wanted to feed an elephant, but balked at the real thing—having in mind the picture-book variety. Her father insisted, as a matter of discipline, and she threw a bun in the general direction of the elephant's trunk, then ran screaming from the stage.

Her first press notice was in a handwritten paper prepared by a member of the cast. She and a friend had written an "A-1 play," and it was forthwith produced at the summer home of her parents in Canada. The review of *The Hidden Treasure* concluded with the practical note: "We made 20 cents on the whole thing." As a little girl she had less interest in serious dramatics than in what are generally termed "dumb acts." A trouper-friend of her father's taught her the slack wire, and she installed a trapeze in her room. Perhaps, to her, such activity was a release for a personality that was more than normally sensitive.

"Kit" Cornell thought of herself as "a terribly ugly" child. "I knew I wasn't popular. I was timid even with children of my own age. I suppose I had an instinctive fear of being hurt. . . I had been hurt so often. . . Some nights before the performance I find myself caught by a foolish dread that it takes all my strength to control. . . You see, I can remember so many occasions when fear has had the best of me." And her husband, thinking along the same lines, wrote: "She still suffers from a supersensitive and frightened childhood. She has not outgrown the peculiar and psychic sensitiveness which has always been her principal asset as an artist and her principal liability as a person."

At Miss Merrill's school, Oaksmere, Mamaroneck, New York, she studied dramatics and returned there to teach from 1915 to 1916. Edward Goodman of the Washington Square Players came up to the school to help coach a play that Miss Cornell had written. He suggested that she try out, some time, for the Players. She acted on it at the first possible moment, appearing at a rehearsal to read some lines. But fear choked her. In an almost inaudible voice she mouthed the lines, all the rich deep inflections we associate with her vocal technique missing—and when it was over she didn't have to be told she had failed. She knew it in the hollow way that failure sinks home. Nor was it just the part. Her mother's death a short time before had left a blank. Seeking the cool, dim recesses of a nearby cathedral, she gave way to loneliness and tears.

In November, Miss Cornell appeared with the Washington Square Players, speaking four words, "My son, my son," in *Bushido*. She was with the Washington Square Players two years and made only $40 the whole time; fortunately she had an income from her mother's estate. A part in *Plots and Playwrights* (1917) won the comment: "There is a new face that stands out—Katharine Cornell. . . A tall girl with a fine strong head, broadly spread eyes and full mouth—mentality, physical control and simplicity." And a young talent scout for Winthrop Ames, Guthrie McClintic, wrote opposite her name on the program: "Interesting. Monotonous. Watch."

In 1918 Miss Cornell joined the Jessie Bonstelle stock company, doing 10 performances a week and learning a new play as well. In Buffalo, on the stage of her father's theatre, she played what she considered her first professional role, a part in *Cheating Cheaters*. Next, through Miss Bonstelle, the young actress was given a good part in the Brady road company of *The Man Who Came Back*, at a salary of $100 a week (1918-19). Then came her first London appearance, November 1919, in *Little Women*, a part that created almost as much of a stir in New York as in London. Returning to New York, she took a part in Bonstelle stock (Detroit) rather than tackle Broadway, and was there from 1920 to 1921, directed by her future husband, Guthrie McClintic. By the time of her marriage to Mr. McClintic on September 8, 1921, she was getting leading parts in New York productions and was regarded as one of the most capable of the younger actresses.

The McClintic production of *The Way Things Happen* (1924) was a flop, nor did *The Outsider*, her next vehicle, run much longer. There was still time for the Belasco production of *Tiger Cats*, and the successful run in Shaw's *Candida* that had to be cut short because of contractual obligations for *The Green Hat* (1925). The Arlen play, like all of Miss Cornell's since, was directed by Guthrie McClintic. It marked the first time Miss Cornell, who puts play above star, allowed her name up in lights—and then only on the road, after her husband had persuaded her that it was an essential part of theatre exploitation. Alexander Woollcott (see sketch this issue) didn't like her "reeling, writhing and fainting in coils" in *The Letter* (1927), but to Miss Cornell the unsympathetic role of the woman who murdered her lover "without a single decent motive" presented an intriguing acting problem.

Good notices were by this time commonplace. In 1931 a great part came with Rudolf Besier's *The Barretts of Wimpole Street*. The first of the plays bought for the new Cornell-McClintic firm of which she was manager, it had been turned down by 27 producers. Of Miss Cornell in the part of Elizabeth, Arthur Ruhl wrote: "Her pale beauty, the strength of her weakness, the fire and longing of her spirit reaching through the moral miasmas which enveloped her—all this was brought out with fine truth, with a poetry no less poetic for being unexpressed, with fine authority, with glamor."

The Barretts opened at the Empire on a rainy night in February 1931, with only 52 people in the orchestra when the curtain went up. The orchestra gradually filled, as did the balcony, and they kept coming for a long run. "Doc" Cornell saw it first from the wings, just as he had witnessed his daughter's initial professional appearance. Turning to a friend, he said: "She's come into her own." And Miss Cornell liked the play, perhaps more than any other in which she had appeared.

The Barretts of Wimpole Street was played more than 700 times, and the long road trek was chronicled by Woollcott and others. Once in Seattle on Christmas night, a performance was given long after midnight, the train having been delayed, and the stage preparations went on in full view of the audience. Miss Cornell likes the "road," believes in giving it the best; and, according to Woollcott, some movie theatre owners refuse to rent their stages to her, so fearful are they of the public's hankering for the legitimate theatre when embodied in the person of Katharine Cornell.

Since *The Barretts*, Miss Cornell has successfully undertaken no less than 10 productions, new plays as well as occasional revivals. Of these, *Romeo and Juliet*, *Saint Joan*, *The Wingless Victory*, and *No Time For Comedy* brought new depth and power to her acting. To her, "a new part is like Kipling's ship that found itself. After three weeks of rehearsals you know a good deal about the person you want to be and you know the play. Yet until you have given a good many performances, your part doesn't live and breathe. The moment always comes, though, when the things you have thought and felt and planned begin working together. When that happens, the part is like that ship—it has found itself."

Miss Cornell's reluctance to tackle a part until ready for it has long been a matter of common knowledge. A long succession of exotic and emotionally beset characterizations caused her critics to fidget now and again, but they stayed for the play to unfold. Ellery Rand has observed: "She is driven by her desire for perfection." And, again, a critic has expressed it: "That sense of destiny, that inward, driving force is a rare gift which may lead her to greatness." Something of this force is revealed in her autobiography, *I Wanted To Be An Actress* (1939), simply written, candid—"the stuff that makes a person and not a myth."

CORNELL, KATHARINE—*Continued*

Hollywood offers have not thus far tempted Katharine Cornell, though she recently relented sufficiently to say that she might take a part—if she honestly felt she could play it better than any other person in the world! "Nothing at all could compensate me for the direct contact with my audience, the direct audience-reaction—the most precious, the most vital thing the theatre has to give." Radio has fared better, for Miss Cornell consented in November 1940 to do an excerpt from *The Barretts* for a Red Cross benefit broadcast. At the first test play-back she was surprised at the rich, low tones of her voice, and at its tragic implications—wondered how she managed comedy!

Guthrie McClintic and Katharine Cornell have been happily married for many years. They have lived almost all of that time in a high-ceilinged old-fashioned house on Beekman Place, and now that they cannot go abroad for vacations they usually spend part of the summer at Martha's Vineyard, where they have a house. "Guthrie is my greatest inspiration," said Miss Cornell. "I was born old, old as sand. Guthrie is younger. He has impeccable taste. I never know about clothes and furniture. . . Our ideals are fundamentally the same, but we have that saving grace to marriage—different methods of approach."

Regarded individually, Katharine Cornell's features are still overly large. High cheekbones, dark brown eyes set wide apart, and a large mouth create a total effect that is deeply moving, like the elements in an impressionist painting. "Kit embodies and projects beauty," wrote her husband. "She can be old or young, radiant or dull, splendid, drab, inspired, buoyant, harsh, grief-stricken—whatever she chooses to be."

Katharine Cornell likes sports, plays a fair game of tennis and golf, and likes trapshooting, but when busy in a play she seldom indulges these tastes, preferring to rest during her leisure time. She and Mr. McClintic have amassed an almost complete collection of original drawings, paintings and sculptures with her as their subject, and it overflows a room of the Beekman Place house. She has a private charity, the Katharine Cornell Foundation, incorporated in 1935, and has honorary literary degrees from a number of colleges, among them Smith College, the University of Wisconsin and Elmira College for Women. In 1935 she was awarded the Drama League's Medal for her performance as Juliet.

Curtain speeches are not easy for Miss Cornell. The first time she attempted one, during the Buffalo playing of *The Green Hat,* she came out before the audience, began, "For years I have planned what I would say if ever I was asked to make a speech. . ." Her words trailed off, stopped. Miss Cornell looked helplessly at the audience, bowed and left the stage.

COSTELLO, LOU *See* Abbott, B. and Costello, L.

COUDERT, FREDERIC RENÉ, JR. (kōō'dâr') May 7, 1898- New York State Senator

Address: b. c/o Coudert Bros, 2 Rector St, New York City; h. 988 Fifth Ave, New York City

Hearty praise and bitter censure have attended every step of the investigations of the Rapp-Coudert Committee of the New York State Legislature. Set up in 1940 to look into the problems of both school costs and "subversive activities" in New York City's public schools, with Assemblyman Herbert A. Rapp in charge of the costs problem and Senator Frederic René Coudert heading the subcommittee ferreting out "un-American" teachers, the doings of Coudert's section of the inquiry have far overshadowed those of his colleague's.

Senator Coudert's Committee first burst into the headlines at the end of 1940, when it began to expose Communist activities at Brooklyn College. Teachers and students were subpoenaed to testify and from their testimony five professors, who later denied the charge, were accused of being Communists. Not long after, the Committee turned its guns on New York's City College and charged through the testimony of William Martin Canning, instructor of history, that 54 members of the faculty there were Communists. Since that time hearings have been held, teachers have been suspended from their positions, and the response to the whole inquiry has been overwhelming.

Three large New York and Philadelphia locals of the American Federation of Teachers, which were accused by Coudert in a suit to get their records of being "under the influence if not the domination of the Communist Party," raised their voice. Through the Committee for the Defense of Public Education they have called the hearings undemocratic, objected to the fact that testimony has often been taken in secret sessions and that testimony for the defense has often been limited. They have described the whole investigation as an attempt to pare educational expenditure and terrorize liberal teachers. With this point of view liberal magazines like *The Nation* and *New Republic* have largely agreed: the *New Republic* condemned the Committee's "capacity for digging up unpleasant things in unpleasant ways." In August 1941 the annual American Federation of Teachers Convention denounced it as "playing into the hands of the enemies" of education, although the same Convention approved the expulsion of the three locals criticized by Coudert. And there have been individuals, like Edwin S. Smith, who have not hesitated to call the inquiry "an inquisition." Critics of the Committee have pointed out that its activities have been confined to the exposure of Communism to the exclusion of fascism, fascist organizations, and other subversive and un-American activities.

The Committee's supporters have been equally vocal and equally convinced. Various groups of teachers at City College adopted a resolution supporting the Rapp-Coudert Committee, announcing: "We welcome whatever assistance may come from the investigation in freeing us" from the "destructive activities of relatively very small numbers of teachers and students." Acting President Harry N. Wright of the college has affirmed that the Committee is entirely within its rights and deserving of support; the New York *Times* feels that the Committee "has consistently gone about its work in a fair and liberal spirit."

Senator Coudert himself, in his report to the Legislature in March 1941, while not minimizing the "insidious" activities of Party members in the schools, still hastened to reassure the public that the "great majority" of city teachers "are loyal and devoted supporters of the democratic system of government." And to a direct accusation by a Brooklyn high school principal that he was an "outstanding foe of public education," he replied: "This is simply silly."

As evidence Senator Coudert points to his legislative record since he has been in Albany. During his first term, which began in 1938, he sponsored legislation to provide tenure for members of the city colleges' faculties. In 1939 he introduced the anti-dual job bill, supported by the Teachers' Union, which forbids multiple jobs in the schools and so helps spread employment. He sponsored legislation to implement the exchange of students between the city colleges and Latin-American countries. And he sponsored a bill, which later became law, to permit the New York City Board of Education to weed out unstable teachers, a bill praised by James Marshall, the Board's head, as "a great progressive step," though received by teachers with mixed feelings.

Senator Coudert's opponents concede the time and energy he spends on educational problems, but at the same time object occasionally to the form this interest takes. His proposal to change the retirement age of teachers from 70 to 65 (defeated by the Assembly) was opposed by many teachers and organizations, as was his proposed amendment to simplify legislative procedure on school legislation and the Coudert-McLaughlin bill to permit religious education on public school time which became law in 1940. The Teachers' Union points out, too, that he voted for cuts in the educational budget in 1939 and 1940 and introduced teacher pay cut bills in those same years.

Even his decriers will admit that Senator Coudert knows his law. If legal ability is inheritable, Frederic René Coudert, Jr., had a good start. The first Coudert, an officer in Napoleon's Guard of Honor, arrived in America after escaping "with a false name and a horse pistol" from a death sentence for conspiracy to overthrow the Bourbons after Napoleon's fall. His sons, one of them the Senator's grandfather, founded the law firm of Coudert Brothers in 1853. It prospered, representing many crowned heads in Europe and many important interests both there and in America.

FREDERIC RENÉ COUDERT, JR.

Frederic René Coudert, Sr., the Senator's father, joined the firm and during the years of his association with it became an authority on international law, representing the British Government in this country during the last War. He was suggested for the post of American Ambassador to France in 1914 and mentioned for Secretary of State in the early 1930's. He still guides the firm today. In 1897 he married Alice Tracy Wilmerding, a member of one of Manhattan's wealthiest families, granddaughter of General Benjamin F. Tracy, Secretary of the Navy under President Benjamin Harrison. Of his sons, Mr. Coudert, Sr., says: "Fred, Jr., is the politician, Ferd is the lawyer and linguist, and Alexis is the fencer."

COUDERT, FREDERIC RENÉ, JR.—*Continued*

The politician's son was born on East 15th Street in New York and has lived all his life in the district he now represents—the 17th (or "silk stocking"), running from Harlem down Park Avenue past Union Square. He attended Columbia University, with time out to serve in the War as first lieutenant in the 27th Division of the 105th United States Infantry. After his graduation in 1918 he entered Columbia's law school, was awarded the Kent scholarship for proficiency in the study of law and received his LL. B. in 1922. One year later he was admitted to the New York Bar and one year after that became a member of Coudert Brothers.

Senator Coudert's government activities began in 1924 when he served for a year as Assistant United States Attorney for the Southern District of New York; his political activities in 1929, when he was Republican candidate for District Attorney of New York County. One year later he was a delegate to the New York State Republican Convention and continued as a delegate in 1932, 1934 and 1936; in that year and in 1940 he was a delegate to the Republican National Convention.

In 1938 Coudert was elected to the New York State Senate and in 1940 he was reelected with the support of the Citizens' Union, which reported his voting record as "the best in the city Senate delegation." During the years he has been in the Senate, Coudert has served as chairman of the Military Affairs Committee, as a member of the Joint Legislative Committee for Recodification of the Insurance Laws and, in his second term, as chairman of the Committee on General Laws.

His record of bills sponsored is large. Besides the various educational bills, he presented a bill to eliminate the notarization of income tax returns; another to repeal the one-cent city cigaret tax; still another to reorganize the old New York City Health Department pension fund so that excess revenues may be retained by the city—all these became law. He was less successful with his bills to curb the illegal use of evidence obtained by wire tapping, to remove double taxation on odd lots of stock, to exempt from taxation the Metropolitan Opera House, to change voting hours. When the Teachers' Union asserted that his voting record showed him in favor of "crippling labor unions" he replied, in November 1940: "I'll let my voting record answer that false charge. I didn't oppose a single labor bill last session." They insist, however, that this is disproved by the fact that he voted for the Bewley Bill and against the Teamsters' Union in 1939, for the Wicks Bill calling for an open shop in the New York City transit system in 1940 and for the new Wicks Bill in 1941, and for the Ives Bill requesting a "waiting period" before strikes in 1941.

Senator Coudert's main interest for the past year, however, has been in the subcommittee investigating "subversive" activities which he now heads. And it was because of this interest that he declined an invitation from his Party to run for the United States Congressman's post of the late Kenneth Simpson. That the inquiry was supported by his fellow legislators was evidenced in January 1941 when further funds were voted the Rapp-Coudert Committee and again in April when it was given $247,000 to continue its work—$100,000 for the New York City part of the inquiry, $47,000 for counsel fees. Governor Lehman, however, vetoed the $47,000 part of this appropriation, intended to pay counsel and associate counsel of the Committee, on the grounds that lawyers' fees were excessive. Senator Coudert protested: "I cannot understand why the Governor should want to hamstring if not fatally cripple the subcommittee," he said. "The Committee has won the approval of . . . authorities and of citizens of the City and State generally and now it is sabotaged by our own Governor."

In June 1941, speaking of the kind of teachers who, to his way of thinking, made the investigation necessary, he told members of the Republican Business Women: "Now if your dog had rabies you wouldn't clap him into jail after he had bitten a number of persons—you'd put a bullet in his head, if you had that kind of iron in your soul. It is going to require brutal treatment to handle these teachers. . . Two things are sure. They simply cannot live under the American flag and the Constitution. Either they or the flag and the Constitution must go."

On November 27 it was disclosed that Coudert's subcommittee would go out of existence on December 31 and that the Legislature would probably not appropriate any more money for the Rapp-Coudert Committee as a whole because it had neglected to make the sweeping survey of State educational problems (other than Communism) that it had set out to do.

The subject of all this controversy is an unusually handsome politician, with blue eyes and curly hair, "Fritz" to his friends and "the Junior" to members of Coudert Brothers. During sessions he doesn't see much of his wife, Paula (Murray) Coudert, whom he married in 1931, or of their three children. When legislative matters are put aside for a while, though, he spends a good deal of time with his family and a good deal of time, too, boating. He is a member of clubs like the Piping Rock, Racquet and Tennis, Pilgrims, but reports have it that he infinitely prefers foul smelling pipes and old clothes and days on the water to any other activities they offer.

Who's Who in America

COUNTS, GEORGE S(YLVESTER) Dec. 9, 1889- Educator; author; trade unionist

Address: b. Teachers College, Columbia University, New York City; h. 440 Riverside Drive, New York City

Called a Fascist by Communists and labeled a Communist by some of his opponents on the Right, Professor Counts considers himself a "cross between a Jeffersonian Democrat and a Lincoln Republican, struggling with the old problem of human freedom in an age of science and technology."

Professor Counts, educator, labor organizer and author, opened his campaign in 1941 as American Labor Party candidate for the City Council in Manhattan. When in October 1941 the board of elections rejected the ALP petition for his candidacy on the grounds of an insufficient number of valid signatures, his name was restored to the ballot under the emblem of the Citizen's Non-Partisan League. "If elected," he said, "I shall work unceasingly in the Council for clean, efficient government, for protecting and advancing the interest of working people and all underprivileged groups, for guarding and improving the educational opportunities of children, for cultivating tolerance, understanding and sympathy among all races, nationalities and religions, for the elimination of every totalitarian tendency and movement, for the strengthening of the democratic process and the entire democratic heritage." Although he made a good showing he was defeated.

Born on a farm near Baldwin City, Kansas, December 9, 1889, George Sylvester Counts was the third of six children of James Wilson Counts and Mertie Florella (Gamble) Counts. He claims to be a direct descendant of William Bradford, Pilgrim leader and 30 times elected Governor of Plymouth Colony.

As a boy Counts spent most of his spare time doing chores on the farm. He did find the opportunity, however, to swim, skate, ride, and make collections of birds' eggs and arrow heads. During his teens he found hunting and trapping a lucrative sport and planned to "pioneer" in northern Canada. He even went so far as to estimate the cost of such an expedition, using the Montgomery Ward catalog for prices of arms, axes, beans, rice, dried beef, shoes, etc.

Counts' education began in a one-room schoolhouse. After two years, having completed the fourth grade, he attended the public schools of Baldwin City until 1907, when he was graduated from high school. It was a "dry and formal high school course in botany" that destroyed his desire to become a naturalist and "later challenged him to work to vitalize the subject matter of the schools."

In 1911 Counts received the B. A. degree from Baker University, a Methodist College in Baldwin City, and started his teaching career in the Sumner County High School in Wellington, Kansas. In 1913 he entered the graduate school of the University of Chicago, specializing in psychology, sociology and education, and paying his way with scholarships and odd jobs. He received the Ph. D. degree with honors in 1916 and in that year became head of the Department of Education and director of the summer school of Delaware College, Newark, Delaware. In 1918 he went to Harris Teachers' College, St. Louis, as an instructor; in 1919 to the University of Washington at Seattle; in 1920 to Yale University; in 1926 to the University of Chicago; and in 1927 to Teachers College, Columbia University, where he has remained. He has lectured at Harvard, Stanford, Ohio, Michigan, Iowa, Illinois, Minnesota, Virginia, Alabama and many other universities. "In all of these posts his studies and lectures were directed primarily toward the problem of adjusting the program of education to the conditions and purposes of American democracy."

Blackstone

GEORGE S. COUNTS

Even before he came to Columbia he had served on educational commissions. In 1925 he assisted in the study of the educational system of the Philippine Islands as a member of the Philippine Educational Survey Commission. Among his writings in the field of education were: *The Selective Character of American Secondary Education* (1922), an inquiry into the relation of educational opportunity to economic condition and social status; *The Principles of Education* (1924), with Professor James Crosby Chapman of Yale, a textbook widely used in teacher-training institutions; *The Senior High School Curriculum* (1926); and *The Social Composition of Boards of Education* (1927), which showed that the various boards governing public education were composed of persons drawn from a narrow section of the population. His writings already frankly expressed the belief that effective educational theory must be intimately related to social life and institutions and should stimulate thinking on the problems which they offer. But this belief was strengthened when, from 1927 to 1932, he served as an associate director of the International Institute, making a number of trips abroad in order to study the social institutions of the Slavic countries.

COUNTS, GEORGE S.—*Continued*

"In 1927," he wrote later, "I spent approximately three months in Soviet Russia, traveling extensively by railroad, visiting institutions of many kinds and engaging citizens from all walks of life in conversation. Two years later I returned to Russia and remained seven months. On this occasion I took a Ford car into the country and during July, August, September and October drove approximately 6,000 miles through the European parts of the Union from Leningrad across the Caucasus Mountains and from Odessa to Nizhnii Novgorod and regions beyond. I shaped the route myself and motored alone for about 1,000 miles. . . It was an illuminating and thrilling experience." He said that these visits, particularly, challenged his thinking "on both educational and social questions."

His next books, following the publication of *School and Society in Chicago* (1928), showed the effects of his combined experiences. *The American Road to Culture* (1930), a dispassionate survey of education in the United States, was concerned not with "the theories of professors but with the practices of American schools," and was called by Jerome Davis "one of the best brief social interpretations" of the subject then available. *Soviet Challenge to America,* published the same year, was especially recommended by Louis Fischer "to those who may believe that planned economy is possible under capitalism." In *The Social Foundations of Education* (1934) Counts, as a "collectivist," pictured the economic system developed over three centuries as breaking down, and insisted that education should shift its role to meet the new day—a thesis similar to that of a speech delivered two years earlier and later published in pamphlet form, *Dare the School Build a New Social Order?* In this he had said of the classroom teacher: "Neutrality with respect to the great issues that agitate society, while perhaps theoretically possible, is practically tantamount to giving support to the forces of conservatism. . . Capitalism is proving itself weak at the very point where its champions have thought it impregnable . . . it no longer works; it is unable to organize and maintain production . . . it is not only cruel and inhuman; it is also wasteful and inefficient. . . This situation gives to teachers an opportunity and a responsibility unique in the annals of education."

Counts was at the same time active in the National Education Association (he served on its Educational Policies Commission at one time) and the Progressive Education Association. In 1934 he was one of the founders and the first editor of *Social Frontier,* a magazine intended "to arouse teachers and others to the magnitude and gravity of the crisis facing American democracy." Their role, as he stated it in the first issue, was to "make clear the fundamental conflict of interests which today divide society into opposing groups and make impossible the fulfillment of the democratic tradition." In 1935, at the convention of the Progressive Education Association, he declared that "the teaching profession should unionize from kindergarten to college," and he was himself an early and active member of the New York Teachers Union, at one time serving with Reinhold Niebuhr (see sketch this issue), and with his good friend John Dewey on a "United Committee to Save the Union" during a period of great factional strife. He supported President Roosevelt, attacked the American Legion, the Teachers' Oath, the Liberty League and William Randolph Hearst (who, in turn, called him "Red Russia's Apostle").

The Prospects of American Democracy (1938), however, showed Counts in fundamental disagreement with the extreme Left, not only in a new disillusionment with the working-out of the Russian system but in other matters. In this book he was emphatic in his opposition to all forms of totalitarianism, both Left and Right. He asserted his conviction that American democracy, though in great danger, had an opportunity of salvation greater than that of any other capitalist country, and put forward a nine-point program for democratic action which included government monopoly of military and police power, guaranteeing of civil liberties, exposure of political propaganda, and avoidance of war through a program of international cooperation. (The United States, however, should at no time "permit itself to be drawn into an alliance intended to maintain the *status quo*. Certain of the aggressive nations have just grievances which can be disregarded only at the peril of war" and the destruction of free institutions.)

Throughout the War, Counts has been a strong supporter of President Roosevelt's policies. In 1939 elected to the presidency of the American Federation of Teachers, and re-elected in 1940 and 1941, he has fought for "academic freedom" from interference by such bodies as the Rapp-Coudert Committee, and at the same time has urged the expulsion from the American Federation of Teachers of those locals which the Federation considered Communist-dominated. He has engaged in political activity as a member of the right wing of the American Labor Party, the only political party to which he has ever belonged. He has continued to write on current problems; in 1941 *The Education of Free Men in American Democracy* was published. And he remains an active member of the executive committee of the nationwide Committee on Education and National Defense.

Dr. Counts is approximately five feet eleven inches tall and weighs close to two hundred pounds. Reddish-haired and blue-eyed, with a small mustache and sharp features, his "faint resemblance to Leon Trotsky" has been remarked by *Time* Magazine. He is, however, described by those who have worked with him as a "mild, kindly gentleman" whom it is hard to anger "even at times when one would like to have a mild display of temper." In 1913 he married Lois Hazel Bailey, the daughter of a Methodist minister of Fort

Scott, Kansas. They have two daughters, Esther Mae and Martha.

Since he no longer has time to go hunting and fishing, Professor Counts finds his major source of recreation in a small farm in New Hope, Pennsylvania, where he devotes an occasional holiday to the care of shrubs and trees. During the course of his globe-trotting he has collected seeds of shrubs and trees that interested him and has had such good success in growing them on his farm that he is now supplying his neighbors with exotic plants.

COWARD, NOEL (PIERCE) Dec. 16, 1899- Playwright; actor

Address: b. c/o John C. Wilson, 10 Rockefeller Plaza, New York City; h. Folkstone, Kent, England

On April 29, 1940 Noel Coward arrived in New York, via Paris, on a "confidential" government mission. He spoke vaguely to reporters of his activity in Paris (pursued in a simple double-breasted suit), but wouldn't say whether it had anything to do with propaganda work. His first "government activity" in this country was to act as master of ceremonies at the Allied Relief Ball at the Hotel Astor May 10, 1940. Further activities included a night at the New York World's Fair (Noel Coward Night), a trip to Washington ("to see the Lincoln Memorial," though incidentally he spoke with the President) and a visit to Hollywood, with a Chicago stopover, to chat with actor friends.

Meanwhile members of Parliament wanted to know just what Noel Coward was doing in the United States. Harold Nicolson, secretary to the Ministry of Information, said he was, among other things, "expected to call on President Roosevelt." Said the London *Daily Mirror*: "Mr. Coward, with his stilted mannerisms, his clipped accents and his vast experience with the useless froth of society may be making contacts with the American equivalents . . . but as a representative for democracy he's like a plate of caviar in a carman's pull-up."

It was not until July that Coward revealed his mission here: to see "whether the United States was isolationist or would become interventionist on humanitarian grounds." Further, he told reporters, he was here to find homes "for 58 British children, sons and daughters of destitute actors and actresses." He also expressed a desire to be back home and get into actual fighting (in the last World War he saw no fighting but spent the time mostly ill in the hospital). When a friend suggested to him that the infantry was safest, since in a combat division only one man in five gets killed, Coward had a quick comeback: "But you know how I am. Whenever I'm with a crowd, I always pick up the check."

NOEL COWARD

This particular visit to the United States later cost the playwright a fine of $800 for violation of Britain's wartime finance regulations. Having gone abroad with the Government's consent but with only $40 in his pocket, he made use of assets in the United States which should have been offered to his Government.

Coward's next mission for the British Government brought him to Australia and New Zealand, where he wrung approximately 1,400 hands daily and raised some £10,000 for the Red Cross. Then, after another brief visit in New York, he sailed for London—but apparently not in order to get into any fighting. In August 1941 a new Noel Coward comedy, *Blithe Spirit*, written blithely between and during the earlier air raids over London, had a brilliant opening at the Piccadilly. A "fourth dimensional farce," it concerned the unhappy lot of a man with two wives who had both turned into ghosts, and delighted Londoners, whose problems were quite, quite different. *Blithe Spirit* had an equally brilliant opening in New York on November 5, 1941. In the same period Coward found time to write a book, *Australia Visited, 1940.*

COWARD, NOEL—*Continued*

Although he says he is happiest when "packing up his bag to go somewhere else," Noel Coward likes New York, and has been a perennial favorite in the City's social and theatrical circles. The brilliant playwright, actor and play-producer (his profits once ran in New York alone to some $6,000 weekly), who has been and probably will continue to be "for years and years a member of the Younger Generation," was born in Teddington, London, England December 16, 1899. He was educated privately and at Croydon, and is the first of his family to turn to the stage. He made his initial stage appearance at the age of 12 (he was a choirboy before that) to augment the family income. Of his father, Arthur Sabin Coward, who died in 1937, Noel Coward said in his autobiography, *Present Indicative* (1937): "He made small model yachts for his own amusement" while his mother, Violet (Veitch) Coward, "worked like a slave." "Master Noel" became a member of Charles Hawtrey's provincial repertory players, with two other juveniles, "Gertie" Lawrence and Estelle Winwood. He was a precocious child who discovered early that "conversation with casual strangers was stimulating to the imagination. I shocked many kindly, interfering old ladies with picturesque descriptions of my appalling life at home." He received some formal dramatic training at the Italia Conti Academy, the foremost dramatic school in England. His budding professional career was interrupted by the War, though he never saw active army service. In 1916 he had toured the Provinces in *Charley's Aunt*; at the end of the War he appeared in Cosmo Hamilton's *Scandal*. After this came *London Calling*. All he did in the latter was to write the book, lyrics and music, and play the lead song-and-dance role himself. But he had always been more interested in writing plays than in acting: his first play, *The Rat Trap*, was written at the age of 18. *I'll Leave it to You* (1920) was a failure; *The Young Idea* (1924) was scarcely more successful.

Feeling unappreciated in England, Coward dreamed of New York. "There were apparently two very attractive brothers called Shubert. . . There was also a kindly old boy named Al Woods, who produced the best melodramas in the world, outside of David Belasco, who was of course a species of divinity. In addition to these brilliant philanthropists, there was the Flatiron Building, the Woolworth Building . . . and most exciting of all, Broadway by night. . . Its splendors and its noise and its crowds haunted my imagination. Its gigantic sky signs dazzled my dreams, flashing in a myriad of lights, with unfailing regularity, the two words, 'Noel Coward.'"

His New York opportunity came when Gilbert Miller offered him by cable a first year's option on his play, *The Vortex* (1925). *The Vortex* was a success in both London and in New York; in New York he made friends with George Kaufman, Alexander Woollcott (see sketches this issue), George Jean Nathan, and—particularly—Alfred Lunt and Lynn Fontanne (see sketches this issue). The latter were to help make his play, *Hay Fever* (1924), a success. His first full-charge revue, *On With the Dance*, was also well received in England. Then a nervous breakdown took him for a rest to Hawaii, where he wrote *Bitter Sweet* (1929), and he returned to New York to direct its production, with Evelyn Laye in the leading role (1929-30).

Not always, however, did Coward meet with success. When *Sirocco* (1927) opened, Arnold Bennett observed that "every Noel Coward opening provided two shows, one on each side of the footlights." *Cavalcade* (1932), one of his most spectacular productions, was not received without controversy: its author was accused of writing "nationalistic propaganda." *Home Chat*, on its London production, was greeted with catcalls and boos. In the midst of the turmoil a galleryite rose and shouted to Coward, "Look 'ere, we expected something better." "So did I," coolly replied Mr. Coward. But such plays as *Private Lives* (1931), in which he himself played the leading role, brought him in New York, at least, an enviable dramatic reputation.

Coward has been described as "tall and slim, not handsome, yet strikingly attractive, with neatly parted black hair, clear blue eyes, sensitive hands and an engaging smile. His clothes are unobtrusive, but chosen with a nice discrimination. His accent is 'standard Southern English,' his conversation easy and sometimes witty. He moves and thinks quickly, and enjoys acting. He is able to work practically anywhere. He is unmarried." Coward writes his plays at terrific speed, first in longhand, then on the typewriter. He considers *Hay Fever* (which took him three days to write) his best comedy; *The Vortex* his best drama. "I like traveling," he writes, "better than anything else. Travel rests me and gives me the only time I really have to myself—to think and especially to read. And I always do a great deal of writing aboard ship. I am never seasick." He has been around the world more than once; his companion on these trips has been his friend Jeffrey Holmesdale. Traveling light and stopping at only the best hotels, they have touched many ports. Coward once acted in Singapore and got influenza in Shanghai, where he wrote *Private Lives*. But he says he likes South America best of all.

He owns an apartment in New York City on the East River and 52nd Street, but usually sublets it. His real home is a farm in Kent, England. "I have remodeled the barn into a studio that looks out over the Channel." There he doesn't "loll in bed until noon," but gets up at eight and begins work, usually by strumming on the piano. He gets in a working day of about seven hours.

CROSBY, BING May 2, 1904(?)- Radio and film star
Address: h. 10500 Camarillo St, North Hollywood, Calif.

Bing Crosby's "dulcet, broken-toned" voice has made him the highest-paid singer in the world. There are other men in the United States who earn $700,000 annually, but most of them at least make a pretense of having struggled for it. It is rather refreshing to learn that "hard work, attention to detail, and the other story-book maxims" have played little part in "The Groaner's" success. "I've just been a very lucky guy," Bing says. "A crooner gets his quota of sentimentality with half his natural voice. That's a great saving. I don't like to work."

The parents of problem children may also be encouraged to learn that Bing started life as the bad boy of Tacoma, Washington, where he was one of the seven children of Harry Lowe and Catherine Helen (Harrigan) Crosby, devout Catholics. He was christened Harry Lillis Crosby, and the truant officers were always taking that name down for one reason or another. Bing was promi-

BING CROSBY

nent in other fields than mischief, however. He sang, as did all his family. He acted: his first appearance on the stage, in a school production of *Julius Caesar*, gave him a reputation as a comedian when the heavy curtain began to descend on him. He played par golf. An expert swimmer, he worked one summer as lifeguard in a municipal pool, and once brought away from a swimming meet nine first-place medals and two seconds. The only time he ran away from home it was with the idea of becoming a baseball player. He might, as a matter of fact, be with the Dodgers today if he hadn't worked in a lumber camp one summer and come home with gashes above both knees. This accident prevented him from playing shortstop on the baseball team when he started back to Gonzaga, a Catholic university in Spokane, but he did win his letter later playing infield.

Bing had been sent to Gonzaga to study law. One part of his law training was a course in elocution in which he learned "phrasing"—separating a speech into its various thought-patterns before delivering it—and he still insists that he learned everything he knows about singing in that course. "If I am not a singer, I am a phraser. Diseur is the word. I owe all to elocution." He owes something, though, to the fact that he and a friend of his, Al Rinker, organized a seven-piece band while still in college. Bing played the traps, Rinker played the piano, they both sang—and soon there were as many party engagements as they could handle. One triumphant engagement in a local theatre at $40 a week gave them a mercenary idea. Said Bing, afterward: "I knew a great many young lawyers in town, and I found that very few of them were making as much as $40 a week. And they had to work hard. I said to Al Rinker: 'Let's hit for Los Angeles. Maybe there's some more of this easy dough down there.' "

With Mrs. Crosby providing a battered car, in 1924 the two boys quit school and set out to see Rinker's sister, Mildred Bailey, today the "swing-style" vocalist of radio. They had to walk the last two miles, but she got them an engagement at the Tent Cafe at $65 a week for the team, booked as "Two Boys and a Piano." It was one Pacific coast night club or vaudeville stand after another until in 1927 they wound up at Los Angeles' Metropolitan Theatre at a salary of $65 a week apiece. Paul Whiteman heard them, offered $150, and signed them up immediately. They went to New York with him, where Harry Barris joined them—and that was the beginning of Paul Whiteman's Rhythm Boys, who were a sensation in Broadway night clubs of the late '20s.

They were three years with Paul Whiteman. Then, in 1930, they all landed in California again, where Whiteman was making *The King of Jazz*. When Whiteman returned East, they stayed on, singing under the artificial palms of the Cocoanut Grove. Bing's "Bay-bub-do-ee-do-dee-do" made him a hit as a soloist. He did not, however, make a hit with Dixie Lee (Wilma W. Wyatt of Memphis, Tennessee), an attractive young actress whom he wooed to the tune of *I Surrender, Dear*. "I'd never marry a playboy," she told him, observing with disapproval that he was spending twice what he made.

In September she reconsidered and married him, and it was shortly after that that Bing's affairs took a turn for the better financially. His brother Everett sent *I Surrender, Dear* recordings to both NBC and CBS in New York. They both wanted an audition, and some time in 1931 Bing departed for New York, leaving behind him a "trail of broken bottles and unpaid bills." CBS signed him up; Everett induced him to form "Bing Crosby, Ltd., Inc." to keep his hands off his own property and separated him from his agents and night club contracts for $35,000. The morning of the day he was to have his première over a national hookup Bing lost his voice, and the doctor, examining him, found nodules on his vocal chords. He hadn't lost his voice permanently, however, and, as it developed, these nodules (now insured for $100,000) produced "the effect of a lad with his voice changing singing into a rain-barrel" which has made Bing famous. Soon, with his radio contract and personal appearances and best-selling records, he was averaging some $7,000 a week.

He had already made a few radio shorts for Mack Sennett as well as a "campus comedy" for Pathe tastefully called *Two Plus Fours*. He wasn't very hopeful about motion pictures, though; the first producer he propositioned told him his ears stuck out too much. Besides, as one critic put it: "His first short subjects were quite as broken-winded and spavined as the ordinary run of things and also made the conventional error . . . of playing him up as if he were making a personal appearance instead of giving him something to do." But when Paramount made their first *Big Broadcast* they naturally put him in it along with other radio personalities, and his singing in that seemed to warrant their giving him a contract for feature-length pictures and putting him in *College Humor* and *Too Much Harmony* in 1933. That same year MGM borrowed him for *Going Hollywood,* and it turned out that Bing, unlike most other radio stars, actually had box-office appeal.

At this time Bing's acting was not all it might have been, perhaps because he was invariably cast in the role of a romantic collegian (wide pants, sweaters, saxophones, snappy roadsters, snappy chatter). His voice had given him the title "the Romeo of radio," and he was automatically expected to provide love interest. Even then a natural talent for comedy began to show itself, though; he was, surprisingly, "innocuous to his own sex" (according to one male critic, this was because he never seemed to be trying to be charming); and by 1934, when *We're Not Dressing* was produced, he was turning in what most critics considered very finished performances. *She Loves Me Not,* in which he starred for the first time, followed that same year, and soon J. C. Furnas was writing about his acting: "He borrows something from the deadpan school of slapstick comic and something from the insouciant ogle of the professional masher to produce an effect of being congenitally at home and sure of himself anywhere."

In *Mississippi* (1935), *Rhythm on the Range* (1936), *Pennies from Heaven* (1936), *Waikiki Wedding* (1937), *Double or Nothing* (1937) and *Doctor Rhythm* (1938) Bing made further successes—particularly in *Pennies from Heaven,* which was the first production he made for himself, with Columbia paying half the cost. But it was in *Sing You Sinners* (1938) that Bing really found himself—or, more accurately, that his audience discovered him. Here he played a "rough sketch of himself"—a lazy, happy-go-lucky, undependable but goodhearted fellow who is mad about horses. There wasn't a love scene for him in it, and his brother got the girl—but as far as Bing was concerned that was all to the good, and the audience liked the real Crosby even better than the Crosby they had seen before. Later pictures, *Road to Singapore* and *Road to Zanzibar,* both with Dorothy Lamour and Bob Hope (see sketch this issue), brought him a well-deserved reputation as a mad comedian to whom love and Lamour are purely incidental. *Birth of the Blues* released late in 1941 was acclaimed by the critics who also have high hopes for *Holiday Inn* on which, in late 1941, he is working with Fred Astaire. Bing from the start "has insisted on having important stars around him, while his contemporaries were fighting for single billing," and this may account to some degree for 10 years of consistent Hollywood success.

In radio, too, he has outlasted nearly everyone who started with him. NBC's Kraft Music Hall, on the air since 1936, has turned him from a mere singer to a master of ceremonies. On his first few programs as master of ceremonies his talk sounded stilted ("I told you I am a man who should just sing"), but then a plot was hatched. On every program some questions not in the script were sprung on him, and, forced to ad lib, he would answer in his own easy drawl. Gradually he learned to talk to visiting celebrities (Leopold Stokowski, Lotte Lehmann [see sketches this issue], José Iturbi, Pat O'Brien, Dorothy Lamour) over the air as easily as he would in his own home, and since that time what has made the program so popular has been as much its atmosphere of relaxed informality and of leisureliness as it has been Bob Burns' wit or Bing's crooning. One rival producer called the show "a disgrace, ragged, unfinished, fumbling"; commentators point out that it is precisely its "small details, snatches of saucy dialog, and other tricks and trappings, none of them remarkable or even bright alone, but in the assembled show producing a mood and tempo that make for popularity" that are its chief charm. Bing's radio scripters have been commended for the remarkable vocabulary which Bing uses with comical effect on the show.

And if Bing's radio program is one of the most informal on the air, Bing himself is probably radio's most informal star. He goes around looking, for the most part, even more untidy than in the days before he was a conspicuous success. Hawaiian shirts, open at the collar; a battered felt which is seldom removed, outdoors or in; ancient slacks that have never felt an iron; a generous mouthful of gum—these are distinguishing characteristics. He is five feet nine, has light blue eyes and light brown hair, getting scanty, an altogether engaging grin and a picturesque way of talking.

He still likes sports better than almost anything else. Mornings, when he's not working, he often goes to the race-track for the workouts, drops over to the golf course for a couple of dozen holes, then returns to the track for the afternoon racing. He himself owns the popular race track at Del Mar, a 100-acre breeding ranch nearby, and some 75 horses, mainly Argentine and American thoroughbreds. He is, in fact, a "minor business octopus" whose ventures have included an employment agency, a gold mine, a real estate project, a music publishing company, an office building, the management of two prize fighters and a girls' baseball team. There are, besides, substantial royalties on records ($77,000 in 1940); on the radio his voice is worth $7,500 a week for an hour's broadcast; and he gets $175,000 for the three pictures which he makes every year. His income tax for 1940 was $377,000.

Bing's quietly-furnished semi-Colonial home has 14 rooms with an adjoining tennis court and swimming pool, and there he spends a good deal of time with Dixie and with the four young male Crosbys: Gary Evan, the eldest; Philip Lang and Dennis Michael, twins; and Howard Lindsay, the youngest. Every few months or so he asks his old musician friends to come over for a jam session. Among his favorite conductors, though, CROSBY, BING—*Continued*

are Toscanini and Damrosch. He was presented with the degree of Doctor of Philosophy in Music by Gonzaga in October 1937. A devout Catholic, he often sings in the church choir on Sundays; he reads a lot—likes detective stories, especially those by Dashiell Hammett, and enjoys the novels of Somerset Maugham, William McFee and Joseph Conrad; he has tried writing a novel himself, tells his boys bedtime stories "in Crosbyesque slang," and would like to settle down and write short stories some day. In that far-off day when he realizes *all* his ambitions he will be a tap dancer like Astaire and a tennis tournament player, too. Sometimes his friends wonder: is it possible that this fabulously lazy guy Crosby is really not a lazy guy at all?

CROSS, RONALD H(IBBERT), 1ST BARONET May 9, 1896- British High Commissioner to Australia

Address: Canberra, Australia

In the sudden reshuffle of May 1, 1941, Ronald Hibbert Cross, Privy Councillor and United Kingdom Minister of Shipping, was appointed United Kingdom High Commissioner to Australia. The New York *Times'* correspondent commented that he is "well known in Australia, is liked by [former] Premier Robert G. Menzies (see sketch this issue) and is being sent there because of the critical necessity of keeping the Empire happy." The opinion of a Labor M.P., that he "was sent off to Australia by Churchill because he was noisy in his opposition to some understanding with Stalin" was not generally shared. On the King's birthday honors list issued in June 1941 the British High Commissioner was raised to a newly created baronetcy.

Sir Ronald is "a merchant-banker of the conservative Eton-Army-business pattern." Born on May 9, 1896, the son of James Carlton Cross, he went from Eton straight into the Duke of Lancaster's Own Yeomanry and later into the Royal Flying Corps as a fighter-pilot. After the First World War ended he went into business, and in 1925 married Louise Marion, daughter of the late Walter Emmott of Emmott Hall, Colne, Lancashire. It was not until 1931 that he was elected to Parliament as a Unionist from Rosendale, Lancashire, but the year 1935 found him Government Whip. For two years he held voters in the House of Commons in line.

Harris & Ewing

SIR RONALD H. CROSS

By this time considered one of the most promising younger men in Parliament, in 1937 Cross became a Lord of the Treasury and later Vice-Chamberlain of His Majesty's Household. The latter post he held until 1938, when he was appointed Parliamentary Secretary of the Board of Trade; and in 1939, after Britain declared war on Germany, he took over the important post of Minister of Economic Warfare. His was the responsibility for marshaling England's "credit and trade battalions" in the War.

In Nazi eyes Minister of Economic Warfare meant "Minister of Starvation." Londoners, more jokingly, called Cross' Ministry MEW, also pointing out that his cable address was WHISKERS, LONDON. Cross himself, working in great obscurity with his staff of 800 in the gloomy building where the London School of Economics had formerly been housed, announced that Britain's objective was not primarily to starve Germany of food but of industrial resources. This meant an attempt to break Germany's economic strength by cutting off German trade both by means of a naval blockade and by trying to undersell and overbid Germany in markets that couldn't be cut off by the British blockade—at that time The Netherlands, Belgium, Scandinavia, the Balkans, etc.

The first report of the Minister of Economic Warfare to Parliament on January 17, 1940 was extremely optimistic—over-optimistic, as later events proved. He reported that after only four and one-half months of economic warfare Germany had been reduced to the economic straits of 1916, and that although there were still gaps in the British blockade Germany was suffering from shortages of many vital commodities as well as lack of clothing, soap, food. "We look forward," he predicted, "to the day when we shall have so strangled Germany's economic life that she can no longer sustain her war effort." The first result of that speech was to intensify the growing movement to put the Minister of Economic Warfare in the British Cabinet.

In the general upset of May 1940, on the same day that Lord Beaverbrook became Minister of Aircraft Production, Ronald H. Cross was appointed Shipping Minister, with the job of making sure that there would be ships for British supplies. It is generally believed that in that position he did a good job under great difficulties. Although British shipping losses grew heavier and heavier after the fall of France, shipyards worked at full capacity both to replace losses of cargo ships and to reduce losses by building more warships to protect convoys.

On January 25, 1941, in a transatlantic broadcast to the United States, Britain's Shipping Minister assured Americans that Britain can beat "the U-boat threat," but "we must have your industrial support." On April 30 he defended the pinch of the blockade. "Americans should realize Britain is fighting for her life," he said. "By waging economic warfare to the utmost we believe we shall shorten the War by many months and this weapon can thus be the means of saving innumerable lives and of hastening the time when the world again will be free from the curse that now lies upon it." And even after having resigned as Minister of Shipping he remained hardly less concerned about the problems of that office. In June 1941 asked about England's greatest need from the United States, he replied: "Ships, ships, ships."

Slender, six-foot-three, "fair-haired, direct, pleasant, incisive," Cross is well known for his tact. In April 1940, when the Italian press was making exceedingly nasty statements about Great Britain, he announced that "we have no quarrel with Italy and we have every wish to be friends." He and his wife have three daughters, Angela, Diana and Susanna, and up to the time of the War led a simple and quiet home life.

Who's Who

CROSSLEY, ARCHIBALD M(ADDOCK) Dec. 7, 1896- Research director
Address: b. Crossley, Inc, Princeton, N. J.; 330 W. 42nd St, New York City; h. 21 Battle Rd, Princeton, N. J.

One of America's important new industries is public opinion analysis. It's new only in the sense that it now boasts a scientific method, for actually there were "straw polls" in the days of Andrew Jackson, when newspapers first attempted to predict elections by "the straws in the wind." Currently, disgruntled legislators complain that opinion polls are making Congressmen a useless luxury, and they speak none too cheerfully of "Government by Gallup." But no one can deny the increasing accuracy of the opinion polls.

ARCHIBALD M. CROSSLEY

All of which is a far cry from the immortal boner of 1936 made by the late *Literary Digest*, which many predicted would be the poll to end all polls. Actually, however, it ended only the magazine, while the opinion-takers went merrily on their way to bigger and better predictions. Among these was shrewd, spectacled Archibald M. Crossley, president and treasurer of Crossley, Incorporated, with offices in Princeton, New Jersey and New York City. Today America's three major opinion agencies are the Gallup (see sketch 1940 Annual) poll, the *Fortune* Magazine surveys and the Crossley surveys.

Crossley was born in Fieldsboro, New Jersey and is the son of Martha Jane (Bullock) and Joseph Crossley, both of England. He attended New Jersey schools and Princeton University, from which he was graduated in 1917. That year he inauspiciously launched his career by selling vacuum cleaners. Later he sold classified ads for a Philadelphia advertising agency and eventually found a niche in the purchasing department of the Day & Zimmerman Company.

Sometime during his various occupations Crossley discovered that he had a knack for research work, for the year 1918 found him already installed as research manager of the J. H. Cross advertising agency in Philadelphia. Here he served with distinction, and the *Literary Digest* acquired him in 1922 to serve as assistant director of research. Later he

CROSSLEY, ARCHIBALD M.—*Cont.*

was appointed chief of the research department.

Despite its electoral error of some years later, the *Digest* was a trail-blazer in the field of promotion and research and contributed a great deal to the science of the public survey. Its predictions from 1920 to 1932 gained it a reputation for infallibility. Crossley learned much, and probably contributed to the magazine just as much as he learned. In 1926 he was finally ready to go out on his own. Meanwhile, in 1920, he had married Dorothy Fox of Lexington, Massachusetts, and had settled down in Princeton. (There are three children: Helen Martha, a Radcliffe college student; Joseph, 2nd, a Princeton undergraduate; and Dorothy Irving, who won't be attending college for a few years yet.)

Crossley soon became a big name in the survey field. His studies were recognized as almost indispensable business aids for newspapers, advertising agencies and corporations producing commodities. He was one of the first to sample public reaction to brand names of breakfast foods, toothpastes, soap and other widely advertised products. More important, however, was his research in connection with radio advertising, listening habits and audience participation; here he is acknowledged to be preeminent. And his ratings of radio stars have made Crossley a byword among the listening public.

Polling election opinion was a sort of sideline to Crossley's business of analyzing markets, but he has proved no amateur in political prediction. In 1936 he predicted President Roosevelt would defeat Landon by a wide margin. But ex-Postmaster General Jim Farley's intuition that year proved more accurate than even the most painstaking poll. It was Farley alone who said the Republicans could confidently count on only Maine and Vermont; Crossley picked six certain and seven potential Landon states. When the votes were counted they showed Crossley had underestimated the President's strength by seven per cent, while Farley had hit the bull's eye.

Still, Crossley was considerably more accurate than the *Digest,* which had insisted Roosevelt would get only 43 per cent of the votes. Incidentally, Crossley has since analyzed the reason for the magazine's fiasco; he said it had failed to take into account the political effect of economics and was relying on the pre-depression basis of numerical votes received, rather than on a qualitative analysis of the economic status of the straw voters. In other words, the big vote for Landon might have come from people who weren't impoverished by recent events; but to get a true picture, it was necessary to sample opinion with regard to all income levels, including those which had suffered under a Republican regime.

Crossley's Presidential poll of 1940 was remarkably accurate: it was within 1.8 percentage points of the actual outcome of the elections. Like its predecessor, the poll was published in leading newspapers and attracted considerable attention.

It is his marketing research for which Crossley is chiefly known, however. His private surveys for advertisers provide a reliable means of checking on how a given amount of advertising will go, which media are the most effective for a particular product, how a given audience will be apt to react to a given type of advertising. As a means of getting the maximum out of each advertising dollar, of preventing waste and of planning a campaign along definite lines, the Crossley surveys are probably one of the greatest single influences in current advertising trends.

Crossley's radio work has been particularly outstanding. His famous Cooperative Analysis of Broadcasting, a continuous measurement of audience reaction to various programs, is the undisputed authority in the field today. Advertisers use it to help them slant their programs toward a particular income level, to help them pick the most appropriate talent and to choose the stations apt to give them the best service in relation to their specialized needs. Thousands of telephone calls, house-to-house canvassing and other devices are employed. Begun in March 1930, the survey is now operated on a non-profit basis for the governing committee of advertisers and advertising agencies. Crossley ratings of stars decide many a radio career, since a high rating usually means a star can command a higher salary for his services, while a low rating means a star's virtual oblivion. Noncommercial events as well as advertising programs are rated by the survey, and this makes it an invaluable service for government agencies as well as business groups. It was awarded the Final Harvard Advertising Reward for outstanding research.

Another important Crossley enterprise is the Continuing Study of Magazine Audiences, begun in 1938 under the sponsorship of *Life* Magazine and now operated by the Magazine Audience group. It is a useful link between magazine management and the reading public. It helps periodicals achieve maximum effectiveness as advertising media.

Research is Crossley's only hobby, as well as his life work. He has delivered many lectures before business groups and colleges on public opinion and kindred topics and he is a voluminous writer of articles on business who has contributed to *Public Opinion Quarterly, Advertising and Selling* and other periodicals, and, in addition is the author of a book called *Watch Your Selling Dollar!* (1930), published by B. C. Forbes. His high forehead, white hair, and spectacles, give him a professorial air. He has traveled in every state of the Union, in Canada, Mexico and throughout Europe.

CROUSE, RUSSEL (krous) Feb. 20, 1893- Author; playwright; producer

Address: b. 1430 Broadway, New York City; h. 159 E. 78th St, New York City

The dramatization of Clarence Day's *Life With Father* was the first non-musical venture of the writing team of Howard Lindsay and Russel Crouse. It opened at Skowhegan, Maine on August 14, 1939, "a simple nostalgic comedy" (New York *Times*) staged by Mel Burke's Lakewood Players. When the play came into New York for its sellout opening, Lucius Beebe, commenting on Crouse the dramatist, said that it "partakes less of his talent for musical shows than of his talent for wistful souvenirs of departed Americana . . . there is more kinship between the spirit of *Life With Father* and *Mr. Currier and Mr. Ives* than between the play and, say, *Red, Hot and Blue*."

According to Mr. Crouse himself, *Life With Father* represents "the first time my passion for Americana in general and New York memorabilia in particular met up with the theatre in my professional economy." In dramatizing the book Lindsay and Crouse had to be extremely selective in the use of such material, so as not to clutter up the atmosphere: "We allowed topical references to intrude themselves into the action only when they were essential to or had some direct bearing on the progress of the drama."

Before *Life With Father* tagged Crouse as a dramatist and *Arsenic and Old Lace* established him as co-producer, he had high professional ratings in the newspaper, book and press agentry fields. In *Mr. Currier and Mr. Ives* (1930) he chronicled the lives and times of the two famous print-makers. Until that year his writing had been confined largely to newspaper work; from 1924 to 1929 his humorous column *Left At The Post* was a feature of the New York *Evening Post*. In 1931 Crouse published *It Seems Like Yesterday* and in 1932, the year he became press agent for the Theatre Guild, he published two books, *Murder Won't Out* and *The American Keepsake*. That he should be drawn to *Arsenic and Old Lace* was natural. Here was a play that combined in one theatre piece a distinctly American flavor, deft comedy and enough murder to satisfy the most insatiable homicide fan.

Crouse's explanation of how and why he and Lindsay produced *Arsenic and Old Lace*, their first job as a producing unit, begins: "During the past few weeks I have been asked by the New York *World-Telegram*, the Brooklyn Chamber of Commerce, my aunt, Mrs. A. C. Crouse of Washington, D. C., the Morris Plan Bank, which has perhaps the most complete collection of my autographs, and a large swarm of little people who keep coming out from under my rug and making faces at me, why Howard Lindsay and I produced *Arsenic and Old Lace*." In the process of dismissing reasons why, he blandly lists the benefits that have accrued to the collaborators as a result of this experiment, but triumphantly concludes that the real reason for the venture was that they were "both nuts. I don't want to take much of the credit on that score because I'm not very nuts. Just a little bit. You'd hardly notice it. But that Lindsay! He's good and crazy."

Russel Crouse was born in good mental health on February 20, 1893, in Findlay, Ohio, the son of Hiram Powers and Sarah (Schumacher) Crouse. Educated in the public and high schools of Toledo, he began his writing career at the age of 17 as a reporter on the Cincinnati (Ohio) *Commercial-Tribune*. From 1911 to 1916 he worked as news and sports reporter on the Kansas City (Missouri) *Star*, and in 1917 was political reporter for the Cincinnati (Ohio) *Post*. He left newspaper work to join the Navy during the First World War, serving as yeoman 2nd class from 1917 to 1919. At the end of his enlistment Crouse broke into the New York newsrooms, working in turn for the New York *Globe*, New York *Evening Mail* and, finally, the New York *Evening Post*.

Vandamm

RUSSEL CROUSE

With the production of Ward Morehouse's play, *Gentlemen of the Press*, the newspaperman had an eight-line acting debut. It was duly chronicled by Brooks Atkinson in an unsubtle play upon words: "One R. Crouse, who has been picked from the *Evening Post* staff to bring a touch of verisimilitude to a newspaper play, spoke his lines gently last evening. His performance was muted as Duse."

That was in 1928. During his brief appearance in the play Crouse continued to write his column for the *Evening Post*, and in 1929, another actor having taken the part in the road company, he began writing scenarios for short films on newspaper life. Later, when the play was filmed, Crouse had a two-line part to which he sometimes refers as the

CROUSE, RUSSEL—*Continued*

height of his career. "I took Marc Connelly to see the movie," he says, "and at the psychological moment Marc dropped his glasses, stooped to pick them up, and missed the entire performance."

Crouse's first attempt to do a libretto for a musical comedy was *The Gang's All Here* (1931). It had, as he put it, a run of "two consecutive weeks." But in 1933 he collaborated with Corey Ford on the book for the far more successful Joe Cook show, *Hold Your Horses.* And in addition to his sorties into the theatrical field and his books he was at this time press agent for the Theatre Guild, a job that most people would have conceded to be full time in itself.

Yet his versatility had only begun to assert itself. In 1934 Lindsay and Crouse got together for the first time, on the book of *Anything Goes,* adapted by them from the story by Guy Bolton and P. G. Wodehouse. A dream was responsible. A worried producer confided to Neysa McMein, the illustrator (see sketch this issue), that he couldn't think of a collaborator for Lindsay. Miss McMein admitted that she couldn't, either, but that night she dreamed of one, and it was Russel Crouse. Within a few days the deal was on. Percy Hammond called it "a big show." It proved a loosely plotted but properly pointed and irreverent vehicle for such talents as Ethel Merman (see sketch this issue), Victor Moore and William Gaxton, and was the first of a series of Lindsay-Crouse box-office bonanzas. In 1936 they completed *Red, Hot and Blue*; this was followed by the Ed Wynn show, *Hooray for What,* on which they teamed up with E. Y. Harburg.

In 1937 Crouse finally resigned from his press agent's job with the Guild. It was during the run of *Idiot's Delight,* and the company drew up a testimonial to the effect that, having won his spurs, Crouse was "now hereby entitled to full program credit as a qualified A No. 1 playwright, and, moreover, we, the undersigned members of the *Idiot's Delight* company, do hereby swear our love and gratitude to him to have and to hold from this day forth and forevermore, most especially because we know he's the dearest friend we've had—flood or no flood." The flood referred to occurred in Pittsburgh when the company played there in March 1937. At the time there was just the shade of a suspicion that the whole thing had been engineered by Crouse in the interests of publicity.

Then, after more dinners and farewell parties than had ever been tendered any one individual on Broadway, Crouse set out for one of his annual visits to Hollywood—his first had been in 1934. In 1937 he began his work for Paramount by co-authoring the screen play *Mountain Music*; subsequently he collaborated on *The Big Broadcast of 1938*; *Artists and Models Abroad* (1938); and *The Great Victor Herbert* (1939). In 1940 he and Lindsay reaped their Broadway triumph: they were given the Drama League's Roi Cooper Megrue Prize of $500 for their play, *Life With Father,* and in the same year the Theatre Club, Incorporated, struck two medals to honor them.

Russel Crouse is agile, his bushy hair is thinning out toward the front, and he has dark eyes and a small mustache. Known to his friends as "Buck" because of his amateur buck-and-wing dancing, he is an ardent poker fan. Known also for his light touch in the usually blatant field of press-agentry, he is suspected of having had a hand in the following description of himself from an old playbill: "He has curly hair, likes huckleberry pie, makes his own clothes, and says that when he grows up he wants to be a streetcar conductor."

Crouse, who belongs to the Dutch Treat Club and is active in the Dramatists' Guild of the Authors' League, is married to Alison Smith, onetime dramatic editor of the old New York *World.* Their marriage took place on June 17, 1923. They have a house in New York and four cats, three of them moderately Persian and the fourth altogether so. On the walls are many more cats, in chromos, lithographs, prints and photographs. Usually the collaborators work in the less feline study of Lindsay's house on West 11th Street, however, Crouse sitting at the typewriter and Lindsay pacing the floor. They used to write at the latter's farm in Hunterdon County, but Crouse claimed he could not stand the noise the birds made.

Up to the time of *Arsenic and Old Lace* Lindsay had seldom attended his own openings (with the exception of *Life With Father,* in which he plays the lead), and neither member of the team had pretended to possess any backstage talent. In 1941, with two hits on their hands, they are, as it were, resting on their laurels—Lindsay busy as an actor and Crouse making the rounds of the theatres with a greater sense of ease than he could have experienced in the days when he was doing three jobs at once. "We're just lying fallow," said Lindsay between shows, "and you can imagine what a difficult jumping-off-place we're in with two such terrific hits on our hands. It's a setup that's going to be awfully hard to improve upon, even if we get up the energy to try."

Who's Who in America

CROW, CARL (krō) Sept. 26, 1883- Author

Address: 969 Highland Ave, Pelham Manor, N. Y.

A "hard-headed and practical American businessman" who knows China better than most people know their own home state, for the past few years Carl Crow has been communicating what he knows to American audiences in a series of books marked by understanding and wit and a generous sympathy for the Chinese people. When *Four Hundred Million Customers* was published in 1937 in English, French, German, Swedish, Danish and Polish, it became an immediate best seller, and he has followed that success with six other books, one of which, *Meet the South Americans* (1941), turns from the Orient to look at our neighbors to the South.

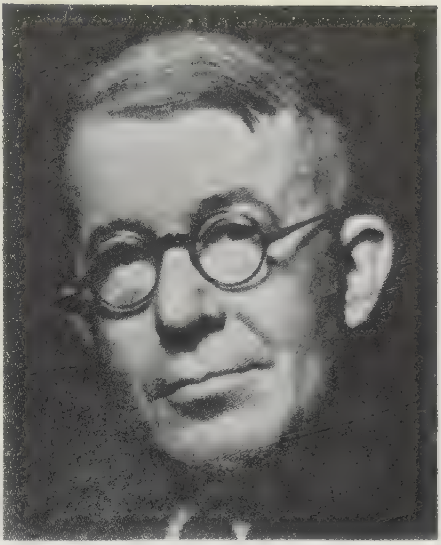
Born in Highland, Missouri on September 26, 1883, the son of George Washington and Elvira Jane (Sharrock) Crow, Herbert Carl Crow was the eldest of four children. His father was a country schoolteacher, and most of his ancestors, who were all living in America during Colonial days, had been pioneer schoolteachers or preachers. None ever made money, and his father was no exception.

Carl was 16 when his father died and he had to begin making a living for himself. For a while he served as a printer's apprentice; then as a journeyman printer; and at 19 he borrowed some money and founded a weekly newspaper. It was not very successful, but he sold it at a profit, and in 1906 decided to go to the University of Missouri, having previously studied at Carleton College in Farmington, Missouri for a year. He landed in Columbia with only $7 because the friend who was taking care of his savings had spent the money!

He remained at the University until 1907, however, for a time working as a printer at 15 cents an hour, later as reporter for the *Columbian Missourian,* a paper founded by the late Dean Walter Williams and then famous as America's "Model Country Weekly." While carrying full courses at the University he acted as local editor of this paper and also as correspondent for the Chicago *Tribune,* St. Louis *Post-Dispatch,* St. Louis *Republic* and Kansas City *Star.* Instead of completing his college course he quit to become the partner of Dean Williams in the publication of the *Missourian*; then, until 1911, he served on the editorial staff of the Fort Worth *Star-Telegram.*

In 1911 he was offered a post as associate city editor of the *China Press* in Shanghai, the first American daily in China. While there he compiled and wrote *Travelers' Handbook for China* (1912), which has been a steady seller ever since. After 18 months he returned to New York, and a book written en route, *America and the Philippines,* was published in 1914. It dealt with Japanese imperialism in the Far East, particularly in relation to the United States' promise to give the Philippines their independence some day. Mr. Crow then resumed his writing for such magazines as *World's Work, Collier's, Review of Reviews* and *Outlook.*

In 1913 Crow went to Tokyo as business manager and—for a few months—as acting editor of the *Japan Advertiser.* He also acted as Tokyo correspondent for the United Press, and was credited with scooping the world on Japan's famous "21 Demands on China."



CARL CROW

In 1914 he returned to New York once more, continued his magazine writing, saw the publication of *Japan and America: a Contrast* (1916), and then went on to San Francisco. He bought a small fruit ranch which he ran very profitably until America's entry into the First World War brought him back to China as Far Eastern representative of the Committee on Public Information (1916-18). Still in China after the Armistice, he founded and edited the Shanghai *Evening Post* (with which he is no longer connected), became the proprietor of an advertising agency in Shanghai (1919-37), published two small magazines about travel in China and directed an anti-Communist campaign financed by foreign businessmen in Shanghai.

In 1925 he married Helen Marie Hanniger. (She died November 23, 1941.) It was August 1937 when they returned to America, where Crow has since divided his time between freelance writing and his business as an advertising agent. He revisited China in 1938, however, and in the autumn of 1940 was in South America.

His first best seller, *Four Hundred Million Customers,* was largely a digest of letters written over a period of about 20 years in answer to inquiries from clients about the possibility of selling goods to the Chinese. These inquiries showed so much widespread ignorance and misinformation about the Chinese market that Crow thought it worthwhile writing a book which would discuss these problems in non-technical language but from the point of view of practical experience. Lin Yutang says: "There isn't a dull page in it. . . It trips lightly along on the surface of everyday business facts in the tenor of pleasant after-dinner shop talk. One never loses the sense of reality or of the living medium." Most critics were delighted by its humor, "as

CROW, CARL—*Continued*

often at the expense of the author and his clients as of the Chinese."

This book, for most readers Carl Crow's introduction to the American public, was followed in 1937 by *I Speak for the Chinese,* dealing with the war in China, and by *Master Kung; the Story of Confucius* (1938). In 1939 came *He Opened the Door of Japan,* also published in London as *Harris of Japan,* a life of Townsend Harris; and *The Chinese Are Like That,* published in London under the title *My Friends, the Chinese,* which described aspects of Chinese life little known here with the humor and informality which his readers had grown to expect. *Foreign Devils in the Flowery Kingdom* (1940) was described by one reviewer as a "rich and eventful story of the foreigner in China, from Marco Polo's discovery of macaroni to what Crow calls the end of 'the era of the foreign devils' in 1937." And *Meet the South Americans,* published in the fall of 1941, was written with the hope that "this book will help to arouse more interest in South America; will cause more books to be written and read; will cause more people to visit this long-neglected area which is destined to be the continent of the future."

Mr. Crow has known Chinese war lords and businessmen and bandits, men in the streets of the great harbor cities and men in the tiny villages of the interior (though he has apparently come into contact with few Chinese scholars). He has known them and liked them and been willing to learn from them, and he discusses them with a "peculiarly American philosophy that is reminiscent of the late Will Rogers at his best." He has always been firmly opposed to appeasing Japan—so much so that in 1938 one critic wondered (*I Speak for the Chinese*) "why Mr. Crow has nowhere reminded us that imperialism in China has not been exclusively a Japanese and German phenomenon . . . why the Chinese currency retorm of 1935 is described without reference to the American silver purchase policy which made it necessary—a course which would involve untoward reflection on the conduct of the United States—although Japan is justly pilloried for its attempt to sabotage that reform"; and regretted Mr. Crow's tacit advocacy of intervention when speaking of "the peace-at-any-price Americans who virtuously sidestep present problems for future generations to settle." Apparently most Americans have now come to agree with Mr. Crow, however. Since Japan joined the Axis Carl Crow has written several articles on her plans and the possibilities of their success.

Carl Crow's hobbies are gardening, raising chickens, collecting old books and exploring new places in China, in all of which Mrs. Crow was an enthusiastic collaborator.

CUNNINGHAM, SIR ANDREW BROWNE 1883- British commander in chief in the Mediterranean

Address: The Palace House, Bishop's Waltham, Hants, England

The outstanding British admiral in the Second World War is Sir Andrew Browne

Cunningham, who as commander in chief of the fleet in the Mediterranean scored two great successes and continues to aim for more. It was he who headed the fleet that crippled the Italians at Taranto in November 1940 and he who brought the Battle of the Ionian Sea to an apparently successful conclusion in March 1941. Later disasters—at Greece and at Crete—in which a tremendous amount of tonnage was lost, were blamed on lack of heavy equipment. It was he, too, who, after British attacks on Libya in the fall of 1941, made the Army job easier by his sudden swoops on Axis convoys bound for the African front.

The man who mopped up the Italians in the Eastern Mediterranean and is trying in 1941 to keep the Mediterranean clear is supposed to know this sea so well that his men used to insist that when Mussolini referred to "mare nostrum" (our sea) he really meant "mine and Cunningham's." Brusque and taciturn even in relaxation, while on duty Admiral Cunningham is "short, tight-mouthed, efficient as a gyrocompass and untiring as the Mediterranean sun." According to one report this expert seaman "has such a loud voice for commands that his underlings say that inter-ship signals in battle are just a waste of effort; and he is such an expert navigator that his crews say he could cut an egg in half with a battleship."

He has been sailing the seas since he was a young boy. The son of the late D. J. Cunningham, professor of anatomy at Dublin and Edinburgh, and Elizabeth Cumming (Browne) Cunningham, he was sent first to Edinburgh Academy and then to Stubbington House, Fareham. He left school to train on *H. M. S. Britannia,* and in 1898, at the age of 15, entered the Royal Navy. Cunningham's first active duty was on the South Africa station, and during the Boer War he was a midshipman on the cruiser *Doris*. He continued to serve in the Navy, mostly on small ships, and was rapidly promoted.

Before he was 30 Cunningham was in command of the 900-ton *Scorpion* and when England entered the First World War proceeded to establish a reputation for dash and bravery. With this ship he harried many enemy ships during the Gallipoli campaign; with it he whipped into the Sea of Marmora to sink a disabled enemy submarine. In return the Government in 1915 awarded him a D. S. O. and gave him command of the destroyer *Termagent* and a place in the famous Dover Patrol. This Patrol, which kept the channel clear for Britain and raided enemy harbors on the nearby Belgian coast, offered its members one of the most hazardous jobs in the Navy. Cunningham did his job well and in 1919, after the War ended, was made a captain and awarded a bar to his D. S. O. A year later he received a second bar.

His assignments from then on were mostly in the Mediterranean, mostly aboard destroyers. By 1932 he had become a Naval A. D. C. to the King and the next year he was made a rear admiral and given command of the destroyer flotillas of the Mediterranean fleet. In 1937 he was promoted again, this time to vice-admiral. His command was shifted to the Battle-Cruiser Squadron and broadened to include the position of second in command of the whole Mediterranean fleet.

SIR ANDREW BROWNE CUNNINGHAM

Then in 1938 came Cunningham's first period of duty ashore, as Lord Commissioner of the Admiralty and Deputy Chief of the Naval Staff. This assignment lasted only a year—Admiral Cunningham, always a foe of red tape, makes no secret of his dislike of work ashore. Made a knight (K. C. B.) in 1939, he left the Admiralty in that year, promoted to the position of commander in chief of the Mediterranean. This was just in time for the Second World War, and his flagship, the reconditioned *Warspite,* was soon smashing through heavy German fire to storm Narvik Fjord. From Narvik it sailed to the Mediterranean.

At the same time that Admiral Sir Andrew Browne Cunningham (referred to as "A. B. C.") was chalking up his initial successes in the Second World War on the sea, his younger brother, Lieutenant General Alan Gordon Cunningham, was doing important work in East Africa. It was he who commanded the "spectacular" British assault which in March 1941 resulted in the capture of Magadiscio, the capital of Italian Somaliland, and he was at the head of the British advance into Libya in November 1941. Later he was relieved of his command because of ill health. The friendly rivalry between the army and navy branches of the Cunningham family is carried on into their life on leave. Andrew Browne and Alan Gordon vie in growing the best flowers on their Hampshire estate, in catching the biggest fish, in telling the tallest tales, in extolling the virtues of their dogs (Andrew's is a Scotty; Alan's an Airedale). Sir Andrew's

CUNNINGHAM, SIR ANDREW—*Cont.*

hope, once the fighting is over, is to retire to this estate, to his wife, Nona Christine (Byatt) Cunningham, whom he married in 1929, and to gardening competitions with his brother.

CURRIE, LAUCHLIN (BERNARD) Oct. 8, 1902- Administrative assistant to President Roosevelt

Address: b. The White House, Washington, D. C.; h. 3132 P St, N. W., Washington, D. C.

Lauchlin Currie is one of President Roosevelt's six administrative assistants, probably the most anonymous of these men who are chosen, according to the President, because of their "passion for anonymity." "Polite, diplomatic and unassuming," it is his job to keep "ideas flowing smoothly back and forth between Roosevelt and Administration officials, big and little."

In the beginning of 1941 these duties were extended, and much of his anonymity dispensed with, when Lauchlin Currie was sent to China on a special mission, similar to Harry Hopkins' (see sketch this issue) mission to England. He returned in March of the same year to make his report. Although it has not been made public, most commentators agree that Currie, while in the East, studied China's economic structure in general and its special problems of currency and transportation in order to determine the best way for the United States to help the Chungking Government. This interpretation of his mission was given weight by Currie's own remarks while there. After conferring with Chinese leaders, he called China an "outpost of the world's present struggle for democracy" and talked of his country's responsibility to aid it.

Time (April 14, 1941) states that back of the reforms of the Kuomintang in April, "letter and spirit, one of the strongest influences was the United States, represented by the bespectacled face of Lauchlin Currie." It also states that Currie helped clear up the Communist problem by suggesting that Chiang Kai-shek's Government "raise needed revenue and undercut Communist influence by taxing the landlords while feeding and pleasing the peasants."

This short, Scotch, graying economist, sometimes called the No. 1 United States disciple of John Maynard Keynes (see sketch this issue), has been working for the United States Government since 1934. He was born in West Dublin, Nova Scotia, the son of Lauchlin and Alice (Eisenhauer) Currie, and was educated at the London School of Economics, which awarded him a B. S. degree in 1925. He immediately came to the United States (he was naturalized in 1934) and settled down at Harvard. In 1927, the year he was married to Dorothy York Bacon (they have two sons), he became an instructor at the University and for seven years taught Harvard boys "that the purpose of business is profit." At the same time he was working for his Ph. D., which Harvard gave him in 1931, and acting as professor of international economics (in 1933 and 1934) at the Fletcher Graduate School of Law and Diplomacy in West Medford, Massachusetts. He was busy outside the academic world as consultant to the Kendall Company of Boston, producer of cotton products.

Currie's reputation spread far beyond Boston. His classes were well known; his articles on monetary policy, credit, loans, income were widely read; his book, *The Supply and Control of Money in the United States* (1934) became a standard work on the subject. It was not an unexpected move when Secretary of the Treasury Morgenthau persuaded him to come to Washington in 1934 as senior analyst. His appointment later in the same year to the position of assistant director of research and statistics for the Federal Reserve Board was even less unexpected.

In this position Currie won enthusiastic recognition inside "political brain-picking circles," but his highly technical duties were not such as to make him known to Washington and the public at large. It was in 1938 that he began to give evidences of his growing importance. In that year he put forward a plan to solve railroad troubles by a lend-lease procedure by which the roads would get equip-

LAUCHLIN CURRIE

ment in much the same way that Britain gets war goods under the Lend-Lease Bill. In that year, too, he wrote an "influential memo" on the causes of the recession, in which, among other things, he discussed social security taxes and pointed out that compensatory Federal spending to stimulate heavy industry might be more flexible if concentrated "in large part outside the regular budget."

A year later, in May 1939, the nation at large began to take notice of him when he gave his testimony, heavily authenticated by charts, before the Temporary National Economic Committee. In this testimony he showed that investment still follows production, not the editorial page; that since 1932 State and local governments have been piling up savings and that the net Federal investment has to be at least $1,000,000,000 to provide equivalent purchasing power. Then, in July 1939, he was made Roosevelt's personal economic adviser and administrative assistant.

In Washington, Currie is known as the man who had never in his life been in an airplane until his recent flight to China, as "an inflexible unenthusiast, and as the man who dictated his abstruse economic drafts while lying on a sofa, preferably with his eyes closed."

Who's Who in America

CURRY, JOHN STEUART Nov. 14, 1897- Artist

Address: b. University of Wisconsin, Madison, Wis; h. 432 Lorch St, Madison, Wis.

"The theme I have chosen," John Steuart Curry said when discussing his sketches for the murals at the Kansas Capitol, "is the struggle of man with nature. This struggle has been a determining factor in my art expression." Along with Grant Wood and Thomas Hart Benton, Curry is a painter of the Midwest, "his work as American as a Kansas wheat field." In it are recorded the tremendous sweep of thunderstorms over the prairie, the cataclysms of flood and cyclone, the expanse of fields ripe with grain.

Often Curry's conception is big—in *The Line Storm,* a presentation of destructive forces "done from the memory of many such storms before which we fled"; in *Mississippi,* a strong study of natural forces on a rampage; in *Kansas Wheat Ranch,* a painting "heavy with a feeling of the tremendous acreage of the desert of wheat." Often it is vigorous and robust—in animal studies like *Hogs Fighting* or *Hen and Hawk.* There are times, too, when it is precise and even delicate, as in *Osage Orange* or *Kansas Cornfield.* But no matter what the conception, no matter what the subject, Curry's work is painted with "veracious intensity." It is real, free from symbols, romanticism, propaganda, irony. "I am not the painter for people who want pretty pictures," Curry says.

Most critics—with the possible exception of Ralph Pearson, who feels that Curry's work lacks "visual music," that with all its virtues it is still illustration—agree more or less with Grant Wood that "when Curry is right he is the most moving painter alive," and that when he is not right he is completely undistinguished. His work is uneven, "ranging from the most majestic landscapes in contemporary art to commissioned portraits of surprising mediocrity." In actual technique there are, according to Royal Cortissoz, "roughnesses, moments when the drawing is a trifle too casual," and yet these "cannot counterbalance the essential directness and force of what he does."

This painter of the Midwest was born in Kansas, brought up there and first painted there. His birthplace was Dunavant, a tiny town that no longer exists, and his heritage was a farming one. His father, Smith Curry, lived and worked on a farm for most of his life, as had his father and grandfather before him. But unlike many other farmers Smith Curry managed to travel around a bit, and when he married Margaret Steuart in 1895 he took her to Scotland for a wedding trip.

John was the first-born of five children. "I was raised," he recalls, "on hard work and the shorter catechism. . . We were up at four o'clock the year round, feeding the steers, planting and plowing corn, cutting hay and wheat; and in the school months doing half a day's work before we rode to town on horseback to our lessons. But we didn't mind. It

Peter A. Juley & Son

JOHN STEUART CURRY

was the only life we knew—and I had a good constitution." Young John did more than farm work. He had begun to draw, his mother says, "when he wore skirts and curls." He "was always at it. He drew the things he saw on the farm and the old Northwestern express that roared by at dusk. And one winter, after the corn had been laid by, we went to Arizona, where John's pictures of cowboys, bucking bronchos and long horned cattle were much prized by the pupils of the country school."

At the county high school Curry, with his powerful shoulders and firm build, was an outstanding athlete, a mediocre student and a devoted artist. He left there in 1916 to study at the Kansas City Art Institute, fortified by money earned working as a section hand on the railroad, a suit of city clothes and art knowledge gained from studying reproductions of the Old Masters which his mother had gathered on her wedding trip. He stayed in Kansas City only a month and then moved on to the Chicago Art Institute, where he studied for two years, earning his way as a bus boy in a cafeteria. From Chicago he went into the Army as a private during the War and then in 1919 entered Geneva College in Pennsylvania as a special student of art. Here he distinguished himself rather more, it is reported, as a star halfback.

From Geneva College, Curry went to Tenafly, New Jersey to work in the studio of Harvey Dunn, an important magazine artist. Eventually he was offered a commission by the *Saturday Evening Post.* "I had no idea of the way in which illustrations were manufactured," he confesses. "The subject was a passenger train and I just went ahead and made a picture of the old Northwestern express." For this, his first published work, Curry received $25.

For the next five years or so Curry supported himself and his wife, Clara H. (Derrick) Curry, whom he married in 1923, by doing illustrations for the *Saturday Evening Post, St. Nicholas* and other magazines. "Never a shining light in the field of popular illustration," commissions began to drop off about 1925. Curry had been doing independent pictures during these years and when he saw he wasn't going to be able to get along with his magazine work he borrowed $1,000 and went to Paris with his wife in 1926. He stayed there a year, studying at the Russian Academy, and returned in 1927 a vastly improved draughtsman, uninfluenced by cubism or impressionism. Then came some time studying at the Art Students League in New York, where he not only painted but began, under the tutelage of Charles Locke, to make lithographs, a medium in which he has worked on and off ever since. In fact, it has been said that "the precision of his line, his concentration on design, his economy of means are better realized in these graphic works than in his paintings."

But lithographs were only a side line then to Curry. In 1928 he borrowed money from his brother to buy a small house near Westport, Connecticut and retired there, determined that he would paint something good. On his first trial he created *Baptism in Kansas,* which was "instantly acclaimed as the work of a new master of American genre" and bought by Gertrude Whitney (see sketch this issue) for her museum. She also subsidized him for the next two years, years in which he produced important work.

By 1931 Curry was holding his first Kansas exhibition, sponsored by William Allen White, and creating a furor in his home state. They called his *Baptism in Kansas* "drab," his *Hogs Killing Rattlesnake* "unnecessary," his *Tornado* "uncivic." But the East was more impressed. *Tornado* won second prize in the Carnegie International Exhibition of 1933; *Spring Shower* was acquired by the Metropolitan Museum; and other works like *The Gospel Train* and *the Return of Private Davis* won critical acclaim. Museums all over began to buy his work and by 1935 even the Kansas State College had acquired a Curry. Curry shrugged this purchase off as he had shrugged off the reception to his 1931 exhibition. "Why should Kansas want any of my work?" he asked. "It has Kansas."

Before this, however, Curry had forsaken scenes of his home state to paint circus pictures, "the finest thus far done in America," according to one critic. In 1932 he had accompanied the Ringling Brothers, Barnum and Bailey Circus on its New England tour and produced from it paintings of acrobats and animals and one of his most effective canvases, *The Flying Codonas.* He had also married Kathleen Muriel Gould of London in 1934 after the death of his first wife in 1932, decorated the auditorium of the Westport High School, and become a teacher at the Art Students League.

By 1935 Curry's position was established, and in that year the Federal Government ordered two large murals for the Department of Justice Building in Washington. It took Curry two years to complete these studies of *Western Migration,* portrayals of the pioneers on a grand scale. Then in 1936 the University of Wisconsin, "undertaking to give added impetus to regional art as a force for rural as well as urban culture in this Middle West area," appointed him "artist in residence" and gave him a four-year contract at $4,000 a year. In the fall of 1937 Curry moved to Wisconsin, promptly painted "Professor Curry" on his garbage can and proceeded to invest the college with a feeling for art. He has done paintings of current agricultural topics, given informal instruction to the students, lectured on art. With his "face-cracking, cherubic grin and piping voice," he is popular among the students. Curry has continued with his own work, too, doing oils of football players, of farm stock and of rural scenes that are considered by some critics to be somewhat weaker than his Kansas paintings.

He has also continued to paint murals. Shortly after he came to Wisconsin, Curry was commissioned by the State of Kansas to paint murals for the Capitol which would depict Kansas "in a sane and sensible manner." He began work on these in 1938, and in 1939 also did murals for the General Land Office in the Interior Building in Washington—murals called *Oklahoma Land Rush* and *The Homestead and the Building of the Barbed Wire Fences,* painted in the standard Curry colors of reds for dust and soil, gold for sunlight, green for fields of grain. In the summer of 1941 his Kansas murals, by that time partially completed, caused considerable controversy ("hideous things," one State legislator called them) because of his depiction of John Brown. But harsh words didn't keep the legislature from voting him money enough to finish them. In these murals, as in all the work he is doing now and plans to do, Curry has demonstrated that whether he is painting of the past or of the present, direct from the scene or from imagination or memory, "it is everyday human material that lends my brush its fill of inspiration."

CURTIN, JOHN (kûr'tĭn) Jan. 8, 1885- Prime Minister of Australia

Address: b. Parliament House, Canberra, Australian Capitol Territory; h. 24 Jarrad St, Cottesloe, Western Australia

Australian News & Information Bureau
JOHN CURTIN

Bulletin: On October 2, 1941 John Curtin accepted a commission to form a new Australian Government and four days later organized his Cabinet, with himself as Minister for Defense Coordination as well as Prime Minister. It was the first Labor Government in Australia since 1932. The Cabinet of Arthur W. Fadden, which followed that of Robert G. Menzies (see sketch this issue) after the latter's resignation on August 28, had fallen after having been defeated on a motion regarded as a vote of confidence, 36 to 33.

From July 1941 issue:

John Curtin, leader of Australia's Federal Parliamentary Opposition since October 1935, has repeatedly refused to form a National Government with Australia's two conservative parties, the United Australia and the United Country parties. Instead he has chosen to preserve Labor's political independence and to use his party's strong Parliamentary position (the War Government has a majority of only two votes) to get more social legislation.

Yet under his leadership both Parliamentary Labor and the Australian Council of Trades Unions have declared unqualified support in the War against the Axis, and Curtin himself has entered the War Advisory Council. When, after the Allied defeat in Greece, "much of the Australian press, a majority of Australians and almost all of the continent's vociferous Laborites wanted to know why the Anzacs had been sent into the hopeless Greek campaign in the first

CURTIN, JOHN—*Continued*

place," it was Curtin who answered them and answered the enemy propagandists who wrote of the apparent defection of Australia in headlines like "British Empire Crumbling to Pieces."

To his own countrymen he said that many of their statements were "mischievous and unwarranted." To the world at large he announced: "As leader of Australian Labor, I say to Germany and Japan: Australia and the workers of Australia unite in determination to give their all in the War. We are pledged to devote the nation's entire resources to this and bear willingly any burden imposed upon us to preserve our security and to demonstrate to the Empire and our Allies that we shall not be found wanting in this crucial struggle for human liberty."

John Curtin was born at Creswick, Victoria, in the Ballarat gold fields, the son of John and Katherine (Bourke) Curtin. After receiving his education at State schools, he quickly engaged in labor journalism. In 1911 he became secretary of the powerful Victorian Timber Workers' Union and joined the political theorists who grouped around the *Labor Call*, the State's leading Labor newspaper, published at Melbourne. In 1917 he moved to Perth, West Australia to edit the Westralian *Worker*, and he remained the guiding spirit of this paper until 1928. He had seen the Labor movement split on the issue of conscription in 1917 (he had been one of the leaders of the anti-conscription fight), and his aim now was to give Labor a theoretical structure that would survive similar issues. To this end he published a long series of pamphlets, the most important of which were *The Heritage* (1927), and a booklet, *Australia's Economic Crisis* (1931). And always he remained the articulate exponent of the Australian Labor Party's dual traditions of nationalism and theoretical socialism.

Curtin left the *Worker* to take his first full-time political position, as member of the House of Representatives. He had represented his country before that—in 1924, when he was a delegate to the League's International Labor Conference, and in 1927 and 1928, when he was a member of the Royal Commission on Family Allowances. He stayed in Parliament until 1931, and during that time was a member of the Joint Committee on Public Works (1929-39). From 1933 to 1935 he was State Advocate for Government of Western Australia to the Commonwealth Grants Commission; in 1934 he re-entered the House of Representatives. One year later Curtin became the leader of the Opposition, and in that position has maintained a certain detachment from the rough and ready politics of industrial labor which led many to accept him as the Labor Party's philosopher. Since 1940 he has been a member of the Australian War Council.

Mr. Curtin was married to Elsie Needham in 1917 and has one son and one daughter. Once an ardent cricket player and footballer, today his recreations, when he has time for any, are swimming and walking. He is a member of the Australian Workers Union and of the Australian Journalists Association.

CUSHING, TOM *See* Cushing, C. C. S.

CZETTEL, LADISLAS (chĕt'tĕl lä'dĭs-läs) Costume and fashion designer

Address: b. c/o Constance Hope Associates, Inc, 29 W. 57th St, New York City; h. 168 E. 63rd St, New York City

"I create subconsciously out of my soul," explains Ladislas Czettel, designer of costumes for the Metropolitan Opera House and a well known creator of modern gowns in the United States, when asked where he gets his ideas. But if it is costumes for the Metropolitan that he is designing, a great deal of study of the history of the period, the country, the people and the customs precedes the creation.

Mr. Czettel designed the 570 costumes used in Verdi's *The Masked Ball*, which opened the 1940 to 1941 Metropolitan Opera season. Since he had received the assignment only five weeks in advance he had to work day and night in order to complete the costumes in time. And before he could begin designing it was necessary for him to do some research, for every item in the production had to be entirely new. This was the first time *The Masked Ball*, which had not been done at the Metropolitan for twenty-four years, was being given in its original setting, the eighteenth century Swedish court of King Gustavus III, instead of in the usual Puritan Boston.

Before Mr. Czettel could begin on his assignment it was necessary for him to find out what was being worn in Sweden during the latter part of the eighteenth century. "The fashion of today," he has said, "becomes the costume of tomorrow." And so it was the fashion of the eighteenth century Swedish court and the history and customs of the people of that country that he had to study, in order to design the costumes for "tomorrow's" opera.

But he had some help. "In designing the costumes for *The Masked Ball,* I must confess," he said, "that I have enjoyed the assistance of a distinguished collaborator—no less a personage than the late Gustavus III of Sweden!" When Czettel went to the New York Public Library to do research on the period he found that the Swedish King had been a designer and had left original sketches of the dress of his day, both that of the court and of the peasants, and copies of these sketches were at the 42nd Street Library.

Mr. Czettel's work was not finished when he had completed his designs for the 570 costumes. He has to be on hand during the production of an opera to see that the costumes are all right and that the performers have make-up and hairdresses according to instruction. Every change of costume must have his approval before the actor goes on the stage. "Not until the last change has been made do I breathe freely," the designer has confided.

Born in Budapest, Hungary, Ladislas Czettel had had a successful career before coming to this country in 1936. When he was only three years old he began sketching. When he was five he designed a wedding dress for his grandfather's cook. By the time he was 12 he was designing clothes for his mother, and when he was 15 he did costumes for Sári Fedák, the second Mrs. Molnár, the great Hungarian operetta star. "I always wanted to be a designer," Mr. Czettel explains, "and I never had a 'second choice.'" As a little boy he dressed many dolls in all kinds of fantastic costumes. Today in the Vienna State Library there are other dolls, 20,000 of them, each about a foot high, which are dressed in exact replicas, accurate in every detail, of costumes and dresses that he has designed.

He studied first at the Academy of Art in Munich. Then at the age of 16 he went to Paris, where he became the only pupil of Leon Bakst, the famed designer for the Russian Ballet. Bakst introduced him to Poiret, who launched him on his career. For 12 years he was head designer of the Vienna State Opera, and during that time he created costumes for hundreds of glamorous divas. He designed also for the Moss-Empire Theatrical Corporation, the Gaumont-British Film Company and Max Reinhardt's Theatres in Berlin, Vienna, Salzburg. The first designs by him widely shown in the United States were in the film version of Bernard Shaw's *Pygmalion.*

In 1941 Mr. Czettel is designing for the Metropolitan Opera Company for the third season, and by February 1941 had done costumes for *The Daughter of the Regiment* as well as for *The Masked Ball.* In order to work in this country he had to join the stage designers' union, and to qualify for that had to pass an eight-hour examination. Prior to this season he did, among other costumes, those for *Falstaff, Thaïs, The Wedding of Figaro,* and costumes for Lotte Lehmann (see sketch this issue) in *Der Rosenkavalier,* Kerstin Thorborg in *Tannhäuser,* Grace Moore in *Faust,* Jan Kiepura in *Manon.* For the Allied Relief Ball of 1940 he designed costumes for Mrs. Edward Warburg, Mrs. Howard Dietz, Mrs. Irving Berlin, Mrs. George Kaufman and others. For the Beaux Arts Ball (1940) one of his creations was a dress for a five-and-ten-cent store salesgirl, at a cost of $7.28.

LADISLAS CZETTEL

But costume designing is only one of his activities. He is also an "ace-high designer of *haute couture,*" and has created clothes for many prominent women here and abroad, including Countess Esterhazy, Princess Elizabeth Bourbon, Lady Dorothy Meynell, Mrs. Herbert Lehman, Marlene Dietrich, Lady Chichester, Mrs. Wood Halifax and a number of others. Late in 1940 he designed a group of day and evening clothes for Henri Bendel's exclusive 57th Street specialty shop in New York, and he is now working on another collection for that shop. In addition he lectures on these two separate and distinct phases of designing at the New School for Social Research, where he had a one-man show. He holds the honorary degree of Doctor of Arts from the Berlin State Art Academy.

Though none of Mr. Czettel's 20,000 Viennese dolls has been shown in this country designs of both his costumes and his modern gowns have been exhibited at the Museum of Modern Art (New York City), he has shown sketches at the Museum of the City of New York and in two Scenic Artists shows, and the American Federation of Arts has exhibited his designs from coast to coast.

DACHÉ, LILLY (dä'shā') Hat designer
Address: b. 78 E. 56th St, New York City; h. Bedford Village, N. Y.

LILLY DACHÉ

As Lilly Daché puts it: "A hat that is well designed never goes out of fashion. . . I wear some of mine three and four years." Perhaps that accounts for the number of customers who are willing to pay $25 and more for an original Lilly Daché creation. This hard-working, quick-tempered Frenchwoman designs some 9,000 hats a year—hats that go into 47 department stores as well as into her own 56th Street shop. And if she has begun to think of millinery as art rather than as merely an unusually profitable business, she has some excuse: on April 29, 1941 she was one of the recipients of an American Design Award of $1,000 (sponsored by Lord & Taylor and inaugurated in 1937) for her creation of the half-hat, "which counteracted the hatless craze." At that time she was also praised for having originated the turban fashion of the last few years and for conspicuous bravery in adoption of new materials, even those which she has difficulty in pronouncing. (She introduced plastic vinylite in January, although she still calls hats "'ots.")

Lilly Daché has been displaying a flair for original hats ever since the ripe age of 10, when her mother ordered a traveling suit for her: black and white checked skirt, bright red jacket. Lilly promptly stopped in at a shop where men's bicycle caps were made and ordered a red one to go with the suit. It was an unheard-of idea in her native town of Beigles, France, and one that was never consummated because the incredulous shop owner went to Mme. Daché for confirmation. But to this day the visored cap is her idea of a smart and correct travel hat, and no collection of hers is ever launched that doesn't include one in some variation or another.

Her talents for design probably came from her mother, who had married a middling prosperous farmer of Beigles. "She was the most extravagant woman," says Lilly. "Very pretty and very proud of it, she loved clothes passionately and designed her own—rather startling ones, but lovely. She used to send to Paris for handwoven linens and all kinds of special materials for her clothes." Lilly would save the scraps and sew them into doll's dresses and hats. (She is left-handed, by the way.) There were trips to Paris, too, when two exceptionally good crop years swelled the coffers, for Mère Daché was never particularly intrigued with being merely the wife of a farmer.

Lilly hated school bitterly and played hooky so constantly that when she was 14 her parents refused to waste money on books for her any more. (Now she studies something all the time—at present she has three art lessons a week.) She wanted to be an actress, and would put on the usual backyard plays—hers always were tear-jerking tragedies about a woman whose husband deserted her. But she wanted most of all to be independent, and took the first opportunity to get herself apprenticed to an aunt in Bordeaux who was a milliner. Next she begged until the aunt arranged an apprenticeship for her at Réboux's in Paris, and was a midinette there for four years. Before coming to the United States she also worked briefly for another famous milliner whom Mme. Daché will not name because she was so cruel to her apprentices.

Lilly Daché arrived in New York on September 13, 1924 with $15 and the names of two stores—R. H. Macy and Henri Bendel. At Macy's she was promptly hired as a salesgirl in millinery. There she sold a lot of hats, but couldn't understand the intricacies of writing sales slips, and was finally fired after getting into an argument with a floorwalker over her mistakes. Next she worked for a hole-in-the-wall milliner at 77th Street and Broadway. She earned $25 a week, saved $15, and after 10 weeks bought the place for $100. She had no capital, no stock, no "collection," but she had her methods. When a woman came in for a hat and asked to see models, Miss Daché went into a Gallic rage and said: "But Madame! I wouldn't think of letting you wear a hat that someone else has. I weel design something special for you!" With the $2 deposit she rushed out and bought material and did acutally cut and fit that hat on the woman's head the next day. The first day she made $80. Soon 40 to 50 hats a day became an average turnout. Although she never displayed a hat in the window (she doesn't believe in it to this day), sometimes there would be such a crowd waiting that the police would come to see whether there was a fire.

In those days the smartest section of New York was around 82nd Street and Broadway. The Ansonia Hotel was the chic gathering place. Hattie Carnegie's was at 85th Street, Milgrim at 74th Street. Daché's 77th Street establishment having become far too small after six months, she moved to 82nd Street, too. But she was not there long. Convinced that her customers would follow her anywhere, after another six months she moved to an office building, the first milliner to do so. They did follow her—in such numbers that she later became the first milliner to have her own building.

The cornerstone of this "nine-story modern building with glass brick front, ultra luxurious mirrored interior" contains the first Daché hat sensation—a black cloche trimmed with black and white checkered ribbon, red cherries and pink cherry blossoms. It was made for Marion Davies, then a Follies beauty. Mère Daché also sent her daughter a "good luck" package to go in the cornerstone. It is bad luck to look inside, so Lilly doesn't know exactly what it contains, but imagines it holds "the necessities of life" dictated by French folklore—bread, salt and light (represented by a candle).

In the meanwhile, in 1932, Lilly Daché had married Jean Despres. Three years before they had been introduced by a mutual friend, who made a "blind date" for them, and since that day they have never missed a day lunching and dining together. It is a typically French marriage. "Unconsciously, he's my boss," is the way she expresses it. A typical day finds her waking up to a breakfast of *café au lait* and *croissants*. By 8:30 she is dictating to her secretary, looking at sales reports, supervising purchases from samples. Next she goes to the designing room and stock room, working in a little office with wholesale customers climbing over her, pinning hats on a disreputable looking stockingette head with painted eyes, no other features. At 12:30 her entire establishment closes for an hour so that she can lunch with her husband without being disturbed, and then it is back to the showroom, where she usually spends the afternoon with customers. Important clients—Marlene Dietrich, Carmen Miranda (see sketch this issue), Carole Lombard, Brenda Frazier, Joan Crawford, Sonja Henie and Mrs. Orson Munn—are closeted with Mme. Daché in a private design sanctum upholstered from floor to ceiling in changeable green faille like the inside of a Victorian jewel box.

In her workrooms Lilly Daché is an empress, very excitable and quick-tempered. She works harder than anybody in the place and expects the maximum effort from everyone there. She would come to work herself in a rush season even when ill, and has little patience with "self-pamperers." She is not opposed to organized labor, she says, although in March 1941 the United Hatters, Cap and Millinery Workers' Union (A F of L) called a strike in her establishment after negotiating unsuccessfully for wage increases of $5 weekly and a 35-hour week for manufacturing employees. Union leaders announced that this was a drive "to close the gap between the low wages paid to milliners who turn out hats for the wealthy and the relatively high wages of milliners producing styles for the masses," and that wages of Mme. Daché's workers were between $16 and $30, with an average of $22 for a 40-hour week. Lilly Daché's spokesmen retorted that the agents of the union did not represent the workers—besides, the company was paying the highest wages in the industry. And the *New Yorker* later found its favorite picket on the picket line outside Lilly Daché, Incorporated—pleading: "Please Do Not Patronize America's Foremost Milliner!"

Entirely apart from her business, Lilly Daché has the French worship of the soil and the French belief that you do not belong to a country until you own earth in it. With the first money she earned she bought a house in the country, at Bedford Village, New York. It is 125 years old and is surrounded by woods and brooks, with a three-acre lake. She has horses, and rides a great deal. She also plays some golf, but doesn't swim. She paints, and perhaps some day will let one of her paintings be seen. Her garden is her pride, particularly her delphiniums and roses. She is mad about clothes and not only collects hats but owns quantities of dresses, most of which hang unworn in her closets from one season to the next while she wears the same simple black every day. Sometimes she buys one that she has no intention of wearing, simply because it is a work of art. (She hopes to design dresses some day, too.) She used to be careless about her appearance, but has made herself into a fashion plate with conscious effort, and sometimes when she is wearing something particularly exciting will ask her husband to take her out. Then they "do the town"; otherwise they don't go out much. Her likes, she says, are rough textures, rich colors and long hot baths. She hates flattery, lobster and runover heels.

DARLAN, JEAN (LOUIS XAVIER FRANÇOIS) (dȧr-läɴ zhäɴ) Aug. 7, 1881- Vice-Premier of France; National Defense Minister in charge of the Ministries of War, Navy and Aviation; Minister of Foreign Affairs; Minister for Information Services

Address: Vichy, France

On February 9, 1941 Jean Darlan, "the Admiral of the Fleet," became a directing member of the French Cabinet. His double appointment by Marshal Pétain gave him even more power than Laval had under the Vichy Government, for he not only retained his post as Minister of Marine but also succeeded Flandin (see sketch this issue) as Foreign Minister and took Laval's old post as Vice-President of the Cabinet, charged with the coordination of all ministerial activities. Shortly afterward Darlan was named Pétain's successor, and on February 16, after the resignation of Marcel Peyrouton as Minister of the Interior, it was announced that he would also take over M. Peyrouton's post and head all departments connected with information, propaganda, radio and the cinema.

Thus came to power in France Jean Louis Xavier François Darlan, who in August 1941 became National Defense Minister in charge of the Ministries of War, Navy and Aviation under the Vichy regime—a position perhaps more important than Pétain's. Generally known in France by the last of his four given names, he was born at Nérac in the Department of Lot et Garonne on August 7, 1881, the son of Jean Baptiste and Marie Marguerite (Espagnac) Darlan. His father had been a French Minister of Justice and at one time Vice-Mayor of Nérac; his grandfather had been a sea captain and the owner of a dozen sailing ships; his great-grandfather had also been a sea captain, the commander of a French warship at Trafalgar. In this Gascon, seafaring, rather stiff-necked family François grew up, under the protection of Georges Leygues and President Fallières, both of whom were from his home district. It was October 1, 1899 when he himself entered the French Naval Academy after being graduated from the Lycée St. Louis in Paris; and it was 1902 when he entered the French Navy.

From 1902 to 1904 young Darlan took part in the Chinese campaign, in 1904 was promoted to ensign, and until the First World War divided his time between participation in campaigns in Western waters and attending schools for training naval pilots. He specialized in naval gunnery; after promotion to the rank of lieutenant in 1912 he himself became an instructor on the training-ship *Jeanne d'Arc*. There he distinguished himself for his emergency service when a fire broke out.

War came. Darlan was given command of a battery of naval guns on the Western front, took part in the battle of Verdun, was on the Balkan front for a time and was cited three times. Although much of this service had been on land, in July 1918 he was promoted to the captaincy of a warship (first grade), and after the War he commanded a flotilla on the Rhine. In 1920, after promotion to the captaincy of a frigate (second grade), he went to the Far East. For a year he commanded the *Altaïr* in China, won high praise from his superiors there and in 1922 returned to France to take over a school for naval pilots.

In 1926, after service as chief of staff of a naval division, Darlan was promoted to a senior grade captaincy and called by the Minister of Marine, Georges Leygues, to head his military cabinet. Two years later he left this post to command the *Jeanne d'Arc.* He attended the School of Advanced Naval Studies, passed out first with special mention, and in November 1929 was promoted to rear admiral. At 48 he was the youngest man in Europe to hold this rank. Darlan immediately returned to his post in the Ministry of Marine, however, and for five years didn't leave it except for brief commands. In 1930 he was cited by his Minister for "exceptional services" at the London Conference; on December 4, 1932 he was made vice-admiral and commander of the Légion d'Honneur.

It was October 4, 1934 when Admiral Darlan assumed command of the second (Atlantic) squadron. He conducted a cruise from the Azores to Dakar in the French West Indies, greatly distinguished himself in the maneuvres of 1935, and on December 31, 1935 was made grand officer of the Légion d'Honneur. In July 1936 he once more returned to the Ministry of Marine, this time as director of M. Gasnier-Duparc's military cabinet, and only two months later was appointed chief of the French Naval Staff. He did not take up his new duties until December 31, 1936, however.

According to the French journalist, Pertinax, Admiral Darlan's chief ambition during these years was to be named chief of staff of national defense, the same position held by General Keitel in Germany. And although on June 6, 1939 Admiral Darlan became commander in chief of the French Naval Forces, Pertinax says that he resented Gamelin's holding the powers he had coveted and did all he could to limit and weaken them. In turn, French advocates of a vigorous policy toward Germany resented Darlan's own appointment and denounced it as political, for during the period of appeasement there had been indications that his diplomatic weight had been thrown on the side of the Bonnets and the Lavals. His political sympathies were also thought to be royalist.

Admiral Darlan's words, however, had always been vigorous. In 1938, writing on the role of the fleet in national defense, he began with a quotation from Richelieu: "Without a fleet it is impossible either to wage war or to profit from peace." And after the long-expected war with Germany finally came in September 1939 there were no hints that he lacked confidence in the ultimate triumph of the Allies. His Christmas message in 1939 was: "We know we are invincible and that victory is assured." As for his navy, fourth among the great fleets of the world, Pertinax says "he pretended to think that everything was easy for it, that no enterprise was beyond the forces at his command, and that he could readily dispense with British assistance."

According to Pertinax, though, Darlan "flattered the English, but underneath was jealous of them and detested them." True or not, on June 16, 1940, after the French disaster, Darlan met the British Navy chiefs and promised them that the French fleet would disarm rather than fall into Axis hands. At another meeting he argued with Admiral Sir Dudley Pound, his good friend for many years, about the most practical method of preventing the Axis from seizing the French warships; and at the next meeting of the French Cabinet he is supposed to have pleaded that the French fleet must not be allowed to fight against the British—that it should be disarmed by the French.

French Information Center

JEAN DARLAN

Many observers believe that his resentment of the British actually dates from later events: the treatment of French soldiers and naval officers in Britain after the break with France and the British attacks on the French Navy at Dakar and Mers-el-Kebir; even more important, the opportunistic realization that to disagree with the men of Vichy would have been fatal to his career. In any case, after the removal of Pierre Laval from office it was Admiral Darlan, Minister of the Navy and the Merchant Marine under Pétain, who took his place as negotiator between France and Germany. After his Cabinet appointments many observers expected Darlan to follow Laval's policy of cooperation with Germany without meeting so much antagonism from the French people, since he did not have Laval's reputation for being pro-German. He soon showed the Germans that he could outdo even Laval, however, and especially when in May 1941 he threatened to defy the British blockade in order to feed France. So "cooperative" was his attitude, in fact, that in August he was rewarded with his new position as generalissimo of the French land, sea and air forces and the overseas colonies. As such he could give orders to Weygand in North Africa, and it is probably he who

DARLAN, JEAN—*Continued*

forced Weygand's resignation in November 1941.

Admiral Darlan is "small but husky, with a square, jutting chin." His profile has been described as Roman, although the pipe which is nearly always in his mouth doubtless spoils the classical effect a little. His friends say he is a man of simple tastes, always cheerful, always completely natural; Pertinax, more critical, complains that "he affected the rough language of a sea dog, which had the advantage of concealing his natural vulgarity." Ambition is clearly his dominant characteristic. Admiral Darlan was married in 1910 to Berthe Morgan, has one son, and possesses not only the Grand Cross of the French Légion d'Honneur, bestowed on him in 1937, but also the decoration of a British order of chivalry: he is, ironically enough, a Knight Grand Cross of the Royal Victorian Order.

Who's Who

DARRÉ, R(ICHARD) WALTHER (OSKAR) (dȧ-rā') July 14, 1895- German peasant leader and Reichsminister for Agriculture

Address: b. Berlin, W. 8, Wilhelmstrasse 72, Germany

R. WALTHER DARRÉ

In 1933, just a few months after he became virtual agricultural dictator of Germany, Walther Darré caused a monument to be erected at Weisbaden in his own honor, financed by "voluntary" donations of the peasantry. The monument was marked "Blood and Soil," and Darré himself made the dedicatory speech. Although even his own adherents and his superiors felt that the event showed him a little deficient in modesty, he has proved himself eminently successful in "selling" Hitler's racial theories to the German peasantry and in whipping into Hitler-approved shape agrarian sentiment in Germany.

An *Auslandsdeutscher* (German living abroad) like a number of Hitler's other advisers, Richard Walther Oskar Darré was born on July 14, 1895 in Buenos Aires. His father, Richard Oskar Darré, Huguenot in ancestry, was the head of an Argentine firm which imported German goods. His mother, Emilia Berta Eleonora Lagergren, was a Swede. Young Walther studied at the German School in Belgrano and the Evangelical Lutheran Normal School in Gödesburg. He was sent to England to study at King's College at Wimbeldon and then to Germany to take specialized courses in overseas methods of farming at the German Colonial School at Witzenhausen, later attending the universities at Halle and Giessen. After the interval of the First World War, when he served as a reserve officer, Darré returned to his agricultural studies. His entry into the Nazi movement, therefore, was not so much as a politician or soldier as it was as an agrarian expert.

Before his connection with the National Socialist Party, Darré had been a civil servant in the East Prussian Chamber of Agriculture and had held a position as manager of a model farm. He was fired by the Ministry of Agriculture because of "financial irregularities" in his books. He turned, therefore, to the Hitler group to afford him an opportunity to rise in his chosen field, and joined the Party in 1928.

During his activities as a civil servant in the agriculture ministry, Darré had studied farming conditions in far eastern Germany and Finland. On the basis of his research he evolved the theory that the rehabilitation of Germany could best be effected through an agricultural and racial revival. His motto became "Race and Agriculture" and he published several books expounding various aspects of his thesis.

At a meeting of Nazi Party leaders in Munich, 1930, Darré finally summarized his theories. Hitler was impressed, and after several further consultations during which the Führer was fascinated by Darré's plans for human breeding and purifying the Nordic stock, he was given the role of Peasant Leader, ordered to "tickle the peasants' racial pride" and "induce them to swallow the Nazi nostrums." It is said that Hitler's early meetings with Darré were among the rare occasions during which the German leader did the listening.

The farmers at first were not particularly concerned with Darré's agricultural theories nor with his anti-Semitism. It was his anti-capitalism, his repeated insistence on the necessity for according agriculture a greater role in the national economy, which won the peasantry. They were also flattered by his doctrine of the Nordic racial superiority of the German peasants, who were to form the new German aristocracy.

Darré's success was so marked that in 1933, when he received the office of Reichsminister for Agriculture, he became agricultural dictator of Germany. He arranged a price-fixing system for grain and originated the Hereditary Farms Act which prevents the peasant from selling or mortgaging his holdings, which must pass in entail to the owner's descendants.

Counted from the beginning among the more radical elements of the Party, Darré enjoys the personal favor of Hitler. As Minister of the Food Supply he has been responsible since the capitulation of France for the underfeeding of all Europe west of Russia. According to André Simone, Darré does not enjoy Goering's (see sketch this issue) good opinion. Goering calls him the "Minister of Malnutrition," and it is from Goering's circle that scandalous rumors emanate about Darré's personal activities in his race-breeding experiments.

Darré's theories have always been a little more radical than was expedient for practical purposes. His plans for purifying the race have centered about the idea of the *Hegehöfe* (human ranches) where young girls and men of the "highest race" would be placed to breed German thoroughbreds. Rumor has it that such ranches already exist in secluded spots of East Prussia, but there is no actual evidence of their establishment.

It is with the peasantry, Darré maintains, that racial purity must begin, and he has classified German women into four categories: those who are urged to marry and breed Nordics, those who may marry and breed if they wish, those who may marry but may not have children, and those who are forbidden either to marry or to have children. The peasant's ancestry is traced back at least to 1800, and Darré is supposed to have a "stud book," one of the largest card indexes in the world, with all racial blemishes recorded.

According to Darré, (*A New Nobility From Blood And Soil,* Munich, 1930), it was the ascendancy of Roman culture which brought about the rise of Christianity, capitalism and bolshevism, all basically Jewish products, as well as the "incredibly stupid doctrine of the equality of all men before God." His anti-Semitism is based largely on the Jewish dietary laws which exclude the pig. In *The Pig as Criterion of Nordic and Semite* (Munich, 1933) he wrote: "The Semites do not understand the pig, they do not accept the pig, they reject the pig, whereas this animal occupies the first place in the cult of the Nordic People." Darré is also supposed to advocate a kind of slavery in which people of inferior race will be the slaves of a German master folk.

Darré has been married twice. By his first wife, Alma Staadt, he had one daughter. He is married at present to Margaret Charlotte von Vietinghoff.

A Grand Commander in the Storm Troopers' organization, Reich leader of the National Socialist German Workers' Party, head of the Reich Agricultural Organization, and member of the Reich Hunting Board, Darré, obstinate and set in his theories, has a great deal of power, but he lacks the personal magnetism of Goering and Goebbels (see sketch this issue). A slight foreign accent is noticeable in his speech. He is tall, but not especially Nordic in appearance. The black uniform of the Élite Guards is his usual costume, and he is known to be an intimate friend of Gestapo Chief Heinrich Himmler (see sketch this issue).

DARWELL, JANE Film actress

Address: b. c/o 20th Century-Fox Film Corp, Beverly Hills, Calif.; h. 5450 Ethel Ave, Van Nuys, Calif.

"Plump, middle-aged, blue-eyed," reads a description of Jane Darwell, "she comes nearest to filling the place left vacant by the death of Marie Dressler." Jane Darwell herself denies this, for she considers Miss Dressler's place unique. And today, with an Academy "Oscar" for the best feminine supporting role of the year 1940—for her characterization of Ma Joad in *The Grapes of Wrath*—it is evident that Miss Darwell's talents need no qualitative standards of measurement.

20th Century-Fox gave Jane Darwell a screen test for the role of Ma Joad mainly out of politeness. It wasn't merely that she lacked the proportions of a gaunt Okie. It was, even more than that, the weight of her previous Hollywood experience. In 10 years of more than 65 characterizations, few had departed from a standardized sameness. They had begun to pall on the actress, since she herself, at least, had some idea of what she was capable. "I was so tired of the parts they gave me," she said. "Those mealy-mouthed women, how I hated them. I played so many of them—those genial small-town wives. I was getting awfully tired of them,

JANE DARWELL

and the studio didn't have anything else for me, so we were preparing regretfully to part."

Fifty-three actresses took screen tests for the role of Ma Joad. The one who took her test before Miss Darwell made such an impression on studio executives that they were about to leave the projection room—all in favor of signing her up—when Director John Ford (see sketch this issue) asked if they were not going to look at the Darwell test. They apologized and went back to their seats, watching the test in silence and in growing amazement. With her hair skinned back and a wan look on her face she had managed to effect a remarkable characterization. After the test had been run through it was agreed that the other actress had given a fine performance but that Jane Darwell *was* Ma Joad.

Jane Darwell was born in Palmyra, Missouri, close to half a century ago. Her given name was Patti Woodard and her father, W. R. Woodard, was a railroad tycoon of the 1880's, at one time president of the Louisville Southern Railroad. She spent her childhood in Chicago, St. Louis and Louisville, where her father had business interests, and at the family ranch near Iron Mountain, Missouri. On the ranch she indulged her liking for animals (she has 14 dogs and 17 cats on her estate outside Hollywood) and also practiced to fulfill a secret ambition—to become a bareback rider!

She was educated at Miss Loring's private school, Chicago, at a girls' school in Louisville, Kentucky, and at Dana Hall, Boston. At school her wish to be a trouper took a more dignified turn and she decided to be an actress. Her parents objected but were willing to compromise enough to let her study voice and dramatics in order to qualify for roles in light opera. Right out of finishing school, Miss Darwell found her way to the stage entrance of the old Chicago Opera House, where Bessie Barriscale and Howard Hickman, matinee idols of their time, were playing stock. After two years' apprenticeship with the company, Miss Darwell went to London and Paris, to study and to add to her experience by minor acting roles. Her father's death cut short her European stay.

Miss Darwell is a pioneer in films, for she was a member of the Lasky Film Company that made *Rose of the Rancho* in 1914. Other early films in which she appeared were *The Master Mind* and *Brewster's Millions.* Except for two seasons on Broadway and a summer in the Keith-Albee stock company at Providence, Rhode Island, she has remained on the West Coast. While on Broadway she had a role in Sidney Howard's first play, *Swords,* which opened in September 1921.

On the Coast she alternated between work on the legitimate stage and picture work. Unlike most veterans of silent films, she didn't have to learn how to use her voice in order to qualify for sound. She appeared in a series of plays at the Alcazar in San Francisco when Henry Duffy took it over in 1924. She also did repertoire in Henry Duffy's company in Portland, Seattle and other Coast cities. And in stock, as well as in pictures, she played character roles.

"Jane Darwell," we learn, "was never an ingenue who aged into character roles, a star who slipped back to supporting roles. She's been playing character parts from the very start, and playing them in preference to leads. . . For 25 years she has been plodding along in pictures, one of that little army of dependable character actors and actresses who supply the unspectacular background against which are silhouetted in bold relief the more richly rewarded performances of the stars. Their names seldom reach the headlines. . . A line among the screen credits, an occasional mention in a buried phrase in a review, are their only recognition."

Miss Darwell, who chose her stage name from a fictional character, has acted in numerous pictures, from *Rose of the Rancho* to *Gone With the Wind* and *The Grapes of Wrath.* In the early 1930's her acting added to such pictures as *Huckleberry Finn; Jennie Gerhardt; One Sunday Afternoon*; and *Design for Living.* After *The White Parade* (20th Century-Fox 1934), it became the usual thing for critics to point out the contribution of Miss Darwell to the films in which she appeared. Among the parts for which she has won praise are her roles in *McFadden's Flats* (Paramount 1935); *Captain January* (20th Century-Fox 1936); *Craig's Wife* (Columbia 1936); *Nancy Steel Is Missing* (20th Century-Fox 1937); *Jesse James* (20th Century-Fox 1939); *The Rains Came* (20th Century-Fox 1939) and *Gone With the Wind* (Selznick-MGM 1940).

From the moment Jane Darwell began to read John Steinbeck's novel, she wanted to play the character of Ma Joad. She liked it because there was so much to admire in Ma Joad. "She is such a fine strong character," the actress said, "able to endure anything. All these terrible things happen to her. She still manages to go on. . . Oh, it's a grand part."

Miss Darwell praised highly the work of Director John Ford, and described to an interviewer his working methods. After the preliminaries Ford would say: "Go ahead," leaving the rest to the players. "He never comes over and tells anyone he's been good or the scene is great. If it's all right he says: 'That's the way we'll take it.' But if he swears, then it's good. One day Henry Fonda and I made a particularly difficult scene and after one take John Ford stood back and looked at us and said: 'Well, I'll be—!' That was the nicest compliment I've ever had."

The nearest to comedy that she came in her role of Ma Joad, she recalled, was the scene "in which Henry Fonda insists I dance, and whirls me around and around until I'm dizzy." She likes comedy and feels that in many respects it demands more of an actress than straight parts do. But her Ma Joad was no conventional straight part. It had depth and humanity and will stand as one of the finest character portrayals out of Hollywood.

Jane Darwell is five feet six inches tall, her weight has been estimated at 165 pounds, and her dark brown hair is streaked with gray. She lives within easy commuting distance of the studios, with two girls to whom she is Aunt Pat. She calls them her nieces but actually they are her brother's grand-nieces. The estate she calls her ranch, though it is only a few acres. There she putters around in the garden, sees to her cats and dogs, and relaxes. She claims she never had much luck until she stopped dieting and got plump.

"Jane Darwell will tell you that she is no longer young," says a well-known movie critic, "and that she really is glad of it. She's at a comfortable age now. Over caviar and *escalopes de veau* and *mocha parfait,* she said happily that it was very pleasant to be able to eat just what one wanted to eat, to worry no longer about keeping a figure slim or falling in and out of love."

After more than a quarter of a century in films, she looks forward to years of acting. And Hollywood agrees that she deserves them, for, like Ma Joad, she has "kept a-comin'." No one who has seen the film is likely to forget her expression or the tone of her voice as she said, in the film: "Rich fellas come up an' they die. An' their kids ain't no good an' they die out. But we keep a-comin'. We're the people that live. Can't nobody wipe us out. Can't nobody lick us. We'll go on forever. We're the people."

DAVIS, BETTE (bĕt'ê) Apr. 5, 1908- Film actress

Address: b. c/o Warner Brothers Pictures, Inc, Burbank, Calif; h. Glendale, Calif.

BETTE DAVIS

Bette Davis has become famous in motion pictures by taking roles that would send most Hollywood beauties protesting to their agents. She has played spitfires and hard-boiled hussies, women with dark and jealously guarded secrets, women gallantly facing some dreadful doom. And she has played them with tremendous distinction. For the good of a part, beauty, sympathy, flattering angle shots can all go hang. "I'm no Pollyanna," she admits. "I love parts you can sink your teeth into."

"Tempestuous, intense, compact and case-hardened . . . her big eyes lit with a cold blue glitter" on the screen, with "as wide a dramatic range as any actress in the business," Bette Davis personally is "singularly bright and likable." She is the kind of person who likes to sleep late and lounge around her unpretentious Hollywood house in slacks, who likes to read and mix with people and buy herself uncompromisingly feminine lingerie; who likes horseback riding and swimming in the ocean.

Bette to movie-goers, Bess to her friends, she was born Ruth Elizabeth Davis in the city of Lowell, Massachusetts, and proceeded to grow up into the kind of small girl who at four snipped off her sister's curls, at six threw dolls out the window. Mostly she was brought up by her mother, Ruth Elizabeth (Favor) Davis, who was divorced from her father, Harlow Morrell Davis, when Bette was eight. "My life was shaped by my mother," she says. One of the things her mother did after the divorce was to send Bette and her sister Barbara to a 200-acre farm school in the Berkshires. Here, Bette confesses, she never had any desire to act. "We had school plays but the fact that I tried to run the productions, build the sets and design the costumes had no professional significance. I directed because I wanted to order the other children about." In fact, it wasn't until after she had entered Cushing Academy in Ashburnham, Massachusetts, after more schooling in New York City; East Orange, New Jersey; Newton, Massachusetts and elsewhere, that she began to think of acting.

It all happened one summer when Bette's mother was at Peterboro, New Hampshire making photographs of the Mariarden School of Dancing and the stock company there. She enrolled her daughter in the dancing school; Frank Conroy, the actor, came to know them and told her to let Bette act. "She has," he said, "something you can't buy and something you can't imitate. Even if she doesn't open her mouth she has the quality that draws the audience to her. I think that someday, if she works hard, she will be a fine actress." Inspired, Bette returned to Cushing to take part in all the school plays and to star in the senior play, in which Harmon Nelson, later her husband, also had a part.

In 1927, after Bette's graduation, Mrs. Davis decided she had to have real dramatic training and took her to see Eva Le Gallienne, whose school was famous. Miss Le Gallienne gave Bette the part of a Dutch woman of 70 to read and then asked her questions about her attitude toward the theatre. At the end of the interview she fixed the applicant with a frigid eye and said: "I can see that your attitude toward the theatre is not sincere enough to warrant taking you as a pupil. You are a frivolous little girl." Undaunted, Mrs. Davis took Bette to John Murray Anderson's dramatic school, informed him she would pay the tuition as she could and left her daughter there for study. Bette won a scholarship soon, but she never completed the course. She got a job.

The job consisted of a single line in a play called *Broadway,* which George Cukor was producing during his stock season in Rochester, New York. On her mother's advice, Bette also learned one of the important parts and later acted it. This acting experience was followed by a summer at the Cape Playhouse in Dennis, Massachusetts, where she thought she had been offered a position and found, after she got there, that she hadn't. After working as an usher most of the season, she finally got one part. The next two summers she returned there, but not as an usher.

Back from the first summer, though, things looked dark, and there was a long, fruitless period of searching for a part until George Cukor took her on again in Rochester as ingénue. She finally hit Broadway's fringe in *The Earth Between,* given at the Provincetown Playhouse in Greenwich Village, New York, and even got a critical comment from Brooks Atkinson. He said she was "an interesting creature who plays in a soft unassertive style." Her next appearance, held up by an attack of the measles, was with Blanche Yurka on the road in *The Wild Duck*. Her next, after a summer on Cape Cod, was in *Broken Dishes,* which opened in November 1929, ran for 178 performances in New York and more on the road.

With this play, Bette Davis says, "at last I was accepted as a bona fide actress." She was even asked by Samuel Goldwyn to make a screen test. When she looked at the results, she remembers, she "ran from the projection room screaming"; when Goldwyn saw them he merely asked: "Who wasted my time with that one?" Nevertheless she was given another test, this time by Universal, after her appearance with Richard Bennett in *The Solid South.* And this time a contract resulted. In December 1930 Bette and her mother left for Hollywood.

That first contract was for a year, but it stated that at the end of three, six and nine months, the studio could change its mind. After the first three, in which Bette did nothing and took many not so favorable tests, it looked as though the studio would do just that. But Bette was kept on and given a part in *Bad Sister.* Nobody paid much attention to her, and she made up for the part exactly as she would have for the stage. "As a result she looked not only like a wallflower [she was the good sister] but like something that had been set out on the front porch for the Salvation Army." It was that picture, Bette insists "that gave me a horror of nobility. Ever since I have fought against portraying saccharine characters."

Although she felt she had been terrible in this film, her option was renewed again and she was given a part in *Seed.* But Universal felt they had made a mistake and proceeded to loan her out to other studios until the year was up—to Columbia for *Menace,* a "dilly" of a picture—"every time a door opened, out tumbled Davis"; to another studio for *Hell's House;* to RKO for *Way Back Home,* the best film of the lot. Then her option was dropped with comments like: "No more sex appeal than a stringbean" or "Junior" Laemmle's: "I can't imagine any guy giving her a tumble." Bette Davis got ready to leave Hollywood as a failure.

Instead, she played opposite George Arliss in *The Man Who Played God,* and when the picture was finished found herself with a long-term contract with Warner Brothers. Her light brown hair rinsed to an ash blond, for a while she tried to justify the studio's idea that she was "a schoolgirl Constance Bennett"—in *The Rich Are Always With Us,* with Ruth Chatterton and George Brent, for instance. And in 1932 she married Harmon Nelson, by that time a bandleader, later a Hollywood agent. In December 1938 they were divorced.

Bette Davis' next film after her marriage was *Cabin in the Cotton,* with Richard Barthelmess. It was the first time she had a chance to develop what *Time* calls "her stripe of cinemeanness," but it was followed by *20,000 Years in Sing Sing* and four "impossible" pictures. The first of her prolonged and colorful feuds with Warner Brothers soon opened. She said she was an actress; the studio said she was an upstart they had lifted to prominence who thought herself the modern Duse. It wasn't until 1934 that a few people began to think that maybe she really was what she thought herself. It began with a picture called *Fog Over Frisco* (First National), in which she played a psychopathic case and "gave the first indication of the talent which was later to be given full rein"; it was followed by *Of Human Bondage* (RKO). Bette had worked and fought to get the role of Mildred in that picture. She got it and with it was established as a first-rate actress. As one critic put it: "In the book Mildred's skin was supposed to have a greenish cast. Well, this girl *looked* green!" It was expected that she would receive an Academy Award for this performance, but it wasn't until 1936 that she received her first one, for her performance in *Dangerous* (1935).

But *Dangerous* was preceded and followed by a series of "unbelievably bad films," and Bette Davis decided she had had enough. With her husband she went to London to act with an English company, in violation of her contract. Warners slapped down an injunction, and a battle royal followed. The press said it was over her "inadequate" $3,000-a-week salary; she said the fight had little to do with money (and besides she was making only $1,700 a week) but was centered on whether she could make a limited number of pictures a year, have vacations, be given suitable stories. She lost, after spending $18,000, and returned in December 1936 "to serve five years in the Warner jail." Later she admitted that Warners had treated her decently—waiving a judgment for the court costs, increasing her salary—and that the atmosphere had been cleared. Since then, however, she has been suspended from salary several times for refusing to do pictures and has gone on a couple of "one-woman strikes." She herself doesn't hesitate to admit that she's probably "a very disagreeable person" and that her mother calls her "willful." And critics admit that among their fellowship there are some who feel that not only has her screen work developed her as an actress, but also brought out a "shrewish" streak. Personally, they hasten to add, she's a pleasant, forthright young woman.

After her return from London her parts were better in *Marked Woman, Kid Galahad, That Certain Woman, It's Love I'm After.* She was the proud Southern belle in *Jezebel,*

DAVIS, BETTE—*Continued*

able "by force of personal intensity and able acting" to give "her emotional crises a convincing importance"; able to win for this portrayal a second Academy Award in 1938. But even a good part like this couldn't compensate for some of the stories Warners offered her, and a suspension followed her refusal to accept assignments. When she returned to the studio it was in *The Sisters,* and this film was followed by *Dark Victory,* which Bette feels is "one of the finest films I have made."

Juarez, The Old Maid ("I cared little for it," she says) and *Elizabeth and Essex,* which she hated, followed, and after this last film a state of nervous exhaustion came. Bette Davis, weighing less than 100 pounds, went off to "Butternut," her New Hampshire farm in which she has installed early American furniture and modern American plumbing. She returned rested enough to play the French governess of *All This and Heaven, Too* (1940), and then to return to modernity in *The Letter* and *The Great Lie,* the latter a "weak story", according to the critics, in which she was, nevertheless, "believable and moving."

The première of *The Great Lie* was held on Bette's birthday in Littleton, New Hampshire, where she and her second husband, Arthur Farnsworth, were staying. Even the studio press agents had been taken by surprise by Bette's marriage on New Years' Eve 1941 to the former manager of Peckett's Inn at Sugar Hill, a White Mountain lodge where she had spent several vacations. Soon after her marriage she announced that the way to keep a marriage going was never to have breakfast with one's husband.

There was probably no relation between the two events, but shortly after her marriage Miss Davis decided that she ought to get away from heavy melodramatic roles occasionally. After a slight disagreement with her studio over the vehicle, Miss Davis was then seen in *The Bride Came C. O. D.,* in which with James Cagney she took the bit in her teeth and "flung her breathless way through a rough and tumble comedy with no gags barred." It was followed by another dramatic and shrewish role, that of Regina Giddens in Lillian Hellman's (see sketch this issue) *The Little Foxes,* "a magnificent performance," according to the unanimously enthusiastic critics. Her next assignment was that of Maggie Cutler, the secretary in *The Man Who Came to Dinner,* a much coveted role in one of Hollywood's most discussed films, followed by a role in the film of Ellen Glasgow's *In This Our Life.* In November 1941 she succeeded producer Walter Wanger as president of the Academy of Motion Picture Arts and Sciences, the first actress to be thus honored.

This actress, who is often called "the First Lady of Cinema," has achieved that pinnacle not only through innate talent, but through hard work. There are long and thorough rehearsals, long and thorough preparations for every role. Once she was considered for the role of a German girl who spoke with an accent. She hired a teacher and took German lessons, "because I didn't think I could speak with a German accent without first knowing how to speak German." Another time, when slated for the part of a professional horsewoman, she worked with a riding master two hours a day for several weeks. She didn't get either of these roles, but she wanted to be prepared. When she does get one she's ready for it. As her stand-in wrote in a *Good Housekeeping* article: "Bette's never late. I've never seen her muff a line. She's a quick study, learns easily but always memorizes her scenes the night before." And when she plays it, it's without all the tricky make-up so many other stars feel necessary. "It's impossible to give a decent performance with junk on you," she says.

Despite the fact that she is a leading screen figure, Bette Davis makes no bones about the fact that she doesn't like Hollywood and never did. "I shiver each time I see an auction of a star's personal belongings advertised in the papers. I don't want that to happen to me. I don't want to own anything here I can't pack in a trunk," she says. If and when she ever does pack that trunk she's going off to "run a small theatre in which youngsters with genuine ability would be given a chance." She confesses: "I see myself as an old lady running around the country seeking out unknowns and helping them equip themselves for a career. Probably I'll be a great nuisance. I'll find kids with talent and cuss my way past casting directors and make life miserable for producers until they give my protégés a chance."

DAVIS, WILLIAM H(AMMATT) Aug. 29, 1879- Chairman of the National Defense Mediation Board; lawyer

Address: b. 165 Broadway, New York City; h. 130 E. 74th St, New York City

The life and activities of William H. Davis, the wild-haired, mild-spoken chairman of the National Defense Mediation Board, present an apt illustration of his own favorite saying: "The democratic principle is rooted in persuasion." Mr. Davis' powers of persuasion have been heavily taxed ever since President Roosevelt created the Board "to afford means for voluntary arbitration and to try to negotiate agreements." Since it was conceded that its best chance of working depended mostly on the calibre of the men selected, the choice of Davis as vice-chairman of the Board was applauded by most critics—even by those who branded the Board as either a clumsy compromise or an unwarranted intrusion into a situation fraught with danger.

William Davis' record on the willing but overburdened Mediation Board justifies their confidence. To him belongs the credit for settling the Allis-Chalmers strike, which had lasted 75 days, held up $45,000,000 worth of defense contracts, produced explosions in Congress and resisted all efforts of the Labor Department, Sidney Hillman, William Knudsen and Secretary of the Navy Knox. His handling of this case, which has been called a model for mediators, earned him a unanimous resolution from both management and labor thanking him for his "able, patient and impartial work." Davis is often commended in this way. The stormy New York bus strike of March 1941 ended on a similar note with the union's assurance that, with his appointment as arbitrator, "busmen could rely on getting a fair break." The settlement of the General Motors strike on May 16, 1941, was another victory to his credit, as was the settling of the disagreement between John L. Lewis' United Mine Workers Association and the Southern coal operators the next month. When on June 21, 1941 President Roosevelt selected Davis to succeed Clarence A. Dykstra (see sketch this issue) as chairman of the Board, very few commentators expressed surprise.

Ranking among the top dozen of practicing labor experts in America, William Hammatt Davis has for years given the best part of his time to representing the public interest in labor relations. For that reason his calm voice coming through the clamor of indignation in Washington was listened to with respect as he testified before the House Military Affairs Committee on April 8, 1941. He called on the industry "to accept and recognize without reservation the spirit of the NLRA and collective bargaining," and on labor "to use their legal remedy and not the remedy of force." He warned that compulsory legislation would make "the working man a slave and there is no use in America's producing defense materials if it is a nation of slaves."

Wide World

WILLIAM H. DAVIS

The use of arbitration (voluntary, for "compulsory arbitration so distorts the processes of persuasion that they become practically useless") has long been Mr. Davis' favorite principle. In an article written in 1939 he suggested that the Government "may properly provide agencies for voluntary mediation and conciliation with established panels of trained arbitrators who may be brought into a dispute at the joint request of the contending parties." His presence on the Mediation Board is the logical conclusion of his ideas on the subject.

After watching Davis' activities, it is hard to believe that labor relations are merely his avocation. Actually William H. Davis is a brilliant patent attorney, the senior partner in the firm of Pennie, Davis, Marvin and Edmonds. He was born in Bangor, Maine, on August 29, 1879, the son of Owen Warren and Abigail (Gould) Davis. He was educated at the Corcoran Scientific School in Washington, D. C., and was graduated in 1901 from the Washington University Law School. He became an examiner in the United States Patent Office in 1902, but left this position in 1903 to join the law firm of Betts, Betts, Sheffield and Betts of New York City. In 1906 he married Grace Greenwood Colyer of Baltimore and changed over into the firm of Pennie and Goldsborough (now Pennie, Davis, Marvin and Edmonds), where he has remained since. In 1911 he joined the firm as a partner and since 1920 he has been its senior member.

When the First World War came, the War Department borrowed him to make use of his administrative abilities. In 1917 he was the head of the contract section of the Planning Division of Purchase, Storage and Traffic. In 1918 he became ordnance member and legal adviser to the War Department's Claims Board and in 1919 he handled appeals from the War Department Board of Contract Adjustments.

DAVIS, WILLIAM H.—*Continued*

His positions provided him with an opportunity for complex legal work, for handling a mass of administrative detail, and for furthering good public relations.

After the War, Davis was allowed to practice law in peace until with the New Deal there came new demands for his experience and tact. From 1933 to 1934 he was in Washington as administrator and national compliance director of the NRA until its demise; in 1936 he was appointed a member of the Federal Commission of Industrial Analysis. As a member of the three-man Emergency Board set up to enact the Railway Labor Act, he came in close contact with labor relations functioning under a prearranged structure of agreement. And out of his experience in that connection came his conviction that best relations are achieved under a body of agreement between management and labor with provisions for mediation made in advance—always providing that there is equality of strength between the two groups.

In 1937, too, he became the chairman of the New York State Mediation Board. In that capacity he has often sat at the bargaining table between labor and industry, has helped to settle many hundreds of threatened labor disputes and has prevented an even greater number. One of the important strikes later settled through his mediation was the food strike that tied up 22 warehouses in 1939.

In 1938 he was appointed to the President's Committee of Industrial Relations, a study group of nine men representing business, industry, labor, the general public and the law, who were sent abroad to investigate industrial labor conditions in Great Britain and Sweden. The report the group submitted to the Secretary of Labor upon their return included a valuable body of material upon which the Administration intended to base its wage and labor policies. It also provided the basis for a survey of labor relations in the United States which was started by the labor committee of the Twentieth Century Fund. Mr. Davis was the chairman of that committee and was often invited to air the opinions he had formed as a result of his trip. On several occasions he pointed out that legislation like the Wagner Act is unnecessary in either Great Britain or Sweden, which have developed a mature method of establishing workable industrial conditions.

Davis was for a period in 1939 a member of the New York City Housing Authority. Then in December 1940, he found himself too involved in activities and submitted his resignation from the State Mediation Board because of the pressure of his private law practice. But the year 1941 found him back in harness again, giving the benefit of his experience and tact to the Government.

A short, sloppily dressed man with a wild mop of sandy hair, William H. Davis looks something like a kindly but determined bulldog. He is pleasantly, reassuringly homely. He has a son, and two married daughters. His outstanding characteristics are his capacity for calm in the midst of turbulent situations and his all-pervading, obstinate optimism. He doggedly believes that with honest good will and willingness to cooperate, any dispute can be settled. After a session with him the harassed disputants begin to believe it, too. It is for this reason that his services as a mediator have been so widely sought throughout his career.

Then, too, he has a tremendous capacity for work: the day after the exhausting week end during which the Allis-Chalmers strike was settled he appeared before the United States Supreme Court to argue a patent-infringement case. He has apparently been given all the administrative work of the board: at least he has taken over the task of appointing panels to arbitrate the strikes that have been certified to the National Mediation Board by Secretary Perkins. He played a leading role in the Air Associates and "captive mines" disputes, and surprised many CIO members by voting against the union shop in the latter. CIO representatives resigned from the Board in protest, but most union leaders still retained enough faith in his fair-mindedness to approve his chairmanship of the conference of industry and labor which met in December 1941 to draft a policy for war-time labor relations.

DAVIS, WILLIAM RHODES Feb. 10, 1889—Aug. 1, 1941 Late oil operator

Bulletin: On August 1, 1941 William Rhodes Davis died of a heart attack in Houston, Texas.

From March 1941 issue:

William Rhodes Davis is the oil operator whom Verne Marshall (see sketch this issue) named on December 30, 1940 as having offered to underwrite his No Foreign War Committee. According to Mr. Marshall, too, Mr. Davis was the man who brought a German "agenda" for peace from Berlin to the United States State Department in the fall of 1939. And according to many newspaper sources, Mr. Davis has not only sold Mexican oil to Germany and Italy but has been associated with Dr. Hertslet, Hitler's ace war economist. Mr. Davis has not been enjoying his recent publicity, and on January 5, 1941 gave a press conference in which he made public a letter to Senator Wheeler asking if he could appear before a Senate committee to explain his activities and refute the charges against him.

At the press conference Mr. Davis swiftly denied that he was the financial backer of the No Foreign War Committee, although he said that he was in sympathy with the aims of all organizations which held ideas of world tranquillity similar to his own. He also asserted that he had not been in Germany since September 1939, shortly after war broke out, and that since that time no oil had been shipped to either Germany or Italy, "only a few cargoes" before; that he was "just an oil operator," with no plan of his own for peace; that he wanted the War to end, "but not on Hitler's terms." Most questions, however, he parried with the explanation that their answers touched upon matters of state and that it would therefore be "unethical and even unlawful for me to lay them before the public."

Davis, according to the autobiographical sketch which accompanied his letter to Senator Wheeler, is a direct descendant of both Jefferson Davis and of the British empire-builder, Cecil Rhodes. (*The Nation* points out that standard biographies of Rhodes fail to mention either marriage or children, however.) Davis was born in Montgomery, Alabama on February 10, 1889, attended Stark College there, and left before graduation in order to work for the Union News Company on Southern railroads. Later he became a train butcher, a fireman, and eventually a locomotive engineer, working for the M. O. & G. Railroad of Muskogee, Oklahoma from 1910 to 1918.

In the meanwhile he was already organizing his own companies: in 1913 it was the Best Test Oil and Gas Company of Muskogee, in 1915 the Gotham Mining and Milling Company at Joplin, Missouri and then the Malcona Zinc Corporation at Joplin. After the United States entered the First World War he enlisted in the Army at Muskogee in June 1918, and was discharged as a second lieutenant in 1920 after having seen active service in the 21st Engineers Light Railway Detachment.

Upon his discharge Davis set up offices in Tulsa, Oklahoma as a lease broker. He organized scores of oil companies, on the side dabbled in cheese and rubber, was engaged in scores of lawsuits; in 1929 he was one of several financiers who took over a large concession in Peru with plans to build a railroad to the coast and to import 50,000 colonists. The Peruvian Revolution deposed the dictator who had granted him this concession, and nothing came of it. But always his plans were incredibly bold. He thought in large terms: millions of dollars, millions of Reichsmarks, millions of pounds sterling.

After the Nazis came to power in Germany their restrictions on foreign exchange induced Davis to build one of the largest oil refineries in the world at Hamburg. This was so that a Boston bank might "unfreeze" some of its German investment. But the project lost money, and Davis set up an English company to finance it. This later resulted in Davis' being sued on charges of attempting to defraud a Danish oil company. He was found guilty in a lower court, but was unanimously cleared of the charges in the London court of appeals.

It was Davis' need for further supplies of crude oil for his refineries that brought him to Mexico in 1938. Even earlier than that, in May 1936, Davis said that he had met President Roosevelt in order to try to work out some kind of a three-cornered trade arrangement between the United States, Germany and Mexico. Nothing had come of this effort, but by the end of 1938 Davis had cut loose from his English connections and had obtained a virtual monopoly of expropriated oil from Mexico, which he himself began to barter to the Axis in return for tankers and oil machinery. He is said to have sold $10,000,000 worth until the War and the British blockade stopped him. His willingness to deal in Mexican expropriated oil (rather than his willingness to deal with the Axis) made him unpopular in the State Department and in oil circles at this time. Plans to extend the barter agreement even further were rejected by Germany, however.

International
WILLIAM RHODES DAVIS

Nor were his barter arrangements completely successful. Before the present War Davis proposed to deliver 17 German Junkers airplanes to Mexico in payment for oil, airplanes which he said he had originally bought from Germany for sale to the Spanish Loyalists; a protest by the American Ambassador to Mexico stopped their delivery. And after the War began two of his chartered ships carrying oil—consigned to the Scandinavian countries, according to Davis—were captured by the British. Now he could not sell oil to Germany and Italy on account of the blockade; he could not sell it to American and English oil companies because they considered it their own; his luck with South America was negligible. It was apparently about at this time that he hopefully visited Germany and brought back the much-discussed peace "agenda."

It seems likely, however, that the War can continue indefinitely and Mr. Davis still remain a rich man. He collected more than $400,000 from the Germans in 1940. And although his holdings include a terminal at Malmo, Sweden and distributing facilities in Sweden, Norway, Denmark and Finland as well as a great investment in Mexican

DAVIS, WILLIAM RHODES—*Cont.*

oil reserves, his main source of revenue consists of properties in Texas and Louisiana. He is responsible for the recent development of the largest oil reserve in Southern Texas, and in November 1940 he reportedly sold a half-interest in it for several million dollars.

Davis is described as a man of rather less than average height, "impeccably dressed, gray-haired, ruddy-faced," with an Alabama drawl—"affable but nervous, a man anxious to talk, but not on all subjects." He married May Tankin of Boston in 1909, and they have two living sons: Joe Graham and Currie Boyd Davis. There is also a granddaughter by another son who was killed in an airplane accident in Nicaragua in 1933. Mr. Davis takes a lively interest in politics, reportedly made large contributions to President Roosevelt's campaign funds in 1932 and 1936, and his office mantelpiece boasts a photograph of the President which is signed: "To Major W. R. Davis from his friend, Franklin Delano Roosevelt." (In 1940 Davis is said to have switched to the Republican camp, however.) He is a Protestant, a Mason and a Colonel in the New Mexico National Guard.

DAWSON, WILLIAM Aug. 11, 1885- United States Ambassador to Uruguay

Address: Department of State, Washington, D. C.

A tactful move in the direction of Hemisphere Solidarity is to raise a Latin American nation from ministerial to ambassadorial status. Colombia, Venezuela and Panama have all been promoted in the past few years, and in February 1941 President Roosevelt appointed the United States' first Ambassador to Uruguay. "Precise, perspicacious" William Dawson, a seasoned diplomat with more than a decade's Latin-American experience, received the appointment.

William Dawson was born in St. Paul, Minnesota on August 11, 1885, the son of William and Maria (Rice) Dawson. He acquired his B. A. at the University of Minnesota in 1906, and then went on to the École Libre des Sciences Politiques in Paris, where so many career diplomats have received their training. On March 28, 1908 he received his first appointment in the United States Foreign Service—as vice and deputy consul general in St. Petersburg, Russia. Three months later he was given the post of vice and deputy consul. That same year brought him an assignment in Barcelona, Spain; in 1910 he went to Frankfort, Germany; and in 1913 he received his first South American assignment—as consul at Rosario, Argentina. He was there until 1917, spent two years as consul at Montevideo, Uruguay, and then returned to Europe to act as consul in Danzig from 1919 to 1921 and at Munich from 1921 to 1922.

Wide World
WILLIAM DAWSON

More important assignments followed. From 1922 to 1924 Mr. Dawson acted as consul general at large, and from 1925 to 1928 was chief instructor in the Foreign Service School of the Department of State. The Mexican Embassy claimed him next, and he served as consul general in Mexico City from 1928 to 1930 before receiving his first ministerial appointment as envoy extraordinary and minister plenipotentiary to Ecuador in 1930.

In 1935, the year after Dawson left Ecuador to take up the same post in Colombia, a reciprocal trade agreement was signed between Colombia and the United States. During Dawson's period of service in Colombia the United States State Department was doing its best to break down a sudden attitude of independence toward foreign capital, and the problem has been similar in other Latin American countries—often complicated by German and Italian economic penetration. The year 1937 found Dawson in the same post in Uruguay, where he had been a consul 20 years before. March 1939 brought Dawson an assignment as first United States Ambassador to Panama, four months before the United States Senate ratified the General Treaty (signed at Washington in 1936) whereby the United States renounces the right to acquire additional lands and waters and the right to intervene to keep order in that Republic. Then he returned to an Uruguay that is firmly committed to a policy of intercontinental cooperation.

On June 8, 1926 Ambassador Dawson married Agnes Balloch Bready of Washington, D. C. He is a member of Chi Psi, an Episcopalian, and belongs to the Metropolitan and Cosmos Clubs in Washington.

DEANE, MARTHA, pseud. *See* McBride, M. M.

DE FOREST, LEE Aug. 26, 1873- Inventor; research engineer

Address: b. 5106 Wilshire Blvd, Los Angeles, Calif; h. 8190 Hollywood Blvd, Los Angeles, Calif.

Lee de Forest is the holder of over 300 invention patents, and because of them "we telephone over half the world, speech is broadcast over the whole world, the movies talk, television has come, cosmic rays tell their story and atomic energies are revealed." His latest efforts are being turned toward the development of a pilotless "television torpedo plane" which he believes will provide the United States military forces with an inexpensive means of getting information by aerial surveys and which can be used also as a robot bomber.

Ever since he was a boy Lee de Forest has been inventing. The first products of his inventiveness were made in Talladega, Alabama, where his parents had moved six years after Lee was born in Council Bluffs, Iowa. His father, the Reverend Henry Swift de Forest, was head of Talladega College there, founded to educate and uplift Negroes. His mother, Anna Margaret (Robbins) de Forest, had been a choir leader in the Reverend De Forest's church back in Iowa before her marriage. It took Lee's parents quite a while to get used to the fact that they had a scientifically-minded son.

Lee spent his childhood trying to build locomotives; he constructed his own electric motor; and when he was 15 he proudly announced that he had discovered the secret of perpetual motion. Nevertheless, his father still wanted him to study the classics in preparation for the ministry. Lee put an end to these hopes after he entered Mt. Hermon Preparatory School in 1891. He wrote to his father: "Dear Sir: I intend to be a machinist and inventor because I have great talent in that direction." That was the end of the controversy, and Lee went on to the Sheffield Scientific School at Yale in 1893.

LEE DE FOREST

At Yale, De Forest had very little to do with his classmates. He spent his time studying, reading works on electricity and inventing—one of his brain-children was the design for an underground trolley. After he received his Ph. B. in 1896 he stayed on at Yale for graduate work, burying himself in the electrical laboratory and completing the research on "Reflection of Short Hertzian Waves from the Ends of Parallel Wires" which won him his Ph. D. in 1899. (Yale, Syracuse and Lewis have since given him honorary degrees.)

Then he started looking for a job. He wandered west to Chicago, where he began working as a laborer in the dynamo factory of the Western Electric Company. A little later he was promoted to the telephone laboratory. Every spare moment he could find he spent developing a device for detecting wireless signals, and early in his research discovered that he could use a telephone receiver as an indicating device in receiving wireless signals. After his discovery in 1900 he left Chicago and settled down in a shack in Milwaukee with Professor Johnson, who was doing some experiments of his own on wireless sets. De Forest refused to give him his own anti-coherer idea (detector)—and found himself fired.

De Forest returned to Chicago, where he obtained a position on the staff of an electrical magazine, and another teaching at the Armour Institute. He continued working on his detector, which he called a "Sponder," until 1901, when he gave it its first long-distance test—and discovered that it worked! Immediately he and his partner, E. W. Smythe, decided to go ahead with the patenting and marketing of the device, only to discover that money and publicity were necessary. To get publicity De Forest persuaded the Publishers'

DE FOREST, LEE—*Continued*

Press to let him report the International Yacht Races with his wireless in competition with Marconi operators, who were doing this for the Associated Press. De Forest's broadcast was a complete failure. But so was that of his rivals, and the publicity was successful.

Encouraged by it, De Forest set up a machine shop on the Jersey City water front and erected the first wireless station of its kind in that vicinity. Eventually he was able to interest Wall Street sufficiently to form the De Forest Wireless Telegraph Company and with the money from the capitalization bought equipment and set up transmitting rooms. In 1903 he went to England to demonstrate his invention and while there communicated by wireless from Wales to Ireland. From a third voyage in 1906 he returned to find his company in financial difficulties and the other directors anxious for him to resign. Business matters had always weighed heavily, and it was with a feeling of relief that he took the few hundred dollars offered him and set out on his own again.

He improvised a laboratory in the loft of the Parker Building in New York City and began making tests. "I'll build a better detector for wireless reception," he announced. "I'll try to send the human voice through the air instead of messages by dots and dashes." Shortly after he was awarded gold medals at the St. Louis World's Fair in 1904 (the first of many) he began to give up the wireless field—partly because his electrolytic detector had been declared to interfere with the patents of another inventor, mostly because he was particularly interested in transmitting the human voice. He started work on his audion tube.

Using an arc light surrounded by a ceramic chimney into which a hydrocarbon vapor was pumped, De Forest generated from this crude device wireless waves and with it spanned space with messages and music. This was in 1907. Immediately he formed the De Forest Radio Telephone Company to promote his idea and by the end of the year, after a public trial of radio-telephone apparatus, the Navy Department had ordered enough radiophone sets to equip the fleet.

De Forest celebrated by marrying Nora Stanton Blatch in 1908 and going with his bride to Paris to install one of his radio telephone transmitters on top of the Eiffel Tower. Back from his honeymoon, he built an aerial on top of the Metropolitan Life Insurance Building and shortly afterward installed microphones in the Metropolitan Opera House. It was through these, on January 2, 1910, that the voice of Caruso was transmitted in the first radio broadcast of its kind.

De Forest became short of funds again—he has never been a success as a businessman—and went out to San Francisco to take a position as research engineer for the Federal Telegraph Company, while his own company slowly died. In 1914 it came to life again for a while when he refinanced it with the $50,000 he had received from the sale of his audion tubes to the American Telephone and Telegraph Company. De Forest had already been working in New York—his San Francisco position lasted only two years—and he set up another laboratory at Highbridge, New York City and later a transmitter at the World Tower Building, from which regular radio broadcasts of vaudeville were given for the first time.

In 1917 De Forest sold further rights to his audion tubes to the American Telephone and Telegraph Company and used the money for more experimental machinery. As radio developed he was manufacturing radio tubes for this new industry, but his heart wasn't in this work. He was seeing ahead even further—toward the development of talking motion pictures. By 1923 he had shown for the first time a sound-on-film program in a theatre (the Rivoli in New York) and had invented his "noiseless recording" positive prints and "glow-light" recording of sound on films. The motion picture producers weren't interested until 1927, when Warner Brothers plunged into the field.

From talking pictures De Forest turned his interest, later, to television and from television in general to the problem of "television torpedo planes." Meanwhile, in 1934, after years of litigation with Edwin H. Armstrong, his claim to the invention of the "feed-back" and oscillating vacuum tube circuits had been upheld by the Supreme Court of the United States. Yet despite recognition from learned societies, manufacturers and scientists, De Forest failed in these years to make money. By 1937 he had filed a bankruptcy petition listing assets of $390 and liabilities of $104,000.

In 1934 he founded the Lee De Forest Laboratories devoted chiefly to research and manufacture in the new field of short wave, or radio, diathermy, the application of high frequency currents to heating of the human tissues, found highly beneficial in all cases where congestion is involved. The United States Army and Navy are today using large numbers of De Forest Dynatherms in their numerous hospitals and on all battleships.

Still active in his work after almost 50 years of inventing, the "father of radio" lives quietly in California with his third wife, Marie Mosquini, whom he married in 1930 (his second marriage, to Mary Mayo, took place in 1912). He gets up each morning at seven, does setting-up exercises and then eats exactly the same breakfast every day—two poached eggs, corn muffins and a glass of milk. Never does he use cigarets or drink coffee. Those, he feels, dull the perceptions, and an inventor, he knows, must always keep his keenly alert. He is ardently fond of fine music and mountain climbing.

DEHN, ADOLF (ARTHUR) (dān) Nov. 22, 1895- Artist

Address: 230 E. 15th St, New York City

Exhibitions of graphic work by Adolf Dehn have come to be annual events in the art world. Those of 1941, scheduled for May as usual, were held at the Associated American Artists Gallery and comprised another prolific crop of water colors, lithographs and drawings. Five years ago, when Dehn took up water colors at the age of forty, he did one a day. In 1940 he had two shows of new work simultaneously, one in Chicago at the International Water Color Show, where his works had a special room, and one at the Weyhe Gallery in New York. "The new pictures," said Edward Alden Jewell, "betoken a new robustness, a deepened sense of the realities that lie behind appearances. Adolf Dehn, unless in some of the piquant caricatures, makes no bid for facile réclame."

A Guggenheim Fellow in 1939 and winner of honors and awards in the print division at the Philadelphia Art Alliance from 1933 to 1934, Dehn is no ivory tower resident. "Half straight, half comic," said *Time*, "his squirming, salty lithographs were prized by art connoisseurs as well as magazine readers, made the grade of leading United States and European museums." His sharp, subtle commentaries on the contemporary scene first saw the light of day in *The Liberator* and have since been published in numerous magazines ranging from the famous European satirical publication, *Simplicissimus,* to *Harper's Bazaar* and *The New Yorker.*

Chubby-faced, black-browed, with unruly gray hair parted vaguely in the middle and an expression at once youthful and worldly-wise—Dehn is a complex of his works. In him there is a little of the Friar out of Rabelais, of the sharp sophisticate, and of the serious artist intent upon the American scene.

Adolf Dehn was born November 22, 1895, on a farm in Waterville, Minnesota. His great-grandparents were among the first land-hungry nineteenth century pioneers to settle in that part of the state. His parents, Arthur and Emilie (Haase) Dehn, were farmers. Along with a sturdy verisimilitude, Dehn's studies of farm life, particularly in his native Minnesota, have a lyrical sensitiveness that speaks of such simple things as love for the soil and the dignity of those who make their living from it.

At the age of 19 he went to Minneapolis to attend classes at the Art Institute, where he had as fellow students such artists as Arnold Blanch, Wanda Gág and Harry Gottlieb. "Traditional instruction," said Alan Burroughs, "did not cover the Carl Sandburg-Spoon River spirit which forms his background. When he came to New York he still felt 'Main Street' about him. He made drawings of the waterfront; he lingered over the details of ugly shacks, warehouses and docks. He drew *The Harvest,* showing three frightened women going through ash cans for garbage or saleable junk."

Peter A. Juley & Son
ADOLF DEHN

Dehn came from the Minneapolis Art Institute to New York's Art Students League on a scholarship in 1917. Sent to teach art in a Reconstruction Camp in the South during the World War years, he found time to sketch landscapes as well. An early influence on his work was Boardman Robinson (see sketch this issue), though he did not study with this famous instructor. He was hard up a good deal of the time and did odd jobs to keep going. He managed a year of study with Kenneth Hayes Miller, wanted to work with Sloan as well but didn't get in many lessons. In 1921 he went to Europe, studying and visiting galleries, and finally settled in Vienna, where jobs, including some magazine work, enabled him to meet his $30 monthly living expenses.

Before going abroad Dehn had followed the trend of the times by paying tribute in some of his work to Oriental art, particularly that of China and Japan. In Europe more contemporary influences made themselves felt, those of Picasso, George Grosz and Pascin. The assimilation of these, and of the great graphic work of Daumier, was an almost obvious learning process with Dehn. His own style was so integrated with what he wanted to say that it had little trouble in emerging from the chrysalis of these influences.

While some of the early work of Dehn's stay in Vienna shows the influence of Grosz, he could not subscribe wholeheartedly to the disillusionment and cynicism that dominated

DEHN, ADOLF—*Continued*

the art of post-War Europe. His zest for life is present even in the most incisive of his lithographs. "With Dehn," said Guy Pène du Bois, "there is a depth of laughter which can be made of nothing short of pure good nature." Also speaking of his satirical work, Ernest Brace writes that he seems always "to focus upon some manifestation of the ingrowing: greed in all its aspects from the carnal to the pecuniary, pomposity and the like."

Although he remained in Europe for almost 10 years, returning to the United States in 1929 to stay put for a while, Dehn's work can hardly be called that of the expatriate artist. Some of the subject matter deals with his travels, but the majority of lithographs, drawings and water colors depicts his native land. In lithography, as in magazine work, Dehn has been best known for his satire. In the water colors he carries into a new medium the study of landscape begun in lithography. His subtle and lyric color, as well as his penetrating handling of subject, have brought him within the short space of five years into the front ranks of American water colorists. In lithography, which he began in 1920, he has also been unusually prolific, completing at least 250 from 1927 to 1936.

His satirical lithograph, *Sunday Painters*, is typical of this phase of his work. It shows two well-dressed gentlemen in a mad struggle to put on canvas the placid lyricism of a river scene, obviously working against time. *Art Lovers* depicts a group of "art lovers" taking in an exhibit or, as Brace put it, "pointing their sharp noses on the scent of culture." Speaking of his gift for satire Brace said: "There is nothing unreal in his landscapes, they are not merely sentimental; but when man, or, more often, woman, enters the picture, we are suddenly confronted with all the grim perversity of reality. We feel as if we had been on a long vacation at the mountains or the seashore and were back in the city again taking our first ride on the subway."

"Both as an artist and as a person," this writer tells us, "he shows an unusual lack of reticence. . . He seems to have little need for either reserve or evasion." To most critics, who praise his work without stint, this tendency is a welcome relief from the currents of informed innocence that dominate so much of our native satirical art. "Graciousness and soft beguilement," McBride once commented philosophically, "are not the specialties of Mr. Dehn. He has a northern and severe point of view."

Within the range of graphic work Adolf Dehn shows a rare versatility both in the variety of his subject matter and in his knowledge of technique. He might use a number of black and white mediums in one drawing, merging them easily, and again he might choose to depict his subject in delicate line. In lithography, Brace points out: "He has lavished upon hundreds of stones his feeling for the form and texture of objects. The invariable mark of his work is his sure understanding of the tactile qualities of his subject. . . The richness of his tones, their precision, and their infinite range are the result of his synthesis of skill and creative imagination."

Despite wide representation in museums and a fame enjoyed by few men in his field, Dehn never won a prize, as he put it, "until the Philadelphia Art Alliance came along and spoiled everything with a first prize in 1934." The winning lithograph was one of his sturdy characterizations of common folk and was called *Native of Woodstock, New York.* (His sister, Olivia Dehn, who studied in Vienna, won the Scribner $250 book cover prize in 1932.) He likes the country, and his Guggenheim Fellowship took him all over the Southwest and the West, with a long stay among the lakes, rolling hills and farmlands of his native Minnesota.

Many of his water colors in the exhibition at the Associated American Artists Galleries in the spring of 1941 were landscapes, although others, like *Homage to Mr. Mellon's Millions,* were wicked satires. But nearly all of them were appreciated in a solid sort of way: four museums and dozens of private collectors carried off original Dehns.

While not long enough on the government art project to be identified with it, Dehn was for a time on a Public Works Art Project. He has been too busy as an artist to find much time to teach, but his two experiences in this field found him popular with students. One was a short period recently at Stevens College. Another was his stay in the summer of 1940 at the Colorado Springs Fine Arts Center.

No hobbyist, Dehn likes to play tennis, plays a fair game of ping-pong and has a little place in the country where he tries to coax along a garden when he is not busy doing sketches of the surrounding landscape. Similarly, when he goes to an opera or a concert he is as much interested in the audience as in the program.

Dehn is represented in numerous museums here and abroad. These include the Metropolitan Museum of Art, the Whitney Museum of American Art and Brooklyn Museum (New York City); Minneapolis (Minnesota) Institute of Fine Arts; British Museum (London); and many more. He is a member of the American Society of Painters, Sculptors and Engravers; Associated American Artists (Gallery); American Print Makers; American Artists Congress.

Who's Who in American Art

DEKLEINE, WILLIAM (dê-klīn′) Nov. 28, 1877- Medical director of the American Red Cross

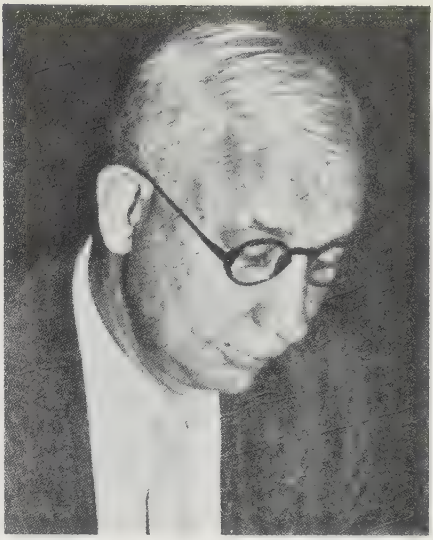
Address: b. American Red Cross, Washington, D. C.; h. 3000 Tilden St, Washington, D. C.

Under the supervision of Dr. William DeKleine, medical director of the American Red Cross, a drive for 10,000 donated pints of blood plasma for the United States Navy began in New York City February 1, 1941. The organization planned to seek an "unlimited supply" of the plasma for the United States Army as well. In a speech (January 13, 1941) before the New York branch of the American Pharmaceutical Association, Dr. DeKleine said he was "wary about discussing the plan" lest the public get the idea that, because of the urgent requests of the Navy for this plasma so vital in transfusion emergencies, the United States was "going to get into the War." He explained that Navy vessels were, by their very nature, exposed to unpredictable dangers in peace-time line of duty.

Dr. DeKleine said further that the Red Cross was terminating its collection (made jointly with the Blood Transfusion Betterment Association of New York) of 5,000 litres of plasma to be sent to England. He indicated that the immediate supply of plasma for the Navy would come mainly from the 17,000 registered donors who had already "offered their blood to Great Britain in its hour of need." As in the case of its shipment to England, the plasma, more durable than whole blood, would be prepared in a dried form that could be utilized at need with a distilled water solvent.

The blood plasma research studies that were being made by a committee of famous physicians under the direction of the National Research Council of Washington were described by Dr. DeKleine in a recent issue of the *Red Cross Courier* (September 1940). "Plasma is obtained by centrifuging whole blood. It works on the same principle as a cream-separator. Centrifugal force causes the cells to settle at the bottom of the container, leaving an upper layer of golden colored plasma. This is drawn off, placed in sterile containers, and stored in a refrigerator until ready for use." Plasma has several advantages over whole blood: "Not only can it be kept much longer and transported any distance without damage, but it does not require typing like whole blood. It can be pooled in large containers to simplify storage and can be administered anywhere." It is for this important reason that plasma is ideally suited for the emergency treatment of the wounded in military as well as civilian practice.

A pioneer in the public health field, Dr. DeKleine's special interests during his medical career have been the combating of tuberculosis (he was director of the Michigan Tuberculosis Survey Campaign) and the pellagra problem of the South. He was born on a farm in Jamestown, Ottawa County, Michigan on November 28, 1877. Of his parents Dr. DeKleine writes us: "My father, Hilbert, was born in The Netherlands in 1845, youngest of seven children of Derk DeKleine, who came to the United States in 1848 with a group of Dutch immigrants under the leadership of Albertus Christiaan Van Raalte, a minister of the Dutch Reformed Church. This group trekked to Ottawa County, Michigan and founded a Dutch Colony known as Holland on the shores of Lake Michigan. Derk DeKleine settled his family near Holland on a tract of land purchased from the Government, and became a prosperous farmer. Hilbert also became a farmer and had six children, of whom I am the fourth. My mother, Alice Kremers, was born in Michigan in 1852, the daughter of Willem Kremers, also a member of this Colony. He also became a prosperous farmer."



DR. WILLIAM DEKLEINE

William DeKleine went to Hope College, Holland, Michigan, where he received his B. A. in 1902, and was graduated from Northwestern University Medical School in 1906. He began his medical practice in Grand Haven, Michigan, remaining there until 1914, when he went to the University of Michigan to study public health under the direction of the late Dr. V. C. Vaughan, dean of the Medical School. The following year he received a degree of Master of Science in public health.

In 1915 Dr. DeKleine was appointed director of a tuberculosis survey campaign conducted by the Michigan State Board of Health. "This was a two-year state-wide educational campaign; the first one of its kind ever conducted in this country," he writes. "We traveled from county to county with a group of specialists, offering free examinations to anyone suspected of having tuberculosis. This campaign reached thou-

DEKLEINE, WILLIAM—*Continued*

sands of people and started a wave of interest throughout the state in early diagnosis and treatment. Mobile units of all kinds have since been introduced in every part of the country."

In 1917 he was appointed first full-time health officer of Flint, Michigan, and he served in the same capacity in Saginaw from 1922 to 1924. For four years thereafter he was associated with private agencies in New York City engaged in promoting nationwide interest in child health work. It was while directing the medical relief work for the Red Cross in connection with the Mississippi Flood Disaster of 1927 that Dr. DeKleine became interested in the South's pellagra problem. He inaugurated there a yeast distribution program, since "pure yeast contains more of the pellagra preventive than any food known, and is therefore an important emergency measure in the absence of an adequate diet. The distribution of large quantities of this product, coupled with the promotion of gardening, has contributed largely to the recent marked reduction in deaths from this disease." Red Cross chapters under Dr. DeKleine's direction are still distributing large quantities of yeast in the South. The present pellagra death rate is said to be 70 per cent below the rate in 1927, when the work was started.

Dr. DeKleine has "participated in all the major disasters in this country since 1927, including floods, hurricanes, tornadoes, fires, epidemics, explosions, droughts, etc." His work in public health has taken him to all parts of the United States, supervising the organization of health departments, of "traveling tuberculosis clinics," and directing the rehabilitation of disaster-victims who are unable to help themselves. He is a member of the Board of Directors of the National Health Council, Fellow of the American Medical and the American Public Health Associations, and a member of the D. C. Medical Society and of the Southern Medical Association.

In connection with these many activities Dr. DeKleine has found time to write a number of monographs on his surveys. These include "Community Clinics and Public Health" (*Journal Michigan State Medical Society,* October 1921); "Recent Trends in Pellagra" (*American Journal of Public Health,* June 1937); "Red Cross Blood Transfusion Projects" (*Journal American Medical Association,* December 3, 1938); and "Cerebrospinal Meningitis in a Flood Refugee Center" (*Southern Medical Journal,* January 1938).

A strong physique—Dr. DeKleine is six feet two inches tall, weighs nearly two hundred pounds—has given him energy and endurance for the long, hard hours of emergency work he has supervised during major disasters. He is married (in 1906 to Lottie M. Hoyt of Holland, Michigan) and has one son, Dr. Edwin H. DeKleine, who is a plastic surgeon in Buffalo. A young grandson is one of Dr. William DeKleine's major interests.

Besides his work on the supervision of the blood plasma drive, Dr. DeKleine says that his "present special interest is in the subject of health nutrition; believing that the next important contribution to the public health and the prolongation of life will come through the general application of the newer knowledge of nutrition. Other things being equal, individuals and families who observe correct dietary habits and practices will be less subject to illness and live longer than those who do not. I hope to devote the remainder of my life mostly to promoting interest in that subject and to helping make it possible for people to have access to the foods they need."

DENNIS, LAWRENCE Dec. 25, 1893- Journalist

Address: b. Weekly Foreign Letter, 205 East 42nd St, New York City; h. 420 Warwick Ave, West Englewood, N. J.

Lawrence Dennis, publisher of *The Weekly Foreign Letter,* has been called by *Barron's Weekly* "this country's leading intellectual Fascist"; by the *New Republic* "our first American National Socialist philosopher"; by Dorothy Thompson "braintruster extraordinary to the forces of democratic defeat." In December 1940 United States Secretary of the Interior Ickes (see sketch this issue) named him among the leading native Fascists in America in a speech at Columbia University, and Mr. Dennis countered with a letter to the New York *Times* in which he said: "The reality in America which comes nearest to Fascism is Mr. Ickes and the reality which comes next nearest to Fascism is Mr. Roosevelt's third term. . . I wrote a book about The Coming American Fascism and predicted it would come through a war against Fascism. I have since repeatedly said that Mr. Roosevelt and his New Deal were the only significant Fascist trends in America. I have never belonged to or been connected with any movement or organization of a political character in my entire life."

Dorothy Thompson points out that "Mrs. Lindbergh's phrase, 'The Wave of the Future' and the whole argument she marshals to support her 'Faith' that Communism, Fascism and Nazism are riding this wave . . . was first advanced by Mr. Dennis in almost identical words." *The Nation* notes that a student recently visited the New York office of the No Foreign War Committee and, upon asking a member of the office staff "what form of democracy" the committee wanted to preserve, received the reply that he might read Lawrence Dennis to get the answer.

Dennis himself, however, is not exactly an isolationist—or at least not an isolationist of the garden variety. He has announced that although he believes the present war futile for the purposes for which it is being fought, he will "try to help it along once it becomes clear that the majority have been inveigled into wanting it." Nevertheless in the fall of 1941 he was still favoring America First meetings with his encouraging presence.

Lawrence Dennis was born in Atlanta, Georgia on Christmas Day 1893, the son of George and Mary (Smith) Dennis. He attended Philips Exeter Academy (1913-15) and Harvard, where his studies were interrupted by the First World War. After having paid his expenses to attend Plattsburg during the summer of 1915 and again in 1917, he volunteered and went overseas as a lieutenant of infantry with the First Army Headquarters Regiment. He said later that he considered American participation in the War "wholly unjustified and wrong at the time," but that "if he is not too old, he will similarly volunteer to fight in the next war," which he also "feels fairly certain he will not approve of." If too old for that, "I shall be delighted to serve my country with its war propaganda. I am just as ready to lie as to kill for my country. Any ethic which does not put a man's country above all else is a stench in my nostrils." In 1919 he received his honorable discharge as a first lieutenant.

Following demobilization, for three months Dennis wandered around Europe, playing the foreign exchange markets "on a shoe string." He returned to Massachusetts in September 1919 and received his B. A. from Harvard a year later. In September 1920 he entered the United States diplomatic service, and served as American chargé d'affaires in Romania and Honduras before being sent to Nicaragua in the same capacity in 1926. All during the Revolution and the American intervention he was there, and finally in June 1927 he criticized the policy of the United States and resigned. It was his opinion that warfare on General Sandino at the cost of "100 American and 3,000 Nicaraguan lives" served "no useful purpose." Dennis does not believe in permitting such acts as the Mexican oil expropriation on the part of Latin American Governments any more than he believes in open military intervention, however. He thinks that "our only hope in Latin America lies in developing native governments more respectful of our rights and more amenable to our demands"—Sumner Welles' "good neighbor" policy.

Continental

LAWRENCE DENNIS

After his resignation from the diplomatic service, Dennis joined J. W. Seligman and Company, an international banking firm, and represented them in Peru until 1930. While engaged in this work, he said later, he had doubts concerning the "magic" of Kreuger, Insull, Mitchell and others. He began wondering how foreign loans could be repaid if a favorable balance of commodity trade was needed, how investment trusts could make millions by trading with one another in common stocks, how industry could go on expanding in a world of falling prices, declining birth rates and stagnant migration. He was adviser to the bankers who floated the Peruvian and other South American loans, and testified in 1932 before the Johnson Committee that he had advised against making these loans.

By 1930, however, he had retired to his farm near Becket, Massachusetts, and had begun to write and lecture on "current social change." His first book, *Is Capitalism Doomed,* appeared in 1932. Dealing with finance, agriculture, free trade, international cooperation and foreign investments in a decidedly critical spirit, insisting that "business needs to receive orders—not to give them," Dennis pointed out the necessity for government planning. At that time the Left took this Right-wing economist comfortably to its bosom: Norman Thomas said "the convinced Socialist will find more ammunition in it than in most radical books."

Actually, however, the ideas expressed in this book do not seem to be inconsistent with those in Dennis' later writings which have

DENNIS, LAWRENCE—*Continued*

furnished arguments for the extreme Right. Convinced that capitalism was in its "old age," Dennis was here presenting "suggestions of moderation or restraint" which might prolong and render its declining years more pleasant rather than definitely prophesying or advocating any other system. Among his suggestions were high taxation, a self-sufficient national economy, high tariffs and the abandonment of international cooperation, a "mischievous fallacy" which led inevitably to war. It was after the publication of his book that he spoke before a Senate Committee on "Spending Our Way Out of Depression."

In 1933, writing in *The Nation*, Dennis announced that the banks could not be safe without the "substitution of some form of state capitalism"; in 1934, criticizing the planlessness of the "Roosevelt revolution," he spoke of need for a single authority, a single theory, since the day of "the liberal American state" was over in any case. By 1935 he was already painting the portrait of what he called American Fascism (although, he said, its party exponents of the future would probably deny it was Fascism at all). It would come most easily, he said, if there were another world war to defend the British Empire, and the President were allowed "to exercise virtually unlimited powers within the Constitution." This was not the only way it might come, however. In April 1935 he was quoted as saying that if Huey Long "could get up before 500 of our big industrialists in a secret meeting" the Kingfish could give them a "proposition" to their liking.

Dennis' second book, *The Coming American Fascism* (1936), expanded his first theory, predicted that the war would take place within five years, and attempted to give "one man's picture of what a desirable Fascism... would be like." It was not received so well as his first: most reviewers found it a mixture of "keen, incisive thinking" and "reckless generalization," of "common sense" and "cheap cynicism"—even "patent self-contradiction." Some, however, said in effect that it "should be made required reading for capitalists and reformers at this juncture."

From April 1936 to October 1939 Dennis held a position at E. A. Pierce & Company as consultant and economist. During that time he contributed a great many articles to the *American Mercury*, edited a magazine called *The Awakener*, and eventually started his own mimeographed *Foreign News Letter*. He consistently opposed all attempts at collective security as unrealistic, announced that "whether anyone likes it or not, that is what we are in for, the rule of naked force." In the United States he was one of the half dozen private customers of Manfred Zapp's Transocean News Service, a Nazi news service.

Since the Second World War Dennis has been devoting his time entirely to writing and lecturing again, and his name has been linked with that of many prominent isolationists. In 1940 he published his *Dynamics of War and Revolution*. Addressed to "the elite or the ruling groups, actual and potential" (Dennis does not believe in "democracy or the intelligence of the masses as my critics will generally use these terms"), in this book the Fascism-through-war thesis of *The Coming American Fascism* is developed even further. Here, however, Dennis begins to use the terms "Fascism" and "Socialism" almost interchangeably; in the past he had made a distinction. One critic summed up *The Dynamics of War and Revolution* by saying: "A high state of literacy in economic literature plus a mind uninhibited by moral enthusiasms . . . has made a sharper analysis of democratic capitalism than has been produced in many a year." Liberals were disapproving—and, many of them, admiring. Quincy Howe placed the book in a list of 10 recommended books ("Required Reading for Liberals Only"). In February 1941 Dennis was one of the members of the Eighth Fortune Round Table, discussing the subject "Peace Aims."

"Tall, dark, broad-shouldered," Lawrence Dennis has been married since 1933 (his wife's name is Eleanor) and has two children, Emily and Laura. His hobbies are "anything except sport." He announces: "I am much too intellectual to be a good demagogue."

DENNIS, OLIVE WETZEL Nov. 20, 1885- Service engineer

Address: b. Baltimore and Ohio Railroad, Baltimore, Md; h. 710 Walnut Ave, Rognel Heights, Baltimore, Md.

Olive Wetzel Dennis is a "service engineer" with the Baltimore and Ohio Railroad, probably the only woman in the country with that title. As such she travels about 50,000 miles a year looking for ways and means to improve railroad service. From her travels and from her observations, always based on a solid foundation of engineering knowledge, have come suggestions for many of those things which have transformed the modern railroad from a "nightmare of red plush, straight-backed seats and smoke-filled cars" to a comfortable, pleasant way of getting from one place to another.

Miss Dennis likes to emphasize the fact that her work is advisory. "I do not claim credit for doing definite things on the railroad," she says. "I only make suggestions." From these suggestions, however, have come plans leading to the first air-conditioned train; the first reclining-back seats with foot and head rests in coaches for night travel; the first large dressing rooms for women with free paper towels, liquid soap and drinking cups;

car ceiling lights that can be dimmed at night and individual wall lights; lunch counters; new designs for train interiors; designs for the china service for the B. & O. and changes in its menus. Her latest interest is in the newly designed low-rate, triple-decked Pullmans, devised as another step between de luxe day and night coaches and the more expensive sleepers, and she is now trying to find out the advantages and defects of this equipment her company rents.

She is doing this mostly by actual testing, for whenever new devices are being tried out, Miss Dennis is the guinea pig. Once she took a trip to Chicago just to sleep both ways in order to discover the relative merits of two different mattresses. (She slept fine on both.) On other occasions she has sat up all night traveling across the country, or eaten most of the way across, in order to test, check up on or figure out angles in railroad travel.

Other woman have tried to do this sort of thing, and few of them have been successful at it. This, Miss Dennis thinks, is "because they lack a technical background and the civil engineer's knowledge of railroads." She confesses that she herself is more interested in the mechanical and engineering problems her job presents than in those little touches which appeal to women passengers. "She would rather puzzle over the arrangement of doors and cabinets to avoid blocked passages or detect flaws in the construction of a Pullman berth than compose a color scheme for the club car."

Another reason why so many women fail at Miss Dennis' kind of job is that the men who have been running the railroads for years tend to resent criticism or even suggestions from a woman. "Probably the most important phase of a job like mine," she says, "is developing tact. . . Problems must be handled diplomatically." And she has discovered that "if one can present casual ideas for service improvement and refrain from chirping 'I told you so' when a feminine idea works out in practical application, the rest is easy."

This kindly, soft-spoken, retiring little woman with graying hair and a friendly smile has been making "suggestions" and getting them carried through on the B. & O. (and then taken up by other railroads) since 1921. She was born in Thurlow, Pennsylvania, the daughter of Charles Edwin and Annie (Wetzel) Dennis, and brought up in Baltimore. In Baltimore she went to public school and first began to practice engineering principles. While all the other little girls were playing with dolls, she was building doll furniture with her father's tools—not for the dolls' sake but for the sake of her own interest in mechanics.

From public school and the Peabody Conservatory of Music, Olive Dennis went to Goucher College, which gave her a Phi Beta Kappa key and a B. A. in 1908, and from there to Columbia, to get her M. A. in mathematics in 1909 on a Goucher alumnae fellowship. Then she started teaching mathematics, first in Washington, D. C., and then elsewhere. It was while she was imparting mathematics to students at the University of Wisconsin one summer that she took some survey courses and immediately decided to study civil engineering. She went to Cornell University to do this and received her Civil Engineer's degree in 1920, the second woman to be graduated from the college's Civil Engineering Department.

It was shortly after graduation that Olive Dennis joined the Baltimore and Ohio Railroad. "I always wanted to build bridges," she recalls, "and was delighted to have a job as draughtsman with the B. & O. when I left college." This was the time when the railroads were beginning to feel the effects of competition with automobiles and buses, and also beginning to realize the necessity for doing something about it. Within a year Miss Dennis had been appointed to the newly created post of Engineer of Service with the assignment of offering constructive ideas for technical and general improvements. She has been offering them ever since.

Bacnrach

OLIVE WETZEL DENNIS

When she is not traveling around the country testing berths and meals or figuring out construction problems, Miss Dennis figures out cryptograms and puzzles. She is a member of the American Cryptogram Association and former president of the National Puzzlers' League. And when she wants really to relax she listens to music or works in her garden.

DE SEVERSKY, ALEXANDER P(ROCOFIEFF) (sâ-vĕr'skê) June 7, 1894- Airplane designer

Address: h. Asharoken Beach, Northport, Long Island, N. Y.

Wide World

ALEXANDER P. DE SEVERSKY

Alexander de Seversky is a slim, well-built, kinky-haired, energetic Russian who has designed many speed planes, amphibians and pursuit planes; who has invented a good many of the modern refinements and advances in airplanes; and has himself broken a number of the world's speed records. For his contributions to aviation for over 25 years he was awarded the 1939 Harmon Trophy in December 1940.

The character of the Second World War has inspired him to see a future of planes more powerful and effective than those we now have, and within the next five years, he prophesies, there will be air battleships capable of 22,000-mile nonstop flights. Toward this future he contributed in November 1940 a new pursuit plane which gives the pilot greater visibility and more firing power because of its engine in the rear and its four propellers. He is also working in 1941 on plans for a completely new type of military plane and a novel kind of helicopter. Believing that America's choice is between air power second to none and the danger of humiliating defeat, he has written numerous articles with this thesis in order to wake up the public. One article in the *American Mercury*, "Why Lindbergh Is Wrong," has been widely quoted.

Seversky has been interested in aviation all his life. He was born Alexander Nicolaiovitch Procofieff-Seversky in Tifflis, Russia, the son of Nicholas and Vera (Vasilieff) Procofieff-Seversky. His parents sent him to the Imperial Naval Academy of Russia and while there he spent most of his free time hanging around a factory for which Sikorsky was then designing planes. Once in a while he was allowed to sneak a ride in them as ballast. After he was graduated from the Naval Academy in 1914, he took postgraduate work at the Russian Military School of Aeronautics. It was in Russia that he invented a combination pontoon and ski which allowed Russian naval planes to continue in service during the winter.

When Russia entered the First World War Seversky became an aviator. In July 1915 his plane was shot down and his right leg was blown off by the last of his own bombs. It looked as though his military career was over, and perhaps his career as an aviator. But only one year later he was back at the front with an artificial leg and a special decree from the Czar, and before the Revolution had downed 13 German planes and "won every kind of decoration in Russia."

Just as the Revolution started Seversky was appointed to an aviation commission visiting the United States and on the way over got the present form of his name. His Russian passport was issued in French, and the "de" was a French gesture. Seversky liked it and kept it.

In 1918 De Seversky, as he now called himself, saw no reason for returning to his homeland and settled down in America, first as a test pilot and then as a consulting engineer to the United States Air Service. It was in 1921 that General Mitchell asked him whether he could perfect a bomb sight. De Seversky was sure he could, and though he wasn't a citizen General Mitchell got the engineering appointment for him as his special assistant. For three years De Seversky devoted all his time to this work and developed a bomb sight which tested with 100 per cent accuracy. Mitchell arranged for the United States Government to buy De Seversky's 364 patent claims for $50,000, and with the money De Seversky founded the Seversky Aero Corporation in 1922.

Immediately he became busy on a long list of inventions: retractable landing gears for use on land, water and ice; new methods of structural design, wing flaps, etc. But his company didn't do well financially, and in 1931 he started another. By this time De Seversky was a real American. He had married an American girl, Evelyn Olliphant, in 1925; he had become a naturalized citizen in 1927; and he had joined the United States Army Air Corps Reserve, in which he rose to be a major.

The new company which De Seversky organized in 1931 with Wall Street backing specialized in long-range pursuit planes, and

De Seversky was its founder, president, chief designer and test pilot. During its first three years he did nothing but experiment—a mechanism generally used for mid-air refueling and an amphibian which set a world speed record for its type plane were among the results. When this same amphibian, stripped of its pontoons, was entered in a competition for army trainers, De Seversky won a Government contract for 35 planes. Next he made a pursuit model, the *P35*, which incorporated every modern efficiency device airplane designers had perfected, and the Government bought 85 of these.

Despite Government purchases and planes which set one world's record after another, the Seversky Aircraft Corporation was losing money. At the end of 1938 its backlog was nonexistent and its losses, including "experimental costs," averaged about $1,000,000 a year. De Seversky suggested that W. Wallace Kellett, a director of the corporation, be made vice-president. Five months later, in the spring of 1939, the directors made Kellett president and demoted De Seversky to director. In October 1939 they changed the company's name to the Republic Aviation Corporation and in May 1940 took De Seversky off the board altogether. Finances improved —the company made its first profits—in the first half of 1940 it earned $842,000.

De Seversky, though, resented having been eased out. In August 1940 he filed a stockholders' suit for damages totaling $23,000,000 against the Republic Aviation Corporation, claiming that in ousting him the stockholders lost their biggest asset—his talents as a designer—and that the management of the corporation deprived the stockholders of profits on orders of $50,000,000 by preventing him from selling planes to England. He is also suing for the right to use his own name in business.

DILL, SIR JOHN G(REER) Dec. 25, 1881- Governor of Bombay; former chief of the British Imperial General Staff

Address: Government House, Bombay, India

Bulletin: General Sir John G. Dill retired as chief of the British Imperial General Army when he reached his sixtieth birthday, December 25, 1941. He was succeeded by Sir Alan Brooke (see sketch this issue). General Dill, who was a field marshal, became Governor of Bombay, which is one of the most important jobs in the Indian Government and second only to that of the Viceroy.

From February 1941 issue:

The chief of the British Imperial General Staff is the practical soldier who works hand in hand with the Secretary of State for War, representing the Army at the chief of staff's committees and at meetings of the War Cabinet. He must possess not only the widest practical and theoretical view of strategy and tactics, but a full understanding of office routine and administration. He is called on to make quick decisions which may affect the whole course of a war; he must think far ahead, ponder carefully and act resolutely.

It is a good thing, the British think, that Sir John Dill now occupies this responsible post, for he has been called "our best general since Marlborough" and has been described

Wide World

SIR JOHN G. DILL

by the Germans themselves as "the only British general worthy of our steel." And Dill is not only admired for his military brilliance, he is liked for being an officer who rules by winning the affection and respect of his troops rather than by jack boot methods. When in active command he has always gone among his men and has always shown a warm humanity. Once, when he was in charge of the Aldershot Command, the case of a youth of 17 who had been sentenced by a district court martial for desertion came before him. Dill learned that the boy's father was dead, that his mother had died recently, that his grandmother was now trying to exist on her old-age pension of $2 a week and that the boy had deserted to get work to support the old lady. Dill quashed the sentence. Another time, when Dill was investing a young private with the Military Medal, he asked him: "Have you ever seen your comrades march past? No? Then come over here and you shall." The private and general stood side by side at the saluting base as the troops went by.

John Greer Dill is an Irishman from the Protestant stronghold of Belfast in Ulster, and comes from a family which traces its descent back to a Dutch soldier who went over with William of Orange. His grandfather was a Presbyterian minister and his father, John Dill, a bank official; his mother was the former Jane Greer. Young John was sent first to Cheltenham College and then to the Military College at Sandhurst. In 1901 he became a subaltern in the Leinster Regiment, served in South Africa for what remained of the Boer War and won the Queen's Medal with five clasps. Back in England he found peacetime soldiering as a junior officer very boring, so boring that at one point he almost gave it up.

He decided to stick it out, however, and in 1911 was made a captain. When the War broke out three years later he was taking a course at the Staff College, Camberley. He went straight to France as a brigade major and remained there throughout the War, most of the time on the General Staff. In 1915 he was awarded the D. S. O., in 1918 the C. M. G., and during the War France gave him the Croix de Guerre and the rank of Officier de la Légion d'Honneur, and Belgium presented him with the Croix de Guerre and the Croix de la Couronne.

After the Armistice Dill's temporary rank of brigadier in the Operations Branch, which he achieved in 1918, had to be relinquished, but in 1920, before he was 40, he became a colonel. From 1923 to 1926 Dill commanded the 2nd Infantry Brigade and then spent two years at the Imperial Defence College as army instructor. In 1929 he was sent to India as brigadier on the General Staff and stationed at Quetta. The following year he was raised to the rank of major general, and in 1931, after being promoted over the heads of six seniors, became commandant of the Staff College at Camberley. Another big jump over older men came in 1934, when he was transferred to the War Office as director of Military Operations and Intelligence. Here he made a point of seeing how other armies work. In September 1935 he attended the German maneuvers in East Prussia, went over the battlefield of Tannenberg and made the personal acquaintance of Keitel, Von Brauchitsch, Von Reichenau and other generals. Later, too, he established contact with high officers in the French Army and surveyed the Maginot Line.

By 1936 events in Palestine and Trans-Jordan had reached a serious pass, and it was felt that the presence of a really original-minded and experienced officer was required. Dill was raised to lieutenant general and sent out. "He was an unqualified success as a commander in the field. The pacification of the troublesome protectorate was due very largely to his tact and firmness in dealing with both Arab and Jew, and also, it may be said, with the civil administration of the time." His instructions to his troops were: "Don't trail the coat. Fire only if fired upon"; but when he was forced to take drastic action he used, on a minor scale, the new German technique of airplanes and tanks. In retaliation Fawzi Kawakji, the Arab rebel leader, offered £500 for "that devil Dill, dead or alive."

The Palestine job well done, Dill was brought home and placed in charge of Britain's huge infantry base at Aldershot in 1937 and later promoted to full general. In 1937, also, he was knighted as K. C. B. While in England he took part in the General Staff talks with France and Belgium that followed Germany's remilitarization of the Rhineland and was active in drawing up plans for Britain's rearmament.

At the outbreak of the Second World War in September 1939, Dill went to France as a corps commander. A month later he was appointed A. D. C. to the King and in April 1940 he became vice-chief of the Imperial General Staff. One month later he succeeded General Sir Edmund Ironside as chief of the Imperial Staff. In the first months of 1941 he and Anthony Eden headed a British delegation which visited Ankara, Egypt and Athens in order to examine the situation in the Middle East and in the Balkans.

With all these years of experience behind him and all the military tasks before him, General Dill still doesn't look much like a soldier. He is tall, slight and fair-haired, and has "keen, sharp eyes, with little wrinkles at the corners, showing shrewdness and the ability to smile; a spruce mustache; a firm, determined mouth with a humorous twist at the corners." He has one son by his first marriage to Ada Maud Le Mottee. In October 1941 he was married for the second time, to Mrs. Nancy Furlong, the widow of a brigadier general killed in action the year before.

A good deal of his success as a leader of men has come through his conciliatory attitude and quick practicality in emergency. This ability to think and act fast, yet pleasantly, has been demonstrated probably hundreds of times, but an incident of October 1914 illustrates it as well as any other. A great body of recruits from South Wales had arrived in the Sussex town of Lewes, burning to begin their training to fight the Kaiser's men, only to find themselves without uniforms, warm overcoats or canteen facilities. It was a menacing situation, with thousands of tough industrial Welshmen getting disgruntled, and one which demanded the presence of a senior officer. Such an officer was sent, but when he arrived he found that a certain young Captain Dill had fixed the whole thing up—he had rung up Lyons, the caterers in London, to send down a complete canteen installation, and had requested one of the largest tailoring firms to provide civilian overcoats.

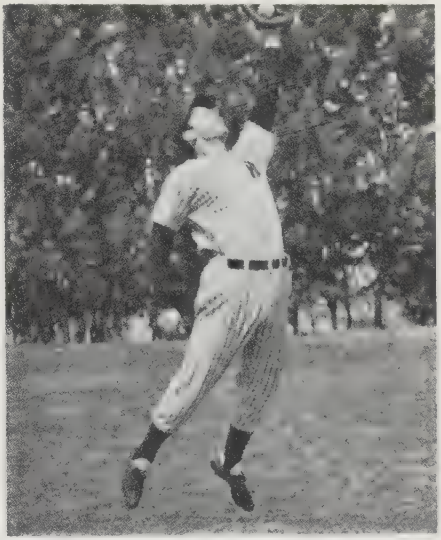
Who's Who

DIMAGGIO, JOE (dĭ-mäj'ē-ō) Nov. 25, 1914- Baseball player

Address: c/o New York Yankees, 55 W. 42nd St, New York City

"It's by far the worst slump of my life," Joe DiMaggio confessed in the spring of 1941 as the New York Yankees moved northeastward for their first series of the season in Boston. In 10 games in the Midwest DiMaggio had wangled only a half-dozen hits—a tour average of .177—and not until the middle of May did his batting look like a comeback. "Off the figures, I look terrible," he himself admitted at the time. "But I have belted a good many hard balls, only to have them caught. Mind, I am offering no excuses."

From the boy who came off the San Francisco sand lots to become in 1936 "the American League's most sensational recruit since Ty Cobb," this situation needed, and got, an explanation. "It's my timing," said Joe. "It's 'way off. I was going fine until I ran into McCrabb of the Athletics. He wasn't fast. He wasn't tricky. He had only a dinky curve and a little sinker. But he could put the ball places. Did he start me on the slump? No. It just happened he was the pitcher that afternoon. When it hits, you do some lunging. You hit some on the handle. You start pressing and it gets worse than ever. Then you decide to concentrate on your timing, and the harder you try the tougher the going. There is no remedy. Time and confidence in yourself are about all you can look to."



JOE DIMAGGIO

In spite of this pessimistic approach, the situation was rather sensationally remedied in a very short time. During the summer of 1941 Joe DiMaggio set a new modern record by a hitting streak of 56 games which began on May 15 and ended on July 17 and was named athlete of the year by the Associated Press poll of the sports experts. "I just keep swinging," he said.

Joseph Paul DiMaggio, Jr., was born in Martinez, California on November 25, 1914, next to the youngest of nine children. There were four girls and five boys. Two of the boys, like the father, became crab fishermen. The other three went into baseball, all graduating into the Major Leagues. Vince was the first to begin, and although Joe got ahead of him in the race he, too, is now out of the bushes and with the Pittsburgh Pirates. Dominic, the bespectacled baby of the family, nicknamed by sports writers "the little Pro-

DIMAGGIO, JOE—*Continued*

fessor," came along with the handicap of an old taunt that he was riding on Joe's reputation. But he closed his first season batting .306, and his second was a point higher, which placed him first in runs scored, first in total hits (on the Coast). What is more, he was voted the most valuable player of his league (1939) and in 1940 was sold to the Boston Red Sox for $40,000 and a couple of players.

As a boy, Joe DiMaggio sold newspapers to help support his family. When he played baseball in junior high school he was the one without the uniform: his father, with nine children to support, couldn't afford any extras. But around the North Beach section of San Francisco where DiMaggio grew up he didn't have his fill of baseball. He wanted more. High school was a chore, but he got through his freshman year. Then, when his brother Vince went to the San Francisco Seals, Joe watched them work out through a knothole in the fence surrounding the field. During the season of 1932 Francis "Lefty" O'Doul, manager of the Seals, let Joe practice with them occasionally, and when toward the end of that season a player left the team he was allowed to finish out the three remaining games. He played shortstop.

His batting was excellent, his work at shortstop merely satisfactory. Finally in 1933 he got his first real break, when a shoulder injury put Vince out of the game and Joe was substituted in the outfield. For it has been as an outfielder that DiMaggio has made his reputation. His outfielding, plus his batting talent, added up to something for the home town to cheer about. "From the very first day," we learn, "he covered the outfield like a tent. By 1934, he was acknowledged the greatest player the Coast League had ever produced."

Even at the outset of his career, scouts from the big leagues had him spotted as promising talent. In 1934 the bidding began. The New York Yankees got him the following year (1935), reputedly for $75,000 and five players. Meanwhile a knee injury delayed delivery, but the Yankees kept their option, and in 1936 Joe reported for spring training at their Florida camp. Next he hurt his instep, then burned it under a diathermic lamp, and he missed the early games. But he came in for 138 of them, and his batting stood at .323 at the close of his first season in the Majors.

Joe DiMaggio has been described as an essentially modest fellow with a sense of family responsibility typical of his Sicilian-American upbringing. In his early big-league years his attempts to be breezy and casual were much commented upon. "Everyone in San Francisco knew what he was doing," observed a sympathetic commentator. "They giggled a bit, but they sympathized. But the boys in the East saw only the brashness, and were unkind enough to make him say for publication that everything would be all right with the Yankees once he was in the line-up... It was the simple truth, of course."

"In his career so far," this writer continued, "he has made only one serious mistake: his holdout in 1937. Fans thought that this young man ought to be satisfied with the $25,000 Colonel Ruppert offered him. But Joe answered by turning in one of his best years, and topping it with a phenomenal 1939 which won him the Sporting News' annual award as the most valuable player in his league." In the holdout year (1937), 259 leading sports writers, voting in an annual poll for an All-Star team, gave Joe 258 of their votes for his outfield position! He was one of only two players to be so honored in the first year with a big-league team.

That was also the year when DiMaggio's batting average was .347, when he hit 46 home runs, and when he won the home-run championship of the American League. But he had tacked up a few other records, too, even before his phenomenal hitting in 1941. He is one of the three players in his league to hit two home runs in a single inning, and he is the only player in the more than 100 years of the national game to play on four pennant-winning and world's championship teams in his first four years in the Major Leagues. He has however, never played a complete season. In August 1941, after 121 games for the Yanks, he went to the hospital with a sprained ankle.

His dark eyes, dark hair and prominent nose suggest his Southern Italian antecedents. He has a large mouth and a slow, friendly smile. Rangy in build, his height—six feet one and a half inches—takes care of his one hundred ninety-five pounds. He is one of those rare baseball players—Babe Ruth was that way in the outfield—who never seem to be in a hurry except when speed is indicated; that is, his timing is so good that most catches seem to be easy and effortless. He is a remarkable judge of line drives and in 1940 at the Yankee Stadium (New York City) raced far back to the flagpole in center field to catch Hank Greenberg's tremendous drive. All in all, when he works in the outfield his grace and ease suggest that he is able to judge a play by a split second, and this is quite true.

At bat, DiMaggio has always been one of the "greats" of big leagues—no one regarded the late-spring falling off as more than a lull. He uses a heavy 40-ounce bat and, as *Time* describes it, "hits with a loose easy swing, flicking power into the bat with his wrists at the last possible moment." Perfect co-ordination has helped him to success as a big-league batter, and he had already won the American League crown in this category for two seasons (1939 and 1940).

DiMaggio has a tremendous following, and his fan mail is said to exceed that of the great Babe's at its peak. He is, understandably, the idol of Italian-Americans. Some 30,000 San Franciscans tried to crowd into the Cathedral of Sts. Peter and Paul on the occasion of his marriage to lovely Dorothy Arnold, an actress. With their new baby, they live in a West End Avenue penthouse in New York City.

Joe DiMaggio's $100,000 grotto, a highly modernistic restaurant with a large bar, a dance floor and band, is famous for its sea food. It is located at Fisherman's Wharf, San Francisco Bay, and is managed by Tom DiMaggio. This venture is the nearest Joe ever came to being a fisherman. His yearning for the sea is said to be the work of imaginative writers: since childhood, Joe DiMaggio has had one important yearning, to be a great baseball player, and he was a natural for that.

Joe has been praised by Taub (haberdasher to America's famous athletes) as a smooth dresser. His first trip with the Seals, as reported by a sports writer, sounds like something out of Ring Lardner. "Admiring the *sang-froid* of Trainer Johnson and the Seals' first baseman, Jack Fenton, who was his roommate on road trips, he did the best he could to copy their mannerisms, dress and replies to wisecracks." To the question of where he had been he had a stock reply: "I've been meandering nonchalantly down the pike." And that pike, it hardly need be stressed, led nonchalantly to the Yankee Stadium.

DIRKSEN, EVERETT M(CKINLEY) Jan. 4, 1896- United States Representative from Illinois

Address: b. House Office Bldg, Washington, D. C.; h. Pekin, Ill; Mayflower Hotel, Washington, D. C.

EVERETT M. DIRKSEN

"Hailed as Republican coup-of-the-week when it was voted in while 65 Democrats went to lunch in one afternoon," the amendment to the Lend-Lease Bill giving Congress authority to rescind the Lend-Lease authority by concurrent resolution of both Houses was the work of Representative Everett McKinley Dirksen of Illinois, generally known as an isolationist and critic of the Administration until his switch to support of Roosevelt's foreign policy in September 1941. At that time he announced: "To disavow or oppose that policy now could only weaken the President's position, impair our prestige and imperil the nation." In domestic affairs he remained anti-New Deal, however, and late in 1941 voted for the Smith Bill.

Everett Dirksen was born on January 4, 1896 in Pekin, Illinois, the son of Johann Frederick and Antje (Conrady) Dirksen. It was the year of McKinley's election, and 11 months after Everett was born a devoted Republican father conferred upon him the middle name of McKinley. He tells us that his childhood years were "uneventful except that they were filled with the usual amount of mischief," and after being graduated from Pekin High School with salutatorial honors he found employment working from 11 to 13 hours each night for the lucrative sum of $55 a month. It was the summer of 1914 when he visited a half brother in Minneapolis and became interested in attending the University of Minnesota. The advertising department of the Minneapolis *Tribune* gave him a job, and he managed to borrow enough money to pay the matriculation fee.

Young Dirksen's college career continued through two years in the College of Arts and a year and a half in the College of Law before "Uncle Sam selected a nice fresh . . . suit in olive drab color." He entered the United States Army on January 4, 1918 and after completing the prescribed course of the 3rd Officers' Training Camp at Camp Custer,

DIRKSEN, EVERETT M.—*Continued*

Michigan, was invested with the rank of sergeant and sent overseas. Another course at the French Artillery School at Saumur followed, after which the rank of second lieutenant was conferred on him and he rejoined the 328th Field Artillery as a full-fledged training officer.

A shortage in balloon observers developed in the A. E. F., and Dirksen was assigned for duty in that capacity. He soon found himself in the St. Mihiel sector as a member of the Observers' Corps of the 69th Balloon Company attached to the 4th Army Corps. His military service consisted of balloon observations at the front and a subsequent assignment to the 2nd Section of the general staff. There he served for eight months in the occupied area of Germany, doing various kinds of intelligence duties.

He was mustered out of the service in September 1919 and proceeded to engage in a number of lines of business. They included the manufacture of household equipment, a position as general manager of the Cook Dredging Company (1922-25) and a part proprietorship in a wholesale bakery establishment. It was not until 1927, the year he married Luella Carver of Pekin, that he was elected City Commissioner of Pekin. Until 1931 he served as Commissioner of Finance. The April 1930 primaries found him a candidate for the Republican nomination for Congress in the 16th Illinois District, and although at that time he was defeated by 1,100 votes, his nomination in 1932 was more successful. In "rough and tumble" campaigning he has won every successive election, and in 1941 is serving his fifth continuous term in the House.

Dirksen's first committee assignments in Congress consisted of membership on the Committee on Territories, the Committee on the District of Columbia and the Committee on Immigration and Naturalization. Subsequently he was assigned to the Committee on Banking and Currency, the Special Committee on Reorganization of the Executive Branch, the Special Committee to Investigate Real Estate Bondholder Reorganizations, the Special Committee to Investigate Crime in the District of Columbia and the Appropriations Committee. He became known as one of the most effective debaters on the floor of the House, a "good political showman," and generally popular with his colleagues.

The Republican from Illinois has also been one of the most consistent critics of New Deal fiscal and monetary policies—particularly of New Deal spending policies—and during his years in Congress associated himself closely with Representative Joseph W. Martin, who in 1940 became chairman of the Republican National Committee and minority leader of the House. For six years Dirksen served as a member of the Republican Congressional Campaign Committee; in 1941 he served his fourth year as vice-chairman in charge of the Midwestern area; and in 1940 he was a vigorous campaigner for Dwight H. Green, who was elected Governor of Illinois. In January 1941 there was a campaign in Illinois and other central states for Dirksen's own election as chairman of the Republican National Committee to succeed Martin when he retires. He is in 1941 a member of the Appropriations Committee, an assignment which is exclusive.

By attending evening school in Washington, D. C., Mr. Dirksen completed the unfinished law course begun at the University of Minnesota, and has been admitted to the Bar in both the District of Columbia and the State of Illinois. He is a member of the American Legion and of the Veterans of Foreign Wars, a Mason, an Elk and an Eagle. Mr. and Mrs. Dirksen have one daughter, Danice Joy.

DONNELLY, ANTOINETTE *See* Blake, D. pseud.

DONOVAN, WILLIAM J(OSEPH) Jan. 1, 1883- Lawyer; United States coordinator of information

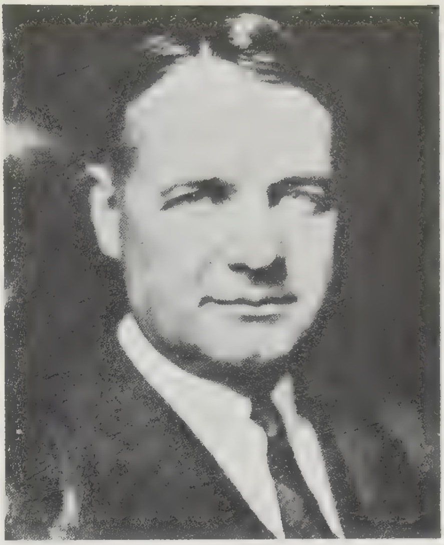
Address: b. 2 Wall St, New York City; Department of State Bldg, Washington, D. C.; h. 742 Delaware Ave, Buffalo, N. Y.

Colonel William J. Donovan, in the First World War known as "Wild Bill" of the Fighting 69th, seems likely to go down in history as one of the mystery men of this War. During 1940 and 1941 he shuttled back and forth from country to country without any diplomatic title but obviously with the blessing of President Roosevelt, and wherever he went rumors followed. His itinerary for February 1941 included Jerusalem, Cairo, Malta, Gibraltar and Spain; and the New York *Times,* discussing his previous tour of the Balkans, said: "His resolute presentation of the position of the United States in the struggle of the free nations against dictatorships is everywhere remarked to have had tremendous effect, stiffening resistance to Germany in the Balkans." It was shortly after this comment that Germany sprang her Balkan *coup,* however.

William Joseph Donovan was born in Buffalo, New York on New Year's Day 1883, the son of Timothy P. and Anna (Lennon) Donovan. (His father was the Republican leader in an Irish ward.) Donovan attended the preparatory department of Niagara University and then went on to Columbia to take his B. A. in 1905, also acquiring a reputation as a football star, the rather unsuitable nickname of "Wild Bill," and membership in Phi Kappa Psi and Phi Delta Phi. He earned enough money by tutoring to take his law degree in 1907, and then went back to Buffalo to hang out his shingle.

Donovan's career as a lawyer was uneventful—although highly successful—until the First World War. It was July 1914 when he married Ruth Rumsey, daughter of one of the oldest and wealthiest families in Erie County, New York (the Donovans had two children, David Rumsey and Patricia); and it was only two years later when he organized a National Guard cavalry troop and served on the Mexican border as its captain. He also saw service in Poland when he was sent there by the Rockefeller Institute to obtain and distribute milk for children, and it was in Poland that he met Herbert Hoover for the first time.

When the United States entered the First World War Donovan went as a major with the 165th Infantry (the old Irish 69th, New York) to the front. He was soon promoted to lieutenant colonel and then colonel, and his coolness under fire and his daring exploits made him almost a legendary figure among the men of the A. E. F. "By Armistice Day Bill was the most famous man in the A. E. F., even including General Pershing." He was wounded three times, received the Congressional Medal of Honor, the Distinguished Service Cross, the Distinguished Service Medal, the Légion d'Honneur, the Croix de Guerre with a palm and silver star, the Croci de Guerra—became "one of the best decorated heroes of the World War." In 1919 he was exploring China on his own, then was sent to Siberia to observe the Kolchak Government, and, once back in Europe, wound up as special counsel for the Fuel Commission.



International News
WILLIAM J. DONOVAN

Not wishing to capitalize on his fame, after these experiences Donovan went quickly back to the practice of law, however. It was 1922 before he entered politics: in that year he ran for Lieutenant Governor of New York State on the Republican ticket. The victory went to the Democrats, but Donovan ran well ahead of his ticket, and a few months later he was appointed United States District Attorney for the Western District of New York. He promptly made himself obnoxious to the Wets by his attempts to enforce the new prohibition law, and after a raid on his own club some of his best friends stopped speaking to him and his senior law partner severed all connections. But he had received much valuable newspaper publicity, he formed another law firm, and in 1924 he was called to Washington by United States Attorney General Harlan F. Stone (see sketch this issue) to become Assistant Attorney General. Stone had once had Donovan as his law pupil at Columbia.

In Washington Donovan's awesome reputation had preceded him. But fears that he would turn out to be a trust-buster were soon calmed. He was "never prominent among those who . . . denounced Messrs. Fall, Doheny and Sinclair"; he endorsed the evidence against Senator Wheeler, who had broken the Daugherty machine; and when he campaigned for Theodore Roosevelt, Jr., for the Governorship of New York in 1924 he said nothing about Roosevelt's connection with the oil scandals.

March 1925 found Donovan in the post of first assistant to the new United States Attorney General, John G. Sargent, a position which he held under President Coolidge until 1929. It was while in charge of antitrust investigations that he inaugurated the practice of giving opinions in advance upon proposed mergers. All in all, his theory that business

DONOVAN, WILLIAM J.—*Continued*

needed "a traffic policeman rather than a detective" and that American businessmen "should not be treated as though they were narcotic peddlers" met with general approval. It is true that one writer said of Donovan in 1929 that he was "essentially Tory," and at one investigation the late Senator Walsh insinuated that he was "less than diligent" in pushing a certain inquiry into the Aluminum Company of America because the late Andrew Mellon had once been a large stockholder in the concern; but it is also true that John T. Flynn praised his methods, and Oswald Garrison Villard, writing somewhat later, called him "a man of great charm, of unquestioned courage and unusual ability."

Donovan had been one of Herbert Hoover's closest advisers long before the Kansas City convention in 1928. When Hoover became the Republican Presidential nominee he assisted Hoover with his public statements and speeches, even though Donovan himself didn't make speeches, on behalf of his candidacy; and it was generally understood that when Hoover became President, Donovan would become United States Attorney General. According to most stories Hoover broke his word, saying that since there was already one New Yorker in his Cabinet he couldn't include a second New York man who was also a Catholic.

After 1929 Donovan therefore busied himself with his private law practice as a member of the firm of Donovan, Leisure, Newton and Lumbard, and took on further duties as United States commissioner and chairman of the Colorado River Commission. Among other things, he worked on the reorganization of the bankruptcy laws of the United States; he served as a member of the Board of Arbitration under the National Mediation Board; and in 1932 he was the Republican nominee for the Governorship of New York. He was an articulate opponent of the New Deal, and when in October 1937 the Federal Government brought 57 ranking oilmen to trial under the Sherman Antitrust Act he headed the attorneys for the defense.

When the Second World War broke out Donovan was not slow in expressing his opinions, either. His curiosity had brought him to Ethiopia during the Italian conquest, and to Spain during the war there. In 1938 he had watched Germany's military maneuvers, and he was concerned over the state of American preparedness. Nevertheless he wrote (in November 1939): "I do not think that America is in danger of invasion; current talk of a victorious Hitler invading the United States or South America tomorrow or following the War, to me is so much nonsense." Early in 1940, when there was talk of conscription, he suggested that we stop sending our young men to war first—in mechanical warfare older men could do just as well, he said, and "we would face disaster greater than any we might fight to avert, if victory has been achieved by squandering the youth upon which we must rely for greatness in the future." In May 1940 he stated emphatically that "the United States is the one nation on earth which enjoys complete freedom to remain neutral with impunity," that essentially Great Britain and France were "fighting not for democracy but for survival as great powers," and he predicted impoverishment and dictatorship if the United States should enter the War. What he recommended was simply military preparedness and "concentration" on the Western hemisphere.

Dissimilar to President Roosevelt's as these opinions were, they were of such short duration that they did not prevent Donovan from carrying out certain missions for him. On July 14, 1940 the Colonel boarded a clipper for Lisbon, ostensibly on private business, but carrying a special passport which allowed him to travel in a British plane. When he returned in August he announced that he had been abroad on a confidential mission for Secretary of the Navy Knox and reported both to Knox and to the President. Not long afterward he released a series of articles, prepared with Edgar Mowrer, which described the workings of the German Fifth Column; and soon after that the "destroyer deal" with England took place. All this led some observers to believe that actually Donovan had negotiated the deal while abroad.

After his return from Europe Donovan spent a short time in Hawaii with Knox, reportedly gathering material for another exposé; on December 14 he once more left for Lisbon by clipper. The Army and the Navy Departments professed ignorance of any official complexion to this trip, too, but guesses were plentiful: Donovan was going to the Near East to inspect the British forces and to try to swing Weygand around to the Allied cause; he was going to England to counteract the impressions left by Kennedy; he was going to carry out any number of missions, all of them highly important, all of them highly confidential.

When in March 1941 the quiet-spoken, discreet Republican lawyer returned from having dined and talked with important men in nearly all the capitals of Europe and the Balkans, from London to Istanbul, his mission remained almost as mysterious to the public. But his radio report that same month and subsequent speeches on what he had learned abroad left no doubt that he believed Hitler a direct menace to the United States and its economy, and did much to convince Americans that speedier and bolder action was necessary. It was not, however, until July 1941 that President Roosevelt gave him an official title and an office without precedent in United States history: that of coordinator of information. In 1941 he and Edgar Ansel Mowrer (see sketch this issue) wrote *Fifth Column Lessons for America.*

Donovan is "forthright, friendly and energetic"—adventurous, but the kind of man who never lets his clothes get rumpled. Mrs. Donovan can be described in almost the same words. A few years ago she sailed around the world in a 90-foot schooner with their daughter (who was later killed in an automobile accident) and their son, now a Virginia farmer.

DOUGLAS, DONALD W(ILLS) Apr. 6, 1892- Aircraft manufacturer

Address: b. Douglas Aircraft Co, Santa Monica, Calif; h. 1433 San Vicente Blvd, Santa Monica, Calif.

In 1941 Donald W. Douglas announced that "the planes being produced for America's defense and for aid to Britain are, on the whole, second to none, and in some categories, vastly superior to anything in the world." As the airplane designer and producer who since 1915 "has done more than any other individual to give man mastery of space," who won the Collier Award in 1936 for "the outstanding twin-engined commercial transport plane" and the Guggenheim Gold Medal in 1940 for his contribution to the development of commercial and military airplanes, Donald Douglas' words carried weight. His factories in Southern California, employing more than 28,000 persons, were even then busy night and day filling orders for medium bombers, for attack ships, for dive bombers, for troop and cargo transports, both for the United States Army and Navy and foreign governments.

Douglas has become the outstanding plane manufacturer he is, one associate says, because he is a man "who dips into the future with the mind of a poet and the slide rule of an engineer." And airplanes have always been the great interest of his life. He was born in Brooklyn, New York, and went to Trinity Chapel School in New York City. His father, William Edward Douglas, then a banker and now assistant treasurer of his son's company, planned a naval career for young Donald, and urged him to apply for admission to the United States Naval Academy. His application was accepted and in 1909 Donald left his father and his mother, Dorothy (Locker) Douglas, to start his career as a midshipman at Annapolis.

Lawrence Kronquist

DONALD W. DOUGLAS

Not long afterward he was among the small group that saw the Wright brothers demonstrate their frail little biplane at Fort Myer, Virginia. He saw it leave the ground, circle the course and return to its starting point. After that, training cruises, navigation and mathematics seemed important to him only insofar as they related to wings and skies. When he should have been studying seafaring problems, he was experimenting with model airplanes and gliders, building small workable models. It was one of these models that ended his naval career. It was a beautiful job and it sailed smoothly through the air after Douglas had launched it from the roof of his dormitory. It made a beautiful three-point landing, too, but on an admiral's head. Donald Douglas resigned from Annapolis in 1912.

He immediately entered Massachusetts Institute of Technology to study aeronautics and in 1914 he was graduated with a B. S. in engineering. His first job was an appointment at M. I. T. as assistant in aeronautical engineering at a salary of $500 a year. For one year he worked with Commander J. C. Hunsacker on the first wind tunnel, a development that helped take the guesswork out of airplane performance and laid the foundation for aviation's development in the next quarter of a century.

In 1915 Douglas joined the Connecticut Aircraft Company in New Haven as consultant, working there on the *D-1,* the Navy's pioneer dirigible. After a short time he went to the Glenn L. Martin Company's plant in Los Angeles as chief engineer, but he left this position in 1916 to become chief civilian aeronautical engineer for the United States Signal Corps. In 1917 he was back with the Glenn L. Martin Company, again as chief engineer,

DOUGLAS, DONALD W.—*Continued*

but this time at their new Cleveland factory. He stayed there until 1920.

It was in that year that he launched out for himself and came to Southern California, a young man who had little more than a pleasing personality, a good technical background, a roll of blueprints, an abiding faith in the future of aviation and the hope of finding someone with money who wanted an airplane. He found David R. Davis, a wealthy Los Angeles sportsman who was anxious to be the first man to make a nonstop flight across the North American continent, and persuaded him to give him the necessary financial assistance. With an office at the rear of a Santa Monica barbershop and space rented on the second floor of a planing mill, he started work on the Douglas *Cloudster*. The *Cloudster* didn't make the first trans-continental flight—another plane did—but it did introduce startling and important innovations in plane manufacture. It was the first airplane to attain material increase in speed by streamlining; the first plane with gas dump valves; the first plane with a truly effective instrument panel.

Douglas went to the United States Navy with the plans of his *Cloudster* and officials there were interested enough to give him a contract to build three planes. But Douglas hadn't the money to get going. Day after day he went around trying to induce bankers and businessmen to put up the funds, and times were hard for his wife, Charlotte Ogg, whom he had married in 1916, and for his growing family (he now has four sons and one daughter). Finally, through a reporter on the Los Angeles *Times,* he was introduced to the *Times'* publisher, Harry Chandler, and managed to interest him in supporting his project. Chandler sent a note around to 10 other local businessmen, and through these men the money was secured.

This government contract was finished in 1921, and the Davis Douglas Company which had built the first *Cloudster* became the Douglas Company. Other government contracts followed, and in 1923 there came the most important one of Douglas' career up to that time. The Army had been looking for a plane to fly around the world and after talking the matter over with a number of other manufacturers came to Douglas to get the job done. On April 6, 1924 specially designed Douglas planes took off from Seattle, Washington on the first successful round-the-world flight.

As a result of this flight Douglas planes got a good deal of publicity, and orders began coming in both from the United States Government and from foreign governments. By 1928 the firm was ready for a reorganization and expansion program, and its name was changed to the Douglas Aircraft Company. Before this time Douglas had turned back every penny earned into his company, which had shown a consistent profit almost from the first. Today it is probably the most prosperous of the nation's plane manufacturers, and even in 1937, a pre-War year, it showed a profit of $1,081,513.

Throughout the '20s Douglas' company developed and built advanced military aircraft of every type, but in 1932 it branched out into another field. In that year a contract was signed with Transcontinental and Western Airlines for the development of a new modern, twin-motored, all metal commercial transport. The *DC-1,* the result of the Douglas Aircraft Company's designs, took to the air in 1933, was later modified and named the *DC-2* and in its new form superseded almost every commercial model then being used. Its basic design was further developed into a sleeper transport plane, the *DC-3.* The *DC-4,* the biggest and almost the fastest land transport in the United States, was developed by Douglas at the request of the four largest domestic airlines and Pan American Airways, and in 1938 took to the air. Douglas hadn't driven a single one of the 1,300,000 rivets in this plane, but he knew "exactly where each one is, and why it is there, knew how many hours and minutes it would take to replace it." All these DC planes (DC stands for Douglas Commercial) brought to air travel new standards of safety, speed and comfort. Today they are serving airline routes covering 57 countries, and in the United States itself they now carry the vast majority of all air passengers, airmail and express.

During this same period new military models also continued to be developed and sold to the United States and foreign governments, including Germany, quite impartially. This caused the Senate committee investigating munitions to list Douglas Aircraft along with Curtiss-Wright and Pratt and Whitney as one of the American aircraft companies "helping to build an air fleet for Germany." Business with all foreign governments except the Allies ceased, of course, after the outbreak of the Second World War, and since the fall of 1940, contracts awarded earlier having been finally signed, the main business of the Douglas plants has been national defense.

One of the biggest jobs they have turned out is the *B-19,* the Douglas super-bomber, the largest airplane ever built, with a wingspread of 212 feet, a cruising range of 7,500 miles and room for 125 people. For government projects like this and others, Douglas pushed construction of a huge new "blackout" factory at Long Beach, California and another assembly plant at Tulsa, Oklahoma. Plans called for the employment of more than 50,000 men and women with an annual payroll of about $90,000,000 when completed. Douglas insists, however, that all this business and a backlog in 1941 of orders amounting to $350,000,000 haven't meant tremendous profits for his company: according to his testimony before a Senate committee investigating the national defense program, he has actually been losing money on government contracts.

According to a number of commentators, it is "thoroughness, determination and a desire to be his own boss" that have made Douglas one of the leading aircraft manufacturers in the world. Douglas said once: "It would be impossible for any banker to tell me how to run this business. If any persons tried I should certainly get out. It just wouldn't work." He feels, too, that it isn't possible for his workers to dictate to him. Possibly as a result of this attitude, Douglas Aircraft had two serious strikes in 1937. The outcome of one of them was an agreement which the employees had to sign as a pledge that they wouldn't strike, damage property or sabotage planes. There have been National Labor Relations Cases against Douglas, too. Since the strikes Douglas has showered his men with pamphlets on their relationship. A typical one is entitled *Your Job and Mine, a Heart to Heart Talk with the Boss.*

Whether he is beset by labor trouble or the rush of national emergency production, Douglas is never hurried, never harried. He gets to work at nine, leaves at four and always manages to get enough time for yachting, fishing and even quiet evenings at home with a few friends. "Lean, athletic, with a finely chiseled face, bronzed from the sun and sea breezes," it has been said that he built his tremendous plant near Santa Monica because he wanted to live near the smooth sailing waters there.

DOUGLAS, WILLIAM O(RVILLE) Oct. 16, 1898- Associate Justice of the United States Supreme Court

Address: b. United States Supreme Court Bldg, Washington, D. C.; h. Eastern Ave, Silver Spring, Md.; 1778 Pennsylvania Ave, Washington, D. C.

WILLIAM O. DOUGLAS

When William O. Douglas took his seat on the United States Supreme Court in April 1939 he was the youngest man to fill that position in 125 years. And with his unruly sandy hair hanging over his forehead, his lean figure, boyish look and usually disheveled clothes, he looked even younger than his 41 years. Nevertheless he had a distinguished career behind him, as professor and as chairman of the Securities and Exchange Commission.

This career was achieved the hard way; everything William Douglas ever got he worked and fought for. He was born on October 16, 1898 in Maine, Minnesota, where his father, William Douglas, was a Presbyterian "home missionary." Five years later, worn out by traveling on horseback in all kinds of weather, by the hard life of an itinerant preacher, William's father died, and his mother, Julia Bickford (Fiske) Douglas, was left with three small children and about $2,000 in insurance. After wandering over much of the West, Mrs. Douglas and the children finally settled down in Yakima, Washington.

Keeping the family going was a struggle, and William did everything to earn money—ran errands, mowed lawns, worked in stores. As he grew up, it looked as though there would be no money for a college education for him, but in his last year in high school he won a tuition scholarship to Whitman College in Walla Walla, Washington. He started out for college with no other resources than that, but soon picked up jobs in a jewelry store, waiting on tables, acting as janitor. Summers he picked cherries, made fruit boxes, worked in the wheat fields. When he was graduated in 1920, he had behind him not only four years in which he had supported himself and contributed to his family, but a school record that included the presidency of the

DOUGLAS, WILLIAM O.—*Continued*

student body, membership on the debating team, and election to Phi Beta Kappa.

Without trouble, Douglas found a position teaching English and Latin in the Yakima High School and found his duties augmented by coaching the debating team and teaching public speaking. He had taken the position to try to save enough money to attend law school, but with the effort involved in keeping himself going and helping out at home, it looked as though he would never get to be a lawyer. "Finally," he says, "I decided it was impossible to save enough money by teaching and I said to hell with it." With a train of Chicago-bound sheep to nurse, he started for New York and Columbia Law School.

Douglas arrived in New York in September 1922 looking like a tramp and with about 12 cents in his pocket. At the Beta Theta Pi clubhouse he found a fraternity brother from Washington to stake him to $75, and with it he enrolled in the law school. But the money lasted only a short time, debts piled up, and it began to look as though William Douglas' ambition to become a lawyer would never be fulfilled. Just when things were worst, he learned from the appointments office at Columbia that some one was wanted by a firm to lay out a correspondence course in law. There were only six months of law school behind William Douglas, but he took the job and earned $600. Other openings followed, and by the end of his first year he had $1,000 in cash.

He took it and went back to LaGrande, Oregon to Mildred Riddle, whom he had known in his schoolteaching period. In August 1923 they were married and, Douglas recalls, "blew in my thousand bucks." But it wasn't hard to replace them, and the Douglases managed well until William Douglas was graduated from law school in 1925, second in his class and one of the editors of the *Law Review*. And then he found a position in the law firm of Cravath, De Gersdorff, Swaine and Wood.

In law school Douglas had been particularly interested in the study of the relation between law and business, and, according to one commentator, he went into his Wall Street firm "like an anthropologist" to "study the facts of law and life among the natives." Under Robert R. Swaine, one of the best corporation lawyers in the country (who years later was to be hammered away at by his former assistant in the course of an SEC investigation), Douglas mastered the intricacies of corporation finance. It was the time of a boom market and there was a bright future before him as a corporation lawyer.

But Douglas was never part of Wall Street and its maneuverings. He made one plunge into the market, saw his stock triple within a week, sold it and saw it dip back again to where he had bought it. This was enough for him, and he never speculated again. At the same, time, too, he was building up a curious feeling of detachment toward the whole business, his attitude influenced by works like Veblen's *Absentee Ownership* and Brandeis' *Other People's Money*.

In 1927 he resigned his position and went back to Yakima to hang out his shingle. Within ten days he had started back to New York, for he had found himself one of sixty-five lawyers in a town of twenty thousand. He didn't return to his old firm, however, but instead devoted himself to teaching. Columbia Law School, at which he had been lecturing during his two years with Cravath, De Gersdorff, Swaine and Wood, offered him a full-time position as assistant professor, and he accepted it. One year later he resigned, after President Butler appointed a dean for the Law School without consulting his faculty.

Douglas wasn't out of a position long. Robert Maynard Hutchins, then dean of law at Yale University, offered him a position at Yale, and in 1928 Douglas started in there as an assistant professor; within a year he had been raised to associate professor; in 1931 he was made a professor; and in 1932 he was made Sterling Professor of Law. Hutchins, who tried unsuccessfully to inveigle him to the University of Chicago with an offer of $20,000 a year, called him "the outstanding professor of law in the nation." And at Yale Douglas was indeed revolutionizing the teaching of corporation law. He insisted that the students be taught exactly what happens, rather than sterile legal concepts; he insisted that they learn how corporations really work and what lawyers' problems really are. And he himself did important work on corporation law and especially on bankruptcy, part of which was published in the bankruptcy studies of the Yale Institute of Human Relations from 1929 to 1932, part of which appeared in articles in law journals and in his books, the first four written with C. M. Shanks: *Cases and Materials on the Law of Management of Business Units; Cases and Materials on the Law of Financing Business Units; Cases and Materials on the Law of Corporate Reorganization* (all three published in 1931); *Cases and Materials on Business Units, Losses, Liabilities, and Assets* (1932); *Cases on the Law of Partnership, Joint Stock Associations, Business Trusts, and Other Non-Corporate Business Organizations,* with Charles Edward Clark (1932).

While teaching at Yale, Douglas entered the service of the Government, at the request of President Hoover, to direct bankruptcy studies in collaboration with the Department of Commerce. It was partly as a result of these studies that he was asked to direct the study of protective committees carried out by the Securities and Exchange Commission. From 1934 to 1936 Douglas held hearings, examined records, investigated these committees which spring up whenever a business fails, and his report, released in sections over a year and one-half, criticized the performance of bankers as bond trustees and pointed out glaring abuses on the part of protective and reorganization committees. Many of its suggestions recommending reforms have since been put into effect.

In January 1936 Douglas was made a member of the Securities and Exchange Commission set up in 1934 to police Wall Street, and before long Wall Street got its first savoring of the kind of man he was. Before the New York Bond Club, he spoke on "Democracy in Industry and Finance," and the terms he used were terms like "corporate kidnapping," the proposals he made were for the complete remaking of investment banking with management responsible to the will of the "real owners of the business." There was little jubilation in Wall Street in the fall of 1937 when he was made chairman of the SEC to replace Joseph P. Kennedy. Charles R. Gay, president of the New York Stock Exchange, did call the promotion "gratifying," Fred Moffat, president of the New York Curb Exchange did say it was an "excellent choice," but the mutterings were loud, and the phrases most often heard were "inconsistent meddler" and "impractical reformer."

Douglas hastened to answer one question for Wall Street: "What kind of a bird am I?" In his first press conference he said: "To tell you the truth I think I am really a pretty conservative sort of fellow from the old school, perhaps a school too old to be remembered. . . I am the kind of conservative who can't get away from the idea that simple honesty ought to prevail in the financial world. I am the kind of a fellow who can't see why stockholders shouldn't get the same kind of fair treatment they would if they were big partners instead of little partners in industry. . . I think that the SEC in the role of investors' advocate can do a great deal to preserve and revitalize the capitalistic system upon truly conservative standards."

Still looking like a Western college boy who had come East and made good, in Max Lerner's words "a slow moving fellow, low-voiced and deliberate in speech—a simple sort of fellow with slouching ways and carelessly chosen clothes," a man who during investigations would "twist himself in knots, sit on tables or drape his legs over the side of his chair," William Douglas got under way. Now, he felt, was the time for action, and he told the Stock Exchange so. "The job of regulation has got to be done. It isn't being done and, damn it, you're going to do it or we are. All you've been giving us is the run-around. If you'll produce a program of reorganization I'll let you run the Exchange. But if you just go on horse trading, I'll step in and run it myself." For months the Exchange produced proposals which Douglas rejected as ambiguous and vague, but finally a report was produced by an Exchange committee recommending everything Douglas was asking for. In March 1938 the Stock Exchange voted for reorganization.

Douglas continued to get things done—"partly through a blend of toughness, shrewdness and reasonableness which Wall Streeters could recognize and appreciate." He kept a sharp eye on reorganizations, he was alert for all the kinds of maneuvering which can go on behind the respectable façade of corporation law, he didn't hesitate to call suggestions "phoney" and he was able to establish an amicable working truce while doing it. By organizing round-table conferences, he helped the Stock Exchange govern itself without using many of the SEC's drastic police powers. William Douglas, it has been said, "found the New York Stock Exchange a private club and left it a public institution, collecting the scalp of Dick Whitney and the magic symbols of the Street's Elder Bankers in transit." His *Democracy and Finance* (1940) was written during this period.

In March 1939 President Roosevelt nominated him an Associate Justice of the Supreme Court in an appointment that pleased Congress, the inner White House circle and the public. Since then Justice Douglas has "brought to the Court something it could well use—an intimate knowledge of corporate finance and familiarity with the complexities of sound business finance as distinct from the complexities of financial finagling." A man who, according to Max Lerner, has one of the sharpest and deftest minds in Washington, he has shown himself on the court to be a liberal and a reformer. He is not a reformer just for reform's sake, but a man who believes that reforms have been and are needed to revitalize both our economy and our national morale.

Away from the Court he spends his spare time with his wife and his two children, Mildred, and William, known as "Bumble"; plays a little bridge, poker or golf; reads the biographies of great and little men and women.

Who's Who in the Nation's Capital

DOWNS, ROBERT B(INGHAM) May 25, 1903- Librarian

Address: Library, New York University, New York City

As part of the national defense program, a commission of librarians has been created to survey the emergency research facilities of 700 of the nation's chief libraries. This commission, known as the Joint Committee on Library Research Facilities for National Emergency, was organized at the suggestion of Archibald MacLeish in cooperation with the

ROBERT B. DOWNS

Library Service Division of the United States Office of Education, the Special Libraries Association and the American Library Association. Its activities were made possible by funds from the latter and from the Carnegie Corporation, although much of the actual work has been done by volunteers from 200 general and 500 special libraries.

Descriptions of collections numbering millions of volumes and other library data needed in the work of the National Defense Council have been assembled in the Library of Congress by the Joint Committee. A summary of this material was published by the American Library Association under the title *Guide to Library Facilities for National Defense*, for distribution to Government officials and research libraries of the United States. The survey of library resources covers widely spread fields of technology and science: aeronautics, bridges, copper, fortifications, gas, hydrography, irrigation, lighthouses, mineralogy, phosphates, sulphur, timber, zinc; war contracts; financing of plant expansion for defense purposes.

This is the first time in the history of American libraries that such a survey has been undertaken. Robert B. Downs, chairman of the committee, believes that its value will not be limited to the present emergency period, but that it will prove equally important in normal times. He says that it may be the springboard for the establishment of a centralized source of information of the nation's technical research resources. The present committee's efforts may lead to a similar but even larger study of the 150,000,000 books now in the research libraries throughout the country.

Robert Downs has had much experience in surveying the resources of libraries. In 1938 he edited *Resources of Southern Libraries.* This study started with the organization of the committee on resources of Southern libraries by the American Library Association. "As a reference book, this guide," says one reviewer, "will be consulted frequently and profitably. As a book to be read through at successive sittings, it offers most interesting if somewhat disconnected information and suggests the possibility of a regional bibliographical tour filled with delightful surprises."

Robert Bingham Downs has an understanding of the South. He was born in Lenoir, North Carolina, where his Scotch-Irish father, John McLeod Downs, was a merchant, a postmaster and a member of the State Legislature. His mother, Clara Catherine (Hartley) Downs, was of Dutch-English descent. He had his first library experience at the University of North Carolina, where he worked as an assistant while attending the University. He was graduated in 1926 and then entered the School of Library Service at Columbia University, from which he received a B. S. in 1927 and an M. S. in 1929. In the meantime he worked as a reference assistant at the New York City Public Library. In 1923 he published a pamphlet, *American Humor*, written in collaboration with Elizabeth Crooks, a classmate from Newark, Delaware, whom he married in 1929. They have two children, Clara Breckenridge and Mary Roberta.

From 1929 to 1931 Robert Downs was librarian and assistant professor of bibliography at Colby College, Waterville, Maine. Then he returned to the University of North Carolina to serve as assistant to Dr. Louis Round Wilson, the librarian. After one year, following Dr. Wilson's appointment to the University of Chicago Graduate Library School, Downs was made acting librarian and a year later librarian and professor of library science. With Dr. Wilson he wrote *Special Collections for the Study of History and Literature in the Southeast* (1934). Along with his administrative work he conducted courses in reference, bibliography and the history of books and libraries; and to the graduate students of the University he gave a special series of bibliographical lectures. To encourage recreational reading he had a book store installed in the library building and arranged for weekly talks by authors and critics.

At the time of Downs' appointment to the directorship of the New York University Libraries (1938) it was written: "Considering Mr. Downs' professional activities in the direction of library coordination and cooperation, it is apparent that he has had a fertile field in the South and has worked it well. As a member of the American Library Association's board on resources of American libraries, and as chairman of the Association's Committee on Resources of Southern libraries, he conducted a survey, the results of which are of extraordinary potential value to American scholars. As librarian of the University of North Carolina he aided the integration of regional resources, cooperating closely with Duke University." In other directions as well, says this same commentator, "his work has been notable. Strong collections in such fields as Negro history and State documents have been built up; passage of a law requiring a deposit of 25 copies of all State documents in the University library was obtained; and a system of extensive duplicate exchange was developed."

He has contributed many papers to library and other periodicals and has published *The Story of Books* (1935), a pamphlet popularizing the history of printing, and a *Guide for the Description and Evaluation of Research Materials* (1939), a list of classified headings to use in estimating the strength of a library,

Robert M. Downs is at present also working on a survey of the library resources of New York City for the American Library Association, and under his direction a study of union catalogs will be undertaken as a Carnegie project for 1941. He is president of the Association of College and Reference Librarians and a member of many professional associations as well as of the Grolier and Salmagundi clubs. He is a Democrat; golf and travel are his hobbies.

DRAPER, DOROTHY (TUCKERMAN)

Nov. 22, 1889- Decorator; real estate stylist
Address: b. 38 E. 57th St, New York City

"All that anyone needs to become a good decorator is a sense of beauty, a sense of fun, and some common sense," says Dorothy Draper, America's foremost woman decorator and real estate stylist. Her achievements include the redesigning and furnishing of New York's famous Hampshire House (the biggest decorating job ever awarded to a woman), the Terrace Club of the World's Fair, the Hotel Carlyle, Hollywood's Arrowhead Springs Hotel, Camillia House at the Drake Hotel in Chicago, the Delnor Hospital, St. Charles, Illinois, New York's new Maison Coty and the Mayflower Hotel, Washington, D. C. Mrs. Draper has not only done face-lifting operations on old buildings and pulled many an anemic property out of the red, but has smartened up the apartments—and lives—of "Top Drawer Society." Among decorating circles the term "Draperized" is used to indicate her particular and individual technique. In April 1941 she was appointed director of the Studio of Architecture Building and Furnishing of *Good Housekeeping* Magazine, and assumed her new duties on June 1.

DOROTHY DRAPER

To thousands of homemaking women throughout the United States, Dorothy Draper is already known through her articles in magazines such as *Vogue* and *House and Garden.* Her extension course, "Learn to Live," grew out of the countless letters on decorating and entertaining problems she received from women in many countries. Early questions ranged from "I have red hair, but do you think I can do my bedroom in pink?" to "Will a new dining room rug help me hold my husband?" It soon became apparent to Mrs. Draper that women's whole lives often needed refurbishing: the course became as much concerned with such matters as Understanding Yourself and How To Love And Be Loved as with formal versus informal home styling.

Two well-received books by Mrs. Draper have recently been published: *Decorating Is Fun! How To Be Your Own Decorator* (1939) and *Entertaining Is Fun! How To Be a Popular Hostess* (1941). In the former she showed how women can decorate their homes, expressing their own tastes, at little expense: what to do about awkwardly shaped rooms, how to economize on floor coverings, how to reupholster furniture, etc. It is a practical book answering "a huge variety of questions with a blithe spirit as well as with professional competence." In her new book, *Entertaining Is Fun,* Mrs. Draper emphasizes the art of enjoying oneself as hostess. Her advice on how to make guests want to come again includes "intelligent planning, daring and originality." The book covers everything from a buffet supper to a week end, and includes a chapter on how to entertain one's husband.

The success story behind Dorothy Draper, Inc., is not at all the feminine version of the Horatio Alger pattern. Dorothy Tuckerman was born into a family long regarded as one of New England's most aristocratic, has always been listed in the *Social Register,* started her career from the ballrooms of Newport and Tuxedo Park, belongs to the River and Tuxedo Clubs (two of New York's most exclusive), and entertains the best people in her beautiful tower apartment in Hampshire House. She

DRAPER, DOROTHY—*Continued*
was born in New York City of Colonial ancestry. Her paternal great-great-great grandfather was Oliver Wolcott, one of the signers of the Declaration of Independence. Her parents were Paul and Susan (Minturn) Tuckerman. She grew up in New York and Newport, and had "no schooling to speak of, except that I was brought up where I had the privilege of being constantly in touch with surroundings of pleasant good taste." She didn't study art or decorating in school, and lays claim to no special talents; but extensive travels in Europe augmented and enriched her own background and natural good taste.

Following her marriage in 1912 to Dr. George Draper, she lived as a glamorous young society matron. "Tall, statuesque, always beautifully dressed and meticulously groomed," she wrought such magic in her own houses that friends and acquaintances began urging her to "do" their houses or apartments for them. News of what she was able to do in decorative matters got around to architects and real estate men. Her professional career began in earnest when Douglas Elliman, one of New York's best-known realtors, gave her the Hotel Carlyle to decorate. She achieved the Hall of Fame (1933) for the decorating of the River Club, for work brimful of originality, and for her latest venture—remodeling of tenements. In 1934 she was chosen as sole representative in decoration by the National Federation of Business and Professional Women.

"She is slender and vibrant, dark-haired and dark-eyed, this Mrs. Draper who has three children and a grandchild three months old. [This was written before she became twice a grandmother.] She thinks a great deal of superfluous nonsense is talked about women combining careers with normal home life. The way to combine the two, she thinks, is to combine the two and not dramatize them." But she says, too, that "American women are divided into two classes, the happily married and the decorators." She herself has been divorced for years.

Mrs. Draper, who calls herself a "stylist and designer," lands orders by presenting to hard-boiled realty owners instances where "low-cost but intelligently-applied cheerfulness has boosted rentals." She combats drabness in buildings by selling principally "imagination and paint-and-color jobs." Once she did no more with an old building than paint the outside shiny black with white trim, and the doors in different striking colors. Within three months it was 100 per cent rented. "Her prize exhibit is a block of once disconsolate New York tenements belonging to the Henry Phipps Estates. Under the Draper rejuvenation an average of $15,000 was spent on each of the 11 buildings. Results: 100 per cent occupancy with a comforting waiting list of high-type tenants; increase of rentals from $25 to an average $100; return of property to an income-paying basis in addition to amortization of improvement costs; general betterment of neighborhood."

She has decorated the homes of many society leaders, including those of Mrs. Frank Vanderlip, Mrs. Owen Young and Mrs. Preston Davies. The only valid test of a successfully decorated room, she asserts, is the reaction of a person standing in the doorway—whether he or she exclaims: "What a lovely room!" Visitors to Mrs. Draper's own tower apartment are said to enter with exactly that exclamation. "A small but conveniently arranged foyer is hung with brilliantly colored wallpaper and eighteenth century engravings which are family heirlooms. There is a generous mirror above a handsome black lacquer commode designed by Mrs. Draper, and side chairs in green leather. Her spacious drawing room manages to achieve an elegance and a dramatic quality without infringing upon the general atmosphere of restfulness and comfort. It combines furniture of many periods, mostly eighteenth century, but with a few modern notes, including small tables of black mirror, white plaster lamps and white damask curtains heavily fringed in wool. The walls are dark and the chairs slip-covered in quilted chintz in a brilliant pattern. A fireplace with shining brass and, when the weather is cool, a glowing fire, is the room's focal point."

DROCH, pseud. *See* Bridges, R.

DRUM, HUGH A(LOYSIUS) Sept. 19, 1879- Commander of the First Army, United States of America

Address: Headquarters, First Army, Governors Island, N. Y.

Lieutenant General Hugh A. Drum, the only United States officer now on active service who was chief of staff of a combat army in action during the First World War, believes now as he did in 1917 that "mechanical devices in war are inferior to the human element." Though modern equipment is needed, he says, "back of it all must be men, well trained, well versed in the profession of arms and patriotic in the finest sense." As commander of the First Army, which comprises the 1st, 2nd and 6th Army Corps, including eight divisions, numerous corps and Army troops, an Air Defense Command and Harbor Defense Commands along the North Atlantic Coast, he is working day and night to build the kind of army in which he believes.

He has more than 40 years' army experience to guide him, and a military family background before that. Many Drums distinguished themselves in the United States Army, and General Drum's father, Captain John Drum, was one of the volunteer officers of the Civil War who obtained a commission in the regular Army and kept it. His mother, Margaret (Desmond) Drum, gave birth to Hugh at the army post of Fort Brady, Michigan. His early life was spent in a succession of army posts, and it wasn't until 1894, when his father was detailed as instructor at the College of St. Francis Xavier in New York City, that he stayed in any one place for any length of time. He studied at this college for a while and later at Boston College, which gave him a B. A.

From Boston College, Hugh A. Drum went to the Philippine Islands in 1898. He was already a second lieutenant in the Army, made one at 19 by President McKinley after his father had been killed in the assault on San Juan Hill in Cuba. In the Philippines, Drum spent two years fighting malaria, flies and bad water as well as insurgents. In 1901 he was in Mindanao fighting the Moros, winning his brevet as captain and a Silver Star. Colonel Frank D. Baldwin, the expedition commander, liked his work and took him along as aide de camp when he was promoted brigadier general and assigned to command the Department of the Visayas, and later when he was sent home to command the Department of Colorado.

Captain Drum was assigned to the Southwestern Division until 1906, and two years later was shifted back to the Philippines. He returned to the United States to attend the Army School of the Line at Fort Leavenworth, from which he was graduated with honors in 1911, and the Army Staff College, from which he was graduated in 1912. Immediately afterward he went on duty on the Mexican border and spent two years there.

During these years of service and study Drum was busy writing on tactical subjects; he did work in improving small arms practice; he made plans for attacking cities built of stone. This last project came to the attention of Major General Fred Funston, and as a result Drum was taken along as aide de camp when the General was detailed to command the 1914 expedition to Vera Cruz. Later Captain Drum worked out plans for the defense of the Rio Grande frontier and for the concentration there of the regular Army and the National Guard, made a reality in 1916. General Pershing was as impressed as General Funston had been and retained Drum on his staff. And when Pershing sailed with his original general headquarters staff of the A. E. F. in May 1917, Captain Drum was with him.

U. S. Signal Corps

HUGH A. DRUM

Captain Drum was soon given the temporary rank of lieutenant colonel and the job of studying the problem of which ports the French Government was to turn over to the A. E. F. for receiving and forwarding troops and supplies. His next position was in the Operations Section of Pershing's general staff, his problem, with others, to decide how American troops were to be organized for battle. He was at the front lines discovering this, first with the British in Flanders, then with the French, finally with the American 42nd Division. There he was described as a "square-shouldered, beautifully turned out little hawk-nosed" soldier.

On July 4, 1918 Colonel Drum was made chief of staff of the First Army, A. E. F. He found himself organizing headquarters to handle an army which had swelled to a million and one-quarter and helping to forge the victories at Saint-Mihiel and Meuse-Argonne. By the time the Armistice was signed, he had advanced through colonel to brigadier general, both ranks temporary, and had served as chief of staff of Service Supply.

During the post-War decade General Drum (his brigadier general's commission was made permanent in December 1922) moved around a good deal. In 1919 he was director of the Army School of the Line; in 1920 and 1921 commandant of the General Service Schools. In 1922 he left teaching for a while to take the command of the coast and air defenses of the 2nd Corps Area and in 1923 he became

DRUM, HUGH A.—*Continued*

assistant chief of staff for Operations and Trainings. His three years in Washington in this position, under General Pershing, came at a time when the Army was going through the throes of reorganization; his own job was heading a board to consider the Army's aerial requirements and later acting as executive chairman of the Baker Board which made a broad survey of the problem. Clashes with General "Billy" Mitchell, later court-martialed, and others resulted from his activities here, for General Drum never agreed with those who insisted that the airplane was the be-all and end-all of modern warfare. He insisted on this in the general staff report submitted to the President in 1925, and he has continued to insist on it. Successful modern war, he believes, can be achieved only through a balanced plan in which the Navy and Army, each with its proper air component, bears its proper part.

General Drum left Washington in 1926 to take over the command of the First Division. In 1930 he was made inspector general of the Army. As such he investigated athletic activities at West Point, then under fire from Hamilton Fish (see sketch this issue), and gave the Academy a fairly clean bill of health. There followed two years as commander of the 5th Corps Area, from 1931, when he was made general, to 1933, when he was made deputy chief of staff under Douglas MacArthur (see sketch this issue). In this position he studied the problem of army aviation, helped to modernize the Army and build the Civilian Conservation Corps. Also, as a member of the Army and Navy Joint Board, he studied plans for the cooperation of the two services.

His studies here were given a practical application when in 1935 he was appointed commander of the Army's largest peacetime command, the Hawaiian Department. In his two years in Hawaii, General Drum directed the building of more than 50 miles of military roads and a bombproof ammunition depot, saw a bombing base completed, started the Hawaiian Service Command to help make Hawaii self-sufficient in food. He returned to the United States in 1937 to take command of the 6th Corps Area and the Second Army, with headquarters in Chicago, and in the fall of 1938 moved from Chicago to New York, where he was given command of the premier Corps Area of them all, the 2nd, with headquarters on Governors Island.

Made a lieutenant general in 1939, General Drum is now in command of the First Army, one of the four armies into which the whole United States area is being divided. Always a firm supporter of national preparedness, a believer, before the present Selective Service Act, in universal military service, he now has an opportunity to change those "haphazard methods we have followed in the past." The intensive training of troops is his job now, and it was he who directed the maneuvers of the First Army in northern New York in 1940; he who in March 1941 set competitive tests with unit and individual awards for the First Army; he who planned the comprehensive and exacting maneuvers for the First Army in the summer and fall of 1941. His job, he feels, is to prepare the "military man who insures our peace," not to commit himself on whether this military man will go to war. His answer when asked in April 1941 was: "I don't know about that. You'll have to ask a higher authority—perhaps God."

In his career General Drum has received almost all the honors a soldier can win: the Silver Star, the Distinguished Service Medal, the Croix de Guerre with two palms; he is a commander of the French Légion d'Honneur, of the Belgian and Italian Orders of the Crown. He is also an honorary member of the West Point Society of New York and the possessor of perpetual membership in the New York Society of Military and Naval Officers of the World War, and in September 1941 Fordham University gave him an honorary LL. D. None of these honors means so much to him, however, as the Laetare Medal which he received in 1940—"to me, from the spiritual viewpoint, [this] is the pinnacle of all I desire." Awarded annually by the University of Notre Dame to an outstanding member of the Catholic laity, it was presented to General Drum with the citation: "His genius in war is equalled only by his brilliant leadership in peace." His name, the *Catholic World* commented, "has long been associated with the highest standards of religious and civic endeavor. . . . The simplicity of his religious life has always endeared him to the rank and file of his military associates."

These associates have long been impressed, too, by General Drum's abilities as a hard driver and a hard worker. A short, stocky, shrewd-minded man who looks younger than his years, he is always smartly turned out, whether in uniform or civilian clothes. For relaxation the General, "Drummie" to his wife, Mary Reaume, whom he married in 1903, rides, plays golf and badminton. Their daughter, Anna Carroll Drum, lives with her father and mother in a 100-year-old house on Governors Island, New York. Called by Major George Fielding Eliot a man whose "mind is still elastic, still eagerly seeking for new ideas," he once sent his entire staff to see *Hellzapoppin* "because," said he, "that show is a great display of rhythm, precision and deliberate maneuver-timing."

DUKE, VERNON Oct. 10, 1903- Composer

Address: b. 799 7th Ave, New York City; h. 41 E. 61st St, New York City

For many years the dual musical personality of Vladimir Dukelsky held the fascinated attention of music critics. Would Dukelsky, the classicist, retain his hold in that field while making a name for himself as Vernon Duke in popular music? Or would Vernon supersede Vladimir? By 1941 there could no longer be any doubt—Dukelsky was as active in classical music as he had been at any time in his long and varied career. He had completed a violin concerto at the request of Jascha Heifitz and had it accepted for performance by the Boston Symphony Orchestra, and a suite from his ballet *Entre'acte*, for which Balanchine wrote the scenario, was given its première by Leon Barzin and the National Orchestral Association. To some extent the outlooks of Dukelsky and Duke have merged, bringing the ballet to Broadway. In the process his music has tended toward a more American, and a more popular, idiom. Torch songs (*I Can't Get Started With You*), show music (*April in Paris*) and ballet music such as that created for Zorina (see sketch this issue) in *Goldwyn Follies* (1937), have made the name of Vernon Duke familiar to the public. With *Cabin in the Sky* (1940) he completed his most successful theatre job to date, in the musical comedy story form that he prefers to the revue, then began working with John Latouche, his collaborator on *Cabin in the Sky*, on a song and dance show with a Scotch flavor to be produced by George Abbott, on songs for a George Marion, Jr.-Fred Thompson show and on songs for Eddie Cantor's (see sketch this issue) musical *Banjo Eyes*. At the same time he was completing a musical setting for playwright Behrman's *Serena Blandish*.

VERNON DUKE

Vladimir Dukelsky was born October 10, 1903, in Pskov, Russia, the son of Alexander and Anna (Kopylov) Dukelsky. His mother was part Spanish, his father Georgian (South Russian). Of his background he says: "My parents were well-to-do people in the sugar business. My uncle, Prince Toumanov, was Governor of the Caucasus. I was slated for a diplomatic career, so at four I started the study of languages. But before I was seven I was trying to compose." At the age of eight he completed a heroically long (fourteen-act) ballet, and a few years later he forsook the Imperial Naval Academy for the Kiev Conservatory. He also studied for a time in Moscow. His early instructors were Glière and B. Javorsky.

Living in Russia at the time of the First World War and the Revolution, he recalls himself as "an extremely pale young man unsuccessfully imitating Debussy." The first public performance of his work occurred at Kiev in 1918, when *Intermezzo* was played; and in 1919 a students' orchestra gave two movements of a string sextet. During his last days in Russia the Red Cross discovered that he knew a little English and appointed

DUKE, VERNON—*Continued*

him a guard, with an old rifle that wouldn't shoot. Then, with his parents, he left Russia for Constantinople in January 1920, arriving "after all sorts of usual adventures that were quite unpleasant in those days but seem monotonous now, as they are the inevitable 'repertoire' of every Russian."

Although it was to be fully seven years before jazz became a part of his own musical outlook (during the Revolution he had been immersed in the study of fugues and of such composers as Bach, Scarlatti and Mozart), even in 1921 jazz interested him when he heard it in the incongruous setting of post-War Constantinople. While in Turkey he began working in the popular field, harmonizing three Turkish folk songs for a musical show; and in collaboration with the Russian painter Paul Tchelitchev he wrote an *Oriental Ballet* that was produced in 1921 at the Théâtre des Petits-Champs, Constantinople. His own music was, in fact, distinctly modern, and an overture, *Gondola,* played at Carnegie Hall soon after his arrival in America in 1922, was called by Krehbiel "a farrago of atrocious noises." With the doors of Carnegie Hall all but closed to him as a result, the young Russian branched out into a many-sided career during which he appeared in vaudeville, wrote Dada poetry, wrote incidental music for a variety act of sawing a woman in half and wrote a musical thriller to an Edgar Wallace mystery, *The Yellow Mask.*

That wasn't all, though. During this first American stay Dukelsky also met the late George Gershwin, his greatest inspiration in the popular music field and the one who later suggested the name Vernon Duke. According to the impressionable young composer, Gershwin was "leading the American popular composers away from the light operatic genre and into a field accentuated by new rhythms. He was also discrediting the old theory that a score should contain two hits and so much incidental music."

Nevertheless in 1924 the bulk of Dukelsky's music was still cast in a classical mold. Included were a piano concerto, two orchestral scores and a vocal suite. Late in 1924, while living in Monte Carlo, he completed the ballet *Zéphyr et Flore,* which had its première there in 1925 and opened in London in November 1925. Produced by Diaghilev, its choregraphy was by Massine and settings were designed by the French artist Georges Braque. In London the composer became popular and something of a public figure—a tall, top-hatted, romantic-looking youth with brown eyes and jet-black hair. "He became so entranced with 'la vie artistique,'" said Benjamin Welles, "that he donned purple shirts, orange cravats, pinned a baby orchid to his lapel and went strolling with the better ballet types, shepherd's crook in hand. A little near-sighted even then, he adopted a monocle—this ornament he discarded years later after some Broadway acquaintances had pleaded with him all night at a New York restaurant. . . Duke's color sense, one feels sure, must take a high place in any inventory of his personal capabilities."

It was not until after a few songs of his had found their way into Cochran revues in London that Vladimir Dukelsky's career as Vernon Duke finally got off to a slow start with a musical play, *Yvonne* (1926)—promptly dubbed by Noel Coward (see sketch this issue) "Yvonne the terrible." Some of his revue numbers fared better, as did the works under his real name: a sonata for piano and orchestra was conducted by Koussevitzky in Paris in 1926, with Dukelsky at the piano, and his *First Symphony* was conducted by Koussevitzky in Paris and in Boston in 1927. "Thus," Vernon Duke recalls, "began a dual life, which, according to my perhaps unduly dogmatic critics, has so far been notable for its two sharply contrasted phases: (1) when I wrote 'promising' serious music and bad jazz; (2) productive of bad serious music and jazz laden with promise. . . I await eagerly the symptoms of a third period when the two sides of my musical nature will go hand in hand and be of equally good quality."

Late in the 1920's Duke returned to America. In 1930 Aaron Copland introduced him to the producer of the *Garrick Gaieties,* for which he wrote several numbers that year, teaming up with lyricist "Yip" Harburg. Dukelsky's *Second Symphony,* together with Gershwin's *An American In Paris,* represented the United States at the London and Oxford festivals of the I. S. C. M. It has been performed by the Boston, Chicago, Paris and Warsaw Symphony Orchestras. From 1931 to 1932 he did an operatic work and an *Epitaph,* both under his real name and both dedicated to Diaghilev, and in 1932 Duke's *Walk a Little Faster* had its Broadway debut while Dukelsky's *Second Symphony* was given a performance by the Chicago Symphony Orchestra.

"Duke and Dukelsky," Isaac Goldberg wrote in 1933, "dwell in perfect, if at times modernistic, harmony." But Duke was definitely in the ascendancy. In 1930 this versatile Broadway composer was at Paramount's Long Island studio, doing incidental music for films. He had access to a library "containing the most fabulous catalog imaginable, listing every existing emotion—'fury', 'jealousy', 'lust', 'indifference', etc., and hundreds of fragments to express the emotion in musical terms." In 1933 he contributed music to *Shoot the Works* and to the *Ziegfeld Follies* of that year. He did the score for the *Ziegfeld Follies* of 1935 and in 1936 was called in to complete the score begun by Gershwin for the *Goldwyn Follies.* He was the first composer to write a ballet expressly for the screen—the famous water ballet for Zorina (see sketch this issue) in the last-named film. For the Beatrice Lillie revue, *The Show Is On,* Duke wrote two ballet sequences, one of which was cut from the final show. Other Broadway shows to which he contributed music were *Three's A Crowd* and *Americana.* An interesting judgment on Duke's popular compositions in those days was that of Isaac Goldberg, who wrote: "He can become capricious and petulant. . .

It may be significant that his music is not as rich as it might be in the humor, the bubbling spirits and fun that make Gershwin's songs and dances such a tonic." But that was in the early 1930's.

At about the same time works by Dukelsky included a ballet taken from Gide's *The Counterfeiters* and *The End of St. Petersburg*—the latter a musical treatment of the works of several Russian poets. *The End of St. Petersburg* enjoyed a fair reception at the hands of the critics, though Gilman found much of the score "a threshing of old straw."

In 1938, discussing the field in which Vernon Duke excels, this critic remarked: "The modern composer of music for the theatre must be a combination of musician, technician, artist and long-suffering diplomat. . . [He] is obliged to alter his attitude toward the music he wishes to write and think almost entirely in terms of the market." Yet as Vernon Duke, Dukelsky has been able to maintain a high technical level. His ballet *Raffles*, written in 1940 for Ray Bolger, was a feature of *Keep Off the Grass.* In 1941, while Balanchine's production of *Entre'acte* (Dukelsky) was getting under way, Vernon Duke wrote the music for the Eddie Cantor show, *Banjo Eyes*, as well as the score for an American production starring England's Jessie Matthews.

An artist who likes good clothes and still has a flair for color, Vernon Duke has nevertheless toned down some since the 1920's. His favorite hobby is writing on musical subjects for newspapers and magazines. He is a member of ASCAP and also has a card in Local 802, A F of M. As for his musical ideas, many of them come to him while traveling. Although he finds trains most conducive to imaginative work, he has also thought up ideas while en route on ferryboats, ocean liners, in taxicabs and in automobiles. But not in airplanes. He has what amounts to a phobia of high places, and fainted once while sight-seeing atop a Mexico City cathedral.

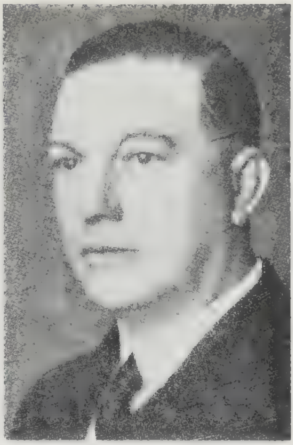
DUKELSKY, VLADIMIR *See* Duke, V.

DUNCAN, SIR ANDREW RAE 1884-

President of the British Board of Trade

Address: b. Board of Trade, London, England; h. Dunure, Foxgrove Rd, Beckenham, Kent, England



SIR ANDREW RAE DUNCAN

On January 6, 1941 it was officially announced from the office of the British Prime Minister that several new executive committees had been set up to obtain "more rapid and decisive action" in the prosecution of the War. The first of these was the Import Executive, consisting of the five ministers who are the chief importers; the second was the Production Executive, to allocate raw materials, productive capacity and labor; the third was the Lord President's Committee, which was to coordinate the work of all the other committees and advise the War Cabinet as to how they are working. Sir Andrew Rae Duncan, Minister of Supply since October 3, 1940, was chairman of the first of these committees and a member of the other two. One of the more important executives in the British Cabinet, he had the task of seeing that the three British forces get the guns, the tanks, the lorries, shells, rifles and machine guns that are England's need. On June 29, 1941 his duties were taken over by Lord Beaverbrook and he was returned to his former position as President of the Board of Trade.

"Square-faced, burly, dourly Scottish, he has withstood the hurricane of Government change. . . He has proved himself a capable speaker, loyal to his 'rr's'; and even those who see in him the traditional figure of Big Business admit his undoubted capacity as an administrator." Duncan is a typical Scotsman, determined, tenacious, full of "go." He attends kirk regularly on Sundays and is a member of the Caledonian Club and the London Ayrshire Society, where he used to foot an eightsome reel with the best of them. There aren't eightsome reels for him now: the grim needs of the War are paramount, and for Duncan their grimness has had a bitter personal emphasis in the loss of his elder son in action in June 1940.

Duncan began life without any of the "advantages" and might have remained an ordinary schoolmaster in an ordinary school all his life. Instead he studied law, made contacts with large business interests on the Clyde and made spectacular progress in business, the Civil Service and politics. His father was a social worker at Irvine, Ayr-

DUNCAN, SIR ANDREW RAE—*Cont.*

shire, Scotland, where Andrew Rae was born. He was educated there, too, at the Irvine Academy ("academy" is the usual Scottish term for a good secondary school) and then went on to the University of Glasgow, from which he was graduated with a composite M. A., LL. B. degree.

Duncan started to teach English at Ayr Academy, but with true Scotch industry and thrift he saved enough from his small salary to take a law course. Passing out as a solicitor, he succeeded at a very early age in becoming a partner in one of Glasgow's best legal firms, Biggart, Lumsden and Company, which had many industrial connections. Duncan got to know many of the Clyde shipbuilders and engineers; his chief, Sir Thomas Biggart, was honorary secretary to the Shipbuilding Employers' Federation; and when, at the beginning of the First World War, that organization moved to London, Duncan became its full-time paid secretary there.

At the same time he was given a Civil Service war job, as secretary to the Merchant Shipbuilding Advisory Committee. Sir Eric Geddes, then First Lord of the Admiralty, next made him joint secretary to the Admiralty Shipping Council. By the time he was 34 Duncan was already known as an important man, considered one of Lloyd George's "discoveries." And when others of these "discoveries" went back into private industry after the War, Duncan stayed on with the Government. He was appointed coal controller and given his first chance to mediate industrial disputes, a type of work in which he always has shone. His task was to bring the mines back from State control to private ownership. When this work was successfully concluded in 1921, he received a knighthood.

In the 1918 election Duncan had put up for the Cathcart Parliamentary Division of Glasgow as a Coalition Liberal, but failed by 33 votes in a three-cornered contest. In 1920 he was called to the Bar by Gray's Inn and in that same year, when the Advisory Committee of the Coal Mines Department was formed, he was appointed its chairman, a position he held until 1929. It was in 1920, too, that he became permanent vice-president of the Shipbuilding Employers' Federation (he gave this up in 1927). In 1921 he became a Knight Bachelor. In 1922 he made a further attempt at Parliament, but was again beaten, this time in Dundee, by the late E. D. Morel, the pacifist.

Though he didn't win a seat in Parliament, Sir Andrew's talents were much used in the next few years. In February 1924 he was appointed to serve on the Dock Strike Inquiry and in July on the Royal Commission on National Health Insurance. October 1925 brought a visit to Nova Scotia, where he investigated the bitter grievances of the miners who were burning the pits. Here, in a Scottish colonial community, this Scotsman made himself *persona grata,* was given an honorary degree by Dalhousie University, and succeeded in settling the quarrel. As a result of his success, in the following April he was asked by the Canadian Government to deal with the long-standing differences between the Maritime Provinces and the Midwest. These, too, he settled.

In January 1927 Sir Andrew got his biggest job yet, at a salary of £7,000 a year. An enormous electrical setup known as the Grid was being arranged to take current into every part of England. To control it, the Minister of Transport established a Central Electricity Board and made Duncan its chairman. (He served in that capacity until 1935, and he remained a member of the Board until recently.) Again his duties were of a conciliatory nature, his task the settlement of the varied and often conflicting interests of all the parties within the industry. In that same year, too, he became a member of the Civil Service Arbitration Tribunal and technical assessor of the Permanent Court of International Justice at The Hague (labor section). In January 1929 he became a director of the Bank of England; from 1931 to 1932 he was a member of the Industrial Court, representing the Chancellor of the Exchequer for Civil Service arbitrations; from 1933 to 1935 he was chairman of the Sea-Fish Commission.

In November 1934 the Government took Sir Andrew from his work on the Grid, made him the independent chairman of the executive committee of the Iron and Steel Federation, with a salary of £8,000. With the outbreak of the present War this body became merged in the Ministry of Supply, and Duncan, as a result, automatically became a civil servant. In January 1940 the late Neville Chamberlain took him into the Cabinet as president of the Board of Trade, and a seat in Parliament was found for him in the solid Tory City of London. When Churchill took over in May 1940, Duncan was one of the few men he retained, and five months later he appointed him Minister of Supply. After eight months, however, he was returned to his previous position.

His success, it is said, according to the *Picture Post,* "is due to the teacher in him. He is usually on good terms with the Head. He picks the bright boys. He does not force them along, but encourages them to think for themselves and have the courage of their own judgment. In resolving difficulties he is a catalyst. A catalyst is a chemical which makes other chemicals combine, but remains, itself, unchanged."

In 1938 Duncan was advanced a grade in knighthood to G. B. E., and before the entry of Italy into the War he held the Order of St. Maurice and St. Lazarus from that country. In 1916 he was married to Annie, daughter of the late Andrew Jordan. There were two sons before the War; there is one, now.

Who's Who

DUNHAM, KATHERINE 1910- Dancer; choregrapher

Address: 43 W. 66th St, New York City

The New York daily papers of January 17, 1941 carried a piquant notice to the effect that the chief dancer in one of Broadway's current musical hits would lecture to the Anthropology Club of the Yale University Graduate School on the practical application of primitive materials to the theatre, demonstrating her discourse with the aid of 10 performers. The notice was no more striking than the combination of talents in this gifted Negro choregrapher, and the career they have shaped for her. Katherine Dunham has danced her way from the pews of a Methodist Church, through the torrid mysteries of Haitian voodoo and primitive ceremonials in Jamaica, Martinique, Trinidad, to recherché Sunday night concerts in New York ("Tropics and le Jazz Hot" she called her programs) and Broadway stardom.

That meant incidentally dancing her way through hardship, discouragement, indefatigable labor, to success. From one point of view she has "arrived"; yet she feels herself still definitely on the way. Her goal is suggested by the dictum of the New York *Herald Tribune's* critic, Walter Terry: "Katherine Dunham is laying the groundwork for a great Negro dance."

She has mastered the steps and contortions that characterize Negro dances from the plantation to the Harlem "joint"; has studied and reproduced the juba, the rumba, the *danse du ventre*, as well as the cakewalk and the shimmy. These become, however, not her performance but her raw material: elements to be fused and developed into an idiom of her own. It is never an "arty" idiom, and always expresses the vitality we associate with the dance and with the Negro. The same critic remarked that one feels "as if the performers (of her troupe) were dancing because they felt an overpowering urge for rhythmic movement and not merely because they were scheduled to give a show."

Miss Dunham's background contributed a number of elements to her diverse career. Her family was a pillar of the church in Joliet, Illinois, where she was born in 1910. Her mother, Annette Poindexter Dunham, was a schoolteacher. Her father, Albert Millard Dunham, descended from Madagascar via Tennessee, kept a cleaning and dyeing establishment by day. At night he indulged a fondness for playing the mandolin and guitar, somewhat to the distress of Katherine and her brother Albert, who were commandeered to form a trio until Katherine openly revolted and Albert fled to the University of Chicago. Here he became one of the most brilliant students ever graduated from that institution. After taking his Master's Degree at Harvard he returned to Chicago for his Ph. D. and then went to teach at Howard University.

KATHERINE DUNHAM

His little sister's education carried her to more distant and more exotic places. Her interest in the dance was evident even in Joliet, where at the age of eight she split the congregation wide open by staging a "cabaret party" to raise funds for the church. She cleared $32, which at the time seemed almost as much as the $2,000 her 1941 troupe takes in weekly. Her parents did not worry too much about her twinkling feet, since she stood very well in her studies, was class poet and occasionally a paid contributor to *Child Life Magazine*. But by the time she entered the University of Chicago she knew that choregraphy was her field, and had determined to earn her way through college by forming a dancing school. The school was in a cold, drafty barn, and it took rather violent instruction to save teacher and pupils from pneumonia. They shivered and sneezed through it without fatal results, and the teacher managed at the same time to win distinction as a student in her college courses. More important, for present purposes, she discovered the study of anthropology, which made it legitimate—and feasible—to study primitive dances.

Through a staunch friend, who is now one of the *Easy Aces* radio performers, she met Mark Turbyfill, a ballet dancer with the Chicago Opera Company, and they developed the idea of a Negro ballet. Earl Delamarter, assistant director of the Chicago Symphony Orchestra, was enlisted, and the three established a Negro school of the dance which staged its first public appearance in 1931, with a *Negro Rhapsody* at the Chicago Beaux Arts Ball.

The Katherine Dunham Dance Group made its way slowly, until a performance in an abandoned loft resulted in a Julius Rosenwald Foundation Fellowship which enabled Miss Dunham to study native dance, ritual and folklore in the Caribbean and in Brazil. The steps she had to master were no more intricate than her social role in communities where

DUNHAM, KATHERINE—*Continued*

both Negro and white elements eyed with suspicion a young woman who "frequently disappeared into the bush for days on end" and sometimes came back with the eggs and feathers of a voodoo ceremony sticking to her hair. In Port au Prince she was actually warned to leave. Instead she rented the biggest theatre the town afforded and announced a concert. Her audience came armed with epithets and ripe fruit; but all that was flung at her was a shower of "Lovely, lovely!", "How artistic!" and a pitter-patter of applause. For she appeared in a long tulle dress sprinkled with rosebuds, pranced daintily through a bit of Debussy, followed it with a respectable though castanet-clicking Spanish number and ended with a Fire Dance, at the close of which she released a flock of doves into the audience. In comparison to that dual feat of penetrating the inner circles of local aristocracy and native priesthood, her recent conquest of Broadway seems almost a minor achievement. She returned from her travels with a large repertoire of dances, quantities of authentic and illuminating films, and a store of inside information on primitive cults and customs that commands the respect of anthropologists.

Although critics and audiences have been glowing in their praise of Miss Dunham's own performance she rather prides herself on a realization that she is not a great dancer. She feels her forte to be choregraphy, the planning and directing of dances, the training of dancers. Those who rhapsodize over her own prowess may be to some extent confused between pleasure in the dance and in the dancer, for not the least of Katherine Dunham's gifts is beauty. Moreover she has the ability—partly executive—to achieve settings and costumes which further her choregraphic and dramatic effects. She is less a singer than a dancer, yet her low voice, half singing, half speaking, greatly enhances certain of her numbers.

Off stage her voice is also low, and unusually pleasing. Always quiet and reserved, she has an unusual ability to express herself in words, written or spoken. Two of her articles on dancing in Martinique were published in *Esquire* in 1939, and she is now working on more. An exhaustive analysis of dances in Haiti is waiting for final revision, and she hopes, Broadway willing, soon to finish her book on the Maroon peoples of Jamaica.

Asked about her role in *Cabin in the Sky,* Miss Dunham confesses that she looks forward to a different type of performance. Her ambition is to be an actress on the legitimate stage and to combine choregraphy with this, in a new type of vehicle. Her troupe meanwhile is being held together and developed technically, while in Chicago new recruits are training. She is directing a group of children there in the study of classic ballet, and looks forward to adding them to her company. During her absence classes are directed by Olga Rostova, formerly of the Russian Ballet.

The agent who first dubbed Katherine Dunham "the Marian Anderson of the dance" was not too happily inspired, for they are far more different than similar. Critics feel that Miss Dunham's own name is quite enough to characterize an artist whose talent, intelligence and abounding vitality put it in her power to rank as a major figure in the American dance.

DURBIN, DEANNA Dec. 4, 1922- Film actress

Address: b. c/o Universal Pictures Corp, Universal City, Calif; h. Brentwood, Calif.

The girl who made the awkward age look graceful on the screen has really grown up. On her eighteenth birthday, December 4, 1940, her parents announced her engagement to her first beau, Vaughn Paul, a fellow worker on the Universal lot, who was assistant to the assistant director on her first film and later was made associate producer. The wedding took place in Hollywood on April 18, 1941 before 900 guests in the church and a crowd of about 2,000 fans waiting outside.

The public she numbers in tens of millions finds it hard to believe that little Deanna Durbin has graduated from child actress to *ingenue.* It was only in 1936 that she first adolesced onto the screen in *Three Smart Girls.* Since then, in 10 successive box-office hits, she has "singlehandedly lifted Universal out of the red," has won the hearts of America's film audience with her famous smile, their ears with her "perfect blue-white diamond of a voice"; has developed into an actress who received the small "Oscar" of the Academy of Motion Picture Arts and Sciences for the best junior screen performance in 1938; and signed a contract that calls for $1,750 a week, a $50,000 bonus for each film and an annual increase of $250 weekly until 1943. This, in addition to the annual fortune she reaps from "commercial interests" such as the use of her name for clothing and accessories, put her well up in the $200,000 salary bracket in 1940. It has been said, however, that her greatest achievement has been to stay just a simple, buoyant young girl who finds the limelight as healthy and invigorating as sunshine.

Deanna was christened Edna Mae in Winnipeg, Canada, where she was born December 4, 1922. Her mother, Ada (Read) Durbin, and her father, James Durbin, had both come from England, where her sister Edith was born in 1912. When Edna Mae was a year old Mr. Durbin's health forced them to move to Southern California, where he went into the real-estate business. The Durbins were simple, sturdy folk, with no musical careers in the family, although Uncle Arthur sang in a church choir and all of them liked to gather around the piano.

The Durbin girls lived a normal go-to-school life in Los Angeles. Edith completed high school with honors, took a Master's Degree at the University of California, and now as Mrs. Clarence Heckman teaches dramatics in a Los Angeles junior high school. The less studious Edna Mae detested arithmetic, liked history and English, was very fond of school dramatics and singing in church socials. It was Edith who first insisted that her little sister must have singing lessons and used part of her earnings as a schoolteacher to provide them. The Durbins were not thinking of Hollywood at the time, nor had any of them entered its studios only a few miles away.

But Hollywood came to Edna Mae, plucked her from her classes at the Bret Harte Junior High School, changed her name to Deanna, and thrust her into a fame that seldom happens in one's early teens—and if it does, seldom lasts into maturity. In 1935 the Metro-Goldwyn-Mayer officials had almost given up hope of finding a girl to portray Madame Schumann-Heink as a child, and asked an actors' agent to help them. Through a friend he heard about Deanna Durbin's singing at some neighborhood party and arranged for an audition. He was startled at the loveliness of her voice, and presently the Durbins were startled by a contract.

At this point Madame Schumann-Heink fell ill, the proposed picture was called off and the contract canceled. Meanwhile Deanna, once "discovered," had made a number of public appearances, sung over the radio and begun to develop a local following. She had also made such an impression on Rufus LeMaire that when he transferred from Metro-Goldwyn-Mayer to Universal he remembered "the blue-eyed youngster with the golden voice," sent for her and placed her under contract at $300 a week.

DEANNA DURBIN

After the usual exasperating wait for just the right picture, *Three Smart Girls* was decided upon, to be directed and produced by the then unrecognized and now almost unrivaled twosome, Koster and Pasternak. While it was still in production Eddie Cantor (see sketch this issue) signed Deanna as prima donna of his air show, and by the time the film was released she had an enthusiastic radio audience to be surprised by the unexpected acting ability she displayed. Next came *100 Men and a Girl,* in which she appeared with Leopold Stokowski (see sketch this issue), followed by *Mad About Music* in the spring of 1938. The next fall *That Certain Age* added the fourth sensational success and won her the critics' vote for the best performance of the month by a cinema actress. *Three Smart Girls Grow Up* reunited the trio of Pasternak, Koster and Durbin, who had been the open secret of each other's success. It also marked the beginning of Deanna's own growing up, which became more apparent in *First Love* and in *It's a Date.* At the end of February 1941, DURBIN, DEANNA—*Continued*

her ninth picture, *Nice Girl?,* came in like a lion—complete with Franchot Tone, serious love scenes and loud acclaim. And the next picture, *It Started With Eve,* in which she co-starred with Charles Laughton, showed a genuine talent for sophisticated comedy.

Stars do not shine without polishing, and Deanna Durbin's sparkle represents years of intensive work and regular living, getting up at 6:30 or 7 every morning except Sunday and following through her exacting regime until 5; then a quiet evening, usually at home with her parents, and early to bed. The private tutor assigned by the school board of Los Angeles worked with her on the studio lot three hours of every school day in the year until in 1940 she proudly received her high school diploma. Then there was voice study, under Andres de Segurola, former baritone of the Metropolitan Opera Company, who has been her teacher and coach since her first radio success at 13, when he pronounced her vocal apparatus as fully developed as that of a mature soprano. But the chief work, of course, was the making of pictures, which for Deanna involves dual rehearsals and performances—her songs are recorded separately and then synchronized with the motions of her mouth in the unrecorded singing she does while the picture is being taken. An ingenious mathematician estimated that the average Durbin song gave 3 minutes of melody and consumed 12 cups of coffee, 48 cigarets (not hers, for she doesn't smoke), 5 pieces of chalk, 550 feet of celluloid, 776 working hours of 97 specialists, male and female.

To find the best environment for this busy life her parents moved to a large, cozily formal house in the exclusive suburb Laughlin Park, where homes are large, quiet and covered with vines. Mrs. Durbin keeps the household running as smoothly as she did in their humbler homes, and before Deanna was married both parents collaborated in seeing that their daughter remained the model of a well-brought-up young girl. When she drove her own gray roadster she was expected to phone every morning and report her safe arrival at the studio—usually by 8 a. m.

In some ways fame has meant a cloistered life, with study, rehearsal and rest so closely fitted that there has been little time for random "living." Consequently Deanna seems younger than many of her contemporaries. Her promptness and feeling for perfection are as unusual among stars and as much appreciated by her colleagues as her even disposition. Her strongest cuss words are "fuzz", "bats" and "phooey." One of her favorite diversions is going to the movies, but mostly she is too busy making them. The one entertainment she has always found time for is concerts. Among her large collection of recorded classics she treasures the complete recordings of Stokowski, which he presented to her during the making of *100 Men and a Girl.* Recently she has also collected air-mail stamps, particularly from first flights.

Her favorite pets are "Tippy," a dog of dubious pedigree, Ferdinand the parakeet and three miniature turtles: Penny, Kay, and Eddie Cantor. Her favorite sport is swimming, but autograph hounds bar her from public beaches, so before her marriage she had to swim in the great pool among the Durbins' terraced gardens. Horseback riding and badminton she likes; also roller skating, but the studio has a prejudice against that prolific breeder of bruises. Ping-pong is a recent and safer enthusiasm. It is said that her interest in sports increased with her interest in Vaughn Paul. Another bond they share is the ability to laugh at the same things—"zany humor or sophisticated humor, but no sophomore puns."

In October 1941, however, it seemed possible that her marriage might also mean her retirement from picture-making, for she was suspended by her studio for refusing to work. The studio maintained that she demanded working conditions and supervision of her films not in her contract. She insisted that her husband was a Universal producer in "name only," and when he left the studio after demands to produce an important film she hoped to follow him. Later in the year, however, she patched up her difficulties with her studio.

Who's Who in America

DYKSTRA, CLARENCE A(DDISON) (dīk'strŭ) Feb. 25, 1883- President of the University of Wisconsin

Address: b. University of Wisconsin, Madison, Wis; h. 130 N. Prospect Ave, Madison, Wis.

> Bulletin: On March 19, 1941 President Roosevelt named Dr. Dykstra chairman of the newly-formed Defense Mediation Board, as one of the public's representatives. Two days later it was announced that Dr. Dykstra had resigned as Director of Selective Service in order to devote all of his time to his new duties. On June 19, however, his resignation from the Defense Mediation Board was also accepted; Dr. Dykstra wished to give more time to his university than he had found possible. He remains on call for panel service in defense labor controversies, and is still an advisory member of the joint Army-Navy Board.

From January 1941 issue:

Public opinion is unanimous that the choice of Clarence A. Dykstra to head Selective Service was a "singularly fortunate" one. The position needs an expert administrator, and as city manager for Cincinnati and president of the University of Wisconsin Dr. Dykstra has shown himself to be just that.

His nomination approved unanimously by the Senate, Clarence Dykstra took the oath of office on October 17, 1940 and told the American people: "Those who have thought we were supine or soft or that a democracy could not move with effectiveness may be disappointed." Immediately he took hold of the organization that had already been built up, "authorized and empowered to appoint necessary members of local boards, local board physicians, government appeal agents and members of appeal boards."

This large, six-feet-three and almost 200-pound civilian who is now in charge of drafting young men into the Army was born in Cleveland, Ohio, where his father, Lawrence Dykstra, was pastor of the Dutch Reformed Church. He was the second of six children, and Cleveland was just one of the many pastorates in which his father and mother, Margaret (Barr) Dykstra served. Most of Clarence's early education was received in the public schools of Chicago. His college was the State University of Iowa, where his principal study was the science of municipal government.

After he was graduated in 1903, Dr. Dykstra spent a year at the University of Chicago as a fellow in history and an assistant in political science. The next two years he spent as a teacher in private schools in Pensacola, Florida. Between 1906 and 1908 he was back at the University of Chicago. Then came one year as an instructor in history and government at Ohio State University and nine years, from 1909 to 1918, as professor of political science and head of the department at the University of Kansas.

During all these years of teaching Dr. Dykstra had been building up a good deal of theory about state and municipal government. His first real experience in governmental affairs came in 1918 when he became executive secretary of the Cleveland (Ohio) Civic League. He stayed there eighteen months and then spent two years as secretary to the Chicago City Club. From Chicago he went to Los Angeles, where until 1926 he was secretary to the City Club and commissioner of the Department of Water and Power. As commissioner he was a member of the board which built a $300,000,000 aqueduct and which constructed hydroelectric plants for Los Angeles. In 1926 he became the director of personnel and efficiency for the Department of Water and Power, after qualifying for the position by passing a competitive Civil Service examination. During these years he was also a professor of municipal administration at the University of California.

Wide World

CLARENCE A. DYKSTRA

From 1930 to 1937 Dr. Dykstra was city manager of Cincinnati, where, after years of political mismanagement, the citizens were anxious to keep their new charter and clean government. Dr. Dykstra proceeded to expand and improve city services. Zoning, waste-collecting, hiring, purchasing were all carried out efficiently and without political bias. Yet during these years of expanding municipal service, Cincinnati's tax rate was not raised—in fact it was kept the lowest in the country for a city of its size. Dr. Dykstra was as approachable as he was efficient, and story has it that it wasn't unusual for a housewife to phone him if the garbage truck wasn't on time.

Dr. Dykstra expressed his own idea of city government like this: "We live in communities and a community is the sum of our lives. This is an age of cities, of ever expanding growth and multiplication of functions. The proper carrying out of these functions with the least possible expense with the most efficient personnel and the most appropriate appliances is the task of municipal statesmanship."

During these years Dr. Dykstra received many academic honors and many important related positions. He was president of the International Association of City Managers, a member of the Technical Advisory Board of the National Emergency Public Works Administration, a member of the Ohio State Advisory Committee of the United States Employment Service and chairman of the National Resources Board's committee to survey "The Role of the Urban Community in the National Economy." It was in 1937, however, that his greatest popular fame came—during the disastrous flood.

During the flood crisis Dr. Dykstra was granted unprecedented dictatorial powers by

DYKSTRA, CLARENCE A.—*Continued*

Cincinnati's City Council. He organized flood relief and flood control coolly, ably and efficiently. For 36 hours at a stretch he stayed at his desk; for hours he waded about the city. When everything had been brought into order in eight days, Dr. Dykstra was a national hero.

In 1937, perhaps because he felt that he had already proved his ability to translate academic theory into practical political achievement, Dr. Dykstra accepted the post of president of the University of Wisconsin, even though it meant a cut of $10,000 from the $25,000 salary he was receiving. The job at that time was a tough one, "under the handicap imposed by the national hullabaloo stirred up when Dr. Glenn Frank was summarily dropped." The choice was hailed as "wholly admirable," and soon after he took office Dr. Dykstra proceeded to organize the University on the same lines of efficiency he had established in Cincinnati.

His "at homes" became a regular feature of college life and he has been consistently looked up to and admired in the years he has been there, although, according to *Time*, he has "so far kindled no fire among the faculty or students." Dr. Dykstra didn't want to leave the University to take over his present position, and it was only because of a good deal of persuasion on the President's part and his own belief that "we should all do our bit" that he was induced to accept the position he now holds. However, he is officially merely on leave of absence, with permission to spend necessary time on university work. Wisconsin, which is receiving his $10,000 draft salary, has appointed an administrative committee of three to handle routine and policy details in his absence.

Dr. Dykstra was married in 1909 to Ada M. Hartley, who died in 1926. Dr. Dykstra's second marriage, to Lillian K. Rickaby, who was dean of women of the Riverside School in California when he met her, took place in 1927. He now has a daughter, Elizabeth Sylvester, a stepson, Franz Lee, and a young grandson named Stephen Dykstra Posey.

As professor, city manager, college president and as head of the draft, Dr. Dykstra is "unemotional, unspectacular and wholly interested in efficiency." As one observer put it, "In reasoning and movement he is as impetuous as the town clock." His speeches seem to reflect his personality. In them he is "terse and direct; his speech deliberate, his voice resonant. He never makes use of a humorous anecdote. Much to be said, little time in which to say it, no time to be wasted." His work has always been his main interest; music his only hobby. It has been said "he would walk an earthquake to hear Bauer, Iturbi or Rachmaninoff play the piano." But the same biographer reminds us that Dykstra is the kind of man who after playing a better than average performance of Debussy's *Clair de Lune*, in his Cincinnati days, would get up from the piano saying: "The man we need for that police job is Bumblenunger."

EARLY, STEPHEN T. Aug. 27, 1889- Secretary to President Roosevelt

Address: b. The White House, Washington, D. C.; h. 7704 Morningside Dr, N. W., Washington, D. C.

Stephen T. Early, secretary to President Roosevelt, is the kind of secretary whose secretaries have secretaries. The White House is one of the greatest news sources in the world, and it is he who directs its public and press relations. Every morning at 9:20 Early is in the President's bedroom, conferring with him on daily business, storing up in his head the plans and thoughts of the President which he will interpret to the press at his daily conference.

The conference comes every morning at 10:30. To the scores of newspapermen gathered around, Early is straightforward and usually reasonable. There are times, of course, when he blows up (*Time* calls him "occasionally liverish"), but on the whole he maintains "an innate objective approach to his job." His attitude, appreciated by the press, is that reporters are entitled to forthright replies to important questions, and he gives them.

When he isn't holding his own conferences, he is often taking care of the problems which arise during the day, able to answer reporters' queries because he has the President's complete confidence, because he is in and out of the White House executive offices nine or ten times a day. At the President's own press conferences, "Steve" is by his elbow, now and again asking the President to clear up a remark he thinks might be misunderstood, offering suggestions.

Considered "the most expert press officer the White House has ever known," Early got that way through long newspaper experience. His own years as reporter and news writer gave him his "understanding of the active reporter's problems and of the pressure for quick action that lies behind the dozens of questions" asked. Stephen T. Early was born in Crozet, Virginia, the son of Thomas Joseph and Ida Virginia (Wood) Early. From private schools in Virginia and high school in Washington, D. C., he went directly into newspaper work in 1908.

His position was on the Washington staff of the United Press, and he kept it until 1913 when he went over to the Associated Press. When Roosevelt was Assistant Secretary of the Navy, Early was covering the State-War-Navy beat. He managed to teach Roosevelt some of the ropes of Washington publicity. His activities along these lines were cut short when, after nearly a decade of newspaper work, he went overseas with a machine gun company. In France he served as a captain of infantry and as a staff member of the A. E. F. official newspaper, *The Stars and Stripes,* and returned to the United States with a Silver Star citation "for meritorious service."

Early didn't return to newspaper work immediately. For a while in 1920 he acted as advance man for Roosevelt's Vice-Presidential campaign and then became publicity director for the United States Chamber of Commerce. After a year of this he joined the Associated Press again and soon was its "fast, crack, spot-news man." He was assigned to cover President Harding on his Western tour and scored a six-minute "beat" on his death by slipping down the fire stairs of a San Francisco hotel and telephoning the news to the AP before the official announcement. In 1924 he covered the Presidential campaign of John W. Davis. And in every year of his association with the AP he could be depended on to turn in important, readable stories.

This association ended in 1927 when Early became the Washington representative of the Paramount-Publix Corporation and Paramount News, a position he held until March 1933, when Roosevelt appointed him an assistant secretary in the White House, in charge of press relations. Early took the job with the firm conviction that the most popular thing the Roosevelt Administration could do would be to throw the doors wide open to the press and keep them open. It was his decision, with Roosevelt's approval, to banish "the White House spokesman" forever and no longer require correspondents to submit written questions to the President in advance of his conferences. He insisted that he be permitted to break in on the President at all times to check up between press conferences on the questions put to him by reporters. And he insisted that this same policy be followed by other press representatives in other government departments and agencies. As another innovation he had a news ticker installed in his office in order to keep tabs on the news breaking on all fronts.

These new policies were appreciated by hard-working reporters who had found press relations a perpetual source of difficulty under President Hoover. Newspapers praised Early's efficiency and understanding, made allowances for his being "hard-boiled and short-tempered at times." They have continued to do so, and even Hugh Johnson, newspaperman now, was inspired to write in 1940: "Never have I included Mr. Early among those who recklessly plan our future from positions of official irresponsibility but close personal relation with an overburdened President. . . Steve is one of the fairest and most fearless of the President's associates and, at least among those I know personally, the most dependable." When in the fall of 1941 the reporters covering the President felt that they were getting less out of press conferences than before, it was Early whom they asked to intercede for them.

STEPHEN T. EARLY

Of course there have been rifts between Early and the press in these years, and especially after July 1937, when Early was raised from assistant secretary to secretary. No one denies that Early's "hot temper" has occasionally got him into trouble; that occasionally he has been less well-informed than he might have been. A number of years back he took the "rap" for rebuking Lindbergh (see sketch this issue), after the cancellation of air-mail contracts, for publishing a telegram in the press before the President had been given the courtesy of reading it. As it happened the "publicity motives" which he attacked were not Lindbergh's at all. Again he got into trouble when he delivered what sounded like a Presidential rebuke to Henry Wallace for urging the third term; once again when he relayed the President's views on the Monroe Doctrine in terms "so confusing that neither State Department papers, editorials or his own cryptic statements later could clear them up."

But all this trouble was mild compared with the jam Early found himself in during the 1940 Presidential campaign. It was in November, and Early was trying to get to the President's train which was leaving the station. Policemen prevented him from doing so, and the report went out that he had kicked a Negro policeman so hard that he had to be taken home in an ambulance and put to bed. The papers immediately got to work; Joe Louis paid a call of condolence on the cop; and Early sadly wondered "why Republican politicians are attempting to find political significance in this incident." Perhaps the kindest criticism then came from *Time,* which stated: "Besides committing a first-rate political blunder, he had misbehaved in a way no decent citizen should. But for once newsmen were sorry for him, blaming it all on his hot temper."

(Continued next page)

EARLY, STEPHEN T.—*Continued*

Some of them were sufficiently sorry, and interested, to get the facts, which, as published later in *Editor and Publisher* and backed by many Washington correspondents, were these: when Early tried to get to the train, the police shoved him back so violently that he had to be caught, and as he fell his leg was flung into the air and struck a Negro policeman. Since this policeman had recently had an abdominal operation, his wound was injured.

Roosevelt was elected, in any case, and Early continued his job of informing the press and the world of the President's position on significant issues. During the passage of the Lease-Lend Bill he was frequently the White House spokesman; he insisted that "the President is keeping his hands strictly off"; he warned of the forces opposed to the President who were deliberately seeking to confuse the country and undermine confidence in the administration of the defense program. Later he revealed the President's views on weeding out all senior Army reserve officers incapable of active service. In April 1941 he definitely informed the country that the Government had no intention of establishing a domestic press censorship; one month later he denied that the President or Harry L. Hopkins (see sketch this issue) knew anything about a report from Vichy that 26 American ships with war supplies for the British had arrived at Suez accompanied by United States warships. And it was Early who, in June 1941, announced to the press that Roosevelt would commandeer the strike-bound North American Aviation Company. Since that time hardly a day passes in which Early doesn't inform the press and the country of some event, decision, plan. In November 1941, for instance, he warned that Hitler was planning an "economic peace conference" of puppet nations. On December 7th he confirmed the report that Japan had bombed Hawaii.

This is the kind of information he gives out, and always he is vigilant to kill what he called in a *Saturday Evening Post* article in June 1939 the "slanderous, grossly untrue and unfair reports . . . manufactured, passed on by word of mouth, printed and otherwise given currency." Early works hard at this—as he works hard at the hundreds of tasks his position involves. And he works almost as hard when he plays. He is a good golfer, he guns for ducks; he goes deep-sea and fly-fishing; he plays poker occasionally; he follows the races. Once in a while, however, he settles down for a quiet evening with Mrs. Early, the former Helen Wrenn, whom he married in 1921, and their three children in his comfortable home on the edge of Washington. But there is no guarantee it will remain quiet. Reporters stay up all hours of the night, the presses must be fed, and Early is the man who knows the answers.

ECCLES, MARRINER S(TODDARD) (ĕk'lz) Sept. 9, 1890- Chairman of the Federal Reserve Board

Address: b. Board of Governors, Federal Reserve System, Washington, D. C.; h. 2541 Van Buren Ave, Ogden, Utah; Shoreham Hotel, Washington, D. C.

In January 1941 the Federal Reserve Board, headed by Marriner S. Eccles, came out openly for specific fiscal legislation for the first time in its history. Intended to protect the country against the inflationary tendencies of the defense program, the Board's plan suggested repeal of Roosevelt's power to devaluate the dollar, the Administration's authority to issue new currency and the Treasury's right to issue $1.29 worth of silver coins for each ounce of foreign silver it buys. It also recommended that the Board be given power to double the amount of reserve funds which member banks have to keep on deposit at Federal Reserve Banks, that the Treasury find a way to "insulate" the foreign gold it buys, and suggested a method of financing defenses as well. *Time* called this plan "succinct and vigorous"; the National City Bank of New York found "little reasonable basis for difference of opinion on it"; and Ralph Robey called it the only plan that could offer the promise of success.

To a good many people these measures looked like a reversal of those policies Eccles had been advocating publicly ever since 1934. His fiscal theory has been one of bold Government spending, of "easy money"—Senator Byrd of Virginia blamed the debts of the New Deal on his "crackpot" ideas. Today, however, Eccles feels that circumstances are different from what they were during the depression and recession; that the Government should spend its way out of depressions, but adopt a pay as you go policy when the national income warrants.

When Eccles first went to Washington he had a reputation for success and for having original ideas, a reputation he still has. He won it as a practical banker and corporation director and president. He had a good start toward becoming these. His father, David Eccles, was a Scotsman who was taken to Utah by his immigrant family after its conversion to the faith of the Church of Jesus Christ of Latter Day Saints. David Eccles dug coal in Wyoming, ox-carted logs through the South Pass, got hold of a lumber business in Oregon, founded banks, sugar beet companies, insurance enterprises.

Marriner Stoddard Eccles was the eldest son of David Eccles' second wife, Ellen (Stoddard) Eccles, and one of 22 children. He went to the district schools of Logan, Utah, where he was born, and spent the years between 1905 and 1909 at Brigham Young College. Summers he worked with his father, tending stores, working in logging camps, learning to boss men. Then in 1909 his father asked him to accept a "call" from the head of the Mormon Church, and for two years Marriner toured Scotland in the frock coat and silk hat of a Mormon missionary. His chief convert was May Campbell Young, who followed him back to Utah to become Mrs. Eccles in 1913. (They have three children—one of their daughters died some years ago.)

By this time David Eccles had died and left a fortune of seven millions to his family. Marriner began to take over his business interests and by 1916 had organized the Eccles Investment Company, a holding company for his family's widespread enterprises. Through it he acquired a number of banks and by 1927 was president of the First Security Corporation, which operated 26 banks in Utah, Idaho and Wyoming. He was also president of the Sego Milk Products Company, the Stoddard Lumber Company, the Utah Construction Company (one of the six that built Boulder Dam), the Amalgamated Sugar Company and director of many other corporations. And all these banks and companies were successful—not one depositor in an Eccles bank lost a dollar in the crash of 1929 or its aftermath.

Nevertheless Marriner Eccles felt that there was something wrong with the way things were being run in this country. In the early days of the depression he wanted an answer to the problems of unemployment and insecurity. In characteristic fashion he pondered them, read long and hard on economic questions, thought even longer and harder. It was the results of this thinking that he expressed one night in 1933 in an impromptu speech. Stuart Chase, the economist, was delayed by a blizzard from a lecture engagement in Ogden, and Eccles pinch-hit for him. Chase got there just in time to hear the closing part of Eccles' speech and was impressed enough to suggest Eccles get in touch with Tugwell (see sketch this issue), who was then working out New Deal plans.

Eccles didn't get in touch with Tugwell right away, but he did ask to testify before the "depression clinic" conducted by the Senate Finance Committee. To the committee a "slight young man with dark bright eyes darting out of a thin, rather nervous face" gave his ideas on the causes and cure of the depression. A few days before Roosevelt took office he, a capitalist and banker who had voted Republican until 1932, declared boldly for "reflation" and Government spending, for higher income and inheritance taxes, for Federal grants for the unemployed, Federal control of securities and the stock exchanges, for child labor laws, national planning for security, cancellation of the war debts, unification of the banking system, further transportation regulation. Actually his proposals were "nothing less than a detailed blue print of the New Deal"; all of them, except that on war debts, were adopted in principle by the Roosevelt Administration.

After giving his testimony he stopped in with a letter from Stuart Chase to see Rexford Tugwell, who at that time, according to Raymond Clapper, was planning to bring key figures into the Administration. Whether Tugwell was instrumental or not, it is certain that within a few months Eccles was made an assistant to the Secretary of the Treasury and that six months afterward, in November 1934, he was named head of the Federal Reserve Board. "They tell me he has had a string of banks for a long time and none of them has failed," said President Roosevelt of his choice.

Underwood & Underwood

MARRINER S. ECCLES

Eccles' confirmation took a long time, with objections raised because of his many financial interests. Actually the reason for the delay lay in Eastern bankers' distrust of his Western background and extreme youth and in the general feeling in banking circles that a man who believed in a strong banking authority and the need for the country's spending its way out of the depression was not quite the right person to head the Federal Reserve Board.

The big bankers found little reason in the next few years after his appointment to take him any more warmly to their bosoms. Among his significant statements were: "We need to recognize that the principle of the flexible budget is a necessary safeguard of private capitalism"; and "it is absolutely essential to develop agencies which by conscious and deliberate compensatory action will obviate the necessity of drastic downward or upward adjustments of cost and prices, wages and capital structures. If we do not develop such agencies our present economy and perhaps our present form of government cannot long survive."

Eccles promulgated the theory, as summed up in *Fortune*, that money and credit are not ends in themselves but tools which can be used to realize the desired social ends. He started on its way the Banking Act of 1935, providing for strengthening of the Reserve

ECCLES, MARRINER S.—*Continued*

Board's control over monetary and credit policy and opposed in many of its sections by the American Bankers' Association. In early 1936 he upped the margin requirements on stock from 45 per cent to 55 per cent. By 1940, when he was reappointed for another four-year term, Ralph Robey (see sketch this issue) was expressing the viewpoint of a number of conservative people when he called the reappointment "just one more item in that constant stream of little things coming out of Washington that keeps business confidence on tenterhooks and thereby hinders continued recovery." Those who support Eccles countered, in the words of one of his friends: "He talks loose but he banks hard."

During these years, however, Eccles was not entirely supported by labor and all those workers who, he felt, should have a greater share of the national income. There were reasons for this, too. In 1937, at a time when he was called "one of the closest White House advisers," he said in a discussion of Roosevelt's housing program that one of the chief obstacles to building was the high wages paid labor. Later that same year he managed to antagonize the CIO.

In 1941, however, there is less controversy about Eccles than there was in the days when he advocated easy money. Particularly in financial circles it is felt that he is offering well-thought-out plans for this period of national defense and that the new Federal Reserve Board suggestions are practical. Among Eccles' own suggestions has been a plan for taxation that recommended high "selective" sales taxes on commodities like autos and refrigerators and low or no taxes on middle income necessities, though at the same time he suggested broadening the individual income tax base. The choice, he said, was not between guns and butter, but between guns and autos. And he announced the Board's regulations restricting installment credit. "Get out of debt," he warned wage earners. People are recognizing even more than before, too, his ability to carry out all the duties of his position as head of the Board—to act as liaison officer with Congress on the subject of banking laws, to maintain contact with Reserve Banks, to take charge of matters of policy affecting changes in open-market operations and reserve requirements.

It is usually what Eccles has to say rather than the way he says it that has impressed legislative bodies and the public since his first speech in Ogden, Utah back in 1933. A number of his public addresses, statements, reports and testimonies have been collected into a volume (called *Economic Balance and a Balanced Budget* [1940] and edited by Rudolph L. Weissman) which the *Wall Street Journal* calls "required reading." Eccles is lean, smallish and nervous in appearance; dry and intense in his speech; impersonal in his manner. Outside of legislative halls he seems much the same. He eats sparingly, smokes little, drinks very little and lets himself go only when he is out shooting ducks or is given a bag of peanuts.

EDDINGTON, SIR ARTHUR (STANLEY) Dec. 28, 1882- Astronomer; author

Address: The Observatory, Cambridge, England

Among scientists Sir Arthur Stanley Eddington is known for his outstanding contributions to astrophysics and the study of relativity. To the public he became important first for reconciling the average man to relativity and later for reconciling religion with science. Today most people think of him as "a kind of senior member of the firm of Eddington and Jeans, Interpreters of the Universe." The seniority is in popular publication only, for he is five years younger than Sir James Jeans (see sketch this issue) whose career in many respects runs parallel to his.

The son of a Quaker schoolmaster, Eddington was born on December 28, 1882, in the little Westmorland town of Kendal in England. He began his studies at the Sammongate School, where his father was headmaster and where more than a hundred years ago the great scientist John Dalton also taught. Later he took his Master's Degree at Owens College (now Manchester University) and then proceeded to Trinity College, Cambridge, where he piled up an impressive array of honors. In 1907 he was Smith's Prizeman, like Jeans before him, and became a Fellow of Trinity College.

His real initiation into astronomy began in 1906 when he was appointed chief assistant at the Royal Observatory, Greenwich. Seven years later he returned to Cambridge as Plumian Professor of Astronomy and director of the Cambridge Observatory, positions which he still holds in 1941. This has not interfered with temporary lectureships elsewhere, notably the important Gifford Lectures which he delivered in Edinburgh in 1927. The Messenger Lectures delivered at Cornell in 1934 formed the basis for *New Pathways in Science* (1935).

Eddington's first important work was on the streaming of the stars. Later he turned his attention to the mysteries of their internal structure, and has done perhaps more than any astronomer to solve them. The fascinating story of his explorations is told for the lay reader in his *Stars and Atoms* (1927). He is also not only the most popular expounder of relativity but one of the few original workers in this field of research. He was "Einstein's [see sketch this issue] chief field-marshal in the battle for relativity" and led the expedition which went to West Africa to test the theory by observing the total eclipse of the sun on May 28, 1919. His *Space, Time, and Gravitation,* published in 1920, is an accepted classic.

It was only after 25 years of struggle with problems beyond the public view that he began to translate the abstractions of science into popular terms. Immediately he revealed a gift for lucid exposition and graceful prose which won him the response and also the gratitude of the common reader. His *Nature of the Physical World* (1928) probably did more than any other single publication to let the public know what relativity was about. It went further, and ventured a word concerning the implications of scientific knowledge for human problems and for speculations about man's place and his probable future.

Science and the Unseen World followed in 1929, and from then on Eddington became increasingly familiar as a public lecturer and radio speaker. His *Expanding Universe* of 1933 was based on a series of radio broadcasts delivered over a national network the preceding year. Meanwhile, maintaining a sort of intellectual double life, he continued his researches and more technical writing. In 1936 he was busy trying to link up relativity and the quantum theory. That year he presented to the conference on cosmogony at the Harvard Tercentenary celebration a paper on the Cosmical Constant and Recession of the Nebulae, and to another group a discussion on the structure of stars. That year also was published his *Relativity Theory of Protons and Electrons,* in which he sought "a harmonization, rather than a unification, of relativity and quantum theory." This book, according to the London *Times,* "in the elegance of its treatment and the importance of its results . . . ranks with the greatest works of science. . . It is a book . . . of which British science may justly feel proud."

His exposition of scientific material—whether popular or technical—has met with unanimous applause. When he begins to interpret it, however, opinion divides. Eddington calls his own philosophy "selective subjectivism," although it has been suggested that a more accurate name might be "monistic, spiritual, selective, relativistic, epistemological subjectivism." One of his most quoted statements is that "matter may eventually turn out to be thought," yet he repudiates the "all mind" postulate of matter.

In philosophizing and even theologizing about science, like his colleagues Jeans and Millikan, he has won sardonic comment as well as fame and popularity. H. L. Mencken declares that Eddington's deity, being made in his own image, is "a Quaker imperfectly denaturized at Cambridge, and now a don there." The *Manchester Guardian* wistfully remarks that "intellectuals of the status of Eddington and Jeans might be expected to complete their philosophical education in private." Yet, writing about *The Nature of the Physical World,* the *Saturday Review* declared that "to any intelligent and thoughtful reader who would know something of . . . the bearings of the new [scientific] theories . . . on the eternal problems of philosophy and theology, it would be difficult to suggest a better or nobler introduction than this brilliant book."

SIR ARTHUR EDDINGTON

Neither the majority of scientists nor of philosophers accepts him as the spokesman of science with regard to its philosophical implications, nor for that matter does Sir Arthur so regard himself. As an individual he reserves the Quaker's full freedom to speculate and to share his speculations. But as a scientist he declares that officially: "There is no approach of science to religion, and science has nothing to say about religion."

With a dozen honorary degrees, memberships and offices in at least as many honorary societies, two successful careers and a number of special awards, Sir Arthur remains a modest English bachelor who sparkles quietly —a skilled dialectician, a man of profound culture, a pretty wit. The suavity, humor and imagination that swing his readers through his books are equally evident in his manner and conversation. His friends say that being created a Knight in 1930 touched him less than the honor shown him that same year by his home town. With pomp and ceremony Kendal accorded him the Honorary Freedom of the City, the Mayor presented a scroll on which their decision was recorded, after which Eddington lectured at the Friends' School, where his father had taught. In 1938 he was awarded the Order of Merit, one of the highest distinctions in the King's gift, the membership being limited to 24.

EICHER, EDWARD C(LAYTON) (ī'kēr) Dec. 16, 1878- Chairman of the Securities and Exchange Commission

Address: b. Securities and Exchange Commission, Washington, D. C.; h. Washington, Iowa

EDWARD C. EICHER

A "100 per cent New Dealer from a normally Republican District," Edward C. Eicher was on April 9, 1941 unanimously elected to succeed Jerome Frank (see sketch this issue) as chairman of the Securities and Exchange Commission.

Edward Clayton Eicher was born on a farm near Noble, Washington County, Iowa, on December 16, 1878, the son of Benjamin Eicher, founder of a Mennonite congregation there, and Lydia (Sommer) Eicher. After attending private academies in Washington, Iowa, and Illinois, he went to the University of Chicago, where his brother Alpha Delts knew him as "Schlitz" and he took his Ph. B. in 1904. In 1903 he had begun the study of law there; he completed his law course in 1905; and a year later he was admitted to the Iowa Bar.

He did not begin law practice immediately, however, but from 1907 to 1909 worked as assistant registrar at the University of Chicago. In 1909 he became assistant attorney of the Iowa district of the Chicago, Burlington & Quincy Railroad Company, and not until 1918 did he leave the firm. Then he practiced law privately at Washington, Iowa until in 1933 he was elected to Congress from the first Iowa district on the Democratic ticket. One of his campaign planks was that government expenses should be reduced.

Mr. Eicher served as a member of the House of Representatives during the 73rd, 74th and 75th Congresses (1933-39). In 1935 he presented a "cost of production" bill to solve the farm problem which Secretary of Agriculture Wallace called impractical. Actually, though, antitrust legislation proved to be his field. He was an early defender of the constitutionality of the holding company act. He was the sponsor of a bill to tighten up the Clayton antitrust act to prohibit the acquisition of control of one corporation by another through the purchase of stock and assets. During the 75th Congress he was chairman of the securities subcommittee of the Committee on Interstate and Foreign Commerce. In the summer of 1938 he was one of fifteen antitrust investigators, and that same year was appointed one of the three Congressional members of the Temporary National Economic Committee. During his term he supported Roosevelt absolutely. When on January 1, 1939 his term as Representative expired he did not stand for re-election, however, having already accepted an appointment as SEC commissioner for the balance of the term of John W. Hanes. And early in 1940 he was reappointed to the Commission for the term ending June 5, 1945.

On August 19, 1908 Mr. Eicher married Hazel Mount of Washington, Iowa. (They have one daughter, Elizabeth, a foster child.) Mr. Eicher is a member of the Bars of Illinois and of the United States Supreme Court, as well as that of Iowa, a member of the National Lawyers' Guild, of Alpha Delta Phi and Phi Delta Phi.

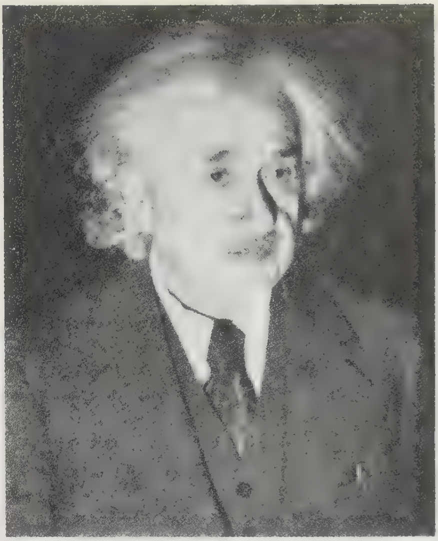
EINSTEIN, ALBERT (īn'stīn) Mar. 14, 1879- Theoretical and mathematical physicist
Address: b. Institute for Advanced Study, Princeton, N. J.; h. 112 Mercer St, Princeton, N. J.

"What I have done personally is much exaggerated. What is really beautiful is science! It is a great gift if one is permitted to work in science for his whole life."

That is one aspect of the man whose work has been called "the greatest single stride science has ever made," and the 30-page paper in which it was first suggested, "the most important document of the century." Here is another aspect: "As long as I have any choice, I will stay only in a country where political liberty, toleration, and equality of all citizens before the law is the rule."

"America's No. 1 refugee" was born in Ulm, a. d. Donau, Germany, the son of Hermann and Pauline (Koch) Einstein. In 1881 his father moved his family to Munich, where he opened a business dealing in technical electrical materials. Though the family was Jewish, both parents were freethinkers, and Jewish customs and rites were not observed in the household. For 14 years Einstein's electrical business had been prosperous and the family enjoyed a measure of ease and modest luxury. Then their fortunes began to decline until, on the verge of bankruptcy, they decided to give up their Munich home and moved to Milan, Italy, where cousins of the family were doing well.

Although the boy was slow to learn to talk, and in early childhood was considered backward, his mother was convinced from the beginning that he would grow up to be a "great professor." He never had any gift for languages and when he first came to America was unable to make a speech in English. At 14, however, he taught himself integral and differential calculus and analytical geometry from textbooks! He wanted from the beginning to devote his life to abstract study, but his parents' poverty compelled him to find a means of making a living. Music and study made up his world. Like so many others, he fixed on teaching as the profession least likely to interfere with his real life.



ALBERT EINSTEIN

When his parents went to Milan, they left the boy behind at school. He managed to secure a certificate stating that he was suffering from nervous exhaustion, and succeeded in joining them. His half year in Italy was pure heaven. In an impulsive gesture he abandoned his German citizenship and resolved never to return. Where he did go was to Switzerland, where he studied in a technical school in Aarau and then at the Zurich Technical Academy. He became a Swiss subject, and it was in this school that he met a Serbian fellow-student, a gifted mathematician named Mileva Marec, whom he married in 1901 and by whom he had two sons, Albert, Jr., and Edward. They were divorced 15 years later.

In this same year, 1901, he began teaching, first in the Technical School in Winterthur, then as a private tutor in Schaffhausen. In 1902 he went to work as a patent office examiner in Berne. This was the period when he first began the research and studies which culminated in the formulation of the Relativity Theory, the first paper being *On the Electrodynamics of Moving Bodies,* published in 1905. He also took his Ph. D. degree from the University of Zurich. In 1909 he was appointed a professor at the University of Zurich. He lectured on theoretical physics, principally on the science of heat. His only regular attendants were two personal friends! At this time he received a position at Berne University as lecturer.

Already, in 1908, he had been invited to lecture on relativity and the constitution of light before the congress of scientists, meeting in Salzburg. It was his first appearance at such an official gathering, and the first rec-

EINSTEIN, ALBERT—*Continued*

ognition of his work. It led indirectly to his appointment as ordinary professor of physics at the German University in Prague (1911-12). He hated to leave Switzerland to go to what was then Austro-Hungary, but once there he found his position much pleasanter than it had been in the larger university in Zurich. When, a year and a half later, he was called back to Zurich, this time to the Confederate Polytechnic Academy, where he had once been a student, he was reluctant to go. He had a wife and two small boys to support, however, and had no choice. This time his lectures were well attended and enthusiastically received.

In 1914, already a figure of world prominence, an opportunity was offered him that he did not dare refuse. Through the efforts of Max Planck, the famous physicist, a professorship was offered him by the Prussian Academy of Sciences in Berlin, with no official duties, little teaching, but unlimited opportunity for study. A separate Physical Institute was to be established for him but he declined this, since his work was by now almost entirely theoretical. He went to Berlin in 1914, retaining his Swiss citizenship, and remained there until the Nazis forced him to leave.

From 1912 to 1928 Albert Einstein was professor of physics at the University of Leyden, "commuting" for that purpose from Berlin and continuing right through the First World War. His avowed pacifism in that war made no difference in the Germany of that day. He suffered no inconvenience because of it, and it helped to make him the first German to appear publicly in the Allied countries after the Armistice. In 1928 his heart became affected. He had to take a long rest and he resigned the Leyden position. (His health was later completely recovered.)

It is impossible to explain briefly to lay readers just what the Theory of Relativity implies, or what its significance is. Put as simply as possible, it regards time as the fourth dimension, thus making all physical phenomena (from our point of view as three-dimensional beings) relative, not absolute. It explains mass, gravity, inertia, space and time. It is mathematical in origin, though most of its proofs and demonstrations come from astronomy and astro-physics. Einstein is devoting the remainder of his life to a search for a "unified field theory" which will bridge relativity and quantum mechanics (the mathematics of the atom and its parts), and thus embrace all phenomena from the electron to the universe. Over 4,000 books and pamphlets and uncountable numbers of articles have been written commenting on, modifying, opposing or upholding the special and general Relativity Theory. Bitterly fought in some scientific circles, it is now accepted, as a whole, by most physicists and mathematicians. But either expositions or attacks involve a technical background which limits profitable discussion to the world of professional science.

Einstein received the Nobel Prize in physics in 1921 and gave all the prize money to charity. He himself does not know how many honorary degrees he has received or to how many learned societies he belongs. With characteristic modesty, he lists among all his various medals and decorations only the Copley Medal of the Royal Society, received in 1925, and the Franklin Institute Medal, received in 1935. He was a research student of Christ Church, Oxford, until 1931, when he was Rhodes Memorial Lecturer and received an honorary D. Sc. degree there. The same year he was Rouse Ball Lecturer at Cambridge. During his years in Berlin he traveled frequently to give lectures abroad and in 1931 he spent several months at the California Institute of Technology. He also made at least one long trip around the world.

It is impossible to exaggerate Albert Einstein's fame and acclaim in Berlin during the years of the Weimar Republic. Though he had rejected the establishment of a Physical Institute, he was persuaded to become director of Theoretical Physics in the Kaiser Wilhelm Institute. Prussia made him an honorary citizen. Potsdam erected an Einstein Tower in its Astro-Physical Institute. On his fiftieth birthday, in 1929, though he fled the city to avoid a celebration, it required several wash-baskets to hold all the cards, letters and telegrams of congratulation, and the gifts would have filled a freight car. Four years later his citizenship was revoked, he was expelled from the Academy of Sciences, his house was searched for arms, he was removed both as professor and director, all his property (including the suburban house which had originally been intended as a birthday gift from the city of Berlin, and which, because of a series of mishaps, he finally bought himself) was confiscated, and he was an exile with a price of 20,000 marks (about $6,800) on his head.

During all these years he had lived with the same simplicity which has always characterized him. In 1917 he married again, this time his cousin, Elsa Einstein, who was doubly his first cousin, their fathers being brothers and their mothers, sisters. She was the buffer between him and the world, especially after they came to America, until her death in 1936. She, too, had been married and divorced, and had two daughters, one of whom lives now with her stepfather (who is also her second cousin) in Princeton.

When Einstein left Germany, he went first to France, then to Belgium, then to England. Then the Institute for Advanced Study offered him a life professorship. He accepted, but asked so small a salary that to keep up its own standards the Institute had to raise it! (Einstein is literally without concern for money. Once for weeks he used as a bookmark a check for $1,500 from the Rockefeller Foundation and then lost the book!) He came to Princeton in 1933 and has been there ever since. In October 1940 he became an American citizen.

"In his humility, his shyness, his lack of desire for controversy, his generosity and simplicity," says Henry Hazlitt, "he reminds one strikingly of other great scientists, particularly

Charles Darwin." He is "profoundly pacifistic, profoundly democratic." Sympathetic to Zionism, he is still, as he has always been, religiously an agnostic. He does not believe in a personal God or in personal immortality, and approaches near to the pantheism of that other great Jew, Spinoza. In the present crisis, war hater though he is, he is ardently for active aid to the democratic nations against Hitler. He has never been a milk-and-water "peace at any price" pacifist, but in 1933 headed the committee which issued the *Brown Book of the Hitler Terror.*

Einstein's appearance, his halo of wildly waving white hair, his wonderful, deep-set dark eyes under bushy brows, his sturdy, stocky body are familiar to everyone. He hates formal clothes, and dresses in loosely fitting garments of the sports variety. Unless he is watched, he is likely to go out of doors in his carpet slippers. He never wears a hat. His house, a modest two-storied gray frame building, is on a narrow street shaded by tall oak and elm trees. He works in a small study, writing on a pad on his knee, rising frequently to pace the room in thought. He wanders about the streets of Princeton, lost in a maze of abstraction, with a beaming smile for those who accost him, but his mind is far away. His shyness and his hatred of publicity are proverbial. Once a crowd gathered outside a Princeton drugstore. The great man was within, and what was he doing? He was standing at a counter, licking an ice-cream cone!

He is a better than average violinist whose favorite composers are Bach and Mozart. Once a critic who had never heard of him as a physicist wrote that he did not understand his world-wide fame, since many violinists were better than he! He improvises constantly on the piano—he calls it "a necessity of his life"—but only to himself, never for listeners. He does not read much general literature. He says "any man who reads too much and uses his own brain too little falls into lazy habits of thinking." He is devoted, however, to Shakespeare, Sophocles, and above all to Dostoevsky, who, he says (ultimate praise!) gives him "more pleasure than Gauss" (the great mathematician).

Dr. Einstein's chief recreations are sailing and walking. He enjoys writing doggerel verse or playing simple parlor games. He enjoys a good joke. He cares little for paintings, but is interested in sculpture and architecture. He writes a clear, fine hand, and although he has little manual dexterity except as a violinist, pianist and sailor, that he is not all theoretician was proved when in 1936 he patented an automatic electric-eye camera. Many of his characteristics classed as eccentricities are merely a conscious attempt to simplify his life, down to such details as going without socks, or using the same soap for washing and shaving. Though he seldom knows what he eats, he is boyishly fond of a dish of his childhood, pike served with mushrooms. He drinks no alcohol, but smokes three pipes of tobacco a day.

Most of Einstein's books are in German. But in 1923 English translations were published: *The Meaning of Relativity* and *Side-Lights on Relativity*; and in 1926 the earlier *Investigation of the Theory of the Brownian Movement. On the Method of Theoretical Physics* appeared in 1933. In 1938, with Dr. Leopold Infeld (see sketch this issue), a Polish-Jewish refugee physicist whom Einstein brought to the Institute for Advanced Study and who is now at the University of Toronto, he published *The Evolution of Physics.* His non-scientific books include *About Zionism* (1931); *Builders of the Universe* (1932); *Why War?* (with the late great Sigmund Freud, 1933); and *The World As I See It* (1934). He was also one of the contributors to the anthology *Living Philosophies,* and has published numerous scientific articles and brochures.

This man who "changed the concept of the universe" has, as Edwin Muller remarked, "the look of a man at peace with himself." And, to quote Archibald Henderson, "he fulfills one's expectation of a genius."

ELIZABETH, pseud. *See* Russell, M. A. R., Countess

ELLINGTON, DUKE Apr. 29, 1899- Conductor; composer

Address: b. c/o Hansen & Williams, Inc, Room 801, RKO Bldg, 1270 Sixth Ave, New York City

William Morris

DUKE ELLINGTON

One of the first swing concerts ever held in an institution of higher learning was given by Duke Ellington's Orchestra at Colgate University, Hamilton, New York, December 11, 1940, as part of the regular concert series. The audience responded enthusiastically to a program of twenty-two numbers, twelve of which were Ellington's own compositions and four other works on which he and some of his musicians had collaborated.

Ellington, variously called "The Aristocrat of Swing", "The King of Swing", "The King of Jazz", "the most inventive and resourceful composer that jazz has produced," has an orchestra that for the last decade and more has consistently been up among the 10 most popular orchestras of the country, and by some critics and fans has even been rated the leader of them all.

"Mr. Ellington and his Orchestra," says a *Fortune* article (August 1933), "offer rich, original music, music stemming out of the lyricism of the Negro and played with great virtuosity. Ellington's music is jazz. It is the best jazz." According to a writer in *Melody Maker,* a leading British music journal, he "stands alone in jazz as the one artist who has something to say that is not only personal but also universal, not only down-to-earth but also indicative of a fine and dignified mind. Dignity. That's what Ellington has that no other artist in jazz has had consistently."

For more than 10 years Duke Ellington and his Orchestra have been stellar attractions in motion picture and vaudeville houses, having by now appeared in almost every large theatre in the country. They have also "played dance engagements from Bowdoin College, Maine, to Frank Sebastian's Cotton Club in Los Angeles," and, at the invitation of the instructor, Percy Grainger, have performed for a music appreciation class at New York University. They are familiar to every collector of jazz or swing records and every listener of popular bands on the radio.

Though it is "jazz" or "swing" with which Duke Ellington's name is associated, his music differs from that of other conductors whose names are associated with these terms. In the first place he composes his tunes, contributes the harmony, makes his own arrangements, and as pianist-conductor interprets the music; whereas in the usual band the tune is written by one person, harmonized by another, arranged by a third, interpreted by a fourth. Even when Ellington uses the work of another composer he takes only the melody—the harmony, scoring and interpretation are his own. In the second place, more consistently than any other group, his orchestra plays true jazz or swing—music which is "built around passages in which the musicians improvise, or exercise their own fancy." C. E. Smith says that Ellington was one of the first, if not actually the first, to build a style on the basis of jazz, "utilizing its somewhat contrapuntal method of ensemble, its off-beat rhythm, and the instrumental intonation and accent that derive from blues."

Duke Ellington was born April 29, 1899, in Washington, D. C., where his father, familiarly called "Uncle Ed," was a blueprint tracer in the Navy Yard. He was christened Edward Kennedy, but in high school acquired the nickname "Duke" because of his care for his appearance. When he was seven years old his parents "attached" him, as he describes it, to a piano keyboard. "Though I liked music I never got on with practicing lessons," he confesses. "Before I knew it I would be fashioning a new melody and accompaniment instead of following the score."

However, in spite of this tendency to "fashion new melodies," Duke did not plan to be a composer, but an artist, and during his last year in high school he even won a scholarship for the Pratt Institute of Fine Arts, Brooklyn. A job as "soda jerker" in a Washington ice cream parlor and poolroom called The Poodle Dog, where there was a piano which he was often called on to play, and an opportunity to play in a band changed his mind about the art course. What he calls his "first break" came when he was 17. The leader of a society band offered him a place in his third band if by evening he could play *Siren Song.* He spent all day learning the tune. When he arrived on the job he found that the band was "legitimate" and that he would have to know about correct chords. On the spur of the moment he decided to copy a trick that he had seen Lucky Roberts use—throwing his hands away from the piano. "Before I knew it the kids around the stand were screaming with delight and clapping for more," he has said. "In two minutes the flashy hands had earned me a reputation, and after that I was all set."

Soon Ellington was experimenting with his own band, and for several years he "jobbed around" in Washington. He and the men who played with him called themselves The Washingtonians, or The Wildcats, and many Washingtonians and Wildcats are still with him. Ellington's success was hardly spectacular, however. Once he was asked to play one of the five pianos in Russell Wooding's 60-piece orchestra, but he lasted only halfway through his first concert—he couldn't resist getting in a "hot lick" (his own improvisation) where the score called for a pause, and Wooding promptly fired him.

It was 1923 when Duke Ellington went to New York to try his luck. There he found little more than split-week theatre engagements with Wilbur Sweatman and occasional engagements to play at Harlem "Parlor Socials" or "Rent Parties" (unpromising but entertaining). He hadn't been in New York long before he made a trip home to Washington, but he returned later in the year and, after experiencing "some mighty hot nights and a few hungry dawns," a five-piece band that he had assembled was hired by the Kentucky Club.

Before long music publishers, song pluggers, newspapermen, band leaders (when their own clubs closed) and celebrities were crowding into the Kentucky Club to hear the five-piece combination that Ellington had built around his piano. One of the music publishers who eventually came was Irving Mills. Almost immediately he placed Ellington under contract, and assisted him in enlarging his band to 12 pieces. He was particularly interested in the conductor as a composer and in making his orchestra available for recordings. "Naturally I agreed," recalls Ellington, "and we got together four originals."

During the decade and more that has since elapsed, Duke Ellington's Orchestra has made a surprising number of recordings, including many transcriptions for the radio. Of twenty-eight records given top rating in *Swing* during 1940, seventeen are Ellington's. Two recent records by the full band, *Cotton Tail* and *Never No Lament*, and *Portrait of Bert Williams* and *Bojangles*, elicited this remark from Geoffry Marne (*Swing*, September 1940): "If these two new Ellington records aren't perfection they will do until the next Ellington record comes along."

After the orchestra had been at the Kentucky Club for over four years Mills was instrumental in placing it in the Cotton Club, a cabaret which was at the time in Harlem but which later moved downtown. They opened there on December 4, 1927. The orchestra was already broadcasting over WHN every day.

"Then we really got a break," said Duke. The Columbia Broadcasting Company put them on the air. At the same time the orchestra began to appear on the stage of the leading theatres. They played for Florenz Ziegfeld's *Show Girl* and were billed with Maurice Chevalier. They also were featured in several films, including *Check and Double Check* with "Amos 'n' Andy," *She Got Her Man* with Mae West, and Earl Carroll's *Murder at the Vanities.*

Through his recordings and his tours Duke Ellington is almost as well known in Europe as in the United States. During the orchestra's first European tour, in 1933, at some of its London appearances one of its most enthusiastic listeners was the Duke of Windsor, then Prince of Wales, who had one of the best collections of Ellington records in Europe and who had a standing order in this country for each new record of his. In 1938, though it was five years since the conductor-composer had been in Europe, it was reported that his fan mail from England was almost as extensive as from the United States. During 1939 he again toured Europe, playing 28 concerts in as many evenings in France, Holland, Norway, Denmark and Sweden. In Paris, where he played twice to a full house at the bombproof underground Théâtre National de Chaillot, the audience was particularly enthusiastic over his *Mood Indigo*, his arrangement of Rachmaninoff's *Prelude in C Sharp Minor, Rocking in Rhythm, Solitude, Harmony in Harlem, Riding a Blue Note.*

As composer, arranger and conductor for a group that is more or less a unit, Ellington is able to get the rare effects for which he is noted. He never uses a baton. From the piano he controls his men with movements of his head, shoulders, elbows and even eyebrows—not to mention his hands. Since he constructs his arrangements around individual players, no other band is able to play his music exactly as he conceived it. Paul Whiteman says that he took his arranger, Ferde Grofé, to listen to Ellington for six consecutive nights, and that they were unable to "borrow" as much as eight bars.

The master of swing, who is working on an opera which will present the history of the Negro in five episodes, says: "My men and my race are the inspiration of my work. I try to catch the character and mood and feeling of my people. The music of my race is something more than the American idiom. It is the result of our transplantation to American soil and was our reaction, in plantation days, to the life we lived. What we could not say openly we expressed in music.

(Continued next page)

ELLINGTON, DUKE—*Continued*

The characteristic, melancholic music of my race has been forged from the very white heat of our sorrows and from our gropings. I think the music of my race is something that is going to live, something which posterity will honor in a higher sense than merely that of the music of the ballroom."

Ellington has shown that jazz compositions may be skillful portraits—of a mood, of a period, of a man. His first, *Soda Fountain Rag*, belongs to the days of "jerking" sodas at The Poodle Dog. *Bojangles* creates Bill Robinson (see sketch this issue) for the listener; *A Portrait of Bert Williams* somehow manages to describe the burnt-cork artist; *Sophisticated Lady* was inspired by a worldly schoolteacher in Washington, D. C.; *Breakfast Dance and Flaming Youth* recalls life in the late '20s. Not one of them is without meaning. For *Solitude* Ellington received the $2,500 ASCAP Prize.

Ellington has one son, Mercer, who is also interested in music—he is a student at the Juilliard School of Music, New York, and has a band of his own. He writes music, too, but his father tries not to influence him. "Duke, the man" has been described by his secretary in these words: "The Duke loves everybody. I've never seen him lose his temper. I've never heard him say he disliked a person. There's a lot of fine philosophy in him. He's deeply religious. He's one man who not only reads his Bible, but lives it. He's not a boss to his men, he's a father. They come to him with their problems—just like kids."

ESTES, HARLOW (ĕs'tēz) Dec. 11, 1900- Author

Address: b. c/o Dodd, Mead and Co, 449 Fourth Ave, New York City; h. 60 Pinckney St, Boston, Mass.

Winner of the 1940 novel contest prize of $10,000, offered jointly by Dodd, Mead and *Redbook Magazine,* is a "thin, pleasant, thirtyish and not-too-overwhelmed Back Bay housewife." Harlow Estes' book, *Hildreth*—her first venture into the novel field—was the last but three of some 640 manuscripts submitted in the contest. It is, she explains, an expansion of a short story she had long tried to sell; for some 10 years she had been writing short stories, most of them being returned to her with the editorial comment that they had "too many characters." She finally decided to write a novel instead, "with this astonishing result."

First published serially in *Redbook Magazine,* then in book form (November 1940), *Hildreth* is a character novel full of true-to-life people psychologically but sympathetically dissected. It is the story of an intense, unhappy girl of 19 who "looks after" her divorced, complacent, almost childish 38-year-old mother. While they are summering on the Maine coast the mother's young widowed sister, Laura, with her four sons, comes visiting. During the summer Hildreth falls in love with a personable young man, Geoffrey—who in turn falls violently for the attractive aunt Laura. This jolt to Hildreth is only the climax to many happenings that cause her to rearrange her ideas of people, to "grow up."

"The theme might be called the contrast between the emotional immaturity of a young girl and the stability of an experienced woman," the author says of her story. "I chose it because contrast helps to reveal character. The two women highlight each other by their difference. My chief interest in writing fiction is to reveal character." Critics in general have praised highly this first novel. One has said that it shows "exceptional balance and breadth of perspective," another that it is "too mature, too sure and subtle to be called merely promising."

HARLOW ESTES

Harlow Estes—her unusual given name was the family name of her mother—was born in Seattle, Washington, daughter of Dr. Henry Robert Wilson, a physician who became a Unitarian minister. Her mother, Gertrude Burt (Harlow) Wilson, was "a Yankee of English stock, one of the New England Harlows." Mrs. Estes says she "grew up in various places: Santa Barbara, California, a year in Kansas, two years in New York State, three years in Berkeley, California." She was educated in a small-town high school in Monrovia, California and spent three years at the University of California (taking no degree), majoring in English and studying short-story writing from 1919 to 1922. She spent one year at Cornell, too. "Writing appears to be an inherited disease in my family," she says. "Father, mother, uncles, cousins all write, or did. They were all bookish people." She claims "a very distant relationship on my father's side with Sir Walter Scott, and am naturally glad to claim it, however far removed; also a first cousinship with the late Violet Wilson, author of *Queen Elizabeth's Maids of Honor* and other books of the historical-research type."

Mrs. Estes has seen much of this country, except the far South, but beyond a few brief trips to Canada has not done a great deal of traveling. "I like to stay long enough in one place to get the 'feel' of it and know some of the people." Since her marriage in 1928 to Stanley Goddard Estes, a professor

ESTES, HARLOW—*Continued*

of psychology at Northeastern University, Boston, she has lived in the East, mostly in Boston. The Esteses have no children.

Mr. Estes is said to be both amazed and proud of his prize-winning wife, whose manuscript he had not read before it received the $10,000 award. "She never showed a line of her writings to me," he said, "nor, so far as I know, to anyone else. She doesn't play bridge, she belongs to no clubs, and she is a neat, indeed, an excellent housewife and an amazingly good cook. She does all her housework." Mr. Estes is quite convinced he has married a wonderful woman.

Concerning her pastimes and hobbies besides writing, Harlow Estes admits that she likes to cook: "Am an incurable experimentalist in cookery but haven't made anyone ill as yet." She also does some painting in water color, landscape and flowers, and portraits in pencil. "But I am hampered by the medium; I have better luck with words." Apparently, however, her writing success is not a mere matter of luck. She has strict writing hours, from nine to three, five days a week. "It took me five months of actual writing to complete my novel," she confesses. "I'd had the characters in mind, however, for four or five years and I'd tried them in numerous short stories, but without any luck. I did the first chapter at least 100 times."

Among modern novelists Mrs. Estes names as her favorites Joseph Hergesheimer, Somerset Maugham, Robert Nathan, Oliver La Farge, Edith Wharton, Ellen Glasgow, May Sinclair, Selma Lagerlöf, Walter Edmonds. "I have a special passion for Thomas Hardy, Jane Austen, *The Constant Nymph, Main Street* and *Nocturne*. Yes, and some Proust, and Joseph Conrad. . . I like best the character analysis and stream-of-consciousness types of writing; I am infinitely grateful for any humor that is offered; and I thoroughly enjoy sports and mystery stories, though I dislike both mystery and sports intensely in real life." Mrs. Estes' second novel, *Long Week End* (1941), has been called "an extraordinarily civilized and an extraordinarily agreeable tale," and "a witty and cleverly told story."

EVANS, SIR EDWARD R(ATCLIFFE) G(ARTH) R(USSELL) Oct. 28, 1881- A regional commissioner for London

Address: b. London Regional Organization, Romney House, London, S. W. 1; h. 76, Cadogan Sq, London, S. W. 1, England

"Hats off to the present; coats off to the future!" is the slogan advanced for this War by Admiral Sir Edward R. G. R. Evans, "a short and sturdy man with an energetic step and a Welsh-Irish lilt in his voice." Too old to take an active part at sea, he has been employed since the opening of the conflict on the London Regional Organization, and until recently was active solving the problem of warm and adequate shelter for London's people. Each night, in this job, he went around inspecting refuges in subways, tunnels, basements, sheet-steel huts; each morning he was at his desk in London Civil Defence headquarters keeping his staff and the telephones busy. Today he is doing purely administrative work for the London region.

Evans has been a man of action all his life, with a reputation for getting things done and done well. A real blue-sea admiral, he must be chafing at the fact that his post, important though it is, does not allow him to have a crack at the enemy. He is the son of Frank Evans, a barrister, and was educated at the Merchant Taylors' School and aboard the training ship *Worcester*, from which he passed into the Navy in 1897.

His first promotion, to sublieutenant, came in 1900. Two years later, as lieutenant, he had his first taste of Antarctic exploration when he sailed on the steam yacht *Morning*, the relief ship of Captain Robert Falcon Scott's *Discovery* expedition to the South. By 1907 he had distinguished himself sufficiently to win the Shadwell Testimonial Prize awarded by the Admiralty. Then, in 1909, he set out on the first great adventure of his career, as second in command to Scott on his South Pole expedition.

The gallant story of that expedition has often been told. It is well known that Scott reached the Pole only to find that he had been forestalled by Amundsen—and the heroism of Oates and the death of Scott have passed into history. It was Edward Evans (he had had a cape named after him by Scott) who took charge of the expedition after the leader died and who brought the survivors back. He returned home to a promotion to the rank of commander, invested with the C. B., and to the discovery that his wife, Hilda Beatrice Russell, had died in his absence. In 1914 he came to the United States to tell the story of the Scott expedition.

Back in England he plunged into war duties, and before 1914 was over had been mentioned in dispatches for his work in *H. M. S. Mohawk*, which bombarded the right wing of the German Army on the Belgian coast. Another mention came the following year when he was on the *Viking*. A further major event of his war years occurred in 1916, when at a Christiania Legation dinner in Norway he met Elsa Andvord and proposed to her 10 minutes later. They now have two sons. (Evans has no children by his first marriage.)

Early in 1917 Evans was appointed to the command of the old destroyer *Broke*, on the Dover Patrol. On the night of April 20 six German destroyers came in near to Dover, fired several rounds into a ploughed field and began to attack shipping. But the *Swift* and the *Broke* located them at 12:40 a. m. and "as the *Swift* turned to ram the leader, the *Broke* got home a torpedo on the second and then steamed full speed against the third."

As Evans tells it: "Those in the destroyer we intended to run down had gathered what our intention was, but for them it was too late. A cloud of smoke and sparks belched forth from their funnels and we got a momentary whiff of this as we tore toward her; it all happened in a few seconds, and the feeling of exhilaration as we were about to strike her can never be repeated. At the moment we crashed into her port side, abreast of the after funnel, my enthusiasm overcame me and I shouted out: 'That means two months' leave.'" A bloody, old-fashioned fight followed, and the *Broke* eventually got free carrying a number of prisoners. She was disabled by a shell in the boiler room; her compass, wireless and searchlight had all been knocked out by small ammunition; and her bridge had been hit in 32 places. But though she had to be towed into Dover, she and the *Swift* had sunk two German destroyers and put the other four to flight. Both commanders received the D. S. O. and special promotion to the rank of captain, and Evans won for himself the title "Evans of the Broke," by which most of England knows him.

British Combine

SIR EDWARD R. G. R. EVANS

Evans, who already possessed the Edward VI and George V medals for Antarctic Exploration, came out of the War with the United States Navy Cross, the Croix de Guerre and the orders of Officer of the Légion d'Honneur and Commander of the Crown of Belgium. He won a First Class medal for saving life at sea in 1919 and in 1921 the Board of Trade silver medal for the same feat. In 1921, too, he received a special gold medal from Lloyd's for saving life in the Hung Moh disaster in the China Seas. He was in command of *H. M. S. Carlisle* from 1921 to 1922, and from 1923 to 1926 was with the Patrol Mine-Sweeping and Fishery Protection Flotilla. From 1926 to 1927 he was on the battle cruiser *Repulse*.

At the same time that he was sailing the seas and indulging in bold adventures, Evans had been writing books of naval life intended mainly for the boys' market. *Keeping the Seas* (1920) related his experiences during the World War, and *South With Scott* (1921) told of the Antarctic expedition. There were many others, all written in a breezy, forthright style.

In 1929 Evans was made a rear admiral, and until 1931 was in command of the Royal Australian Navy. He became Companion of the Bath (military division) in 1932 and in 1935 was made Knight Commander of the same order. From 1933 to 1935 he was in command of the Africa Station, and in 1934 undertook a scientific survey in the Antarctic, during which he located and charted Bouvet Island. He had the home command of the Nore from 1935 to 1939.

At the beginning of the Second World War, Evans was made one of the three

EVANS, SIR EDWARD R. G. R.—*Cont.*

regional commissioners for London and during the long period in which the Capital was free from air raids worked ceaselessly to build up an A. R. P. organization. In April 1940, since his wife is Norwegian and he speaks Norwegian fluently, he was made an additional naval attaché in Norway. "If anyone had told me," he commented a month later, "that as Civil Defence Commissioner for the London Region I should find myself acting as a machine-gunner in a Norwegian aeroplane, hedge-hopping, tree-hopping and mountain-hopping before dropping out of the clouds into my Norwegian mountain home, I should have said they were dreaming." After the Norwegian collapse Evans was appointed by Lord Beaverbrook to take charge of the local protection and security of the organization of all aircraft factories and aerodromes.

Evans has been honored by universities, geographical societies and governments for his expeditionary work, as well as for his naval feats. He was Lord Rector of Aberdeen University from 1937 to 1939 and was reappointed for a second term, to extend until 1942. He is a Freeman of Calgary, of Dover and of Chatham and a Knight of the Order of St. John of Jerusalem.

FADIMAN, CLIFTON May 15, 1904- Literary critic; radio master of ceremonies

Address: b. 40 W. 57th St, New York City; h. 930 Fifth Ave, New York City

Every Friday 9,000,000 listeners tune in on *Information Please* to listen to Clifton Fadiman urging his four experts along their intellectual race track with the ease of a Ben Hur handling his spirited steeds. His is the perfect mixture of bright interest and delicate malice that spurs the experts to do their desperate best. Whenever Deems Taylor or F. P. Adams (see sketch this issue), both brilliant wits in their own right, has taken over on the rare occasions when Fadiman was unable to preside, something has gone out of the program. No one else can so well snub an irrepressible Levant, point up Kieran's uncanny accuracy, wring the last drop of wry erudition out of F. P. A. or encourage a stage-struck guest.

Fadiman's ingratiating personality, with its intriguing dash of affable arrogance, is the key to his success in a varied career as soda jerker, office boy, clerk, student, teacher, librarian, tutor, mail sorter, writer, editor, lecturer and master of ceremonies on one of the most popular programs on the air. Like many other strange and wondrous phenomena in American life, he sprang from Brooklyn, born there on May 15, 1904. His father, a Russian immigrant called Isidore M. Fadiman, was a druggist; his mother, Grace Fadiman, a nurse. Even as a child young Clifton showed the tremendous curiosity and retentive memory that have ever since contributed to his erudition. At five, his brother Ed trained his memory by making him memorize elaborate geographic data. At 10 Clifton (onomatopoeically nicknamed "Kip" after an attack of hiccoughs) had read Homer, Sophocles, Dante and Milton.

Clifton Fadiman's was a busy and enterprising boyhood and youth. In Brooklyn he jerked sodas in his father's drugstore and ran numerous errands all over town. He worked as a ship chandler and as an office boy for the French-American line. He helped his brother Edwin to run a paper called the Forest Hills *Reporter*. When he went to Columbia University he paid his way with a series of strange and unconnected jobs, among them running a bookshop in the Pennsylvania Terminal, doing translations, lecturing on French symbolist poetry, helping out in amusement parks, writing book reviews for *The Nation*. Altogether he claims he never made less than $1,000 a year as an undergraduate. He also edited Columbia's undergraduate publication, *Morningside*. He took time off in his junior year to work in the stock room of the publishing firm of Alfred A. Knopf but came back to Columbia a year later after making sure that he would probably never better his microscopic salary. He was graduated from Columbia in 1925 with Phi Beta Kappa honors, a slim, supercilious, golden-haired stripling.

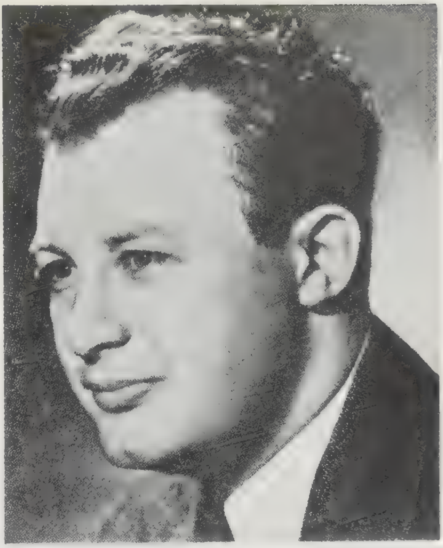
After being graduated from Columbia, Fadiman taught English in the Ethical Culture High School. Possibly those years added the charmingly pedantic air that tinges his *Information Please* manner. In 1925 he lectured for Everett Dean Martin's People's Institute, talking on great literary classics. In 1927 he became associated with Simon & Schuster as assistant editor, still teaching on the side, and in 1929 he became a full-fledged editor. His first best-seller hunch was *Trader Horn*, which he recommended to the firm in 1927. By the time his connection with Simon & Schuster dwindled to that of editorial adviser in 1935, Fadiman was well known in literary circles as one of the country's leading editors. As editor in chief of Simon & Schuster, according to his own estimate, he examined more than 25,000 manuscripts and interviewed some 2,000 authors.

Fadiman's theory has ever been—and still is—that the taste of the American people is steadily improving. He has considered himself a sort of intellectual middleman, a purveyor of culture to the masses, be it in books, lectures or radio. He has added distinction to the "Essandess" fiction list: he was responsible for such novels as Hans Fallada's *Little Man, What Now?*, for Leonard Ehrlich's *God's Angry Man*, for Josephine Johnson's *Now in November*, a Pulitzer Prize winner in 1934. He also persuaded his firm to publish Ernest Dimnet's *Art of Thinking*.

In 1933 Fadiman, now well known as a lecturer and author whose articles were published in *The Nation, Stage, Harper's Bazaar* and other important publications, was engaged to review books for the *New Yorker*. Since then the *New Yorker's* book pages have become a power in the literary world. Their lucid, elegant style has brought Fadiman a formidable following; the impeccable judgment beneath the often flippant pose has made them a citadel of literary criticism. His reviews have evinced a merciless perception that enables him to put his finger on a writer's weak spot with an elegant but unerring touch. His tags stick because of their inherent justice. He coolly dismissed Dr. Cronin's *The Citadel* as second-rate *Arrowsmith*, and remarked acidly about Faulkner's *The Wild Palms*: "The reader will detect no soft alteration in Mr. Faulkner's Gorgon's eye view of human existence." His comment on *Kitty Foyle* was: "Those who have been afraid of Mr. Morley because they figure his whimsy will come off on them should not on that account steer clear of *Kitty Foyle*."

In 1934 Fadiman reviewed books on the radio for six months. He was not over-successful. The next time he came on the air it was in 1938, on the program that made his name a byword in every household. It was a result of an idea by a radio producer named Dan Golenpaul; he thought "stumping the experts" would be a welcome change from other quiz programs whose purpose was to expose the ignorance of the average man. The program was sustaining until Canada Dry took it over with its present panel of experts. It is now sponsored by Lucky Strike.

Soon *Information Please* was listed as one of the five best programs on the air. Its appeal is universal: in 1940 it was awarded the *Saturday Review of Literature* yearly prize for having done most to elevate American taste, and in the same week given a medal by the Hoboes of America. Being invited as a visiting expert to *Information Please* is a badge of honor for which the recipient works hard before Mr. Fadiman gets through with him. In his capacity as master of ceremonies he has wheedled and bullied such guests of varied talents and reputations as Wendell Willkie, Elsa Lanchester, J. P. Marquand, Harpo Marx—who whistled his answers—Alice Duer Miller, John Gunther and Warden Lawes (see sketches this issue).



CLIFTON FADIMAN

Today Fadiman looks like a highly successful businessman. His main characteristics are still an unbounded capacity for work and a good craftsman's delight in putting out a polished job. He reads something like 10 or 15 books a week, but his 150-page-per-hour reading speed makes this easy: he can put away a mammoth-sized novel like *Gone With The Wind* or *Musa Dagh* in less than a day. Simon & Schuster still expect him to write a great book, and he has numerous ambitious outlines. He himself doubts that he will ever do anything with them, self-deprecatingly calling himself "an amiable hack." In 1939 he edited a book called *I Believe*, including credos of men like Jules Romains, Lin Yutang, Harold Laski (see sketch this issue), George Santayana and James Thurber. His next undertaking was sponsoring the Readers Club, an organization to distribute books reprinted on the advice of himself, with Sinclair Lewis, Carl Van Doren and Alexander Woollcott (see sketch this issue). The club has now 80,000 readers. Then in the fall of 1941 was published his *Reading I've Liked*, a personal anthology of widely assorted authors, prefaced by a 64-page foreword.

Fadiman married Pauline Elizabeth Rush in 1927 and has a young son called Jonathan Rush, who thinks his father is a fascinating person. Fadiman is an ardent cyclist and tennis player. He is sociable in general: at

FADIMAN, CLIFTON—*Continued*

his caustic best in front of an audience, but witty under any circumstances. He has a morbid passion for atrocious puns, to which he gives way shamelessly during *Information Please*: once while quizzing the experts upon Othello's words as he murdered Desdemona, he murmured irrepressibly: "A good example of smother love, eh?"

FAIRBANKS, DOUGLAS (ELTON), JR. Dec. 9, 1909- Film and stage actor
Address: h. Westridge, Pacific Palisades, Calif.; Boxwood Farm, Hot Springs, Va.

A perhaps apocryphal story tells of a Hollywood director who was giving instructions to a nameless actor on how his part should be played. "Now," he announced, "I want you to be as English as Basil Rathbone, but only half as English as Douglas Fairbanks, Jr."

One of the most genuinely cosmopolitan of Hollywood's actors, Douglas Fairbanks, Jr., is as much at home in London as in New York, and his French accent is as good as his British. He was educated at the Harvard Military School in Los Angeles, the Polytechnic Preparatory School in Pasadena, the Bovée Art School, New York's Collegiate Military Academy and Paris art schools. The son of the late Douglas Fairbanks and of his first wife, Anna Beth Sully, Douglas Fairbanks, Jr., was born in New York City on December 9, 1909 and made his first visit to Europe at the age of six months, returning soon afterward to his grandfather's estate at Watch Hill, Rhode Island. His introduction to the stage and to Hollywood was also early: he was taken on road junkets with his famous father, and when in 1915 Douglas, Sr., entered screen work, his young son made his acquaintance with motion pictures.

At that age art interested the boy most. He was nine when he painted a caricature of Raymond Hitchcock which the latter used on billboards for years. In 1918 his parents were divorced, and not long afterward his mother remarried and took him abroad to study art. When he returned to a private school in Pasadena, he was unhappy and begged his mother to take him abroad again. By that time her divorce settlement was almost wiped out, but they managed to live in interesting poverty in the Latin Quarter for a while.

It was 1923 when the precocious boy (he was 13) first decided to act. "There was an urgent need of making money on a big scale, and motion pictures presented the best opportunity," as he puts it. Paramount offered him a four-week contract at a salary of $2,000 a week and a part in *Stephen Steps Out*. "The echo of that flop still resounds," he confessed later. Dropped by the studio, he returned to Paris to resume his art studies and to do some writing. But it was not for long: Paramount reconsidered and gave him another chance in a Western and fast action picture.

Not until 1925, however, did the son of Douglas Fairbanks (determined not to make capital out of his father's fame), play in a real movie success, in *Stella Dellas,* with Ronald Colman and Belle Bennett. Other movie roles followed, and he also appeared on the legitimate stage in Los Angeles. Among the plays in which he has acted are *Romeo and Juliet, The Jest, Saturday's Children, Toward the Light, The Ambush* and the memorable *Young Woodley.* In 1926 he worked with his father on the technical end of *The Black Pirate,* being engaged to write the subtitles. In 1927 he wrote the titles for *The Gaucho,* in which Douglas, Sr., appeared, and for *Two Lovers,* as well as appearing in comedies which are better forgotten: *Women Love Diamonds, Iz Zat So?, The Texas Steer.* That year, too, he met and became engaged to Joan Crawford, although he was to appear opposite her only once, in *Our Modern Maidens.* They were married on June 3, 1929 at St. Malachi's Roman Catholic Church in New York City, with his mother present at the wedding.

By this time young Doug was working as a free-lance actor. In Hollywood, at least, there was a boom in the "live-while-you-may" youth who spent his nights dancing and emptying glasses expertly but with a slightly crooked smile. Barely 20, Fairbanks, Jr., was still not too young to carry miscellaneous neuroses and a lost-generation expression of varied intensity through picture after picture, their titles indicative of their content: in 1929 *A Woman of Affairs* (with the great Garbo), *The Jazz Age, Fast Life, The Forward Pass,* *The Careless Age;* in 1930 *Loose Ankles* and *Party Girl.* It was perhaps one of these that inspired a critic to comment, rather lyrically: "While by no means handsome, he has so mobile a face and such expressive eyes that the observer considers only what he is feeling, not how he looks. In much of his playing there is the impression of strain—whether this is because he works under high tension or merely because he feels the character in question requires it, cannot be said."

In 1930 he appeared in a different sort of picture—*Dawn Patrol,* in which his part was as important as that of the star, Richard Barthelmess. As a result of his performance he was starred by his studio, First National. But his luck didn't hold. He was presently loaned to Universal for the lead in a comedy, *Little Accident,* which was a hit, but then proceeded to play in First National's *One Night at Susie's. Outward Bound* was a better picture, but with such an excellent cast that his really good performance didn't stand out, and *The Way of All Men* sent no sane critic into ecstasies. *Little Caesar,* in which he co-starred with Edward G. Robinson, broke the chain temporarily, and *It's Tough To Be Famous* and *Union Depot* were also successes, but they were followed by two pictures which "emphatically were *not*": *Love Is a Racket and Scarlet Dawn.*

During all this time Doug had been taking regular vacations in Europe and also doing some writing—he had begun to publish rather precious poetry and to contribute to *Vanity Fair* caricatures of movie stars accompanied by original character sketches. After he made *Morning Glory* (1933) with Katharine Hepburn his American public saw him no more for a while. He was in England early in 1933; in May, when he returned to make *Design for Living,* he was prevented by pneumonia; and although in August it was reported that he was planning joint films with his father, the plans did not go through. Soon he was back in England, appearing with Elizabeth Bergner in one of the best performances of his career, as the mad Peter in *Catherine the Great* (1934). He also played on the stage in *Moonlight Is Silver* with Gertrude Lawrence, and in *Winding Journey.* By this time it was apparent that his infinitely sophisticated hairline mustache (in no way reminiscent of his father's) was as permanent as his accent.

The next two years were a period of intense interest in British films. In 1935 he was seen in *Mimi,* in 1936 in *The Amateur Gentleman, Accused* and *Jump for Glory,* all British made. He then played Rupert of Hentzau in Selznick's *The Prisoner of Zenda* (1937). This was a solid success, and his salary jumped from a reported $25,000 a picture to $100,000.

There followed more financial, artistic and social triumphs. In 1938 he returned, apparently permanently, to American films in the joyous *Having Wonderful Time,* and then followed his success with three mad but far from naïve comedies: *Joy of Living, The Young in Heart* and *The Rage of Paris.* In December he was seeing Anthony Eden off for the United States and being himself entertained by Lord Tweedsmuir, President Roosevelt, Cordell Hull, Sumner Welles and other figures of international importance. The following year *Gunga Din* and *The Sun Never Sets* set Anglophobes' teeth on edge, although empire-building was forgotten in *Rulers of the Sea.*

Joan Crawford had filed suit for divorce in April 1933, and had acquired her final decree sometime later. Married in April 1939 to the socialite Mary Lee Epling of Bluefield, Virginia, the former Mrs. G. Huntington Hartford, Douglas Fairbanks, Jr., soon proceeded to settle down in elaborately comfortable style in a 12-room home in the Pacific Palisades, "English and a little French and Spanish on the outside." The next year found him wandering through South American and African jungles, white-helmeted, in *Green Hell* and *Safari,* and he was also star and co-producer with Ben Hecht of the less exotic *Angels Over Broadway.* In 1941 his activities were more exclusively public-spirited. As vice-president of the Southern California branch of the Committee to Defend America by Aiding the Allies he had frequent conferences with public officials, and in April accepted a mission from President Roosevelt to make a tour of South America—Argentine, Brazil, Peru, Uruguay, Panama. He was asked to "ascertain the views and suggestions of the governments and peoples . . . with respect to improving the role of the theatrical arts as a possible vehicle for bringing about improved inter-American understanding." His Spanish "not so good" but his French fluent, he was apparently one of the more successful of the United States' would-be ambassadors of good will. The *Nación* was flattering: "He talks of books, of the theatre and painting like a man accustomed to move in

DOUGLAS FAIRBANKS, JR.

FAIRBANKS, DOUGLAS, JR.—*Cont.*

cultured circles. He is genuinely curious about us." *Noticias Graficas* informed its readers: "The truth is that he doesn't say anything new but says it with a smile and easily, and with no commercial intent." These were impressions denied only by the Nazi press. Fairbanks, Jr., was "spy extraordinary" to Buenos Aires' *Pampero,* and, after an episode when heckling youths exploded firecrackers in front of him, that paper's headline crowed, quite falsely: "Hero of a Hundred Films Almost Dies of Fright!"

In October 1941 the actor became an active service naval lieutenant, junior grade, and in the late fall was on a warship bound for Iceland. He had temporarily given up the screen.

Douglas Fairbanks, Jr., (he refuses to take the "Jr." off his name) is a little over six feet tall, weighs one hundred-seventy pounds, has light brown hair and mustache, blue eyes and a face that has frequently been called faun-shaped—livened by a smile as flashing as his father's, but less bold. Lean, athletic, he rarely misses a daily workout of tennis, swimming, wrestling or boxing. He used to be good at track, too. His reading tastes run to history, biography, political economics, and he also enjoys detective stories and metaphysical philosophy. His musical tastes run to concerts rather than opera. A more tenacious and recently acquired taste than any of these is a daughter, Daphne, who narrowly escaped being named Penelope. The young man who used to be Hollywood's "most active playboy and most ardent practical joker" has responsibilities now.

FELLER, BOB Nov. 3, 1918- Baseball pitcher

Address: b. c/o Cleveland Indians, Cleveland, Ohio; h. Van Meter, Iowa

Sometime in 1941 the big, good-natured, prize pitcher of the Cleveland Indians, Bob Feller, allowed a sculptor to pour plaster over his mighty pitching arm to make a cast. It was to be displayed at the Cleveland Health Museum along with models of the arms of Bobby Jones, golfer; the Mayo Brothers, doctors; and Rachmaninoff, famous pianist.

Feller regards this right arm, which earns him around $40,000 a year, with proper respect. "In explaining how he throws a certain kind of ball, Feller will gladly demonstrate in slow motion the subtle and graceful movements of shoulder, elbow, wrist and fingers," writes St. Clair McKelway in *Life.* "He does this with the enthusiasm of a jeweler showing off the inside of a precious timepiece which he did not make but passionately admires. 'Look at it!' Feller will exclaim delightedly. 'Notice that little twist there just as its fingers let go the ball?' He is a modest, good-natured, self-effacing young man and is awed by the arm rather than proud of it."

Going through a crowd at the entrance to a ball park, he instinctively uses his left arm for pushing, according to McKelway. "Feeling his way through a dark room, he puts out his left hand to find the light switch; if he stumbles, it is his left arm that goes up in a reflex motion to break his fall. If he ever swings on an umpire, the chances are a hundred to one that he will try a left hook." He held Number 7,846 in the draft, and with no dependents (except his fellow-players, someone facetiously said), found himself putting "It," as he reverently calls this mighty member, to novel uses. The sports world lost by enlistment in December 1941 a young Feller whom the *Sporting News* in the winter of 1940-41 named the No. 1 major league baseball player. In 1940 he pitched 31 complete games, and led the American League in strike-outs (263).

Born on the edge of an Iowa village named Van Meter eight days before the beginning of the Long Armistice, Robert William Andrew Feller had a Swiss-French father, William A. Feller, who was a comparatively well-to-do farmer, and a French-German mother, Lena (Forret) Feller. The elder Feller had played baseball as a youth, as had Mrs. Feller's father, and as Bob grew up he bought him the best gloves obtainable and helped him organize neighborhood teams. They became great companions; Mrs. Feller became used to having the males of the family late to dinner because they lost track of time playing catch behind the barn, or had gone off to a nearby sandlot game.

By the time Bob was in high school he was making from $35 to $50 a Sunday playing semi-professional baseball in Iowa towns within a 100-mile radius of his home, and he decided that he might as well make the game his lifework. "I knew I was going to make it my career," he has said, "and, anyway, I liked to play baseball better than I liked to do anything else, and I still do." When he was only 16 the Cleveland Indians signed him up, after, says Henry McLemore, they had heard about a rustic fireball who thought nothing of striking out 18 batsmen in a seven-inning game. This feat was accomplished in the National semi-pro tournament at Dayton, Ohio, in the summer of 1935. He was then signed with the New Orleans Pelicans, but decided to finish high school. On July 6, 1936, Bob struck out eight of nine St. Louis Cardinals he faced in an exhibition at League Park, and a week later was bought by the Indians. The authorities of the Adel (Iowa) High School gave him permission to remain with the Indians until September 27, the date of their last game, before returning to resume his senior year in high school. In August he had struck out 17 Athletics and broken Rube Waddell's 27-year-old mark.

In 1937 and 1938 Feller, who hadn't learned the fine points of pitching, "had about as much control as a drunken swallow," writes McLemore. He spent his time on the mound either striking them out or walking them, breaking records in both departments—and fracturing Hank Leiber's skull with one cannon ball smash, according to Jack Chance in *Friday* Magazine. He relied too much on his superhuman fast ball and youthful energy. Feller himself says of those days: "I didn't know much. I just reared back and let them go. Where the ball went was up to Heaven. Sometimes I threw the ball clean up into the stands."

In 1937 he won 9 games and lost 7; in 1938 he made it 17 and 11; in 1939 it was 24 and 9; in 1940, 27 and 11 and in 1941, 25 and 13. The number of his strikeouts has risen to much over 1,000. And his popularity with the fans has risen in proportion. Although the schedule usually calls for Feller to pitch about every fourth day, he is required to be on the field at every game, mostly for promotional purposes.

BOB FELLER

It is Feller's fast ball that fascinates the crowd. Bill Dickey, the Yankee catcher, says that it looks just like an aspirin tablet coming up to the plate, only not quite as large. It travels about 100 miles per hour, and has a peculiar upward hopping motion known as the "hop" in addition to its great forward velocity. In the course of a game Feller makes between one hundred fifteen and one hundred thirty pitches, and on a hot day may lose as much as four pounds in weight. Sometimes he sniffs ammonia or douses his wrists with ice water to pull himself together.

After a hot day's game he gets an alcohol rubdown from Lefty Weismann, the Indians' trainer, who has no medical degree but is an intuitional diagnostician; drinks a glass of hot salt water at his hotel to counteract

FELLER, BOB—*Continued*

the heavy perspiration; has a nap and a shower; and stokes up at dinner time on roast beef, steak or sea food. In Cleveland, Feller lives at the Tudor Arms, a residential club, sharing a suite of two bedrooms and parlor with an outfielder named "Soup" Campbell, with whom he also rooms on road trips. He spends most of his time with his teammates, occasionally going with them to a quiet party, a dance, the movies, or the Municipal Opera at Forest Park in St. Louis.

When not playing ball, Feller lives luxuriously with his parents in a new, nine-room brick house which he built for them at a cost of $25,000. It is equipped with two bathrooms, three bedrooms, a recreation room and shooting gallery, a two-car garage, a flood-lit skating rink and a tennis court. Feller's parents spend winters in Florida at his expense. On the long summer evenings his younger sister, Marguerite, pastes newspaper stories about her brother in one scrapbook and photographs in another. An electric eye in the garage opens the doors when Bob wheels his Buick up the driveway. He has a weakness for fast driving and has added to it a passion for flying, which he took up in 1941.

Bob Feller, says McKelway, is solidly built, a fraction under six feet tall, and weighs on a year-round average about one hundred eighty-five pounds. He has "a longish face with a generous mouth and clear, intelligent eyes." He laughs easily at jokes and at funny situations, and enjoys himself "in a restrained, agricultural way." He has never smoked; chews gum, not tobacco; will take a glass of wine or beer if feeling in good condition. Besides baseball, he plays table tennis, golf and billiards, and enjoys skating and trap and target shooting in the off season. "He likes girls well enough but has thus far escaped being identified with any particular girl by the gossip writers, which is a neat feat in itself."

Nason, J. and others Famous American Athletes of Today 7th ser p177-207 1940
Who's Who in the Major Leagues

FIELD, MARSHALL, III Sept. 28, 1893-
Industrialist; philanthropist

Address: b. 250 Park Ave, New York City; h. 740 Park Ave, New York City

Since October 1940 the largest single stockholder in the New York City newspaper *PM* has been Marshall Field, III. At that time the stockholders in The Newspaper *PM*, Incorporated voted to accept his offer of $300,000 and a 15 per cent interest in a new corporation in return for all the assets of the old corporation, which had run through some $1,500,000 cash in three months. Although Mr. Field's business and philanthropic ventures have been numerous, probably more curiosity has been aroused by his financial backing of this newspaper than by any of the others. His total investment in *PM* has been reported as several millions. Robert Ingersoll, *PM's* editor, explained Field's attitude toward the paper: "Mr. Field," he said, "compares *PM* in some ways with the Philharmonic Orchestra. No one thinks of disbanding the Philharmonic merely because it doesn't now support itself nor never has."

It was not much later when Field announced, to the consternation of other capitalists: "I happen to have been left a great deal of money. I don't know what is going to happen to it and I don't give a damn. If I can't make myself worthy of the three square meals I eat a day, I don't deserve them."

And losses didn't deter Marshall Field from another newspaper venture. In September 1941 he announced that he and "a group of friends" had decided to launch a new newspaper to break the Chicago morning paper monopoly of the isolationist Chicago *Tribune*. He himself was to be the paper's owner, and its policy, he said, was to be one of unequivocal opposition to isolationism. On December 4th the first issue of the Chicago *Sun* appeared, to the accompaniment of congratulatory telegrams from prominent people all over the United States, including President Roosevelt himself.

Marshall Field, III is listed in *Who's Who in America* as Republican and Catholic. He was born in Chicago, Illinois (the home of the department store, Marshall Field & Company) on September 28, 1893, the son of Marshall Field, Jr., who in 1905 committed suicide in his Chicago home, and Albertine (Huck) Field. He was reared and educated in England—he attended Eton College and Cambridge University—and, returning to the United States around the time of the First World War, he enlisted as a private in the 1st Illinois Cavalry in 1917. He was promoted through the grades to a captaincy, arrived in France in March 1918, participated in the St. Mihiel and Meuse-Argonne operations and was honorably discharged on February 20, 1919.

Marshall Field, III returned from the Army to occupy himself with hunting, horses, dogs (mainly retrievers), and the varied responsibilities that go with the inheritance of a fortune of hundreds of millions. But that was by no means all. Settled in Chicago with his wife, the former Evelyn Marshall of New York whom he had married in 1915, he insisted on working for a time as an apprentice in the office of Lee Higginson & Company, brokers. Asked why he worked, he replied: "I would consider it criminal if I did not take advantage of my opportunity to assist in the development of American industry." As a sideline he found jobs for ex-service men.

In 1921 the Fields moved to New York, where Marshall Field, III, built a town house and a Georgian mansion on Lloyds Neck, "Caumsett," and organized the investment-banking firm of Field, Glore, Ward & Company. Nine years later he was divorced from his first wife (there were a son and two daughters by this marriage), and in the same month he married Mrs. Audrey James Coats. It was at about this time that he took up flying and speedboat racing.

In 1934 divorced from his second wife, Field apparently found himself at loose ends—though hardly from lack of responsibilities: a trustee of the estate of Marshall Field, Marshall Field, III, has also been a director of the Continental Insurance Company, the Continental-Illinois National Bank & Trust Company, the Westinghouse Electric and Manufacturing Company and, of course, Marshall Field & Company. He was already vaguely interested in social problems. In 1932 he had voted for Hoover, but by 1934, as he put it: "I got rather disgusted with the Republican Party and I got interested in Roosevelt and what he was trying to do." *Time* says that in 1935 he was "well psycho-analyzed and emerged with a desire to do good in the world"—and that his first act was to donate the next earnings of one of his race horses to Dr. Zilboorg (see sketch this issue), his psychoanalyst. (They reportedly totaled some $500,000, and became the foundation for Dr. Zilboorg's famous study of suicide.)

A few years ago Mr. Field organized a New York committee on child welfare and through it gave new buildings, new equipment and increased personnel to 10 different children's societies. In 1936 he retired from investment banking. Since the Second World War he has acted as chairman of the United States Committee for the Care of European Children, and he himself took five British refugee children into his luxurious home, which already held five of his own. It was September 1940 when he announced that a new diplomatic agreement between the United States and Great Britain would enable non-British refugee children in England, too, to come to the United States without quota restriction. Unfortunately, however, the child removal scheme was suspended the month after this announcement as too hazardous, and Mr. Field's committee was forced to reduce its activities at about the same time Mr. Field became *PM*'s principal stockholder. Since that time the main function of the United States Committee for the Care of European Children has been to guarantee proper care for those already here. Mr. Field has also donated generously to the USO and to British and Russian relief organizations, in all of which he is active; he is chairman of the Defense Council of Public Relief Administration; and he heads Mayor LaGuardia's organization for dispensing hospitality to servicemen on leave. With all his activities and philanthropies, in 1941 he was so busy that he not only worked a full eight-hour day in his Park Avenue office without vacation, but often spent his evenings in conferences.

Ira L. Hill

MARSHALL FIELD, III

Mr. Field has been described as "sturdily handsome, with a grayish pompadour and a biggish, sharp nose." He dresses conservatively and well. On January 15, 1936 he was married for the third time—to Mrs. Ruth Pruyn Phipps. The couple have two small daughters. Field is a member of New York's Knickerbocker Club and of various tennis, golf, hunting and yacht clubs, and in Chicago holds membership in the Chicago, University, Union League, and Saddle and Cycle Clubs. He has also been president of the Philharmonic Symphony Society of New York and treasurer of The Metropolitan Museum. In November 1940, before the choice of John Winant (see sketch this issue) as Ambassador to Great Britain, he was mentioned as a possible successor to Joseph P. Kennedy. It was reported that there was "no doubt here that Mr. Field would be *persona grata* to the British court and foreign office."

FIELDS, GRACIE Jan. 9, 1898- British comedienne

Address: h. 22 Charing Cross, Rd, London, W. C. 2, England; Peacehaven, Sussex, England

GRACIE FIELDS

The War, which has spoiled so many things, has even cast a cloud on Gracie Fields, as much England's sweetheart as Mary Pickford was ever America's. In the British Parliament on July 26, 1940 a Labor member got up and asked some awkward questions. Why had Gracie and her new husband, "the well-known Fascist," Mario Bianchi (better known as Monty Banks) been allowed to take out of the country valuable jewels and sums of money far in excess of the amounts permitted by the defence regulations? Was it true that Gracie had left "practically no assets" in England?

In reply the Financial Secretary to the Treasury said that nothing irregular had been done; that the dollars Gracie would earn in the United States would eventually be assets on the British side; and that although Banks' nationality was dubious, it had been decided to treat him as a British subject who would also have to account for his dollars. A little later Gracie's accountants denied that she had left no assets in England, and the firm of George Music and Sons, from whom she was supposed to have made heavy purchases of jewels, said it had never seen either her or her husband. Protestations were capped by an announcement by the Navy League that Gracie was giving her services free at 32 concerts from Vancouver, British Columbia to Halifax, Nova Scotia to aid in getting war comforts for the Navy and in training youth. And Gracie herself said: "Everything I have is the Government's whenever they want it."

The situation stirred up quite a row, but then, anything that affects the "Lancashire Lass" comes close to the hearts of most of England's people. It has been that way for over 20 years now, which means that Gracie Fields has come a long way from the small cotton town of Rochdale, Lancashire, where she was born and where she first worked. Her father and mother, Fred and Sarah Jane (Bamford) Stansfield, were poor working people. Gracie was born in a standardized street and wore clogs; a public primary schooling was all she got in the way of education.

At school Gracie was described as one of the shyest girls there, very reserved and very particular about making friends, but generous and intelligent. It was acting, not school, that really counted for her. "I started when I was seven—singing from the gallery to a woman on the stage," she once said. "I'd made up my mind to be an actress." So schooling became an off-and-on affair when Gracie got a job acting with a troupe at 25 cents a week. At 12 she was allowed to do a comic number on her own account and at 14 reached the dizzy heights of $25 a week. But it wasn't for long.

Gracie's mother by this time had decided that her daughter had better get all this acting nonsense out of her head and go into the mill like the rest of her schoolmates. So Gracie spent two years in a cotton mill, in a shop and in a paper bag factory. It was no use, Mrs. Stansfield found, for in April 1915, when Gracie was 17, she got herself a job in a revue called *Yes, I Think So* at Hulme, Manchester. In the company the principal comedian was Archibald Selinger (he acted as Archie Pitt), whom Gracie married some years later and divorced in 1939.

From Manchester, Gracie went on to make her first London appearance. It was at the old Middlesex Music Hall, on July 5, 1915, in the same revue. From then on her career was well under way, though it was not until after the end of the First World War that she reached real fame. For a while she played mainly in the provinces. In February 1916 she was playing in *It's a Bargain* at the Tivoli in Manchester and she then toured with this revue for two years. In 1918 she got the part of Sally Perkins in the phenomenally successful light show, *Mr. Tower of London,* which ran for seven years, and she appeared in it on July 30, 1923 in the West End of London. Her success was immediate and striking. Gracie was in the big money from then on.

"In the old days," Gracie once told an interviewer, "my ambition was to earn a hundred pounds a week at the Coliseum, and when eventually I got it I wanted to frame the note—make a picture of it to look at—but they wouldn't let me. Since then I've often earned £750 a week, but I hate to get that much as salary; it worries me; I feel I can't be worth it. I don't mind if I draw it on a sharing basis." Since she made that statement Gracie's income has gone up and up until it has been computed at about $1,000,000 a year.

It comes from her stage appearances, from films and from victrola records. In 1931 she appeared in the film *Sally in Our Alley,* in 1932 in *Looking on the Bright Side,* and from then on in a number of pictures. In 1935 she signed a contract with Associated Talking Pictures which brought her about $600,000 over a period of two years. Then she made three pictures for Twentieth Century-Fox in England, *We're Going To Be Rich, Smiling Along* and *Shipyard Sally,* pictures which were shown widely in America and brought forth comments as varied as: "The production offers nothing to ingratiate Miss Fields in the eyes of the average American"; and "[she is] the most refreshing comedy personality to hit the American screen" in many a year. On the basis of the more favorable reviews, Darryl Zanuck (see sketch this issue) imported Gracie to America in 1937 and then kept her under contract for eight months. Nothing came of it, however.

Gracie made her first record in 1928. By 1933 she was able to entertain her father and mother, the Mayor of Rochdale and others at a Lancashire luncheon celebrating the pressing of her four-millionth record. The *Manchester Guardian* commented a little later: "The only singer who may have exceeded Gracie Fields in the number of recordings was Caruso." When people comment to Gracie on the amount of her income she tells them that most of it goes in taxes. "I'm paying for rearmament," she says. "They'll probably name a battleship after me."

Gracie Fields' popularity is due to her combination of talents as a vocalist and comedienne, coupled with a delightful, informal personality. She is the essence of Lancashire, with its quick humor and forthright speech and its broad accent. She "expresses on the stage the triumph of the common girl who won't be put on." The London *Times* writes of "her large friendliness, cheerful common sense and persistent joy in what is ridiculous"; *Time,* on the other hand, describes her "sheer animal vulgarity, including flea-scratching and grimaces." It is probably all these things, together with a really excellent voice, which improved the morale of the British troops in France in the winter of 1939 to 1940 and of the civilians in Canada and the United States in 1940 and 1941 when she entertained them.

Gracie's London home is on Charing Cross Road. Lately, however, she has lived mostly at Peacehaven, Sussex, and before that spent some time on her estate on the island of Capri. Gracie is still modest about all this prosperity. Her elderly parents are still her first care; and she is an indefatigable performer for charity, especially for charities of her native town, Rochdale, which made her an honorary Freeman in 1937. In return she entertained 9,000 natives of Rochdale in Windsor and London with tea and her own special kind of fun.

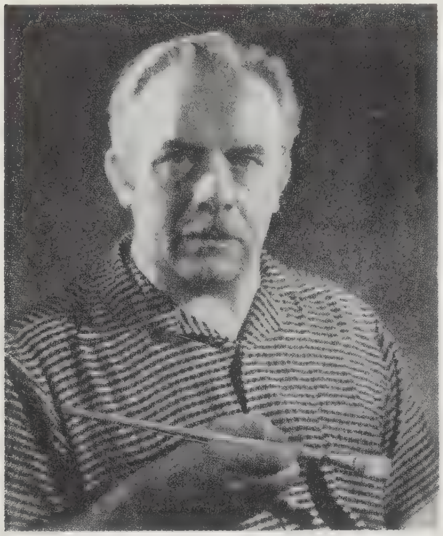
FIENE, ERNEST (fē'nê) Nov. 2, 1894- Artist

Address: b. Studio 908, Carnegie Hall, New York City; h. Southbury, Conn.



Associated American Artists' Galleries

ERNEST FIENE

Ernest Fiene is a versatile artist, and, as Hermon More says: "It is not surprising that his vitality and his interest in all manifestations of life should demand the use of many mediums for his expression." He works in oil, water color, *gouache,* aquatint; he has painted frescoes; he is the author of 45 editions of lithographs and etchings; he has illustrated advertisements, designed book jackets; he has illustrated books, two of them included in the "Fifty Best Books of the Year." Fiene himself says he believes in a broad scope in the expression of art, akin to the work and conception of the Old Masters.

From his many years of painting have come resonant water colors of the Adirondacks and effective, haunting but starker oils like *Yard Engine, Newtown Church* and *Spring.* There have come flower paintings, straightforward portraits, stimulating still lifes, landscapes of much of America, and many, many pictures of New York. In these city pictures, "without ever illustrating or stooping to sentimental narrative Fiene imparts a poignancy to the rapid change and reconstruction of the life of the city." Fantastic skyline, river-vaulting bridges, towering steel structures, brownstone houses, downtown, Union Square, uptown—they are all there. In his capturing of New York as in many other paintings, Fiene shows himself socially conscious, aware of current problems. Yet never is there a morbid quality or a sense of false brooding; always, even in a deeply poetic canvas like *Nocturne,* a picture of Union Square in winter, there is an impression of detachment.

In many of his works Fiene has demonstrated his belief that paint must have a rich body to resist the effects of aging. He seeks an enameled quality, believing that paint must have its own beauty in body and that a freshly painted picture should have the brilliance of new pigment and not be forcefully aged on the palette. The colors the paints show have been called "almost a study in instrumentation. What has sometimes been regarded as harshness or crudity is actually the change of accent and beat, the variation of tonal resonance and withal the refusal to allow a passage to die on the retina of the eye."

But Fiene never depends on color alone for his compositions. He has a keen sense of design, "governed more often by the subject and the form than by a purely decorative scheme." He has a keen realization of the importance of line and the effectiveness of an occasional bold stylization of detail. Always, though, "one feels in his work the desire to capture by plastic means the spirit of the scene or arrangement that stimulated him to put it on canvas."

Ernest Fiene, who has at various times been accused of being a Primitive, an Impressionist, an Abstractionist, a painter's painter, has nevertheless managed at every stage of his artistic development to imbue his work with something of his personality—"his vitality and intensity of emotion." And he has been painting "ever since I can remember." He was born in Elberfeld, Germany on November 2, 1894, the son of Henry William and Maria (Egger) Fiene, and came to the United States in 1912. For a while he worked at an engineering career, "developed some bulging muscles from it," and then turned to art.

He got himself a job in a decorator's shop and enrolled in the National Academy of Design in 1914. For four years he studied there and never finished a picture. At the same time, though, from 1916 to 1918, he was studying at the Beaux Arts, and in 1923 he spent a year at the Art Students League. Before then, in 1920, he had made his first exhibition appearance with the Society of Independent Artists, and in 1921, the year he was married to Jeanette Ettarre of New York, had begun to concentrate almost full-time on his work.

From 1921 to 1928 his work consisted mainly of landscapes, figure compositions and portraits. Particularly he loved winterscapes and the ironclad appearance of the snowy New England fields, but there were, too, pictures of the Catskill Valley of the Hudson River, of Maine, New Hampshire and Vermont at every season of the year. His work was well received. In 1922 William Murrell called him "a romantic with a strong unaffected faith in his own vision of the world, untainted by any intellectual or esthetic theories." His 1924 exhibition drew critical praise, as did his 1927 exhibition of paintings, water colors, lithographs and drawings.

In 1928 and 1929, after becoming an American citizen, Fiene was in Paris and Brittany, doing a series of water colors of Brittany and a group of figure paintings. He returned to the United States to work especially on his series of paintings of New York, most of which were made after 1930. Two years later, in 1932, he received a Guggenheim fellowship and spent a year in Italy studying the early Renaissance masters and, in Florence, the technique of fresco painting. But, one critic commented, his European excursion was only "an interlude between two periods of painting the American scene."

His return from abroad was marked with an exhibition at the Downtown Galleries in 1934, his first one-man show in several years. Edward Alden Jewell rejoiced that a "former harsh and acidulous quality has been to a large extent replaced by a palette much more various and flexible"; that his "color has warmed and mellowed. It is less brittle and flat." And there were many who agreed with Henry McBride of the New York *Sun*: "Ernest Fiene as painter of the American scene in its broad scope has made a foremost place for himself. . . His great research in technic has given him an easy means of expression, particularly in recent years. Today there is a spontaneous quality and a complete unity in his paintings. . . The commonplace scene under Fiene's brush develops into a dramatic experience in the spectator's life."

A year later Fiene, "an excellent teacher," was spending the summer teaching painting at the Fine Arts Center in Colorado Springs. In that same year he showed water colors of New Mexico, works in which the use of selection and compression makes *Sacred Mountain, Taos* and *Rain Over Mountain, New Mexico* "vibrant pictures, restrained yet rich in color and alive with curving motion." He also showed oils of Wyoming and New England, "pictures that glow . . . as though from a steady internal combustion, the coil being electrified to red-hot heat. Through the brick-red of this earth, or at its sides, peeps out chromium yellow, while overhead the blue finishes off the palette." This was the year, one critic stated, in which Fiene "found himself." "Possessed of an interesting style, he has at last mastered it, has ceased being rather self-conscious over it as in the days when he painted stiff churches against the snow or even those able nocturnes of New York City, and has broadened out into a powerful artist."

Late in this same year, Fiene left the Connecticut farm he had had since 1933 to make a trip through Pennsylvania and West Virginia. "It was a winter of continued blizzards and snow," he says. "I traveled by car and although it was hazardous my enthusiasm for the strange visual beauty of the industrial regions blanketed in snow led me on." In 1937, through the medium of the Pittsburgh Commission for Industrial Expansion, an exhibition of the work done on this trip was held. There were industrial themes—*Night Shift, Old Coke Ovens;* there were paintings of Negro slums—*Coming Home, The Red House*; and the show was a success.

In that same year Fiene was given a commission to do four murals in the Department of the Interior Building in Washington, D. C., and not long after that he started two murals for the Central High School of Needle Trades in New York. These two murals were finished after two and one-half years' work. Allegorical in treatment, they present in over 2,000 square feet more than 200 figures—labor leaders, progressive manufacturers, legislators and social workers who have contributed to the progress of the industry and helped bring about reforms in working conditions. The first, called *Victory of Light Over Darkness,* showing sweatshops, the Triangle Fire, etc., has been said to surge with movement and vitality. The second, *Harmony and Achievement,* showing the members of the five needle trades working together and all the improvements in their lives, has been called, in comparison, static. Fiene explained that: "Heaven," he said, "is harder to paint than hell. It ought to be painted statically. It represents an end in aspiration."

Before he started these murals, Fiene had been honored with the Harris Silver Medal and a prize of $500 at the Chicago Art Institute for his *Frosty Morning.* Other prizes include the Clark Prize at the Corcoran Gallery for *Spring Evening*; honorable mention in the Carnegie International for *Razing the Old Post Office;* and the Ada S. Garrett Prize of $750 at the Chicago Art Institute for the same painting. He is represented at the Denver Art Museum, the Whitney Museum, the Phillips Memorial Gallery, the Newark Art Museum, the Boston Museum, the Mia Collection in Japan and at many other museums and private and public collections of art.

The most recent, as well as the largest and most comprehensive exhibition of the work of this large, solid-framed, blond artist was held in January 1940 after he returned from Hollywood, where he had painted a scene of the film *The Long Voyage Home.* In this exhibition were shown a series of water colors, pictures in the genre tradition, a *tour de force* called *Kitchen Table,* painted with his left hand after he broke his right arm, and many examples of the diversified subjects and forms that distinguish Fiene's art. Of them William Murrell wrote: "His sympathies have widened, his experience has deepened, his technique has grown supple and sure. There is more power, control and restraint. . . Fiene's superb orchestration of abstract color spaces within the framework of Nature is a most significant contribution to the art of our time. . . Life and a prodigious amount of work have tempered his realism from its earlier romantic leanings to its present-day clarity and flexibility. Nothing can apparently temper his robust exuberance."

FISH, HAMILTON Dec. 7, 1888- United States Representative from New York

Address: b. House Office Bldg, Washington, D. C.; h. 2319 Ashmead Pl, N. W., Washington, D. C.

Hamilton Fish, for a long time one of the most vocal of American isolationists, was born in Garrison, Putnam County, New York on December 7, 1888. His father was Hamilton Fish, Congressman and Speaker of the New York Assembly; his grandfather had been a Senator, Governor and Secretary of State. Like the rest of his family, he went to Harvard, and there the name Fish became temporarily synonymous with football rather than statesmanship: he captained the varsity eleven and was Walter Camp's All-American tackle. In 1910 he received his B. A., *cum laude,* and remained at Harvard for another year, studying law. It was 1912 when he made his first trip to Czarist Russia, and he was more favorably impressed than when he re-visited the country in 1923. In 1914, following the family tradition, he was elected to the New York Assembly for two years on the Republican ticket.

Even Mr. Fish's opponents can find little fault with his record in the First World War. He led the 15th New York Volunteers of the Colored Infantry, later known as the 369th Infantry, took part in the Battle of Champagne, received the Croix de Guerre for bravery, had his horse blown up behind the lines, wrote home to his father excoriating "the maggots of pacifism," and ended up as a major of infantry of the 4th Division of the Army of Occupation. Today he is a colonel in the Officers Reserve Corps—a graduate of the Army and General Staff College of the American Expeditionary Force—and in July 1941 he reported to Fort Bragg, North Carolina, for a "refresher hitch" of four weeks.

In 1919 Hamilton Fish was elected to the 66th Congress to represent the inhabitants of Orange, Putnam and Dutchess counties in New York for a two-year term; he has been re-elected to the House of Representatives from the 26th New York District ever since. In his first five minutes in the House he displayed the patriotism that has distinguished him to date, and introduced a resolution providing for the Tomb of the Unknown Soldier. He then saw to it that nine towns near his home received captured cannons, and it was not long afterward that he helped to organize the American Legion. In 1921 he married Grace Chapin, daughter of a former Mayor of Brooklyn, New York.

During his first decade in the House, Representative Fish was distinguished for his championship of Negro rights, prison relief, an appropriation of $100,000,000 for the starving Germans, and the recommendation that Doheny, Sinclair and Fall be jailed. Perhaps unfortunately for Mr. Fish, he is even better remembered for bills to make *The Star-Spangled Banner* our national anthem; to jail all Americans who abuse the Administration's (then Coolidge's) foreign policy while abroad; to restore the Army-Navy football game by having President Hoover call a conference of the Secretaries of the Army and the Navy and the superintendents of the two academies, and force the schools to play by law.

In 1930 Mr. Fish decided to do in a small way what Mr. Dies some years later decided to do in a large way. At that time he introduced a resolution for the appointment of a special committee to investigate Communistic activity in the United States, and became its chairman. The Fish Committee was not very successful. During the Red-hunt it raided a Baltimore warehouse and discovered a few crates of lettuce, and the public was amused rather than alarmed. Its chairman filed a report in January 1931 recommending, among other things, that alien Communists be deported, that the postal law be amended so that their literature could not be mailed and that the Communist Party be outlawed, but although he continued to introduce such bills no action was taken on any of them. Although someone else might have had his spirit of rivalry aroused by such a spectacular successor as Mr. Dies, Hamilton Fish has consistently praised his work. "I love the Dies Committee for the enemies it has made," he says now.

In 1931 Mr. Fish addressed the American Legion, calling every man to his post. He announced: "It is the manifest duty of the Legion, the largest veterans' organization in the United States, to take the leadership on most of the non-political and non-partisan issues affecting the interests of the American people, and help in shaping the destinies of our country and making it a better place to live in for oncoming generations." He was also one of the most ardent defenders of the veterans' bonus.

Soon the voluble Congressman was dividing his attention between the Bolshevik danger and the foreign war threat with more emphasis on the latter. As senior Republican member of both the House Rules Committee and Foreign Affairs Committee, he was in a position to do so. In March 1938 he testified before the Naval Affairs Committee, asking for naval parity with Japan, but voted against the bill for naval expansion. In October 1938, speaking at a German Day rally in Madison Square Garden from a swastika-decorated platform, he decided that it was unfortunate that the policies of our Administration had "embittered our relations with Japan, Italy and Germany." In the spring of 1939 he proposed a National Committee to Keep America Out of Foreign Wars; it was formed, and in May the Committee offered prizes on "Why America Should Keep Out of Foreign Wars." As for the foreign War itself, he did all that one man could do to stop it: traveling in Europe in the summer of 1939, he talked with Von Ribbentrop (see sketch this issue), decided that Germany's claims on Danzig were "just," and in August arrived in Von Ribbentrop's airplane at the Interparliamentary Union in Oslo, Norway and offered to arbitrate the Danzig dispute if someone would extend an invitation. He also proposed a 30-day moratorium during which Great Britain, France, Germany and Italy would talk things over; if failure resulted, the case was to be referred to the Kings of Norway and Belgium and the President of Switzerland. The Union didn't pay much attention to his suggestions; Mr. Fish sadly announced: "I wash my hands of the whole thing," and came home.

He remained active in the United States, however. In October 1939 Virginia's Clifton Woodrum announced that thirty-seven Republicans and one Democrat, led by Fish, had organized a "propaganda racket that makes the utility outfit and that of Dr. Townsend look like pikers." His Committee to Keep America Out of Foreign Wars, with headquarters in Fish's Washington office, was allegedly using government facilities and employees and appealing for campaign funds on official stationery. "There is no member of this body or any other body who has so unfailingly, so persistently, so regularly, so systematically and so ineffectively opposed the present Administration," it was charged.

HAMILTON FISH

In November 1939 Representative Fish voted against repeal of the arms embargo, and in the summer of 1940 against conscription. Mr. Willkie's views being different, some Republicans began to worry, and in October 1940 a move began to defeat Hamilton Fish for re-election to the House—prompted by the fact that a Republican victory would automatically give him the leadership of either the Rules or Foreign Affairs Committee. The move was not successful, but Republican hopes and fears both proved unjustified.

Until Japan's attack on Hawaii he opposed the Lend-Lease Bill, the extension of selective service and major revision of the Neutrality Act, delivering fiery isolationist speeches before America First meetings and in the House. (He voted for the arming of American merchant ships, however.) He has also been accused of having permitted anti-Semitic, anti-British material to be mailed under his Congressional frank, a charge which he called a "frame-up, a smear." His franked envelopes disappeared from an office just before Federal investigators swooped down upon it; one of his secretaries was indicted for "corrupt perjury" by a federal grand jury investigating Nazi propaganda; and finally, in November 1941, the grand jury served a subpoena upon Fish himself, after he had failed to respond to an invitation to appear voluntarily. The House called this an infringement upon his immunities, but "authorized" him to testify.

The outbreak of Japanese-American hostilities changed all this. Fish announced that the American people "should present a united front in support of the President of the United States," and suggested that he would like to lead Negro troops, as he had in the First World War.

(Continued next page)

FISH, HAMILTON—*Continued*

"Loud, big-boned," rather handsome, six-feet-three when he takes off his size-twelve shoes, Representative Fish is noted for his "windmilling arms, roof-raising voice and not-quite-legal logic." He has made a habit of speaking of himself in the third person to interviewers, thus displaying an objectivity rare in the world of politics. One story gives him credit for making a two-minute call on President Hoover and then gravely offering the waiting reporters a 1,500-word release containing his remarks!

FISH, MARIE POLAND May 22, 1902-
Ichthyologist

Address: b. Narragansett Marine Laboratory, Kingston, R. I.

Van Dale

MARIE POLAND FISH

Mrs. Fish, like her husband, must get very tired of having jokes made about her name and her profession. But the fact remains that she and he *are* both ichthyologists (students of fish). Indeed, Mrs. Fish is the first person to discover the eggs of the eel. The breeding habits of eels were for more than two thousand years one of the greatest mysteries of science, since these elongated fish lay their eggs and have their young far out in the ocean.

Marie Poland's career began almost by accident. She was born in Paterson, New Jersey, and went to Smith College with every intention of becoming a physician. At college she took a pre-medical course, earning membership in Phi Beta Kappa, and for a year after acquiring her B. A. in 1921 was a research assistant in cancer problems in the Department of Medical Research of the Carnegie Institution. She had entered the College of Physicians and Surgeons when, in February 1923, she abandoned the idea of securing an M. D. degree to marry Dr. Charles John Fish, one of the earliest American oceanographers. Her scientific bent still remained, however, and soon she was looking around for some way to satisfy it.

She found it when she discovered that the United States Bureau of Fisheries, with which her husband was associated, had very little information on the life histories of Atlantic fish, and urgently needed some. Embryology had always interested her, and the embryology of fish or human beings is fundamentally the same—in fact, every human embryo at some time recapitulates the fish stage of its ancestry.

Like many scientists, the Fishes have a summer home and laboratory at the Woods Hole Marine Biological Station in Massachusetts. There Mrs. Fish began studying the development of local marine species and passing on her findings to the Bureau. The work thus done on a voluntary basis was soon recognized as valuable, and led to her becoming a field assistant in the Bureau of Fisheries a few months later. She remained with the Bureau until 1927. In the meanwhile, in 1925, she was elected to the New York Zoological Society as an assistant in the Department of Tropical Research, an honorary position which she kept until 1932.

She accompanied Dr. Fish on numerous oceanographic expeditions, and was often called upon to take complete charge of them. Her husband enjoys telling of an episode during one of the Massachusetts surveys, when he was called to Labrador and turned over command of the survey to her. The research vessel, being under control of the Bureau of Fisheries, was manned by a regular Navy crew. When Dr. Fish returned he went to sea on this vessel, and found that his wife had trained her crew so thoroughly that when she barked out commands in the style of an admiral the hard-boiled sailors snapped to attention and ran to obey her without a smile. Neither she nor they saw any incongruity in their being commanded by a girl in her early 20's, just a trifle over five feet tall!

It was in 1923, with William Beebe (see sketch this issue) and her husband on the "Arcturus" Oceanographic Expedition to the Sargasso Sea, the Galapagos and Cocos Islands, that Mrs. Fish, in charge of all young specimens, put into a finger bowl on her desk four little eggs which had come up in a net from five hundred fathoms below the surface. A week later one of these hatched into a young American eel. These four eggs are still the only eggs of the American eel known to science.

From 1928 to 1931 Mrs. Fish was curator of ichthyology at the Buffalo Museum of Science, of which her husband had become director in 1927. She was a member of the Bermuda Oceanographical Expedition in 1929, of the Cooperative Survey of Lake Erie from 1928 to 1930, of the survey of the Gulf of Maine from 1929 to 1930, and of the International Expedition to the Bahamas in 1930. With her husband she made several oceanographic trips into northern waters as well as into the South Atlantic, studying ocean life in a diving helmet, taking underwater pictures and preparing museum exhibits. In 1931 Dr. Fish requested a leave of absence from the Buffalo Museum to accept the post of executive secretary and director of the International Passamaquoddy Bay investigation, and in 1934 he and his wife accepted the invitation of Rhode Island to come to Kingston to develop a laboratory that would do for fishing, the second most important industry in the state, what agricultural experiment stations do for farming.

It was 1937 when Dr. Fish built and became director of the first Narragansett Marine Laboratory, and Mrs. Fish was a research associate from its beginning. In the fall of 1938 the great New England hurricane caused a tidal wave which swept away the entire laboratory—buildings, equipment, records and the newly built research vessel *Judeth.* But by 1940 a new and much finer laboratory took its place. In it Mrs. Fish has conducted research in the embryology and early life history of fresh-water fish, with a special interest in the embryology and development of the American eel. In 1941 she holds the title of Ichthyologist for the State of Rhode Island.

Mrs. Fish leads one of the busiest lives on record. She is a tiny woman, only five feet one inch, weighs one hundred eighteen pounds and has dark hair and blue eyes. But she has plenty of energy in spite of her frail appearance. Beside her regular laboratory research, she lectures frequently; writes popular science articles often for the magazines and technical papers for the United States Bureau of Fisheries, the New York State Conservation Department, and other scientific bodies; and for three years ran a regular column called "Science for Everybody," which appeared in the Providence *Evening Bulletin.*

She takes time also to be a devoted mother to her daughter, Marilyn Poland Fish, who was born in 1931. Marilyn, who is always called the "Minnow" by her parents' scientific associates, never had a real home until they settled in Kingston, Rhode Island when she was six.

In Kingston the Fishes have bought a large old colonial house and stocked it with seventeenth and eighteenth century furniture, the collection of which is one of their hobbies. There are many family heirlooms in the house as well, for both the Fish and the Poland ancestors came to America before 1630. Here, in her scant leisure hours, Mrs. Fish leads the life of any other young American matron. She swims and sails, she plays bridge and she enjoys amateur dramatics with the Kingston Players, whose president she was in 1936 and 1937. In Buffalo she belonged to the Junior League, in Kingston she belongs to the Junior League of Providence, Dunes Club, Triangle Club and the Smith College Club of Rhode Island. She is a Presbyterian and a Republican. No one would think on casually meeting her that she is one of the foremost scientists of America, or that her life has been and still is full of hard intellectual work spiced with scientific adventure.

She has received many honors. She is a member of the Society of Ichthyologists and Herpetologists, of the Society of Women Geographers and of the Buffalo Society of Natural Science. In November 1940 she was selected as one of the "hundred outstanding career women of the world" to be honored by the Women's Centennial Congress, in New York.

Naturally, Mrs. Fish has had little leisure for writing of greater length than would be required for a magazine or newspaper article, though she would like some day to write a book. She has material enough to prepare more than one, and if she gets around to it they should be as popular as those by her friend and ex-associate, William Beebe. So far, her only publication in book form has been a technical monograph called *Contributions to the Early Life-History of Fishes From Lake Erie and Its Tributary Waters.*

Looking back on the achievements of the past 20 years, Mrs. Fish might be forgiven if she felt some complacent self-congratulation. Quite to the contrary, however, she is modesty itself, and has "a complete horror" of self-praise or first-person biography. She is as vitally interested in her husband's work as she is in her own (his special fields are the distribution of plankton organisms—the minute animal life of the ocean surface, physical oceanography and the ecology of ocean fish), and she feels that with all that she has accomplished she has still only touched the surface of her subject and has much work still to do.

FISHBACK, MARGARET Mar. 10, 1904-
Author

Address: b. R. H. Macy & Co, Inc, New York City; h. 5 Riverside Drive, New York City

Poetess-laureate of Manhattan—champion, in verse, of the 9 to 5 white-collar Kitty Foyles, foe of suburban life and matrimony (until she married the swellest man in the world, with whom she now spends her summers on a Maine farm)—Margaret Fishback has combined a successful light-verse career with an equally successful one as advertising copy-

MARGARET FISHBACK

writer for R. H. Macy & Company, New York. *Time for a Quick One* (December 1940) is Miss Fishback's fifth volume of light verse. Like her representative best in a previously published omnibus collection, *One to a Customer* (1937), these lyrics chant, from the feminine viewpoint, the praises of New York life.

As a reviewer says of them: "If a selection of Margaret Fishback's verse could have appeared on the marble and ormolu table of a Victorian parlor, the young lady in mutton-leg sleeves and whalebone stays would have decided from the titles that the poems were written either in code or some jargon faintly resembling English. . . But if she studied the poems beneath the cryptic labels, she would have discovered that they dealt with fashions, husbands, food, gardens and the weather. Those were a woman's inexhaustible topics of discussion in her day. They still are. Margaret Fishback has changed the lyrics without changing the tune; she is Victorian without the petticoats, with lipstick instead of rice powder. That's why she clicks."

The girl whose wit has clicked as readily in advertising copy as in the more sophisticated pages of such periodicals as the *New Yorker, Harper's Bazaar* and *Mademoiselle* came to New York City in the '20s, determined on a career and fame. She was born in Washington, D. C., March 10, 1904, daughter of Frederick Lewis and Mabel (Coleman) Fishback. Soon after she received her B. A. degree at Goucher College, Baltimore (she was a member of Gamma Phi Beta and won Phi Beta Kappa honors), Miss Fishback—a pretty blonde girl with poise, wit and real determination—came to Manhattan. At that time, it seems, she had ideas of becoming a dean of women, so she took genteel rooms in a club run by the Ladies' Christian Temperance Union and spent a year on further college courses to fit her for such a position. Just for a little contrast, she also took an evening course in ballet dancing. She and other ballet students were glad to "crawl into red tights and yellow wigs" to earn $1 a performance as walk-ons in Metropolitan operas.

Finding the atmosphere of the Temperance Union boarding house a bit stifling, Margaret Fishback and two girl friends rented a basement apartment of their own and began to live what they considered the proper Bohemian life. "This consisted mainly in having At Home evenings every Tuesday and serving the swarms of guests with strawberry ice-cream dunked in ginger ale." In 1927 Miss Fishback landed a job as an assistant copywriter at Macy's. In just two weeks' time she got a break: a sudden vacancy gave her an immediate rise in the Macy world; and the fact that her institutional copy was no less than brilliant kept her there.

Her first verse was a couplet scribbled on the back of an old envelope during a dull train ride—and it brought $3 from a magazine. Knowing what attracts customers, Miss Fishback was shrewd enough to stick to the kind of light verse women readers enjoy In couplet, quatrain and triolet she voiced the perennial problems of the New York working girl, the one-room-and-kitchenette denizen who, Lux box in hand, muses:

"I wonder where, I wonder where
I can hang up my underwear.

Miss Fishback knew well the trials of the bachelor girl in pursuit of a worthy career. Macy's kept her busy and self-sufficient:

To be a mother and a wife
I'm often urged by all my kith
And kin—but as for husbands, life
Is easier without than with.

Then, one day, she chanced to go down to Macy's seventh floor, where she fell in love: first, with a handsome Algerian rug; second, with Mr. Alberto Antolini, the rug buyer himself, who assured her that he would be only too delighted to come and supervise the rug's installation in her living room. As an astonished sales clerk said later, this was "the first time a rug buyer was given away free with the purchase of a Macy rug." On June 14, 1935, she and Alberto Antolini were married, and the Algerian magic carpet went to grace the home of the newlyweds. The Fishback reading public was soon amazed to find the cynical, independent career-girl penning such lines as:

His wash-cloth is a humid wad,
His Turkish towels hang out of line,
But do they make me squawk, 'Oh
God'?
No, ma'am. They just proclaim he's mine.

And the scorner of the little home in the country soon became the proud joint possessor of an 86-acre farm on the St. George River near Portland on the coast of Maine. There, during blissful summer vacations, the confirmed Manhattanite muse may be found digging in her garden, shingling the barn roof, or reading up on farm plumbing.

Husband Alberto is said to be wholeheartedly proud of his wife's fame, and to get as great a kick out of her fan mail as she does. This mail "ranges from frenzied blank verse sent by would-be poets to an interesting proposition from a combination chiropodist and Justice of the Peace, who offered to barter his services for autographed copies of her books. Her public also includes the versatile-minded youth who requested poems about 'Women's Short Skirts or Women's Brief Bathing Suits, and have you written any poems about Cows?'"

Besides her five books of light verse, Miss Fishback has produced a volume of Etiquette, called *Safe Conduct* (1939), illustrated by Helen Hokinson. She also wrote a rhymed primer, illustrated by Russell Patterson, which was given free to children who visited Macy's 1940 Santa Claus. In addition to her work for Macy's she has done freelance advertising for a number of non-competitive accounts, including steamship lines and automobiles. But, counting fame and fortune and all, Margaret Fishback still thinks that her marriage is the best thing that ever happened to her. It is reported that she once went to a luncheon given for a group of big-name women. When she got home she said to her husband thoughtfully: "Alberto, if I ever act like a career woman, will you please sock me in the jaw?"

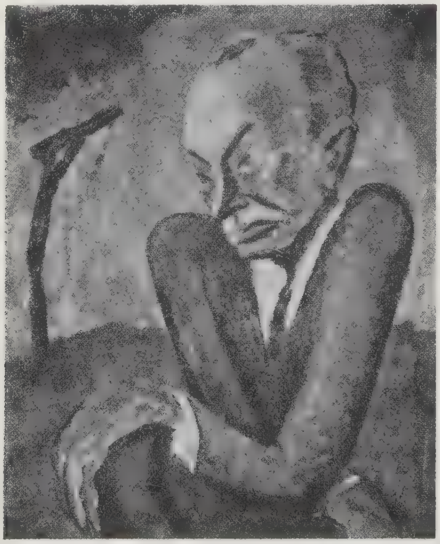
FITZPATRICK, D(ANIEL) R(OBERT) Mar. 5, 1891- Cartoonist

Address: b. St. Louis Post-Dispatch, St. Louis, Mo; h. 501 Clara Ave, St. Louis, Mo.



Colten

SELF PORTRAIT OF
D. R. FITZPATRICK A LA PICASSO

D. R. Fitzpatrick is a slight, sandy-haired, red-faced Irishman who is constantly jabbing "a satirical needle into politicians, racketeers, war-crazy dictators or 'anybody who sticks his neck out' in this mad world." The most outspoken cartoonist in America and one of the most widely reproduced, his drawings are syndicated in 35 American newspapers and have been greeted with vituperation, argument or praise in every country of the world where newspapers and magazines are printed.

A cross-section of his daily stint was presented in New York City in April and May 1941 at the Associated American Artists Galleries, his first political cartoon show in New York. It ranged from "bulge-jawed Mussolinis and neurasthenic Hitlers to war-racked skeletons, the bums and shady politicians of St. Louis' own legendary Rat Alley." There were *The Road Ahead* with thousands of refugees pouring past a sign pointing to "blood, sweat and tears"; a huge iron swastika in the form of a grindstone grinding scores of human bodies into rivers of blood labeled *Liberty, Equality, Fraternity;* John L. Lewis and a fat industrialist picketing the White House simultaneously over the caption, *Fancy Meeting You Here.* And as a concession to "Art" there were two oil paintings among the cartoons, "one a Daumier-brown picture of a group of card players; the other a dour, Picassoesque self-portrait. Of the latter he said sadly: 'It was done in one of my blue periods, during a hangover.'"

There are many who believe that Fitzpatrick, winner of the John Frederick Lewis Prize of the Philadelphia Academy of Fine Arts in 1924 and the Pulitzer Prize in 1926, need make no concessions to "Art." Museums, libraries and collectors (including Franklin D. Roosevelt) all over the world treasure their Fitzpatricks, and in Moscow the Museum of Western Art has eight of his works hanging among its Renoirs and Gauguins. Even fellow cartoonists take off their hats to him, to his slick technique of getting his points over without capsizing his cartoons with explanatory captions. As one commentator puts it: "Fitzpatrick's muscular draftsmanship and Doré-like spaciousness are, if not art, something very close to it."

This artist who was "kicked out of high school at 16 because he spent his time drawing instead of studying algebra and history," always knew he wanted to be a cartoonist. Daniel Robert Fitzpatrick was born in Superior, Wisconsin, the son of Patrick and Delia Ann (Clark) Fitzpatrick, and it was the Superior High School he left for the sake of art. For a while he studied at the Chicago Art Institute (his only other training consisted of a summer spent studying with Henry Varnum Poor) and then, in 1911, he got his first job, doing comic-page drawings for the Chicago *Daily News.* This lasted less than a year, for when the editorial cartoonist became ill Fitzpatrick took his place, and before he was 21 he was doing front-page cartoons.

His work was good, good enough to get him the position of editorial cartoonist on the St. Louis *Post-Dispatch* in 1913. He set out for St. Louis with his bride, Lee Anna Dressen, and immediately drew his first cartoon there—an attack on the old wooden railroad coaches, showing a coffin on wheels on railroad tracks passing a crossing sign of skull and crossbones. Since then his career has unfolded in a tiny office in the *Post-Dispatch's* Olive Street Building, punctuated occasionally by clashes of editorial opinion between him and the paper's editor and its publisher, Joseph Pulitzer.

In more than 10,000 cartoons in his paper and in *Collier's* Magazine Fitzpatrick has "whittled down the most complicated economic, political or social issues into a few simple strokes of his black crayon." The day Prohibition began he produced his most startling sketch, the Statue of Liberty diving into the Atlantic, and for years he campaigned violently against the dry laws. During the depression his cartoons were particularly striking. Under the title of *Our Great Machine Produces—an Apple* he showed a tremendous industrial mechanism letting down a great chain with a hook, on the end of which was a little apple and a very little man looking at it. *Strange Bedfellows* showed "Wheat Surplus" and "Hunger" side by side on a park bench. Always in these cartoons there were added to his skill as an artist a "grasp of the causes of involuntary idleness and a poignant feeling for the man who asks for work and is set at the peddler's semi-begging trade."

During Fitzpatrick's years on the *Post-Dispatch* there have been crusades against Hitler, war, war-profiteering, rackets, "foul-smelling politicians," holding companies, anti-unionists. A bold liberal, he was finally jailed for contempt of court in 1940 for his attacks on lawlessness and injustice in Missouri. Libel suits against him and his paper, carried through several courts of the State, started reform movements through Missouri and particularly St. Louis to clean up the rackets he exposed. Hated and feared by many, he once complained: "The trouble with my job is I have no friends."

Nevertheless, he manages to get together a few of them now and again for a game of poker or a round of golf, or even to go off with him on a duck-hunting or fishing trip. These trips, or his excursions into oil painting, don't happen often, however. There are too many of the world's and man's failings to be exposed; too much rottenness to be raked up; too many events to be interpreted.

FLANAGAN, E(DWARD) J(OSEPH), MGR. July 13, 1886- Director of Father Flanagan's Boys Home

Address: Boys Town, Nebraska

Walter S. Craig

RT. REV. MGR. FLANAGAN

"Boys are better capable of governing themselves than of submitting to government by adults. Don't repress a boy, give him outlets for his energies. Don't preach at him, give him the example you want him to follow. Make him responsible. Remember, *there are no bad boys.*"

It is by following these principles that a tall, rangy, Irish priest has built up one of the most interesting and successful social experiment stations in America. In 1917 a parish priest in Omaha, whose interest in the welfare of the poor had already led him to organize and operate a Workingmen's Hotel, decided to do something about the underprivileged boys he saw playing in slum streets or read about when they got into trouble with the police. He had no money, but he borrowed $90 and rented a house, and into this Home for Homeless Boys he introduced five youngsters, three of them referred to him by the Juvenile Court. Three months later there were thirty.

The next year he moved 11 miles outside of Omaha, and Boys Town, as millions of people now know it, began. Today it has

FLANAGAN, E. J., MGR.—*Continued*

a capacity of 525, and a long waiting list. When a boy leaves, rehabilitated, he goes back to his home if he has a home fit to go back to; if not, to a foster home selected and supervised by the state. Once the majority of Father Flanagan's boys came to him from the Juvenile Court; now only 10 per cent are delinquents. Father Flanagan, director and secretary-treasurer of Boys Town, never despairs of a boy. He once worked for four years to make a decent human being of an eight-year-old boy with a criminal record longer than his height. It was two years before that child ever let a smile crack his grim, sullen little face. But today he is one of the most valued citizens of Boys Town, on the way to becoming a real man. Father Flanagan never scolds, never punishes; he would rather rely on a man-to-man approach, sweetened by the box of candy always in the upper right-hand drawer of his desk. "It costs $5,000 to put a boy in prison," he says, "and $2,000 to make him a good citizen. Which is the better investment?"

Boys Town is a real town, incorporated, with its boy Mayor and six boy councilmen regular members of the Nebraska League of Municipalities. Its Chamber of Commerce is affiliated with the Junior Chamber of Commerce of Omaha, its football team is a member of the Nebraska High School Athletic Association. Its police chief, its fire chief, its parks and grounds commissioner, and its two commissioners of sanitation are all boys. Elections are held twice a year, and are hotly contested. A boy who shirks his duties loses his vote—and mighty few will take a chance on that. The boys make up their own punishments for "delinquents" and enforce them, with trimmings. A boy may be condemned to stay out of the swimming pool for a certain period—but he has to put on his swimming trunks, take a shower, and then watch the other boys enjoy themselves in the pool. "Capital punishment," the worst of all, obliges a boy to go to the movies with the others—and stand with his back to the screen! Tender-hearted Father Flanagan protested against this as too severe, but the boys shouted him down.

By now Father Flanagan has welcomed more than 4,000 citizens to Boys Town, and has still to see a single one go wrong after leaving it. There are no distinctions of race, nationality or creed; Protestant or Jewish boys are just as welcome as Catholic boys. All that is demanded is that a boy need the opportunity, and that there be room for him. These boys were all once homeless, neglected, abandoned—many of them from broken homes or homes which were a travesty on the name.

There is a *Life at Boys Town* series broadcast over station WLW, and in 1937 Metro-Goldwyn-Mayer made a picture about Boys Town which was a smash hit, with Spencer Tracy and Mickey Rooney in the principal roles. In 1941 appeared its sequel, *Men of Boys Town.* The first picture was filmed in Boys Town itself, the second in a reproduction of it in Hollywood. So popular have these pictures been that probably thousands of persons, when they hear the name "Father Flanagan," think of Spencer Tracy. Actually, however, Father Edward J. Flanagan has no physical resemblance to Tracy. He is six feet one inch tall, and though he weighs 187 pounds there is no fat on his bones and he appears thin. His dark hair is very thin on top, and his spectacles conceal heavy eyebrows. He looks like a kindly schoolteacher—which in essence is what he really is.

Edward Joseph Flanagan was born in Roscommon, Ireland, the son of John and Honora (Larkin) Flanagan, and since he did not come to the United States until he was 18, his speech still retains a perceptible brogue. He was naturalized as an American citizen in 1919. He had an extensive education for the priesthood: received his B. A. from Mt. St. Mary's College, Emmitsburg, Maryland, in 1906, his M. A. in 1908; studied at St. Joseph's Seminary, Dunwoodie, New York, in 1906 and 1907; then spent a year at the Gregorian University in Rome and three years more at the Jesuit University at Innsbruck, Austria. He has an honorary LL. D. from Mt. St. Mary's, bestowed in 1938, and others from St. Benedict's College, Atchison, Kansas, and Creighton University, Omaha, Nebraska.

He was ordained a priest at Innsbruck in 1912. Returning to America, he was for a year assistant pastor of St. Patrick's Parish, O'Neill, Nebraska. He then spent three years as assistant pastor of St. Patrick's Parish in Omaha. In 1914 he started his Workingmen's Hotel, while still continuing his parochial duties. Since 1918 all his time has been given to Boys Town. He has written many articles and pamphlets on juvenile delinquency, and acted as "technical adviser" when the first film about Boys Town was made. Officially, in the Church, he is the Right Reverend Monsignor Flanagan, but to the boys he is not "Monsignor" but "Father."

In 1941 he went to California to talk to the boys at the Whittier Reform School. Whittier had been badly managed in the past, having had its share of scandals, but Father Flanagan by no means despairs of it. He believes that no matter how tough the problem—or the boys—the methods he uses in Boys Town will eventually rehabilitate any boy, whatever his resistance or his record. Often when he reads of a boy who is to be sentenced to a reform school or even a penitentiary he pleads with the authorities to send the boy to him instead. Whenever that has been done, he has been able to save the boy from a life of crime.

Boys are Father Flanagan's hobby and recreation as well as his business. Everything he does in the way of work or play, aside from his office as a Roman Catholic priest, is somehow connected with them. But, as his establishment of the Workingmen's Hotel shows, general social welfare is also dear to his heart. He was for 10 years president of the Omaha Welfare Board, and is a member of the children's committee of the National

Conference of Catholic Charities. He is by nature a sociable man, active in the Knights of Columbus and a member of the Omaha Athletic Club.

The value and uniqueness of Father Flanagan's work were recognized long ago by the general public as well as by his co-religionists. In the former category, in 1930 Post No. 1 of the American Legion in Omaha announced him as Omaha's First Citizen. And in the latter category, it was a recognition of what he has done for boys that led in 1937 to his being named by Pope Pius XI as a domestic prelate, with the title of Right Reverend Monsignor.

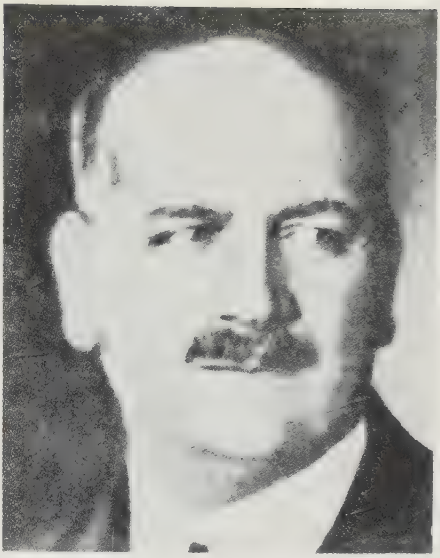
Who's Who in America

FLANDIN, PIERRE-ÉTIENNE (fläN-däN) Apr. 12, 1889- Former Foreign Minister of Vichy Government

Address: b. Vichy, France; h. 139 Boulevard Malesherbes, Paris, 17e, France

On December 14, 1940 Pierre Laval was suddenly removed from the posts of Vice-Premier and Foreign Minister which he had held in the Vichy Government; Pierre-Étienne Flandin, it was announced, would take over the office of Foreign Minister under Premier Pétain. The exact significance of this upset for the future foreign relations of France was, for the moment, anybody's guess. To De Gaulle, it was a "palace revolution," a bluff, symptomatic only of growing discontent among the French people; some rejoiced that henceforth France's foreign policy would be steered by a man who had once been known as pro-British (at any rate M. Flandin is on the tweedy side, likes to hunt, fish and shoot, and his "connections with Big Business, banks and the Stock Exchange in London have been close and cordial"); others remembered his telegram of congratulations to Hitler after Munich, and wondered if he might not be even more acceptable to the Nazis than Mussolini-admirer Laval. Speculation was soon ended; in February 1941 Flandin was dropped from the Cabinet and his portfolio given to Admiral Darlan (see sketch this issue).

Called the "Giant of Avallon," the "skyscraper of the French Parliament," the "unfinished one," M. Flandin's height has been estimated at everything between six-feet-four and six-feet-seven, his political inclinations as everything from Right Center to Fascist. He is Parisian-born but blond, a Norman descended from the Norwegian Vikings. His father was a French resident-general of Tunisia in northern Africa who left a fortune to his children. Pierre learned English at an early age, received what the French call a "British education," then attended Paris University, where he received his diploma from the school of political sciences in 1909. He took his law degree in 1913, the year after his marriage to Mlle. Léon-Barbier (he and his wife are known as "one of the tallest couples in Europe"). They have four children.



PIERRE-ÉTIENNE FLANDIN

Immediately after beginning his career as a corporation lawyer M. Flandin entered the French Chamber of Deputies from the rural district of the Yonne. He was the "baby deputy," only 25; a member of the Left Republicans (who are more often Right than not); and the First World War soon brought him opportunities for advancement. One of the first French military aviators, by 1917 he had become director of the Inter-Allied Aeronautical Service; he was a delegate to the Versailles Peace Conference in 1919; and in both the Millerand and Leygues Cabinets he was included as Under Secretary of State for Air.

The French Left has always accused Flandin of being "little more than a shrewd businessman who has always confused the interests of the State with those of the firms which he represents more or less openly," has named among those firms Schneider-Creusot, the Crédit Lyonnais, the Banque de l'Union Parisienne, the Comité des Forges, De Wendel. If all the charges of his enemies are true, he started early; for they have claimed that from January 1920 to January 1921, while in charge of liquidating war materials, he sold them at low prices to a consortium of contractors who then resold them to the French War Ministries at a profit of a billion francs—and thus acquired some grateful clients who could count on continued benefits from his political influence.

In 1924 he was Minister of Commerce in the Marsal Cabinet; in 1928 he was Vice-President of the Chamber of Deputies; from 1929 to 1930 he was Minister of Commerce in Tardieu's Cabinet; in 1931 he stepped into Laval's Cabinet as Minister of Finance. It is held against him, justly or not, that in this

FLANDIN, PIERRE-ÉTIENNE—*Cont.*

last office he publicly proclaimed his faith in the stability of the pound sterling two days before the Bank of England went off the gold standard, thus enabling some speculators to make handsome profits; and the Aéropostale financial scandal that was exposed that same year (Flandin had been on the company's payroll as legal adviser) did not add to his reputation. Nevertheless in 1932, when he served as Minister of Finance in Tardieu's Cabinet from February to May, the Chamber officially cleared him of any guilt.

For some time Tardieu and Flandin contended for the command of the Center in the Chamber. Tardieu thought of the Radical Socialists, the Socialists and the Communists as equal "enemies of France"; Flandin, on the other hand, was all for a coalition with the Radical Socialists after he became president of the Left Republicans in 1933. His moment finally came. In February 1934 Doumergue became Premier, and there followed months during which parliamentary rule in France seemed finished. Doumergue obeyed the Bank of France in every particular, while in the streets the rioting Fascist Ligues were a continual threat to Parliament if it did not fall into line. The Premier's "constitutional reform" plan would have introduced practical dictatorship, and in addition a *putsch* seemed imminent. Although Flandin previously had served only in Rightists' Cabinets and was at the time Doumergue's Minister of Public Works, he saw his chance in a quick turn to the Left and offered to join forces with Herriot's Radical Socialists in the formation of a new Ministry which would not include Doumergue. Thus in November 1934, at the age of 45, he became France's youngest Prime Minister.

The Left had not forgiven him: on his first day he was greeted in the Chamber with cries of "Aéropostale!" But on the whole France was probably much relieved. As Premier, Flandin announced that he would put constitutional controversies aside and concentrate on economic problems: the fight against poverty and unemployment, the restoration of the national economy, the maintenance of strong public finances, the rejuvenation and reform of the State. Herriot became his Minister of State, Laval was retained as Minister of Foreign Affairs. All might have gone well, but it took only six months for the Bank of France to smash Flandin. He had decided that, unlike his predecessor, he would avoid anything that might suggest "government from above." He therefore refused to ask for full powers in order to devaluate or deflate the franc and proposed instead a policy of easier money. In retaliation, the Bank refused to rediscount government short-term loans; the French began to buy gold and ship capital abroad; there was a financial "crisis"; and when, desperate, Flandin finally appealed to the Chamber for full powers in June 1934, he was overthrown.

Flandin's next office was as Minister without Portfolio in Laval's Cabinet from 1935 to January 1936, followed by a period as Minister of Foreign Affairs in Sarraut's Cabinet until June 1936. It is evident that he had not yet definitely committed himself to a policy of appeasement, for in February 1936 he asked for the ratification of the Franco-Soviet pact which had been signed by Laval, criticizing those who preferred the policy of encouraging war between Germany and the Soviet Union. And although he opposed mobilization when Hitler made his first move to reoccupy the Rhineland (he had already conferred with Baldwin and Eden on the situation), at the League of Nations meeting which followed the Nazi march in March 1936 he grew outraged and almost hysterical at the League's complacent attitude toward Hitler's breach of Locarno. His views on Laval's handling of the earlier Ethiopian crisis were more than a little ambiguous, however.

It was probably only after Flandin's visit to Germany in 1937, when he made friends with Goering and Von Ribbentrop (see sketches this issue), that he was won over wholeheartedly to the idea of a Franco-German alliance. Henri de Kérillis, editor in chief of *L'Époque*, once said of Flandin: "Every one of his individual actions has been dictated by a desire to help Germany achieve its objectives." Flandin, however, went further than even the British appeasers. According to Heinz Pol, it was he who collected funds to enable the French Fascist Doriot to buy the paper *Liberté*, and he himself made use of its columns to discourage French rearmament, to fight the Popular Front, to warn that it was the Communists who were trying to lead France into an unnecessary war, to try to break the Franco-Soviet pact, to point out the advantages of friendship with Germany and Italy. He and Laval apparently saw eye to eye. In February 1938, before Hitler absorbed Austria, Flandin sneered to the Chamber: "A policy based on the League of Nations, collective security and mutual assistance is outdated and old-fashioned." During the Czechoslovakian crisis he tried to make it apparent that France had no intention of coming to the aid of her ally; an interview in the *Revue de France* suggested that France accept or encourage the expansion of Germany toward the East; and posters signed with his name protested French mobilization if Czechoslovakia should be attacked. Flandin's telegram of congratulations to Hitler after Munich is well remembered, and also Hitler's reply: "I have constantly followed your activity in the past year with great interest and sympathy."

On March 12, 1939 Flandin was still calming fears: "Echoes reaching us from London these last days are much more optimistic concerning the international situation. It is a fact that the prophets who worked so hard and are still working to alarm public opinion in France now see their sinister predictions given the lie one by one." On March 15 Hitler entered Prague.

Naturally Flandin and his clique opposed the declaration of war in September 1939. On March 20, 1940, even before the Nazi *blitz,* he gave an off-the-record interview which may or may not completely explain his reasons for opposing it. He affirmed that years ago England and France had already lost the opportunity to establish permanent military, political and economic domination of Europe after the Treaty of Versailles, which is exactly what Hitler did do. Since that was unfortunately the case, the sensible thing to do was to acknowledge it and let Hitler control France's foreign policy and Army and Navy ("France's preeminently agricultural economy would complement Germany's industrial economy"), though insisting on an "independent spiritual, cultural and racial existence." He was already intriguing, with Laval, for an opportunity to lead France to this dependent independence. However, after the fall of France and before his succession to Laval's post, Flandin spent most of his time away from Vichy, in Paris and the provinces. It is reported that Laval barred him from entering the Cabinet on his terms: as Minister of Economics and Finance answerable only to Pétain. He himself remained Foreign Minister of the Vichy regime only until February 1941 when he resigned under apparent German pressure.

Erect, athletic, with gray-blue eyes, "a long head, partly bald, towering over extremely broad shoulders," Flandin is an impressive figure. His clothes are made by a London tailor but, unlike many Englishmen, he prefers British cooking to French. One of his hobbies is collecting tickets for speeding. (He has often expressed admiration for American institutions.) He is the author of a book, *Paix et Liberté* (1939), a collection of speeches to the members of his *Alliance Démocratique* in which he expressed more love for the former than the latter. He has also been a frequent contributor to the *Revue de Paris* and the *Revue de France.*

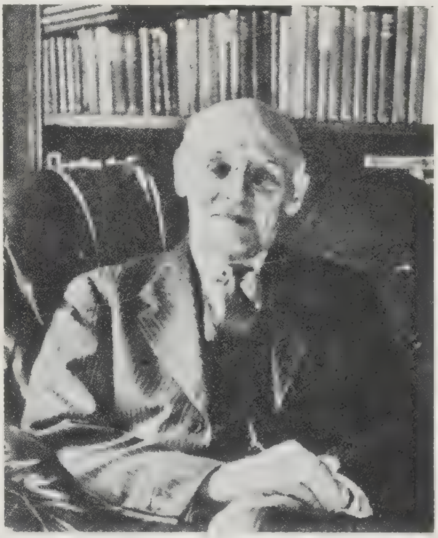
FLEXNER, ABRAHAM Nov. 13, 1866- Educator

Address: b. 20 Nassau St, Princeton, N. J.; h. 150 E. 72nd St, New York City

"Oh, Abraham Flexner!" wrote the late Hans Zinsser. "We have fought with you on minor points, have alternately admired and disliked you, have applauded you for wisdom and detested you for opinionatedness. But in just retrospect, layman as you are, we hail you as the father—or, better, the uncle of modern medical education in America."

Teacher, annalist of educational problems, administrator of philanthropies, educational pioneer and author, Abraham Flexner has received innumerable such tributes. According to the New York *Times* "it is no exaggeration to say that many a patient today owes his life or his health to Abraham Flexner's fearlessness and his passion for what he calls 'excellence.'" He has been the "guiding spirit behind the philanthropies of such men as John D. Rockefeller, Andrew Carnegie, George Eastman, J. P. Morgan, Julius Rosenwald and Louis Bamberger." His peculiar gift of "extraction" caused George Eastman to write: "Flexner is the worst highwayman that ever flitted in and out of Rochester. He put up a job on me and cleaned me out of a thundering lot of my hard-earned savings." And when Flexner's autobiography, *I Remember,* appeared in 1940, Charles A. Beard (see sketch this issue) wrote: "A delightful human document which, at the same time, gives an illuminating insight into the course of the highest learning in America for more than 50 years."



ABRAHAM FLEXNER

Abraham Flexner was born in Louisville, Kentucky on November 13, 1866, the sixth of nine children of Morris and Esther (Abraham) Flexner, both "pious Hebrews." His father had been a teacher in Bohemia before emigrating to the United States in 1853, went into the wholesale hat business and was ruined in the panic of 1873. There was never much money. But there were ways of managing. Fifteen-year-old Abraham, while attending the Louisville High School, found a

FLEXNER, ABRAHAM—*Continued*

part-time post in a private library, the Louisville Library, at $16 a month, which he held for two years; after that a younger brother took it over. Shortly after he was graduated from high school his oldest brother sent him to Johns Hopkins University, "the nation's first genuine university."

Flexner took his B. A. from Johns Hopkins in 1886, having finished the three-year course in two years. After college he flirted with law and political economy for a brief period, then, at the age of 19, settled down to a high school assistantship. Those being the days when such things were possible, at the end of his first term he was promoted to a "full professorship," and for four years he not only acquired teaching experience but read Greek and studied the educational classics more fully. He came to the conclusion that the ideal school was not a large one with a restricted curriculum and large classes, and by 1890 was ready to prove this thesis by starting his own school.

At first Flexner confined himself to preparing a small group of boys for passing college entrance examinations, but his methods were radical: there were no rules, no examinations, records or reports, and each student was allowed to go at his own pace. Results were so successful that both his school and his fame grew astonishingly. President Eliot of Harvard noticed that the pupils of "Mr. Flexner's School" were entering college at an earlier age, being graduated more quickly, and wrote: "What are you doing?" Flexner visited Eliot in order to answer him, and at his suggestion wrote his first article on an educational topic, *A Freshman at Nineteen,* published in 1899. Previously he had contributed only occasional letters to newspapers and to *The Nation.*

In the meanwhile, in 1898, Flexner had married Anne Laziere Crawford, who had been his first female student some six years before. In his autobiography he quotes her as asking: "What is your idea of the future? I think that we will grow old, be comfortably well-to-do, and lead dull lives." They decided to break loose from such a future. In 1905 "Mr. Flexner's School" was closed forever, and the next autumn found Flexner at Harvard. Observing teaching methods all the time, he studied psychology, philosophy, visited the leading private schools in New York, acquired his M. A., and in the summer of 1906 left for Europe. A year at the University of Berlin came next. And the following summer Flexner settled down in Heidelberg to write his first book, *The American College: a Criticism* (1908), "a workmanlike, unbiased exposure of the shortcomings of our educational institutions." He criticized particularly the elective system, the lecture system, the system of assistantships as he had observed them functioning at Harvard. After his return to America in 1908 the book was published, created no great sensation—but Dr. H. S. Pritchett, president of the Carnegie Foundation for the Advancement of Teaching, heard of Flexner and asked him to make a similar survey of medical schools from the point of view of the intelligent layman.

In December of 1908 Flexner therefore set to work. He read all he could find on his subject; he talked to the faculty at Johns Hopkins, which he took more or less as his model; he visited all of the medical schools in the United States and Canada. Even he had not dreamed that he would find conditions so depressing. The publication of his *Medical Education in the United States and Canada* (1910), Bulletin Number Four of the Carnegie Foundation, which gave his observations and recommendations, threw a bombshell into the medical world. It also marked the beginning of reform. A study of the medical schools of Great Britain, Germany and France followed, published as *Medical Education in Europe* (1912), Bulletin Number Six of the Carnegie Foundation. And these bulletins were only the first of a long series of studies in professional education conducted by investigators under the Division of Educational Inquiry of the Carnegie Fund for the Advancement of Teaching. In 1912 Flexner visited Europe once more, investigating prostitution for the Bureau of Social Hygiene. His subsequent report was translated into many foreign languages.

After joining the General Education Board of the Rockefeller Foundation in 1913 as assistant secretary, Flexner continued his work in the Division of Medical Studies. Then, in July 1915, he was asked to frame a project of another kind—a plan for a model school. His pamphlet, *A Modern School* (1916), was the immediate result, and in 1917 came the carrying-out of his recommendations by the establishment of the Lincoln Experimental School of Teachers College, under an endowment from the General Education Board.

In 1917, too, Flexner became secretary of the General Education Board, and it was at his suggestion that John D. Rockefeller, Sr., gave $50,000,000 to be spent, principal and interest, for the reorganization of American medical education. This sum was entirely spent in the next 10 years. What is more, between 1919 and 1928 the General Education Board "directly and indirectly added half a billion dollars or more to the resources and endowments of American medical education." In 1920, for example, Flexner wangled $5,000,000 from George Eastman for the creation of the medical school of the University of Rochester. The Whitneys gave him $8,000,000 for Cornell, J. P. Morgan $2,000,000. In the process of reform the number of American medical schools decreased from 155 to a well-equipped 60 or 70.

In 1928 Flexner retired as director of the division of studies and medical education of the Board, a position which he had held since 1925. In 1927 he had been invited to Oxford to give the Rhodes Trust Memorial Lectures. It was the spring term of 1928 when he went there, and his lectures were later expanded into his much-discussed *Universities—American, English, German* (1930). In this book he criticized the universities of all three countries, especially those of America, and proposed as a partial solution the creation of a small institute for advanced study.

Nearly everything Flexner wrote turned out to be more fruitful than anyone could have dreamed. This was no exception. When his recommendations came to the attention of Louis Bamberger, who had just sold his department store in Newark to R. H. Macy & Company, he and his sister, Mrs. Felix Fuld, approached Flexner. The result of the interview was an $8,000,000-endowment for the founding of the Institute for Advanced Study at Princeton, with Flexner as director. Opened in 1930, a year after Flexner received an honorary M. D. from the University of Berlin, the plan was for the Institute to develop gradually. (The success of the Rockefeller Institute for Medical Research, which Dr. Flexner's brother Simon had directed since its inception, seemed to prove the soundness of this plan.) Staff and students were to be few, teachers were not to be involved in administrative work, and all subjects were to be "fundamental" in character. Mathematics was the first, and when Einstein joined the faculty in 1933 he exclaimed: "This is heaven!"

In October 1939, when newspapers announced Dr. Flexner's retirement as director of the Institute of Advanced Study, carrying with it a pension of full salary for the remainder of his life, the New York *Times* wrote: "A great company of those who know and respect his work will wish that the future years of the founder of the Institute for Advanced Study may be spent in illustrating to us the noble employment of leisure in a land of free human beings." Since that time Dr. Flexner has chosen to illustrate it by his continued interest in domestic and international politics (he is firmly anti-Nazi), art, literature and music, and by delivering lectures on various phases of his experience all over the country.

Dr. Flexner has always believed that the true concern of a university is study, not training, and that proper subjects of study are "the constitution of the stars, the constitution of the atom, the constitution of Oklahoma, Danzig, or Kenya." (He calls domestic science, journalism, etc., the "make-believe professions," ridicules masters' theses on dishwashing, labels correspondence schools "service stations.") To him "a genuine university is an organism characterized by definiteness of aim," and with the exception of his Institute he finds none in the United States.

Dr. and Mrs. Flexner have two daughters: Jean Atherton (Mrs. Paul Lewinson) and Eleanor. Several years ago a *New Yorker* sketch described Dr. Flexner as "a lean gentleman with no hair on his head to speak of, but with features that may vaguely be described as spiritual: a very delicate mouth; a fine, long aquiline nose that flowers into spirited nostrils; a large, placid forehead that hints at the quality of the intellect behind it; and eyes whose constant expression is a concern for the welfare of what they behold." In his 70's now, he can still say: "The deepest joy in life is to be creative."

FLORINSKY, MICHAEL T. Dec. 27, 1894- Educator

Address: b. Columbia University, New York City; h. 270 W. 11th St, New York City

MICHAEL T. FLORINSKY

Lecturer in economics at Columbia University and author of several books on the economic and political scene in Europe and in the U. S. S. R., Michael T. Florinsky's most recent works include a section on Soviet Russia in *Governments of Continental Europe,* edited by James T. Shotwell (1940), first published in a separate volume as *Toward an Understanding of the U. S. S. R.* (1939). This is an evaluation of the politico-economic history of Russia with special emphasis on conditions under the Soviet regime. According to the late Ernest Sutherland Bates, writing in the New York *Herald Tribune Books*: "It soon becomes evident that Dr. Florinsky is out to damn the whole Communist system both in its theory and in its practice. . .

FLORINSKY, MICHAEL T.—*Continued*

What promised to be a very useful work thus turns out in the end to be only 'another book on Russia' in the *con*-class." The London *Times Literary Supplement* said, however: "Hostile in spirit, the book is nevertheless judicial in manner, the work of a trained historian with a firm grasp of jurisprudence and of economics who has based his study almost exclusively upon official Soviet sources." And there were other reviews that stressed his impartiality and objectivity.

Nevertheless Dr. Florinsky does not deny his critical attitude toward Russia, an attitude which the German attack on the Soviet Union did not diminish. On June 26, 1941 he told the University of Virginia's Institute of Public Affairs that "the predatory policies of both Germany and the Soviet Union would seem to reap their deserved reward in this titanic struggle for mutual destruction between the totalitarian states."

Michael T. Florinsky (Mikhail Timofeevich Florinskiĭ) writes us: "I was born on December 27, 1894, in Kiev, Russia. My father, Timothy D. Florinsky was professor of Slavonic history and language at the University of Kiev. He was an eminent authority on Slavonic language, ethnography, history and literature. My mother was Vera Kremkov, daughter of General Ivan Kremkov, chairman of the board of the Government-owned armament works in St. Petersburg.

"I entered the Law School of the University of Kiev [1913] and at the outbreak of war volunteered for service. I went to the Michael Military Academy at St. Petersburg whence, in June 1915, I received a commission of second lieutenant in the Imperial Field Artillery. I served through the War in the Russian Army, being wounded in action in 1916, and was decorated four times. After the Revolution [he returned to the Law School of the University of Kiev in 1918] I left Russia and lived in France and Italy, going finally to England. From 1920 to 1921 I studied at the London School of Economics and from 1922 to 1923 did work at King's College in London. In 1927 I received my M. A. degree from Columbia University, from which institution I received my Ph. D. degree in 1931.

"In England in 1920 I became associated with one of the most distinguished historians and jurists, Sir Paul Vinogradov, F. B. A., corpus professor of jurisprudence in the University of Oxford. In that year Professor James T. Shotwell, of Columbia University, was organizing the *Economic and Social History of the World War,* published by the Carnegie Endowment for International Peace. Sir Paul was chosen as the editor of the Russian series of this work, and I became his assistant. Upon Sir Paul's death in December 1925 I came to the United States and edited 12 volumes of the Russian series for the Carnegie Foundation, which were published between 1928 and 1932. Since 1931 I have been at Columbia University in the Department of Economics, in the faculty of political science (graduate school), from 1931 through 1936 as an associate in economics and since 1937 as a lecturer in economics."

Besides the works already mentioned, Dr. Florinsky is the author of several other political studies. *The End of the Russian Empire* (1931), which treated conditions in Russia during the First World War, was called by the *American Historical Review* "the best and most scholarly work on the causes of the Russian Revolution that has thus far appeared in any language." *World Revolution and the U. S. S. R.* (1933), given favorable reviews for the most part, piqued the *New Republic's* critic into commenting: "Dr. Florinsky is interested in the reappearance of Russia as a Great Power, not in socialism. He belongs to a Russian generation condemned to guess at Russian significances from documents read in exile, offering to foreign interests such gleanings as will be acceptable. Sometimes a certain wistfulness escapes him at Russian phenomena viewed across a gulf." But Louis Fischer reported that "the changing Bolshevik ideas are presented in orderly, academic, faithful fashion," and the *American Economic Review* recommended it to "all students of the Russian scene." It was translated into Chinese and published in Shanghai in 1935.

Next a summer's visit to the Saar region in 1934 and a great deal of research resulted in Dr. Florinsky's *The Saar Struggle* (1934), a history of that region since 1920, published shortly before the plebiscite in January 1935. It was also generally well received, as was *Fascism and National Socialism* (1936), the result of Dr. Florinsky's visit to Italy and Germany late in 1935. Many of the statements in the latter book were based upon what Italian and German officials had told him about their regimes. "It has been said that the democratic form of government is the best but also the most difficult," Dr. Florinsky says somewhere in this book. "After surveying the ways of the totalitarian states, one feels more convinced than ever that the effort to overcome the difficulties is distinctly worth continuing."

Dr. Florinsky has also contributed a chapter to *Contemporary Europe* (1941), and for the Carnegie Endowment for International Peace has edited and written prefaces for two volumes of *Commercial and Tariff History of the Principal European Countries* published in 1941: Frederic Benham, *Great Britain Under Protection,* and F. A. Haight, *A History of French Commercial Policies.* Volumes on Germany and Italy in the same series are being prepared, but may be delayed by the War.

"I consider myself a man of liberal views," writes Dr. Florinsky. "In commenting on *Fascism and National Socialism* the *Survey Graphic* said: 'Mr. Florinsky is objective and fair, disapproving as a liberal of many Fascist phases, yet ever showing tolerance and understanding that denote true liberalism.' Writing as I do on controversial subjects, I have been called at times, according to the reviewer's own opinions, either a horrid reactionary or a flaming Communist. As to more personal matters, I frequently go to Europe and have a strong affection for English clothes and usually wear a carnation. I am unmarried, I enjoy music, but do not play any instrument. Am also very fond of outdoor life and never go to the movies or listen to the radio."

Michael Florinsky is a member of the American Economic Association, of the Institute of Pacific Relations, of the Academy of Political Science, and of the Council on Foreign Relations. His church is the Russian Greek Orthodox Church; his clubs are the Columbia (New York) and the Author's (London).

FOLEY, MARTHA (fō'lē) Editor; writer
BURNETT, WHIT Aug. 14, 1899- Editor; writer

Address: b. 432 Fourth Ave, New York City; h. 136 Old Post Rd, Croton-on-Hudson, N. Y.

MARTHA FOLEY and WHIT BURNETT

For 26 years, while he was editing the yearly American and British anthologies of *Best Short Stories,* Edward J. O'Brien used to read eight American and eight British magazines through every day just as part of his routine. For 10 years, as co-editor of *Story* Magazine with her husband, Whit Burnett, Martha Foley has been helping to tackle from 100 to 150 short-story manuscripts a day. When O'Brien died in England on March 1, 1941 it was Miss Foley who was asked to take over his job, and she accepted because O'Brien was one of the people "I loved best in the world." Her resignation from the editorial staff of *Story* in order to edit *The O'Brien Memorial Best Short Story Yearly Anthology,* which appeared in June 1941 with an introduction by her, she said, made her husband as hurt as if she had just divorced him.

The attitude is understandable. The history of Martha Foley and Whit Burnett is that of *Story*—at least after their marriage on June 6, 1930. Martha Foley was born in Boston, Massachusetts, the daughter of Walter and Margaret Millicent (McCarthy) Foley; Whit Burnett was born in Salt Lake City, Utah on August 14, 1899, the son of Benjamin James and Anna Marian (Christensen) Burnett. She attended the Girls' Latin School in Boston from 1909 to 1915 and then, for two years, Boston University; at about the time she was leaving college Burnett was starting at the University of Southern California (he also attended the University of Utah and the University of California) and getting himself the first of a series of jobs on California newspapers. It was 1922 before Martha Foley found herself in San Francisco as a member of the editorial staff of the *Journal;* by that time Burnett was editor of the Associated Press there. Whether they met then or not, from that time on their lives coincided rather nicely.

In 1925, after two years as feature editor of the Los Angeles *Illustrated Daily News,* Martha Foley went to New York to become a caption writer first for the New York *Daily News* and then for the *Mirror.* By 1926 Whit Burnett was in New York, too, where he finally found a job as an assistant city editor. The year 1927 found both of them working for the Paris edition of the New York *Herald*—she as a reporter, he as city editor. And after he organized the Balkan news service for the New York *Sun* Foreign Service and the Consolidated Press in Vienna in 1929, she became Central European correspondent for it. In the meantime, in 1930, they had been married.

Burnett describes his travels: "From Paris to Moscow, from London to Ankara, from Vienna and Prague to Majorca and Cadiz." In the spring of 1931 he was in Vienna with his wife; it was there that their son David was born, and it was there that Whit Burnett and Martha Foley decided to do something for literature. *Story* began merely as a mimeographed job which the Burnetts planned to send around to publishers who might be interested in its contents. Mimeographing didn't prove to be practical, though: after endless labor the editors emerged with 67 or 68 copies which had cost them nearly $1 apiece! (The fact that the Duke of Kent, some years later, paid $400 for one of those first copies didn't help matters at all.) After that *Story* was printed in Vienna—as a magazine, since publishers hadn't understood its original purpose—and finally in the Balearic Islands. The Burnetts had started for Romania to interview King Carol and had somehow landed in Majorca; there they stayed, with their four months' old infant and their Project.

Story was already famous. One year O'Brien had gone to Vienna to ask for permission to reprint four *Story* pieces in his anthology, and another year there were eight of them represented. As Martha Foley says: "We believed in the same things: freshness, characterization, feeling. We hated the too slick, the mechanical,

FOLEY, MARTHA and BURNETT, WHIT—*Continued*

the trick ending—the pseudo O. Henry school of writing." And although it was daring for the Burnetts to return to New York in 1933, completely without funds, even in the heart of the depression they found people who were interested enough in their magazine to back them financially. Their first real offices were at 57th Street and Madison Avenue, and they were thrilled. But the first day their magazine appeared on newsstands in the United States was the day Roosevelt selected to shut down the banks.

Since that time writers like William Saroyan, Jesse Stuart, Tess Slesinger and Richard Wright have first been published in *Story's* pages. Perhaps the Burnetts' most famous discovery is William Saroyan; after the publication of *The Daring Young Man on the Flying Trapeze* the editors received one short story a day for 30 days from him. Some of their best stories, according to Martha Foley, have been written by men in prison. And even some of their rejection slips have had interesting results. Once they received a large package from the author of a story they had rejected. Inside was a stout rope with a noose and a request that they use it to hang themselves at once.

Besides reading a terrifyingly large number of manuscripts every day, the Burnetts edited *A Story Anthology, 1931-1933* (1933); *Story in America, 1931-1934* (1934), the second anthology; and *The Flying Yorkshireman* (1938), a book of novellas. Martha Foley continued to publish short stories of her own in magazines and lectured on the short story at summer sessions of the University of Colorado in 1935 and 1936, at Columbia University in 1936 and at New York University in 1937. Whit Burnett has for several years been an instructor in the advanced short story at Columbia University, and is also the author of two books, *The Maker of Signs* (1934), a collection of short stories, and *The Literary Life and the Hell With It* (1939), informal autobiographical essays. After they moved to Croton-on-Hudson, New York, Martha Foley appeared only four days a week in *Story's* office, on those days commuting by train: her husband would neither let her drive "his precious car" nor tolerate her back-seat driving.

Martha Foley is described as "a little woman who wears tailored suits and horn-rimmed spectacles and looks like a pleasant young housewife." Whit Burnett is noted for his small, neatly trimmed, pinkish beard. He is a "passionate fisherman and a great teller of funny stories, which he delivers in a dry, dead-pan manner."

As for Martha Foley's present job, she said when she took it over: "If I do one-tenth as well as he [O'Brien] did I'll be perfectly satisfied." She is far from being hopeless about the future of the short story in the next few years "War always seems to be a spur to great writing, with its emotional ordeal and its jolt to any sensitive persons," she says. "This war hasn't had quite enough time to sink in yet, but when it does we should see something."

FONTANNE, LYNN See Lunt, A. and Fontanne, L.

FORCE, JULIANA 1888(?)- Museum director

Address: 10 W. 8th St, New York City

One of the foremost museum directors in America is the woman in charge of the Whitney Museum of American Art, Juliana Force. "In her slim, beautifully fitted clothes, in her effectively tailored gray dresses, with her odd heavy jewelry," wrote Adlene Talmey, "Mrs. Force runs this feminized museum with the bluntness, the directness, that practically no men possess."

The story of how the museum came into being is characteristic, however apocryphal it may be in detail. In 1928 the Whitney collection of American art, comprising some three hundred paintings accumulated during the two decades during which the Whitney Studio Club and the Whitney Gallery had helped to support young American art, was offered to an uptown New York museum. Mrs. Force was authorized to make the offer by the wealthy and socially prominent Gertrude Whitney (see sketch this issue) and to suggest that funds might be forthcoming for a wing to house them. In conference with the museum's director, Mrs. Force indicated the scope of the collection. Tactfully the director pointed to a refusal. He had, as he put it, enough Americans already. And as Mrs. Force departed, with the offer of the new wing unmentioned, the director said, "And give my love to Gertrude." By this time Mrs. Force was in a fury. As one writer put it: "She jumped into a taxi, her pale eyes mad as a hornet's nest, and said to herself, 'We'll build our own museum.'"

Juliana Force was born not far from New York City. After her formal education had been completed she taught in a private school in New England. When barely a girl out of her teens she left this position to become secretary to Gertrude Vanderbilt Whitney, her first task to edit a novel Mrs. Whitney had written. The novel, however, was soon put aside to make way for a career that could with difficulty be crowded into one book. In 1908 the Whitney Studio Gallery had its opening at 8 West 8th Street. In Mrs. Force's cluttered, amusing office she poured tea for Sloan, Henri, Bellows, and many another luminary of American art. "I didn't learn anything," she explains, "but I just grew more and more astonished."

The policy of the Whitney Studio Gallery was substantially that of the Whitney Club that followed it. Emphasis was upon native art and artists. Even in those days, as her championship of Luks and Sloan shows, she was regarded as daring and modern in her tastes. Without neglecting tradition, the Whitney Museum, since its establishment in 1931, has maintained that reputation. Aside from its annual showings of oil paintings, of sculpture, water colors and graphic work, it features historically significant exhibits such as one of a few years back that brought forcefully to the art-conscious public the importance of Eakins and his colleagues.

The Whitney Studio Club, which opened in 1914 in a brownstone front on West 4th Street, formulated openly what had been the tacit policy of the Whitney Studio Gallery. It exacted small dues and gave its members large shows. Hopper, Schnackenberg and many more of today's prominent artists had their first exhibits sponsored there. The Whitney collection was purchased as art and never by way of disguised charity. If such outstanding artists as John Steuart Curry (see sketch this issue) received monthly stipends it was because, as investments in American art, they seemed worth the expenditure.

By 1928 it was felt that the Club had outgrown its usefulness. The period between the end of the Club and the opening of the museum was bridged over by an exhibit gallery at 14 West 8th Street, of which Mrs. Force appointed Alexander Brook (see sketch this issue) director. Meanwhile, plans for an entirely new type of museum began to take shape in earnest. Three houses on West 8th Street were renovated to make up the salmon-pink facade of The Whitney Museum of American Art that had its formal opening November 1931. It was then, as it is today, the only museum in New York devoted in its entirety to American achievement in the field of painting, sculpture and the graphic arts. Its opening exhibit consisted of the 300 or so paintings then in its collection.

JULIANA FORCE

Sole control of the Whitney Museum is in the hands of Mrs. Whitney and Mrs. Force. There are no juries and no prizes, though around $20,000 yearly is spent for the purchase of works of art to be added to its permanent collection. Anyone may submit work to the Whitney, subject to the procedure governing submission. Mrs. Force and the museum's curators look at five examples of work by each new artist, grade them as follows: (A) invite, (B) possibility, (C) ask to submit again, and (D) never want to see again.

In 1933 and 1934 the Whitney Museum found itself the geographical center of a controversy over governmental relief policies—and art. Picket lines formed by the Artists' Committee of Action, predecessor of United American Artists (CIO) of which Rockwell Kent is now president, marched back and forth in front of the Whitney (which was also Mrs. Force's address), and influential groups of conservative artists raised a dignified hullabaloo in the press—all because Mrs. Force had been appointed regional head of the newly created Public Works of Art Project. Behind this opposition was no personal animosity but the belief, on the one hand, that PWAP lacked a clearly enunciated policy based upon economic need—such was more or less the stand of the ACA—and the belief on the part of the conservatives that Mrs. Force favored modern art to the extent that the use of governmental wall space would be denied all but a small clique.

Before the winter was out the *Art Digest* (Peyton Boswell) had outdone itself in strongly worded editorials, and hints of the dangers of sabotage had impelled Mrs. Force to close the Whitney exhibit six weeks earlier than had been planned. In the thick of the controversy Mrs. Force was authorized to

FORCE, JULIANA—*Continued*

eliminate from her work use of the words "needy" and "relief," but eventually, when the Federal Art Project was created under Holger J. Cahill, it was based not upon the need for the art but upon the artist in need.

Mrs. Force is a discerning collector, but this hobby, like her famous parties, seems merely an extension of her role in the field of art. At one time she had three homes, a thatched cottage near Oxford, England, an apartment above the museum of which she was director, and an old gray stone house in Bucks County, Pennsylvania, the gift of her husband, Dr. W. B. Force. She was in England in 1936 when she sold the Bucks County estate to George S. Kaufman (see sketch this issue), completing the transaction by transatlantic telephone.

The apartment above the museum is reached by an elevator of red lacquer. Furnishings include blue satin curtains that sweep the floor, a fabulous white stove, black oilcloth curtains with tiny scattered bouquets of opals embroidered on with gold thread, an antique Aubusson rug, a small modern sitting room with bakelite table and white couch, and a bedroom with a curlicued brass and iron bed with flowered panel inset and a canopy with pink mull curtains. Few decorators could hope to bring esthetic order out of such a bewildering conglomeration of objects, yet in these rooms good taste is the essence of arrangement. "Even if you have never seen Mrs. Force," said Mary Fanton Roberts, "these rooms give you an impression of her varied interests, her dramatic temperament, her artistic integrity and the force of character which have made her one of the foremost women of her generation."

Mrs. Force is dynamic, capable, controlled. A look of preoccupation in her gray-blue eyes suggests hidden depths of personality, as though the real person were somewhere behind them. She has been sculptured by Lachaise, who did a head of her, and an early Sloan portrait emphasizes thin face, heavy gold hair. Peggy Bacon wrote a satirical description of her that she included in *Off With Their Heads*. It reads: "Dependably indiscreet, brutally witty, she talks effectively, constantly, sparing no feelings, letting people know exactly where they stand. . . Handsome auburn *chevelure,* cream-coloured skin, and small menacing eyes that miss nothing. Nose of Cyrano de Bergerac, mouth like a circumflex accent. Figure erect, trim, magnetic, packed with audacity and challenge."

Mrs. Force is said to have a fear of cats, dating from a childhood episode when her brother asked her to touch one, and she did so without looking. Much to her horror it was a furry animal, and alive. It is said that cat-owning friends put their pets away when Mrs. Force calls. The story is told of one occasion when a hostess, unaware of Mrs. Force's dislike for them, left her pet cat asleep in the drawing room during her visit. Mrs. Force sat down some distance from the cat but it awakened precipitately when a pianist opened a number with a crashing chord, and leaped—so the story goes—right into Mrs. Force's lap.

The Whitney Museum has been compared to an elegant private home with the furniture removed. This would hardly apply today, for domestic touches have been eliminated, and even the deep red carpets that save one from "museum feet" emphasize its functional character. As director of this museum and as director in turn of each of the galleries and clubs that led up to it and of the various exhibitions the Museum presents—in 1941 there was "This Is Our City" and a show of children's work—critics inevitably pay tribute to Mrs. Force when they praise the museum. And their praise has been given without stint. Forbes Watson referred to it as "our most influential museum of American art," and Peyton Boswell summed it up with: "The Whitney idea helped American art to speak its own language. While others talked American art, the Whitney bought and supported it."

FORD, BLANCHE CHAPMAN *See* Chapman, B.

FORD, JOHN Feb. 1, 1895- Motion-picture director

Address: b. c/o 20th Century-Fox Film Corp, Beverly Hills, Calif; United States Navy Dept, Washington, D. C.; h. 6860 Odin St, Hollywood, Calif.

In the fall of 1941 John Ford directed *How Green Was My Valley* and then left Hollywood to head a newly formed photographic unit for the United States Navy. The Navy Department gained a man who in 1940 was chosen as the best director of the year by the New York Film Critics and by the Hollywood Academy for his work in *The Grapes of Wrath* and *The Long Voyage Home*, and *The Grapes of Wrath* was honored as the year's outstanding film by both the Film Critics and the National Board of Review of Motion Pictures. After 25 years of constant activity in Hollywood, Ford figures his percentage of hits at about 90, but points out that some films he thought "junk" were great successes and others which he liked just didn't take.

In these 20 years Ford has directed scores of pictures, some historical, some action; some about murder, some about love; some humorous, some sad. Almost all of them have shown his "distinct flair in the use of the camera, care in composition, a feeling for mood, a deft cutting style, an appreciation of movement as the prime element of the movies, an eye for colorful characterization and a great ease in the manipulation of all these elements." And most of them are distinguished by a certain vital realism that Ford has made his own. He dislikes make-up, camera tricks and theatricalism. He is not afraid to shift the camera viewpoint from the eye level, to move into a scene and around characters and to light a set for mood and realism.

Most important to Ford is the real quality of the story he is filming; a good story to him is one that tells of real people and real problems, a story that has social meaning, a story that can be presented with bold strokes and with sympathy, too. In other words, a story like *The Grapes of Wrath.*

John Ford always knows exactly what he wants to do before he even starts on a picture. He doesn't get on a set until he has approved every detail of a finished script and by the time filming begins has memorized every camera angle, every "bit" action and much of the dialogue. "Most directors," he says, "like to 'shoot around' the script so that they can eliminate later, but I try to manage with an absolute minimum of retakes." He did this in *The Long Voyage Home,* and in *Stagecoach* dropped out only one two-minute scene in the cutting room. This means that Ford works on a strict production schedule and usually is able to finish a day or two ahead of it.

"I rehearse the cast carefully on all scenes," he explains, "and use a minimum of dialogue. I believe movies are primarily pictures, so I play them that way. Let the pictures do the talking for you." Actors like to work under him. When a scene pleases him he says: "That's fine." When it doesn't he mildly suggests: "We'll have to do better." When a player muffs a line or miscues, Ford points out the error without raising his voice, makes a few corrective gestures and hurries to get the retake. All the time, dressed in shabby clothes, his feet in sneakers with holes in the toes, he keeps smoking his pipe—and to many the way the smoke comes out is indicative of what he is thinking.

"Six-foot-two and as Irish as Paddy's pig," John Ford was born Sean O'Feeney in Cape Elizabeth, Maine, the son of Sean and Barbara (Curran) O'Feeney. When he was an infant his family moved to Portland, Maine and there Sean attended grade school and high school until he was graduated in 1914. He tried to get an appointment to Annapolis, but did not succeed. Instead he enrolled at the University of Maine, but stayed there only a short while. His brother, Francis, had gone out to Hollywood and become successful and John decided to join him.

In Hollywood in 1914 he got his first film job as property man at Universal City, changed his name to John Ford and proceeded to learn about motion pictures. He filled in as Indian, soldier, horseback rider, carried props, tended the camera and watched the direction carefully. By the end of the year he had become an assistant director. Then he was assigned to direct short films and Westerns, some of them starring Tom Mix. From these he learned to think and act quickly, to estimate footage and develop thrills. By 1919 he had a contract with Fox to direct feature films.

Gene Kornman

JOHN FORD

Ford's first important screen work was *Cameo Kirby,* which introduced John Gilbert to the screen public. It was followed by many others, including one of the biggest historical silent films, *The Iron Horse,* and the great hit, *Four Sons.* With the talking pictures Ford's ability became even more apparent—many hits appeared under his direction. There were *Men Without Women* (he wrote the story of this, too); and *Up the River,* in which Spencer Tracy gave his first important performance. In 1931 came *Arrowsmith* and in 1932, *Flesh.*

Then, in 1934, came *The Lost Patrol,* the first picture of note made by Ford and Dudley Nichols (see sketch this issue), the screen writer, together. It was an indication of what these two, who have worked in close collaboration during the past years, could do. Essentially, *The Lost Patrol* was merely a pulp adventure story. Yet Ford and Nichols were able to make it an exciting movie, one which one reviewer went so far as to call "a virile poem, a short impressive saga of man's courage." In it were seen many qualities of Ford's later work—"a single strong situation, unity of time, place, mood, vivid characterization, colorful locale, suspense."

Because of the success of *The Lost Patrol,* Ford and Nichols set about making Liam O'Flaherty's *The Informer,* which they had been trying to get the studios to make for years. It took only three weeks to film and was, Ford says, the easiest picture he ever directed. No wonder, he adds: "I had been dreaming of it for five years." Under "Ford's compact direction the film was the tragedy of a stool pigeon told in somber key, dark shadows, muffled voices, carousing, night

FORD, JOHN—*Continued*

sounds. Mood, pace, character and sound are blended in it into a fluid unity which . . . holds the spectator taut."

Until *The Informer,* Ford was hardly known outside the trade, although he had been directing for almost 21 years and making a number of successes. With this picture, which has become the outstanding American film classic, his reputation was established. It won the 1935 Academy Award for best direction and was a tremendous critical, as well as popular, success. Then followed other important pictures: *Mary of Scotland* and *The Plough and the Stars* (both written by Dudley Nichols); *The Hurricane*; *Young Mr. Lincoln*; *Drums Along the Mohawk*; *The Grapes of Wrath;* and *The Long Voyage Home,* of which he was also producer with Walter Wanger. In 1941 Ford was working for Twentieth Century-Fox with a contract that allowed him to make one outside picture a year, and for them he directed *Tobacco Road* and the highly acclaimed *How Green Was My Valley.*

All in all John Ford has made over 80 pictures, for a number of companies, and has received the Photoplay Gold Medal (1928), the New York Critics Award, the Foreign Press Club Award and three Academy Awards, Hollywood's highest accolade—first for *The Informer;* second for *Stagecoach;* and third for the direction of two films, *The Long Voyage Home* and *The Grapes of Wrath.* And all these years he has fought a constant battle to "do something fresh. First they want you to repeat your last picture. . . Then they want you to continue whatever vein you succeeded in with the last picture." Ford will have none of this. "I've got a whole lot of respect for the people who go to see motion pictures," he says.

In all these years in Hollywood, Ford has made hundreds of friends—actors whom he has given a new lease on life, new stars he has brought forward. But he has never really become a part of the glamorous Hollywood the motion picture magazines and the press agents tell about. He has had only one wife in all these years—Mary McBryde Smith whom he married in 1920—and his son and daughter so far seem to have no movie aspirations. He has kept the nine-room house in Hollywood he had fifteen years ago; when in Hollywood he avoids night life, interviews and idle chatter.

When a picture was finished, he used to board his 110-foot yacht *Araner* and travel over the South Seas, Central America, the Pacific, often sailing the ship himself, reading all the biographies and autobiographies he could get hold of. "Characters," he explains it. "Characters. I love characters."

FRANK, HANS May 23, 1900- Governor General of Nazi-occupied Poland

During the last days of 1939 Dr. Hans Frank, Governor General of the occupied districts of Poland, had a conference with General Blaskowitz, military commander, about the task of pacifying the conquered Polish territory. This discussion was mainly an argument about the methods to be used. Herr Frank came out victorious; he succeeded in convincing the General that it was the aim of the German National Socialists to make the Polish people understand that "a master-race is reigning over them." With this declaration he took the historic responsibility for the brutal policy that has since been described in documents issued by the Vatican. Although for many months there was a fairly effective veil of silence over what goes on in Poland, it was generally admitted that shortly after the Nazi occupation executions took place, some million men and women were sent to forced labor in Germany, and both private and public property was confiscated. And gradually even more shocking revelations reached the outside world—revelations which caused some commentators to describe Nazi policy as "aimed at eventual extermination of the entire Polish people."

This man who today rules with almost unlimited power over the life and death of a population of 14 or 15 million people was at one time a lawyer. An early biographer, never dreaming that Frank would one day occupy one of the most important administrative posts in present-day Europe, described him as a man "loaded with energy . . . a very good fighter in the courtroom," a man "clever in finding the opponent's weakness . . . always ready to jump, and immune to bluffing."

German Railroads Information Office
HANS FRANK

Hans Frank was born on May 23, 1900, the son of Karl F. and Magdalena (Buchmeier) Frank. His childhood days were not very happy ones, for his father, also a lawyer, was disbarred after having been exposed for swindling, and his family circumstances seemed to have fluctuated between actual poverty and middle-class prosperity. During the First World War he was more fortunate than some, however. He ended his Gymnasium days by passing an emergency examination and then did not volunteer for war service, but waited until he was drafted through the regular channels. He served in the infantry regiment *Koenig*, and in 1918, at the outbreak of the German Revolution, was in a hospital.

Any signs of nationalist sentiment in Hans Frank were indiscernible until April 1919, when he realized that the Republic showed hardly any resistance to its opponents. At that time many "Free Corps" (private military organizations) came into existence. Frank joined the "Free Corps Epp" (in 1941 Epp is a Bavarian Cabinet Minister) and later the mounted "Free Corps Seefried 21"; he served with them until October. It was in these circles that he came into contact with members of the Reichswehr (the regular German Army). During the summer and fall of 1920, after beginning in 1919 to study law and national economy at Munich, Kiel and Vienna, he served illegally as a temporary voluntary private in the Reichswehr.

In Munich, during his student days, Frank was also induced to become a member of the

FRANK, HANS—*Continued*

Thule Society, a sort of religious order for the perpetuation of old German paganism; he became acquainted with Adolf Hitler; he joined the "German Workers Party." Because of his experience he served with the military organization of the Party, and after the creation of the Storm Troops was made one of its higher leaders. In the famous Munich beer-hall *putsch* of 1923 he served as a member of the mounted "Corps Wrede" and helped to proclaim the Hitler Government, but fled with all the others when the police and Army opposed the "revolutionists." In spite of the minor role he had played he then became afraid and left the country for a while.

Back in Germany once more, after an investigation Frank was even permitted to retain his official title of "Referendar." Now his difficulties were mainly financial. His family had originally lived in the Rhenish Palatinate. One of his grandfathers had been a baker, another had owned an oil mill, but the family had never been prosperous. Hans' father, Karl Frank, known officially in customary German bureaucratic style as Frank I, had made few friends even before having been disbarred as a lawyer, and had no well-disposed connections. Hans himself, in order to continue his studies, had been forced to take a job as bookkeeper in a law office. But in 1924 he finally received his LL. D., in 1927 passed his examination for "assessor," and the same year became a member of the Reich Leadership of the National Socialist Party and head of its legal department. In 1925 he married Brigitte Herbst. (A son, Norman, and two daughters, Sigrid and Brigitha Maria, were born to them.)

Frank began to practice as an attorney in 1928 and immediately tried to rescue the remnants of his father's former circle of clients. He had not yet been officially admitted to the Bar but, with the help of some obliging Jewish colleagues who gave him permission to act as their substitute, he succeeded in making a bare living. By the end of the same year he managed to open an office of his own and become an attorney for his Party, and during the following year he actually became quite active as a lawyer. He found time for an extensive tour through Italy and appeared in a great many trials in the courts of the Republic, where he soon attracted attention by his extremely smart appearance and aggressive behavior. He even lectured at the Seminary of Jurisprudence of the Technical College in Munich—a feat of which he loves to boast. The man who had made it possible for him to give those lectures—Privy Councillor Calker, an old friend from the Thule Society—lived to regret his complacence when he heard that Frank later bolstered his Nazi theories in an argument with an experienced lawyer by the remark: "What? You dare to doubt a German teacher of law?"

As attorney for members of the Nazi Party, Frank always resorted to a most provocative attitude and way of speaking during court trials: one Nazi biographer called his eloquence "brilliant," his personal behavior "passionate," his intelligence "daring." At one trial concerning the legality of the Nazi Party in Republican Germany the representative of the Department of the Interior actually left the courtroom in protest against Frank's language and behavior. By the end of 1930 Frank had become the infant prodigy of the Reichstag when he entered it as one of its 107 elected Nazi members, and by parliamentary procedure he soon became chairman of its law committee. This committee, however, never did any practical work.

Frank's great hour finally came. Hitler took over power, and on March 10, 1933, after the conquest of Bavaria, made him acting Minister of Justice for Bavaria. A month later he became the full-fledged Minister of Justice. This last nomination enabled Frank to accomplish two otherwise impossible feats: he forced the Bar Association to reinstate his father and permit him to wear the lawyer's robe again; he obtained permission to continue his own private law office. The results fully justified this last venture: his own private office, managed by assistants, was beseiged by clients who wanted expert professional advice on how to petition Hans Frank, the Bavarian Minister of Justice! True, his professional colleagues in Munich protested vociferously, and one fine day his shingle even disappeared; but lawyer Frank II did not close his private law office until 1934—then only after an unmistakable hint from higher up, and after he had amassed a nice little fortune for himself. His father did not have equal success, however. Shortly after being readmitted to the Bar he committed new embezzlements, and even his son finally refused to come to his rescue.

Despite these peculiar events, Hitler continued to express his approval of favorite Hans Frank. New posts were thrown into his lap: he became Reich Commissioner for Justice (April 1933) and, in December 1934, after the abolishment of all formerly independent law administrations of the different German states, took over the office of Minister without Portfolio in the Reich Government. At the same time he obtained many Party jobs—among them membership in the Reich Investigation and Arbitration Committee, which played an important role during the investigation of the bloody events of June 30, 1934. Frank was also made Führer of the Bund of National Socialist Lawyers and president of the Academy of German Law, founded by Hitler in 1934 and given legal status in the same year.

The publications of the Academy of German Law, necessary after all parliamentary activity in Germany had ceased and the theoretic will to action of the lawyers had to find some kind of an outlet, are indeed voluminous. Among Frank's contributions are *The National Socialist Handbook for Jurisprudence and Law,* which appeared toward the end of 1934 and was published under his name, and a pamphlet entitled *The Juridical Foundation of the National Socialist Führer State* (1938). His talents as a theoretician may be judged by such quotations as this one, from the second edition of the first book: "The state built up by Adolf Hitler is the medium for the realization of National Socialism. . . And so, in utter deviation from the juridical literature of former days, this handbook is a juridico-political confessional, as it were, with the character of a Party and legal law-code." His pamphlet contains this equally remarkable sentence: "Adolf Hitler's victory in the battle for the equality of the German people constitutes the magnificent confirmation of his fitness to be the highest representative of the German people's law."

Since March 1933 Dr. Frank has undertaken many an extravagant little excursion in the interest of this "representative," Hitler. At that time he made a speech against the Dollfuss Government, and in May he followed up his first speech by making speeches all over Austria, ridiculing the "Little Metternich." The police had originally informed him that he was unwelcome, and he had ignored them; only after they had grown more aggressive and after political interventions had taken place in Berlin did Frank consent to leave. Tauschitz, Austrian Ambassador in Berlin, made a personal appeal to Hitler, but the Führer declared that it was impossible to chase after every public speaker.

This, then, is the man whom in 1939 Hitler made Governor General of Poland. Scarcely 40 years of age, he immediately began to govern the Poles according to his theory about the treatment of criminals. ("In the National Socialist state the criminal must shiveringly fear the inexorable moral severity of the people.") Herr Frank teaches a whole people how to shiver. "The swastika will fly over this land forever," he says.

FRANK, JEROME N(EW) Sept. 10, 1889- Judge of the United States Circuit Court of Appeals

Address: United States Circuit Court of Appeals, 2nd District, New York City

Corporation lawyer, member of the original New Deal "brain trust," author of *Save America First*, chairman of the Securities and Exchange Commission—these are among the titles that have come Jerome N. Frank's way in the course of his varied and brilliant career. In February 1941 he was nominated by President Roosevelt as judge of the United States Circuit Court of Appeals in the 2nd District, which embraces New York, Vermont and Connecticut.

Jerome New Frank was born on September 10, 1889 in New York City, the son of lawyer Herman Frank and Clara (New) Frank. His family moved to Chicago not long afterward, and he attended Hyde Park High School before going on to the University of Chicago. There he received his Ph. B. in 1909 and then went on to the University's law school. "One of the two brightest students of pre-War generations," he was graduated in 1912 with Phi Beta Kappa honors and the degree of Doctor of Jurisprudence. That same year he was admitted to the Illinois Bar, and until 1929 practiced law in Chicago as a member of the firm of Levinson, Becker, Schwartz and Frank, corporation specialists.

JEROME N. FRANK

In Chicago, Frank was a member of the "kitchen cabinet" of William E. Dever, the city's Progressive Democratic Mayor. From 1921 to 1925 he helped to negotiate the traction settlement for the city that was defeated by Samuel Insull. He did corporate reorganization work, particularly for the First National Bank in Chicago, and his technique took better care of the small security holder than was customary. He was, in short, a highly successful corporation lawyer of liberal tendencies, with a reputation for hard work, absent-mindedness and a habit of writing novels that never reached a publisher's office.

It was 1929 when Jerome Frank came to New York to become a member of the firm of Chadbourne, Stanchfield and Levy, who often said: "It's worth $50,000 a year to us to have Jerry around just to hear him talk." He had met Felix Frankfurter (see sketch this issue) before, and he saw a great deal of him now. Benjamin Cardozo and Morris Cohen were also among his friends. In 1930 was published Frank's first book, *Law and the Modern Mind*, written on trains in his spare time and dealing with the psychology of individual judges in interpreting the "sup-

FRANK, JEROME N.—*Continued*

posedly unchangeable rules of law." There followed articles in law journals (including one plaintively titled *Are Judges Human?*), lectures at the New School for Social Research and an appointment in 1932 as research associate of the Yale Law School.

Then, after Roosevelt's victory, Felix Frankfurter recommended Jerome Frank (a "lawyer who watches the bread-lines more closely than the price-quotations") to handle the Department of Agriculture's legal business. Although Farley blocked the appointment, in May 1933 Secretary of Agriculture Henry Wallace made Frank general counsel to the AAA, and he also became general counsel to the Federal Surplus Relief Corporation.

It was Frank's first entrance into public life. Until that time he had moved for the most part in literary circles both in Chicago and in New York: his wife, the former Florence Kiper, whom he married in July 1914 and by whom he has one daughter, Barbara, had been a well known poet and playwright at the time of her marriage; the late Harriet Monroe, Carl Sandburg, Rebecca West, the late Sherwood Anderson, Floyd Dell, Max Eastman and Harry Hansen had been his friends. And all was not sweetness and light in Washington. George Peek, whose Moline Plow Works in Chicago had been very competently liquidated by Frank, joined the staff of the AAA, thus creating an uncomfortable situation. Warfare between Peek and consumer-minded New Dealers led by Frank, plus occasional threats of resignation on Frank's part, brought about Peek's shift to the job of looking after exports in the fall of 1933. But (according to Drew Pearson and Robert Allen [see sketches this issue]) Frank's "meditative exercises" finally threw Frank himself into "cross purposes with Henry Wallace and Wallace's chief associate of the day, Chester Davis. They considered him a stratosphere thinker, far from reality, and he was 'purged.'"

In February 1935 Frank resigned, although serving for a short time in Washington that year as special counsel to the RFC and then going to PWA to win the Alabama Power case against the late Newton D. Baker. Back in private practice in 1937, he earned $38,000 helping in the reorganization of Union Pacific. He remained highly influential with President Roosevelt, however, and in December 1937 was offered a commissionership in the Securities and Exchange Commission. The salary of $10,000 a year could have been no inducement; he knew he was "temperamentally unsuited to trench warfare"; but he accepted the appointment reluctantly.

In the meanwhile *Save America First* had been begun, back in 1932, as a criticism of much current economic writing. Its writing had been interrupted by Frank's governmental activity, but a first draft had nevertheless been completed by 1935. In 1937 Whit Burnett (see sketch under Foley this issue) saw it, insisted that he finish it, and several months before Frank returned to Washington the manuscript was completed. It was published in 1938.

Save America First insisted that America's continental unity made her problems totally unlike those of Europe's, that "a depression in America is a mental, not an economic, phenomenon," and that the greater purchasing power for the general consumer necessary to maintain the profit system could here be brought about by an enlightened capitalism. The Reverend Reinhold Niebuhr (see sketch this issue) decided that the "two major themes . . . partially contradict each other," and Stuart Chase announced that although it was the "kind of a book this age needs," that although he agreed in large part with Frank's analysis of the depression, "when it comes . . . to reforming the Big Shots and asking them to act at right angles to the way they have been conditioned to act," he had his fingers crossed. Raymond Moley, however, was confident that a rereading of the National Association of Manufacturers' latest statement of principles revealed little that could not be harmonized with Frank's major thesis, and John Chamberlain called *Save America First* "the most beautifully open-minded book that has come this way in years."

In May 1939 Jerome Frank became chairman of the "split, faction-ridden" Securities and Exchange Commission. Charged with enforcing the Securities Act of 1933, the Securities Exchange Act of 1934 and the Public Utility Act of the security market, Frank engaged in occasional bouts with Wall Street and the Investment Bankers Association. (The SEC is one of the governmental agencies which would have been most vitally affected had the Walter-Logan Bill become law.)

Ralph Robey (see sketch this issue) of *Newsweek* called Frank "arrogant, nervous, argumentative, unreasonable, even insulting at times" in his attitude toward certain businessmen, and the *Saturday Evening Post* was no more complimentary; but on taking office Frank proclaimed that the major function of the SEC and its laws is essentially conservative: "To aid the conservation of our American profit system under our American form of government." And before the Kiwanis Club of Cleveland he announced on April 25, 1940: "You are probably thinking, at once, in terms of further government control over business. If that worries you, let me say that it also worries me." His was a delicate job, but he believes that the SEC's "unscrambling" of utilities provides new outlets for investment as much as it protects the "10,000,000-odd trusting United States investors."

As for Frank's views on the United States' role in the world today, they have changed since he wrote, in *Save America First*: "There might be some point in America's fighting, or threatening to fight, in order to unify Europe; such a consummation might be worth great sacrifices on our part, for it would probably ensure peace in Europe. But in such an enterprise, England will not be our friend or ally but our enemy. For she does not want peace in Europe by means of European integration; that is a price she has always refused to pay... If we want to forestall and defeat American

Fascism, let us do so in America and not in Europe." Today he believes that if Great Britain is defeated it will be necessary for the United States to fight Hitler, and that we should aid England to the hilt. He says: "I was one of those who believed Western Hemispheric isolation was not only desirable but achievable, but the harsh realities of violent change have compelled me long since to admit the futility of my hopes." As early as May 1940 he was making notes on a plan to finance the United States' possible participation in the War, modeled on that of Britain's John Maynard Keynes (see sketch this issue).

Frank is a member of the Association of the Bar of the City of New York, of the New York State Bar Association and of the Order of the Coif. *Time* describes him as a "warm-blooded, quick-witted, supersensitive, argument-loving man . . . with a bald sloping brow, bulging eyes, and the slightly travel-worn air of a shambling, sub-leonine cat." He is sometimes too busy to have a haircut, and "often lets his graying mane hide his ears." Fond of parties, fond of involved word games, "subtle, learned, mentally insatiable, he combs arcane source books for cosmic ideas, wholesales them in brilliant conversation to friends." He is "largely responsible for the semantics fad." His memory is phenomenal. He is skeptical, impatient, pragmatic. With all that, he is sensitive to criticism, wants to be liked and makes a habit of writing letters to newspapers defending his views. Perhaps from a Federal bench such communications will be less necessary.

FRANKEN, ROSE Dec. 18, 1895- Playwright; author

Address: b. c/o Farrar & Rinehart, Inc, 232 Madison Ave, New York City; h. Longmeadow Farm, Old Lyme, Conn.

ROSE FRANKEN

After confining herself almost solely to non-theatrical fiction for nine years, in 1941 Rose Franken came back to the stage with a tender little play called *Claudia,* based on her book of the same name. The play proved a most pleasant and profitable venture to all concerned, from young Dorothy McGuire (see sketch this issue), a talented newcomer to the theatre whose performance in the title role was enthusiastically hailed, to the author herself, for whom it landed a fat Hollywood contract and has made, to date, more than half a million dollars.

Claudia's popularity is mostly due to the fact that it is very easy to take, in a charming, almost Barrie-like, sunny-smile-through-tears manner. It deals with a young girl who is happily married but unable to grow up, intellectually or emotionally, because of an abnormal attachment to her mother. She remains a child-wife to her indulgent husband until the dreadful news of her mother's imminent death (she is dying of cancer) matures her. Claudia learns to face life, "to make friends with pain," and to let go of people she loves—"to hold close with open hands," as her mother puts it. The last act of the play is devoted to the gallantry of affectionate banter, "desperately carried on above the surface of impending calamity."

Essentially *Claudia* is a woman's play. John O'Hara (see sketch this issue) remarked, after a benevolent review, "I know no man who read the Claudia stories. . . But a great many women seem to have known about Claudia all along." "It is the sort of play," said another critic, " that is more palatable in the afternoon

FRANKEN, ROSE—*Continued*

than in the evening, when theatregoers are suspected of being more censorious." One sour soul commented with asperity that "Claudia's unhealthy immaturity remains masked for three acts behind a screen of tedious, relentless *Ladies' Home Journal* cuteness." But most critics, while agreeing that the pathos she injects into the last act softens the fiber of a play that had begun as a skillful comedy, also agreed that Rose Franken's dialogue is buoyantly expert in its brilliantly casual way, and that she handles a difficult problem with a light and sure hand. And all of them had a good word for Rose Franken's direction of her play.

There was a strong possibility that *Claudia* would never be produced because of the difficulty of finding the right person to play the title role—an actress in her early 20's "who could look 19 and has had about 25 years of experience in show business." "Diogenes," recalls Rose Franken, "never searched so relentlessly for an honest man as we did for an actress for the title part of my play." This went on for 16 weeks, and the author and John Golden had almost lost all hope before they found Dorothy McGuire, having previously interviewed something like 800 actresses. It was Rose Franken who took Dorothy McGuire out to her home in Connecticut for a week end and "built her up" for her success. The results definitely paid.

It is possible that Rose Franken drew on her own life's experience for her portrait of Claudia. She was born in Gainesville, Texas, the daughter of Michael and Hannah (Younker) Lewin, but came to New York when she was still a child. She attended the Ethical Culture School. Like her heroine, she chose marriage in preference to a college career when she was 18. Her husband, Dr. Sigmund Walter Anthony Franken, was a famous oral surgeon. She bore him three sons, Paul, John and Peter. This steadily accumulating family notwithstanding, Rose Franken found time to write and achieved considerable success in that profession. At first she wrote only short stories which appeared in many magazines, but by 1925, when her second son John was born (Paul came in 1920 and Peter in 1929), her first novel, *Pattern* (1925), had been published. The other novels she has written since, *Twice Born* (1935) and *Of Great Riches* (1937), published a year later as *Gold Pennies*, were cordially received, and of course the Claudia books which came much later were a phenomenal success.

In the meanwhile, she had decided to try her hand at playwriting. Her first play, *Fortnight*, was given the usual run-around. When it failed to get a production that was promised it in a suburban theatre, Rose Franken grimly ploughed into another one. This was called *Hallam Wives* (1929) and dealt with the problem of a sensitive and talented woman marrying into a stolidly bourgeois family, with values completely divergent from hers, and dominated by a brutally selfish mother. The conflict precipitated when the woman desperately tried to teach her husband "her language" and to keep him from reverting to the Hallam pattern was at last happily resolved. The play was produced in Connecticut over the summer, and was so well received that a New York production seemed in order. In 1932 this play appeared in New York under the title *Another Language*.

Another Language put Rose Franken in the forefront of American playwrights. With Dorothy Stickney and Glenn Anders in the main roles, it rolled up an impressive total of 433 performances—a record for a first play. Critics described it as an intelligent and rather therapeutic study of family life, delighted in its portrayal of the clannish Hallam family, "with its violent little feuds, its chicken salad, its tight shoes, its corseted fat, its rather mean practical jokes and its self-righteous mutual bullying." The screen version of the play was able to recapture much of the original feeling. Helen Hayes contributed a delicate performance as Stella Hallam. Since then the only other play Rose Franken had written until she decided to work on *Claudia* was *Mr. Dooley, Jr.*, a play for children which was produced at the Heckscher Theatre and elsewhere, written with Jane Lewin.

After her husband's death Rose Franken continued to write under her married name. She produced more than 130 short stories and innumerable radio sketches. She went to Hollywood to write motion picture scripts. She also married again—her husband is William Brown Meloney, journalist and writer of fiction. The two of them became a successful literary team, writing woman's magazine serials and novels, including *Strange Victory* (1939) and *American Bred* (1941), under the pseudonym of Franken Meloney. The last book deals with raising Great Danes, a subject on which the Meloneys are experts, this being one of the hobbies of the household.

Rose Franken also wrote her Claudia stories, stories about a young married couple called David and Claudia Naughton. Sprightly and tender chronicles of a marriage, 20 of these stories appeared in the *Red Book* at $2,500 each. Later they were published in book form as *Claudia* (1938) and *Claudia and David* (1940), and in the fall of 1941 an omnibus volume containing both, *The Book of Claudia*, was published after the play had made Rose Franken's happy couple almost a national institution. Film rights were bought for $135,000 and Rose Franken was engaged to write the screen continuity. Its radio serialization was by that time being heard on Friday nights over station WABC, supplementing the Kate Smith program.

With the help of *Claudia*, Rose Franken is maintaining a farm called Longmeadow at Old Lyme, Connecticut. There she and her husband have herds of purebred cattle, sheep and hogs. "We haven't yet brought ourselves to eat a goose or a pig or a duck," she writes, "but otherwise we're pleased to believe we are farming." Rose Franken often brings fresh country eggs and cream to John Golden, her producer, to his great discomfiture. He usually takes them up to Sardi's to be "fixed up for lunch."

The house is a wonderful remodeled old farmhouse, painted pale yellow with white shutters and surrounded by immaculate lawns. A pair of Great Danes and a troupe of Irish wolfhounds and shepherds rush in and out of the house; there is also a cat and a monkey.

A pretty, slim woman, with an elfin face and short dark hair, Rose Franken is an indefatigable and efficient worker. She does everything fast, "from furnishing apartments to writing plays." Reportedly she did *Claudia* in three days, bettering the record she made when she wrote *Another Language* in six. She finds it easy to write her brilliant, delicately humorous dialogue. Perhaps that is why she has never taken herself overseriously as a writer. Being the mother of a family takes all self-importance out of a woman, she claims. "Your family keeps you in your place and prevents you from becoming fatuous."

She is not particularly feminist or defiant about being a woman playwright. "You can't tell a woman's play from a man's, usually because the best people have strains of both the feminine and the masculine within them." But she does admit that "in a love story it is always the woman's relation to the man that is the more interesting, that makes the story. Naturally, a woman writer ought to understand that particularly well."

FRANKFURTER, FELIX Nov. 15, 1882- Associate Justice of the United States Supreme Court

Address: United States Supreme Court Bldg., Washington, D. C.

Felix Frankfurter, Associate Justice of the United States Supreme Court, is a "stocky, tense, five-foot-five-inch figure of a man, with a finely rounded, graying head and a keen face, which usually [has] a lively, bird-like expression." Born in Vienna, Austria, the son of Leopold and Emma (Winter) Frankfurter, he is a descendant of three centuries of rabbis. His father, however, quit the theological seminary for trade, and in 1893, on a business trip to the United States, "fell in love with this country." He stayed, after some months persuaded his family to follow him, and on New York's East Side became not only a retail fur merchant but also "the Unofficial Perpetual Charity Commissioner of New York."

Since his father's habits did not make for material success, Felix, who attended Public School No. 25 with his three brothers, did odd jobs after school while his mother put his earnings away in order to send him to college. When only 19 he was graduated with a B. A. degree from the College of the City of New York, the third highest in his class, and after taking a civil service examination worked for a brief period as a clerk in the city's Tenement House Commission. He quit that for Harvard's Law School, which gave him his LL. B. in 1906.

Equipped with a letter from Dean Ames, the young lawyer immediately found a job with the law firm of Hornblower, Byrne, Miller and Potter. At about the same time Henry Stimson was appointed United States Attorney for the Southern District of New York, with "trust-busting" orders from Theodore Roosevelt. Stimson applied to Harvard for an assistant, was told about Felix Frankfurter, and until 1910 the two men worked together. According to Frankfurter, this experience under Stimson inculcated in him "a high and fastidious regard for the administration of criminal justice"—and this period also marked the beginning of his practice of helping both Democratic and Republican Administrations find youngsters for legal jobs in New York and in Washington.

Bachrach

FELIX FRANKFURTER

It was 1911 when Stimson became Secretary of War and took Felix Frankfurter with him as law officer for the War Department's Bureau of Insular Affairs. Frankfurter quit this post when appointed a professor at the Harvard Law School in 1914, but he spent most of the time between 1917 and 1919 in various administrative and legal posts in Washington, where Justice Holmes named his bachelor lodgings "The House of Truth" because of the earnest discussions on good government that went on in them.

During the First World War Frankfurter was assistant to Secretary of War Newton D. Baker, secretary and counsel to President Wilson's Mediation Commission, assistant to the Secretary of Labor. In 1917 he was sent

FRANKFURTER, FELIX—*Continued*

abroad on a war mission, in 1918 on a confidential mission to England, and early in 1918, too, as secretary and counsel of the President's Mediation Commission he investigated Tom Mooney's San Francisco trial and the Arizona mine strikes. (Theodore Roosevelt condemned the attitude shown by his reports on both as "fundamentally that of Trotsky and the other Bolshevik leaders in Russia.") Finally, in the spring of 1918, Frankfurter became chairman of the War Labor Policies Board, with general supervision of all labor troubles of the nation at war. Franklin Delano Roosevelt, Assistant Secretary of the Navy, whom Frankfurter had met before when he was Stimson's assistant, was also a board member.

It was 1919 when Frankfurter went to the Peace Conference at Paris, where he was occasionally consulted by President Wilson and Colonel House. Although himself not an orthodox Jew, he represented the Zionist cause there. Then in December of that year he married Marion A. Denman, of Longmeadow, Massachusetts, and returned to Harvard to teach the government regulation of private business as Byrne Professor of Administrative Law. Ever since 1914 he had been collaborating with former Justice Brandeis in securing legal sanction before the Supreme Court for state minimum hours laws challenged in the courts, and outside his classroom he continued to advise on public cases without a fee and to do appellate work on behalf of labor legislation, social welfare and civil liberties. (He was one of the original stockholders of the *New Republic,* and one of the founding members of the American Civil Liberties Union.) Among the civil rights cases on which he argued or gave advice were the famous Scopes case, involving the right to teach evolution in the public schools in Dayton, Tennessee; the case of the silk strikers in Passaic, New Jersey, in 1926; the case of the suppression of the *American Mercury* in Boston, which culminated in H. L. Mencken's arrest.

Perhaps, however, Frankfurter is best remembered for his connection with the case of Sacco-Vanzetti, which by 1926 he was convinced was "one of the most glaring cases of a prejudiced trial in American history." He said so, in an article in the *Atlantic Monthly* in March 1927; the article was quoted in the press all over the country, creating a storm in Boston. According to a friend, "Felix always believed in the good, cultured people of Massachusetts; he believed that when the Better Element knew the truth they would cause the verdict to be set aside." He was wrong. And in the meanwhile efforts were being made to have him expelled from Harvard. Yet when it was suggested that he might resign Frankfurter inquired: "Why should I resign? Let Lowell resign."

Gradually criticism died down. By this time Frankfurter's intensive law course was known as the Case-a-Month Club. A caustic tongue, a talent for heckling and intensive use of the Socratic method made him a little hard on his less brilliant students, but the proportion of bright young men turned out of his seminars who later rose to legal fame testifies to the effectiveness of his methods. One student has said: "He brought to the individual a sense of his own active, continuous participation in the real world outside. With Frankfurter, one had a finger in the affairs of Washington, Paris and London." Frankfurter also continually preached the ideal of serving as lawyers "for the community." Absorbed in his pupils, he continued to keep in touch with them after graduation; and in Washington, Administration after Administration continued to ask him to recommend especially promising graduates. (Thomas Corcoran, for instance, was Frankfurter's gift to Hoover's Reconstruction Finance Corporation, and continued his brilliant work under Roosevelt.)

Frankfurter was soon to take a more direct part in the life of the Government. Having helped actively in his friend Franklin Delano Roosevelt's first campaign for President, "in the period of 1933 and 1939, Frankfurter, as one of President Roosevelt's advisers, probably had between a third and a fourth of the Presidential ear." He was a sort of "Jiminy Cricket to President Roosevelt's Pinocchio," but would take no official position. In June 1932 he had declined Governor Ely's nomination to the Massachusetts Supreme Judicial Court; and in 1933 he refused the post of United States Solicitor General.

Obviously, Frankfurter preferred to teach—from 1933 to 1934 he was George Eastman visiting professor at Oxford—and it was probably true that no Court or Cabinet member could have wielded his influence. "A letter from this professor in the Harvard Law School carried as much weight in its own way as a letter from the Morgan office at 23 Wall Street." Frankfurter's correspondence was "as voluminous as Voltaire's"—nearly every day dozens of notes went out to Governors, Senators, leading members of the Bar, bankers, social workers, labor leaders, newspaper editors, former pupils "who had become assistant President or assistant Senator." They might be notes of appeal, of praise or of blame—but they were most likely to contain advice. Furthermore his young men in Washington—among them Corcoran (see sketch 1940 Annual), Cohen, Dean Acheson (see sketches this issue)—were now writing some of the New Deal's most important laws, and New Deal measures with which he himself was known to have been associated were the Securities Act and the Public Utility Act.

In anti-New Deal circles, of course, rumors of Frankfurter's "sinister" influence were current. Hugh Johnson spread a good many of them; Hearst and Father Coughlin took up the theme, calling him "the Iago of the Administration"; and Frankfurter's so-called "100 Happy Hot Dogs", "borers from within" who were seeking "a short cut to collectivism," became famous. When Johnson said that Frankfurter had advised Roosevelt to kill the NRA he was undoubtedly right: Frankfurter had warned that the NRA probably wouldn't withstand a Supreme Court test. But most observers who knew the situation well believed that Frankfurter, a representative of the "old-fashioned Woodrow Wilson liberalism," actually exercised a cautionary influence on Roosevelt. Someone described him as "not . . . a liberal or a conservative but . . . a realist, sometimes a powerfully cautious one." He had no fixed economic beliefs, "least of all Marxian ones." And certainly he was unhappy, if silent, during the fight over the 1938 court-packing bill. Three years before he had written: "There is no magic in the number nine, but . . . experience is conclusive that to enlarge the size of the Supreme Court would be self-defeating."

It was January 5, 1939 when Frankfurter himself was nominated Associate Justice of the Supreme Court of the United States by President Roosevelt. In a not very usual step, the Senate Judiciary Committee held open hearings on a man's "fitness" for this office. Elizabeth Dilling of "Red Network" fame, among others, appeared to call him a Red, a Jew, an alien. Said Frankfurter: "I can express with very limited adequacy the passionate devotion to this land that possesses millions of our people, born, like myself, under other skies, for the privilege that this country has bestowed in allowing them to partake of its fellowship." It was January 17 when the appointment was confirmed without a dissenting vote, and January 30 when Frankfurter took office.

The Nation had previously written of Frankfurter that he had "the concrete economic grasp and passion for justice of Brandeis, the technical legal knowledge and the long perspectives of Cardozo, and something of Holmes's humanity and his gift for seeing life as a battle." Now it editorialized: "We believe that in the perspective of history the appointment of Felix Frankfurter to the Supreme Court will not seem the least of Franklin Roosevelt's accomplishments." But on the eve of Frankfurter's departure a friend found him packing. "Do you know, I'm scared," he said.

Since that time Frankfurter has plugged big loopholes in the tax laws; he has found license for new government commissions in a new interpretation of the Constitution; he has been praised by liberals for such decisions as his annulment of the sentence of Jehovah's Witnesses convicted for playing records in public attacking a religious denomination. Other decisions have puzzled his friends on *The Nation* and the *New Republic.* While the Battle of Flanders was going on he upheld the expulsion of two Jehovah's Witnesses from a Pennsylvania public school for refusing to salute the American flag, and a Yale law authority announced that he was engaged in "heroically saving America from a couple of school children." His opinion restricting the Federal Trade Commission's police powers and his decision in the Chicago milk vendors' case that peaceful picketing might be enjoined when it is "set in a background of violence" have also created controversy. It has been explained, however, that "legal experts regard Justice Frankfurter as being particularly sensitive to preserving states' rights." According to the *United States News,* in the session ending in June 1941 he established himself as the Supreme Court's most dominant member.

Justice and Mrs. Frankfurter live in a rented house on a "not-too-quiet" street in Georgetown. Every morning he rides across Washington in his own chauffeur-driven Pontiac, usually arriving at the Supreme Court Building the earliest of the nine justices. He works hard, his only exercise is walking, and he seldom gets more than four or five hours' sleep a night. But although the Frankfurters pretend to avoid an active social life, that doesn't mean avoiding gatherings with their friends, among whom are Secretaries Stimson and Knox, Eugene Meyer (see sketch this issue), Hugo Black (see sketch this issue), Archibald MacLeish (whose appointment as Librarian of Congress Frankfurter was influential in arranging). The late Lord Lothian was also a good friend of Frankfurter. Frankfurter has, in fact, the reputation of an Anglophile, having fallen in love with Oxford even before the First World War. He has taken three English refugee children into his home—children of a former student—and is astonished at how little noise they make.

Frankfurter is generally said to talk much better than he writes, being particularly fond of unusual words like palimpsest, gallimaufry, expertise. Of his writings one critic says there is "nothing profoundly original or in wide use among law students. . . [His] literary style is part commonplace, part lush, and runs to the excessive use of elegant quotations. . ." Another critic, however, speaking of his "fugitive pieces" collected by two of his students into *Law and Politics* (1939), applies Frankfurter's estimate of Charles Beard (see sketch this issue) to Frankfurter himself: "[He] has helped to make the times, thus achieving the ultimate success of every thinker in politics, namely, to rob his ideas of novelty." In addition to articles, many of them unsigned, in the *New Republic,* the *Atlantic Monthly,* the *Harvard Law Review* (of which he was an editor) and other magazines, Frankfurter's published works include: *The Case of Sacco and Vanzetti* (1927); *The Public and Its Government* (1930); *The Commerce Clause Under Marshall, Taney and Waite* (1937); *Mr. Justice Holmes and the Supreme Court* (1938). He is the co-author of other books, and editor and co-editor of numerous volumes. His wife, herself co-editor with Gardner Jackson of *The Letters of Sacco and Vanzetti,* reads and criticizes most of what her husband writes.

Frankfurter's enemies, who do exist, call him brusque, full of self-importance and an "irritating inner conviction of his own righteousness," a man who has "only half mastered the old Boston art of being rude graciously." His innumerable friends claim: "Wherever Frankfurter is, there is no boredom. He brings with him the sweep of national affairs and the human interest of personal gossip." They call him "brilliant, talkative, vain, warm-hearted, preoccupied, effervescent, learned,

FRANKFURTER, FELIX—*Continued*
naive, wise, and exasperating." And the late Gutzon Borglum is quoted as saying: "Felix is so much nicer than he used to be. He even lets other people talk occasionally!"

FRANKLIN, JAY Apr. 27, 1897- Author; columnist; radio commentator

Address: b. National Press Bldg, Washington, D. C.; h. 2130 LeRoy Pl, N. W., Washington, D. C.

Jay Franklin is the pseudonym for the prolific author of 18 works of fiction and non-fiction under various pen names including the Unofficial Observer, Innocent Bystander, Diplomat, Jay Franklin, John Carter as well as his own name, John Franklin Carter. He has written mystery stories, social commentaries, novels, biographies, articles; he contributes a daily Washington column, "We, The People," to the newspapers; he broadcasts for NBC. Probably the most generally accepted summation of all his activity is the comment a reviewer once made: "Mr. Franklin is brilliant, cynical, occasionally cock-eyed and always exciting."

Jay Franklin's latest book is *1940* (1940), in which he discusses the men, measures and tendencies of today and forecasts the political outline of tomorrow. Called both tremendously telling and "provocative but not always accurate," it is one of a number of books which have analyzed the current scene. His first came in 1926, *Man Is War.* Two years later appeared *Conquest,* a "remarkably keen criticism of American political life and of our foreign policies." *What This Country Needs* was published in 1931 and *What We Are About To Receive* in 1932. In 1939 *The Future Is Ours,* a survey of Federal power activities as represented by the TVA, Bonneville and other projects, came out. In all of these books, Franklin draws upon "a rich store of economic and social understanding."

He has approached the contemporary political scene from the personal angle, too. *The New Dealers* (1934), which he wrote with others, is the story of the men in and behind the Government which came into being in 1932. It was called superficial and prejudiced, but even unsympathetic reviewers had to credit it with being entertaining reading matter. This book was followed by *American Messiahs* (1935) and *Our Lords and Masters* (1935). In 1937 appeared a study of a single man, *La Guardia,* which told of the career of New York's Mayor "with sparkle and dash born of the enthusiasm of an ardent New Dealer."

Much of what Jay Franklin learned in Washington has gone into his mystery stories as well as into his social studies. Their very titles are significant: *Murder in the Embassy* (1930); *Murder in the State Department* (1930); *Scandal in the Chancery* (1931); *The Corpse on the White House Lawn* (1932); *Death in the Senate* (1933); and *The Brain Trust Murder* (1935). All these stories star Dennis Tyler, the diplomatic detective; all are "delightfully dizzy" and "larkish." In 1937 Jay Franklin departed somewhat from his usual lines of creativeness to write *The Rectory Family,* a reminiscent novel of life in a Massachusetts college town in the early 1900's.

Franklin's name appears frequently as a contributor to *Liberty, Atlantic Monthly, Forum, Reader's Digest* and other magazines. It appears every day over his syndicated column; it is heard over the radio in an electrically transcribed series, *The Week in Washington.* Today he is sticking to "Jay Franklin," but explains the multiplicity of his pseudonyms by the fact that he spent so many years in the government service that he couldn't use his own name—it might have embarrassed his superiors or confused his readers.

This pro-New Deal author and commentator was born John Franklin Carter, Jr., in Fall River, Massachusetts, the son of the Reverend John Franklin and Alice Schermerhorn (Henry) Carter. His father moved later to

JAY FRANKLIN

Williamstown, Massachusetts, where he was rector of St. John's Episcopal Church. Young John was educated at St. Mark's School in Southboro, Massachusetts and at Yale University. At Yale he specialized in European history under Dr. Charles Seymour (see sketch this issue), Yale's president since 1937, and received his Bachelor's Degree in 1920.

During the closing years of the First World War, Franklin was serving at the State Department and at the United States' embassies at Rome and at Constantinople. In 1920 he enrolled at the École des Sciences Politiques in Paris but left shortly after to become private secretary to the American Ambassador to Rome. He kept this position a year and then returned to the United States. But 1922 saw him back in Rome, this time as Rome correspondent for the London *Daily Chronicle.* After a year at this the New York *Times* hired him and kept him working until 1928 as general reporter, ship news reporter and in the Sunday department.

In 1928 he re-entered the State Department as economics specialist in the Division of Western Europe and remained there until 1932 when, after a tour of special duty in the Far Eastern Division, he resigned to support himself by independent writing, mostly by acting as Washington correspondent of *Liberty* Magazine. In 1934 he returned to government service as special adviser to Rexford Tugwell (see sketch this issue) in the Department of Agriculture, organized the information program for the Rural Resettlement (now Farm Security) Administration and then resigned in March 1936 to write his daily column, "We, The People."

From August 1938 to August 1939 Jay Franklin toured the country, reporting en route on the "State of the Nation" twice each week for the National Broadcasting Company. Then, at the opening of the 1939 winter session of Congress, he debated the news of the week in Washington with Mark Sullivan in a program called *Public Interest in Democracy.* His latest radio series is the transcribed *The Week in Washington.*

Jay Franklin was married in 1927 to Sheila Sutherland. They have one daughter, Sonia.

FREDERICK, JOHN T(OWNER) Feb. 1, 1893- Radio book critic; author; educator
Address: b. Northwestern University, Evanston, Ill; h. Glennie, Alcona County, Mich.

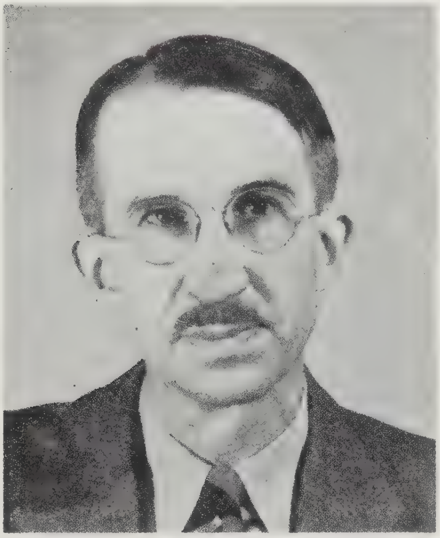
Since 1937 John T. Frederick, literary critic, editor and educator, has conducted a weekly book review program, *Of Men and Books,* sponsored by Northwestern University, on the Columbia Broadcasting System. This broadcast, currently scheduled on Saturdays around noontime, originates in Chicago (where Professor Frederick teaches modern letters at Northwestern's Medill School of Journalism) and is heard over more than 50 CBS stations.

So popular has this purely cultural broadcast become that when Mr. Frederick offered

FREDERICK, JOHN T.—*Continued*

his listeners a list of 50 books recommended for Christmas 1940, more than 2,000 requests for copies came in. It is said that the radio public sends in about a thousand letters a month in response to the program. Not only are book readers interested in Professor Frederick's excellent talks, but booksellers as well, who report an increase in book sales because of them. And in several cities where the program is heard local literary clubs meet especially to hear it.

Of Men and Books owes its increasing popularity in large part to the fact that Professor Frederick is a remarkably good speaker who talks of books simply and informally, from a warmly sympathetic viewpoint, with both understanding and humor. His manner of quiet sincerity and convincing enthusiasms for what is good in the current output makes listeners want to read the books themselves. Moreover, the program is unusual: often Mr. Frederick invites famous "guest" authors to talk informally about their writings with him. Among those who have spoken on the program are Dr. Lin Yutang, Archibald MacLeish, Marquis Childs and Robert Nathan. Another distinguishing feature is that at least half the books discussed never find their way into best-seller lists.



JOHN T. FREDERICK

"That doesn't mean they aren't worth reading," Professor Frederick says. "On the contrary, they frequently are of greater literary merit than works that sell by the hundreds of thousands. But they aren't written by popular authors, or as well publicized. The American reading public consequently is quite unaware of their existence. And that's why I review them. I want my listeners to become acquainted with authors of really important books."

John Towner Frederick's own life and accomplishments are as interesting as some of the biographies he has discussed on *Of Men and Books.* He was born on a farm two miles from Corning, Iowa, February 1, 1893, only child of Oliver Roberts and May E. (Towner) Frederick. From the day he was big enough to handle a hoe he worked on his father's farm. He rode a pony to the town's grade school, and was graduated from the Corning High School in 1909. While still a boy he was tutored in Greek and German to earn advance credit for the University. Determined to get a college education, he entered the State University of Iowa, where he washed dishs and scrubbed floors during the first year to pay his expenses. He then stayed out two years and taught school: at $75 a month he was principal, athletic coach and sole high school teacher at Prescott, Iowa from 1911 to 1913. Then he returned to the University and finished his course in two years, taking an active part in literary affairs. He was president of the senior class; and it was during his senior year, too, that he founded *The Midland,* a magazine which later under his editorship was to acquire a national reputation.

Soon after his graduation in 1915, Frederick married Esther Paulus of Iowa City. They have two children, John Joseph and James Oliver. He taught in the English Department at the University of Iowa for two years, receiving his M. A. in 1917. For the next two years he was head of the English Department at the State Teachers College, Moorhead, Minnesota; taught again at the University of Iowa; and after a year at the University of Pittsburgh, returned to Iowa as full professor, teaching there until 1930.

Besides teaching, Frederick found time to write two excellently received novels of Midwestern farm life: *Druida* (1923) and *Green Bush* (1925). He published also four college textbooks: *A Handbook of Short Story Writing* (1924), and, with Leo L. Ward, *Good Writing* (1932), *Reading for Writing* (1935), second edition, (1941) and *Present-Day Stories* (1941). It was during the years at Iowa City that *The Midland,* originally conceived as a regional magazine, won a national circulation and reputation, rated highly by the late Edward J. O'Brien and other critics for the high standard of its contents. Under Frederick's editorship, and later his coeditorship with Professor Frank Luther Mott, *The Midland* first printed the work of many writers who have since become well known, such as Albert Halper, James T. Farrell, Paul Engle, Ruth Suckow, Paul Corey, Marquis Childs, MacKinley Kantor, Phil Stong and August Derleth.

To widen the scope of *The Midland,* Professor Frederick moved to Chicago in 1930 and took part-time teaching positions at Northwestern University and the University of Notre Dame. He was compelled to suspend the magazine in 1933, however, for lack of money. In 1936 he became full professor at Northwestern's Medill School of Journalism.

He served also, 1937 to 1940, as regional director of the WPA Writers' Project.

Professor Frederick has continued to be interested in farming as well as books. In 1919 he bought a tract of wild land near Glennie, Alcona County, Michigan. It consists of 1,400 acres, including two lakes, woodland, pasture and 200 acres of farm land. In partnership with his father, and with the aid of his two sons, John and James (the latter now in the University of Michigan law school), Frederick raises cattle, sheep and alfalfa. They have built a large stone house, laid with their own hands. Mr. and Mrs. Frederick both like gardening and now spend as much of the year as possible at Glennie. If he ever retires, Frederick says, this farm will be his year-round home.

FULLER, S(AMUEL) R(ICHARD), JR. Feb. 19, 1879- Former chief of the Materials Branch, the United States Office of Production Management; rayon manufacturer; author

Address: b. 261 Fifth Ave, New York City

Randolph Macdonald

S. R. FULLER, JR.

Chief of the Materials Branch of the Office of Production Management until June 23, 1941 was S. R. Fuller, Jr., according to *Time* a "chubby, good-natured" man who "looks like Cinemactor Eugene Pallette with spectacles." Mr. Fuller is known to business colleagues as a rayon manufacturer and may still be remembered by boys now out of their teens as the author of a series of books for ambitious young heroes, beginning with *Winning His Shoulder-straps* (1909) and culminating with *The Cadet Sergeant* (1930). (His pen name was Norman Brainerd.)

Samuel Richard Fuller, Jr., was born in Corning, New York, the son of Samuel Richard and Leora Campbell (Brainerd) Fuller. After studying at the De Veaux School in Niagara Falls from 1890 to 1896 he spent two years as a student at Trinity College, Hartford, Connecticut, where he joined Alpha Beta Phi fraternity. For some time he was employed in an iron-casting company. It was 1905 when he married Lillian Alice Russell (they now have one son and three married daughters), and four years later he emerged as the author of the first book in the series mentioned, obviously both moral and manly in tone. *Winning the Eagle Prize* (1910); *Winning the Junior Cup* (1911); and *Winning His Army Blue* (1917) followed, but it was the Navy that Mr. Fuller joined when the United States entered the First World War.

A commander in the United States Naval Reserve Force, Mr. Fuller was soon working under Franklin Delano Roosevelt, then Assistant Secretary of the Navy, as boss of the Navy Department's steel and machine-tool procurement. In this position his previous experience in the steel and malleable iron-casting industry and his reputation as a trouble shooter were possibly even more helpful than his talents for making everything come out all right in the end.

From 1919 to 1921 Mr. Fuller was president of the Stafford Company of Readville, Massachusetts. Then in 1921 he went to Sherbrooke, Quebec to the Canadian Connecticut Cotton Mills, Limited, as chairman of the board and treasurer of the company. Tire-fabric mills were suffering from the post-War slump; Fuller decided that the trouble was overtooling. While putting the company's plants into shape he also managed to find time to breed thoroughbred Jersey cattle on his Grayburn Farms in Waterville, Quebec, and it was 1929 before he returned to the United States. In that year he was sent to the North American Rayon plants in Tennessee, then having labor troubles, according to *Business Week* "to straighten out a situation which appeared tense to the state militia posted around the factories." He stayed as the president of the North American Rayon Corporation (then the American Glanzstoff Corporation) and of the American Bemberg Corporation of New York City, and changed what had been a steady run of deficits into a steady run of profits.

It was the middle of 1935 when trouble once more arose—this time at the Alaskan settlement project at Matanuska. With luggage packed for a trip to Europe, Mr. Fuller received an emergency call from the United States Government, which remembered his talents. He canceled his sailing, went to Alaska, and there was given a free hand to straighten things out as special administrative assistant to the Alaska Rural Rehabilitation Corporation. After only a short period in Matanuska he returned to his New York office, and there he remained until in 1940 he began commuting to Washington in an advisory capacity, later taking up residence there and devoting most of his time to his new duties.

As head of the Production Planning Board which advised the Office of Production Management before his appointment to the Materials Branch itself in April 1941, it was

Mr. Fuller's responsibility "to get a hilltop perspective of the present and future, advise the United States how to avoid crooked paths and hopelessly blocked roads . . . [to do] centralized planning of the defense program, long-range planning for the sag that must inevitably come when the United States has more swords than ploughshares." The Board's first move after its creation in February 1941 was to start a study of defense production both in the First World War and the present emergency, with special emphasis on M-Day plans.

Having completed his service in governmental work, Mr. Fuller returned to New York to govern the affairs of his two firms as a full-time job again. Occasionally, too, he has spoken on national problems, his approach typified by his remarks at the Economic Club of New York in December 1941. At that time he insisted that demand for price control represented a governmental "reaching for power": prices couldn't be controlled unless wages were. Besides, "If Uncle Sam isn't able to lick John L. Lewis, he'd better think twice before tackling Adolf Hitler."

Who's Who in America
Who's Who in Commerce and Industry

FULLER, WALTER DEANE June 5, 1882- Former president of the National Association of Manufacturers; president of the Curtis Publishing Company

Address: b. Curtis Publishing Co, Independence Sq, Philadelphia, Pa; h. Penn Valley, Narberth, Pa.

In December 1940 Walter Deane Fuller of the Curtis Publishing Company was elected president of the National Association of Manufacturers for 1941. Like his predecessor, Henning W. Prentis, Jr., Mr. Fuller saw as the main task of the N. A. M. the achievement of total preparedness. "We must make doubly sure," he said at the N. A. M.'s convention, "that everything within the power of management is done to meet the public's expectancy in armament." Shortly afterward he announced over the radio that industry recognized as its three major problems for 1941 "first, swift and efficient production for national defense, its supreme task; second, maintenance of as high a scale of living as the defense program will permit; and third, preparation now to make adjustments after the emergency is over." Because of Mr. Fuller's past record and present activities, industry and the public were agreed that he would be able to "mobilize the N. A. M.'s growing membership in all sections of the country enthusiastically behind the defense speed-up."

WALTER DEANE FULLER

As N. A. M. head until December 1941 Fuller has urged a longer work week, a ceiling on wages, a revision of the Wagner Act to end mass picketing and the suspension of antitrust prosecutions against industries collaborating to heighten preparedness efficiency—all in the interests of national defense. He has called strikes the "major bottleneck" in defense production. He has asserted (July 1941) that the "production and delivery of vital armament equipment has not been delayed to date by a shortage of aluminum." Many of these statements have been made at the "defense clinics" which the N. A. M. set up all over the country.

It was while he was making such pronouncements that he revealed, on May 16, 1941, that the *Saturday Evening Post*, major publication of the Curtis Publishing Company and isolationist up to that time, was going to do an "about face" in its attitude toward the international situation. Fuller explained by saying: "We are in an undeclared war now, and the best thing we can do is face it and get behind it as fast as possible."

Walter Deane Fuller, who has held one of the most important positions an American businessman can have, started his career on a very low rung of the ladder. He was born in Corning, Iowa, the son of Walter and Nellie Elizabeth (Deane) Fuller, and spent his boyhood in Norwich, Connecticut. Here he attended grammar and high school, later took courses at evening school and by correspondence, and supported himself by summertime jobs. Here, too, he worked at his first full-time job—as clerk in the Dime Savings Bank, from 1899 to 1903. Four years' experience in Norwich were followed by another clerical banking position, this time in the Bank of Metropolis in New York City.

It was in 1904 that Mr. Fuller started out in the publishing field, as salesman for the Butterick Publishing Company. Within a year he had become junior office manager. Shortly after, however, he shifted to the Crowell Publishing Company and stayed there

FULLER, WALTER DEANE—*Continued*

until 1906, as junior office manager. Then came two years as manager of the subscription division of the S. S. McClure Company and finally, in 1908, his first position at the Curtis Publishing Company.

At the Curtis Publishing Company, Mr. Fuller was made manager of the circulation sales office force. By 1911 he was manager of the accounting department and by 1916 comptroller of the firm. One year later he was made secretary and acted in that capacity for 10 years, during one of the most profitable periods in the firm's history. His next step up was to second vice-president in 1927; his next after that to first vice-president and secretary, in 1932. Since November 30, 1934 he has been president of the company, head of its 12-story building at Independence Square in Philadelphia and of its four magazines (*Saturday Evening Post, Ladies' Home Journal, Country Gentleman* and *Jack and Jill*), which have a combined circulation of over eight million.

It was because of his business record and his position as president of this large company that Fuller was drafted by Governor James of Pennsylvania in 1938 to direct a huge and hurried job-mobilization drive. In November 1939 he and a committee of Pennsylvania businessmen started a whirlwind campaign. They enlisted business, religious and civic groups; they urged every trader, every retailer, every plant to develop new outlets, to increase production, to start construction and alteration projects. In March 1940 Fuller announced that his committee had created at least 30,000 new jobs and decreased the number of Pennsylvania citizens on relief. The first fact has been disputed; the second has not.

Mr. Fuller has had other positions of civic importance: he is chairman of the Planning Commission of Lower Merion Township in Pennsylvania and of the Penn Valley Civic Association. He has, of course, been active in businessmen's associations, too, even before he was elected to the N. A. M. presidency. He has been a vice-president of the Pennsylvania Chamber of Commerce and of the National Publishers Association, a director of the Society for the Advancement of Management, and was, before becoming president of the N. A. M., a vice-president and head of its 1940 Congress Platform Committee.

Despite all his business and civic commitments, Mr. Fuller occasionally finds time for his four clubs (Union League, Poor Richard, Bala Gold, Seaside Park Yacht). He has three children by his first marriage and was married a second time, in 1931, to Mae Schaeffer.

Who's Who in Commerce and Industry

GABIN, JEAN (gä-băN') May 17, 1904-
Film actor

Address: b. 20th Century-Fox Film Corp, Hollywood, Calif.

In the spring of 1941, New York City, which has received so many visitors from war-torn Europe, experienced a slight flurry at the arrival of "the most glamorous refugee of them all." Jean Gabin, the leading motion-picture actor of France, a muscular gentleman with a moody, Gallic grace all his own, came to New York right after the première of his film, *Pepe le Moko.* Then he flew to the Coast to start working for 20th Century-Fox, for which he is expected to make his American debut in *Moon Tide* in the spring of 1942.

Pepe le Moko, shown here four years after its production in France, gave the American public an opportunity to compare Gabin's performance with that of another French actor, Charles Boyer, who played the same role in *Algiers,* a Walter Wanger picture based on *Pepe le Moko.* It was felt by at least one or two of the critics that "Jean Gabin's tough unsentimental performance of the title role was much more credible and revealing than Charles Boyer's sad-eyed mooning in *Algiers.*"

Gabin has never hesitated to play humble or dubious characters: he made his fame in France by playing the *salopard,* the average tough artisan or mechanic. It has been said, for that reason, that Gabin has put the forgotten man into French films. He has always taken the part of a strong individualist, a social outcast, a man in the toils of a secret tragedy to which he finally succumbs. "He never substitutes mere charm for an honest and subtle characterization, constantly related to the other portrayals in the motion picture." For that reason, perhaps, he has been called "the French Spencer Tracy," and he modestly acknowledges the resemblance—"not physically, but there is a mental relationship." Perhaps the resemblance lies in the realism and integrity of their interpretations.

Ever since Gabin was brought to the attention of the American public (particularly after *Grand Illusion* was shown here in 1938) Hollywood has been trying to get him. But Gabin was content to stay where he was; besides, he suspected, with some justification, that pictures of the type he preferred would be subject to censorship in the United States. Accordingly he remained in France, humorously pleading a gourmet's attachment to his native land's wines and foods. It took war and German occupation to uproot him. He saw no future in making German propaganda films, the only possible occupation left him today.

Jean Gabin was born in Paris in 1904. His family name was Monçorge. Both of his parents were theatrical people, his father, Joseph Monçorge, performing under the name of Jean Gabin, which his son later adopted. His mother, who was professionally known as Hélène Petit, died when Jean was 13. Jean, the youngest of six children, spent his boyhood in the village of Meriel, where he was brought up by his sister. He was a young incorrigible in school, particularly when he was taken away from his beloved Meriel, where he had studied under the gentle tutelage of "père Dervelloy," and sent to a Paris lycée.

Young Gabin, whose sole ambition in those days was to be independent, ran away from the lycée and at 16 became a cement mixer at 12 francs a day. Later he worked in an automobile factory. He had a passion for mechanics and in those days wanted above all to run a locomotive. This dream of independence lasted only a year. Gabin's father, an ardent actor, who loved the stage above everything, had different ambitions for his son's career. He wanted to see him become a comedian. That was how it happened that when Jean was only 17 his father took him to see his friend, the impressario Fréjol, who gave him a job at the *Folies Bergère*. Young Gabin, who at that time did not share his father's love for the stage, went about carrying the inevitable spear in a daze of misery. Repeatedly he brought to the frivolous roles he played something of the heavy tragic quality that later made him an outstanding dramatic actor. His apprenticeship was interrupted by a year of military service at Lorient. (Gabin is a seaman of second rank.)

Then it was back to vaudeville, to playing at Bouffes Parisiens in operettas with frivolous titles like *La Dame en Décolleté* and *Trois Jeunes Filles Nues*. An enchanting interlude was a tour in South America, with Gabin singing cabaret songs of the Chevalier type. When he came back he played in shows starring Mistinguette and Elsie Janis. It was while playing with Meg Lemonnier in *Arsène Lupin* that he got an offer to play a small role in a film called *Chacun La Chance* (1933). He agreed and was never seen on the stage again. He played in a multitude of pictures, some of them made in Germany, including films like *La Foule Hurle, Coeur de Lilas, Étoiles de Valencia, La Belle Marinière,* Pabst's *De Haut en Bas*. He became rather well known, married an actress called Doriane in 1932 (they are divorced now) and certainly made a much better living in films than in the theatre. But real fame came when he met Julien Duvivier, a director known for his ability to discover promising actors, who sensed the latent dramatic quality in Gabin and utilized it in *Maria Chapdelaine* (1934).

The picture was shot on the spot in Canada, and after it was shown, Gabin was made. *Maria Chapdelaine* won the Grand Prix and Gabin's performance was loudly acclaimed by the critics. When it was shown in the United States in 1935, it was adjudged one of the 10 best pictures of the year. After this, there followed the period of collaboration with Duvivier in which Gabin's popularity as an actor soared. He became the unchallenged box-office champion of France. Except for a picture like *Golgotha,* in which Gabin played Pontius Pilate, he specialized in parts in which he had a chance to produce the simple hard-bitten characterizations that made him famous. With Duvivier he made *Bandera, Belle Équipe,* (produced in the United States in 1938 under the title *We Were Five*), *Pepe le Moko.*

JEAN GABIN

Never a "contract slave," Gabin made it a rule never to begin a film without insisting on his right to choose his own scenario and director. Most of his scripts were written by Spaak, who was responsible for the delightful *La Kermesse Héroïque*. After Julien Duvivier left France, Gabin teamed up with a director of equal genius, Jean Renoir. This collaboration had equally successful results: *Les Bas Fonds* (released as *Lower Depths* in the United States), *Grand Illusion, Le Messager, Gueule d'Amour* were among them. He also played in *Quai des Brumes* (called *The Port of Shadows* here), with Marcel Carne directing, and his gripping performance as an engineer with a homicidal mania in *La Bête Humaine* will long be remembered. The last picture in which he played was *Daybreak,* "the last major product of an industry that was as long on brains as it was short on budget."

When the War came, Gabin, with many other film stars, was fighting for his country, serving as a second rank seaman on a mine sweeper. When the German Army broke through in June 1940, he was on furlough in Drieux. He left the city 15 minutes before the invaders came and rejoined his naval unit in the West Channel ports. After the armistice he was demobilized at Toulon, lived in Nice for a while and then went on to the United States via Lisbon. The next step was to learn English.

Reporters who interviewed Gabin on his arrival agreed unanimously that the Gabin

GABIN, JEAN—*Continued*

charm carries over from the screen. No pretty boy, Gabin is wide-shouldered, tall, muscular, with rugged features. His hair, which photographs blond, is really "a shining silver gray," and his eyes are a startling blue in a sun-bronzed face. Gabin has retained from his childhood a love of the land, had a farm of his own in France. He still is mechanically inclined and has a warm spot in his heart for locomotives. He is somewhat of a gourmet, likes to hunt, is rather moody and taciturn, sometimes quick-tempered, but has been described by fellow actors as a good *copain.*

GANNETT, LEWIS (STILES) Oct. 3, 1891- Journalist; book critic

Address: b. New York Herald Tribune, 230 W. 41st St, New York City; h. West Cornwall, Conn.

Ben Pinchot

LEWIS GANNETT

The New York *Herald Tribune's* daily book-review column, "Books and Things," has since 1931 been one of the paper's outstanding features. In that year Lewis Gannett, well known journalist and author, became its conductor. Gannett's wide experience as a newspaperman in this country and abroad, as well as his keen interest in the current output of fiction and non-fiction, have given him unusual qualifications for the book critic's exacting job. Readers find his estimates dependable, his taste discriminating, his style informal but sure, and always readable. To vary the column and to provide a cross section of opinion, Gannett has for the past year or two turned over "Books and Things" on Mondays to alternating young critics of fiction.

Lewis Stiles Gannett was born in Rochester, New York on October 3, 1891, the son of William Channing and Mary Thorn (Lewis) Gannett. He had one older sister, Charlotte Katharine MacDowell, who died October 23, 1940. His father was a Unitarian minister, his mother a Quaker. Young Lewis went to the public schools in Rochester. He grew up in a "house full of books," and from an early age loved reading. But his boyhood ambition was to be a naturalist: he took long hikes through the countryside around Rochester, learned a great deal about the local trees and plants and became especially interested in birds. At the age of 10, he says, he carefully compiled a bird book. The budding young naturalist-author was pretty badly disillusioned when it failed to find a publisher, but that didn't stop him from going on with his chosen career. He had a side line, however. When he was 12 he was elected Class Poet. This honor, it seems, came to him on the strength of one poem, the subject matter of which aroused the lively admiration of his classmates when it was surreptitiously circulated. But the school principal somehow failed to appreciate young Gannett's *tour de force* when it fell into her hands.

Destined for Harvard (his father, grandfather, and great-grandfather before him had been Harvard graduates), Lewis Gannett entered the University to study natural science. For three summers he worked in the Marine Biological Laboratory at Woods Hole, Massachusetts; but late in his college course he "shifted to philosophy," then did graduate work in economics. He received his B. A. in 1913, his M. A. in 1915, after studying for a year at the Universities of Berlin and Freiburg.

After his graduate year at Harvard he decided he wanted to see the world and came to New York City intending to learn about life as a taxi or truck driver. Fate took him in hand and made him a reporter for the New York *World* (1916-17). Then came the War; and Gannett, an ardent pacifist, joined the American Friends' Service Committee in France (1917-19). He acted as correspondent for *The Survey* and other papers at the Paris Peace Conference. On his return he joined the staff of *The Nation,* a position he held until 1928. He was also (1922-23) American correspondent for the *Manchester Guardian.* During his first year on *The Nation* he visited Western Europe and Russia; and his observations on a survey trip (1925-26) to Japan, China, Mongolia, etc., were published in his book, *Young China* (1926).

Having seen a good deal of Europe and Asia, but never having traveled extensively in his own country, Gannett in 1933 took the first of his cross-continent trips by automobile. He made a leisurely, informal, firsthand study of places and people in the great Middle States, and in the West and Northwest. What he saw, and what he learned from talking with persons of varied occupations and interests, he set down in the book *Sweet Land* (1934). This trip, Gannett says, gave him more solid pleasure than all his years of book reviewing. Three years later he made another such cross-country trek behind the wheel; and in 1939 he followed still a third route from coast to coast.

"Driving across America," he wrote, "gives one at least a sense of the magnificent distances that separate the sections of this continental America. It gives one also a realization that the twin gods of modern America, the idols to which we pay tithes from Calais, Maine to San Diego, are roads and schools." On this trip, talking with all types of people, he found that Americans weren't "the same" all over, just as "the countryside behind the signs is never twice the same."

In 1917 he married the author, Mary Ross; two children were born to them, Michael Ross and Ruth Stiles. The couple separated in 1929; in 1931 he married Ruth Chrisman Arens, artist, who has illustrated several books for young people, and who did the drawings for Gannett's own book about America.

Mr. Gannett's reviews and articles have appeared in other publications besides the *Herald Tribune.* He has also taken part in various progressive activities, and is a member of the American Newspaper Guild. He has never lost his love for plant and animal life and is an enthusiastic gardener on his farm at West Cornwall, Connecticut. There he and Mrs. Gannett take pride in their young fruit trees and vegetable garden, and in canning their own produce. Gannett's own specialty and favorite is his Golden Bantam corn.

GARLAND, JUDY June 10, 1922(?)- Film actress

Address: c/o Metro-Goldwyn-Mayer Studios, Culver City, Calif.

JUDY GARLAND

Of the multitude of babies who sing *Jingle Bells* on the stages of local theatres at Christmas time, extremely few become stage or screen stars. As a matter of fact, when Francis, Jr., at 30 months sang in the Christmas program at her father's theatre, it is probable that the audience discovered neither the sex nor the latent talent. Those who saw and heard the performance of Judy Garland in *The Wizard of Oz* 15 years later, however, doubted neither her femininity nor her competence.

Francis, Jr., was really Frances Gumm, third daughter of Frank and Ethel (Milne) Gumm. During a vacation in Wisconsin, Frank Gumm, a graduate of Sewanee University, got a job as singer in a movie house. There he met and married the theatre's pianist and the two toured in vaudeville as "Jack and Virginia Lee, Sweet Southern Singers," until their first child was born. Since it was necessary to settle down in order to raise their family properly, the Gumms bought a movie theatre in Grand Rapids, Minnesota, where Frances was born and where she made her debut. In 1927 they moved to Los Angeles, where the children went to school. They had expected to buy another movie house in some nearby town, but Mr. Gumm's health failed until finally he was no longer able to work.

The three Gumm sisters, then twelve, seven and five, had long been a "natural" dancing and singing team. Their mother made them costumes and trained them in a routine, with herself at the piano. Their first appearance was at a civic banquet, where the three girls together earned $1.50. After years of dis-

GARLAND, JUDY—*Continued*

couragement, the team "clicked" at the Oriental Theatre in Chicago, where they had been billed as "The Glum Sisters." The master of ceremonies, George Jessel, suggested that they change their name, and at the age of 12 Frances Gumm became Judy Garland.

The next year the "Three Garlands" had a season engagement at Lake Tahoe. A movie agent heard Judy sing and wanted her to try out for the moving pictures. The legend has it that Mrs. Gumm demurred because she didn't think Judy was "pretty enough." Three days after they returned to Los Angeles, however, the agent turned up and took Judy and her father to MGM, where he secured for her a seven-year contract, reputedly the only one given on the lot without either screen or sound tests.

At first Judy was not given major parts. She appeared in *Pigskin Parade* in 1936, *Broadway Melody of 1938* and *Thoroughbreds Don't Cry* in 1937, and in *Everybody Sing, Love Finds Andy Hardy* and *Listen Darling* in 1938. Her first big part came in *The Wizard of Oz,* in which she proved herself capable of maintaining a sustained role with even excellence and convinced Hollywood that she possessed one of the best voices of its kind in the film capital. In 1939 she received the Academy Award for the best juvenile performance of the previous year and was promoted out of juvenile roles by her studio. In *Ziegfeld Girl* (1941), although the romance given her was of the "puppy love" variety, her part called for more adult characterization than had her previous roles, and her costumes were designed by Adrian, a distinction that lifted her definitely out of the juvenile class. In *Life Begins for Andy Hardy* and *Babes on Broadway,* (both 1941), she had lead roles.

In July 1941 Judy was married to David Rose at Las Vegas, Nevada. Rose, a composer and arranger for radio, is more than 10 years Judy's senior; but they had been friends for a number of years. Rumors of their impending marriage began soon after Rose's divorce from Martha Raye in 1940. They live in a rented house in Beverly Hills while their own is being built.

Judy has appeared as guest star on a number of radio programs and in January 1941 she appeared in *Love's New Sweet Song* for the Silver Theatre program. She wrote the original script, which was adapted by True Boardman.

Judy is snub-nosed and red-haired. Three years ago Sophie Tucker said of her that she would become "America's next red-hot mamma." Judy has expressed the desire, however, to become a great dramatic actress and push the singing and dancing gradually into the background.

GAUSS, CLARENCE E(DWARD) (gŏs) Jan. 12, 1887- United States Ambassador to China

Bulletin: In February 1941 Clarence E. Gauss was appointed United States Ambassador to China, an indication to Japanese commentators that the United States was preparing to follow a more active policy in China. He arrived in Chungking to take up his duties in May 1941 and told China's President Lin Sen: "I bring you from America a message of conviction that the principles in which your people and my people believe will prevail."

From January 1941 issue:

Clarence Edward Gauss, "regarded by many an admiring American as the ablest United States diplomat in the Orient," has a delicate and important task as our first Minister to Australia. The Far Eastern situation is touchy, what with Japan looking with covetous eyes on the Netherlands East Indies only 300 miles to the southeast of Australia, and England's fleet occupied in the Western Hemisphere. Mr. Gauss, who as consul general at Shanghai has since July 1937 been in the East's most conspicuous trouble spot and who has been one of the State Department's "ace trouble shooters" for years, is eminently well qualified to represent his country in Australia.

CLARENCE E. GAUSS

Since 1907 he has roamed around China, serving in several different cities: all of his service, except for brief stays in Washington and in Paris, has been in the Far East. Clarence Gauss' first government positions, however, were undistinguished ones. Born in Washington, D. C., the son of Herman and Emilie J. (Eisenman) Gauss, he received his education in Washington's public high schools and under private tutors. It was in 1903 that he entered the government service as a stenographer in the House of Representatives. After three years in this position and as a worker on the Invalid Pensions Committee, he entered the Department of State in 1906 as a clerk.

After a year's service in Washington Mr. Gauss was sent to Shanghai as Deputy Consul General. In 1909 he returned to Washington on duty, to study for the foreign service and to take charge of the consular school in the Department of State, but in 1912, after passing the career consular examinations, he was back in Shanghai again as Deputy and Vice-Consul General. By 1915 he was in full charge of the American Consulate there, but shortly afterward began his wider service in the Far East. In 1916 he went to Tientsin, where he was in charge of the Consulate; the next four years he spent at Amoy. In 1917 he married Rebecca Louise Barker of Los Angeles. They have one son, Charles Barker Gauss.

From Amoy Mr. Gauss went to Tsinan, Shantung; from there, in 1923, to Mukden, Manchuria; then back in Tientsin in 1924, to Shanghai in 1926 and Tientsin in 1927. In 1931 he was assigned to the Department of State, but it was only two years before he was back in China, at Peiping, as Counselor of the Legation. In 1935 he was in Paris as Counselor of the Embassy and Consul General, but stayed there only a few months before he became Consul General at Shanghai, a position he continued to hold until his promotion to the position of Minister to Australia in January 1940.

In Shanghai, as the Chinese-Japanese War grew fiercer, Mr. Gauss, "hardboiled and short-spoken," sharp-faced, medium-tall and so constant a smoker "that he seems naked without a cigar," worked his regular six-day week and Sundays, too, unperturbed by bomb explosions outside his office or endless arguments with Japanese officers over violations of American rights. Frequently he had to act on his own without consulting Washington and every time he did so he seemed to show "a genius for being right." It was his reports from Shanghai that kept the Department of State up to the minute on Far Eastern affairs. This same "genius for being right" and ability to keep his superiors completely informed is already well in evidence in his Australian activities.

GILDERSLEEVE, VIRGINIA C(ROCHERON) Oct. 3, 1877- Dean of Barnard College, Columbia University

Address: Barnard College, Columbia University, New York City

Pach Bros.

VIRGINIA C. GILDERSLEEVE

Doctor of Philosophy, Doctor of Literature, Doctor of Laws, recipient of many honorary degrees and medals, Dean Gildersleeve was described in an article in *Literary Digest* as having "enough caps and gowns to fill an ordinary New York apartment closet." She is undoubtedly one of the foremost women in American education.

Virginia Crocheron Gildersleeve was born in New York City in 1877, the daughter of a

GILDERSLEEVE, VIRGINIA C.—*Cont.*
Supreme Court Justice, Henry Alger, and Virginia (Crocheron) Gildersleeve. A vital, dark-eyed, dark-haired figure, she is tall and erect and has the poise and dignity becoming to her position. Dean of a women's college for 30 years, she has always emphasized the great value of that training of the mind and character offered by the good "colleges of liberal arts." The combination of such a "liberal" education with some technical or professional training which gives tools with which to work —with which to express one's personality and serve the community—seems to her the essence of education.

Although she has a strong interest in the youthful worries of her charges, she has never yielded to the desire to be called "The Dear Dean" and to pry into their private affairs. She calls students by their last names and herself prefers to be a stern "older sister" rather than a "mother" to her girls.

"Everyone knows that the Dean is a good executive, a magnificent speaker, a wise woman, an intellectual," Alice Duer Miller has written of her, "but not everyone knows she can lose her temper over examples of stupidity and spite, and that, therefore, her tact and calm are the more to be admired, since they are achieved and not wholly innate."

Dean Gildersleeve is inclined to deprecate her own accomplishments. She once said to an interviewer: "I never had to try for anything in my life. My mother sent me to college and after that everything fell into my lap." However, she has a passion for perfection. As a student she was dissatisfied unless she received an "A" rating on every paper. In 1899 she was awarded her first degree, B. A., from the college where she is now dean, and received her M. A. from Columbia University. Before being appointed dean, she was instructor in English at Barnard College.

Archeology is one of her hobbies. On summer vacations she used to look for old stones on the traces of early Roman roads near the cottage of a friend who lives in Sussex, England, and always hoped some day to find a Carthaginian penny. She plays deck tennis for relaxation. Occasionally she smokes a cigaret and enjoys a glass of claret with her meals. She is fond of dogs, and of books on polar exploration. The "Deanery," her home in the college, is a comfortable apartment with the living room filled with many soft chairs and lamps, and lined with books.

Dean Gildersleeve feels that in war time it is particularly important that the women's colleges should continue to keep their students at their usual studies and turn out college graduates, so that the nation may not lack a supply of citizens trained to think: of doctors, social workers, teachers and other highly trained professional workers whose professional education must be based on a foundation of college studies.

Although she is a gifted scholar in English literature, Dean Gildersleeve has always taken an active interest in current national and international affairs. In politics she is a vigorous Independent Democrat. International relations are her specialty. To the cause of understanding and cooperation between nations she has devoted most of the time she could spare from her deanship. One of the founders of the International Federation of University Women, she has twice served as its president, from 1924 to 1926, and again from 1936 to 1939. She was an early advocate of the idea of a League of Nations and still believes in the absolute necessity of some form of international world organization to insure order and justice. She is a member of the Commission to Study the Organization of Peace; and she has also worked with the Committee to Defend America.

GINSBERG, SAMUEL *See* Krivitsky, W. G.

GLASS, CARTER Jan. 4, 1858- United States Senator from Virginia

Address: b. Senate Office Bldg, Washington, D. C.; h. Mayflower Hotel, Washington, D. C; Lynchburg, Va.

"I've lived too long," said five-foot-four, 100-pound, bellicose Senator Carter Glass in 1938. The sharp-voiced Virginia legislator had of late appeared increasingly reflective and melancholic. A changing world with newfangled theories of government still drew sparks from his oratorical anvil, but now the Senator was perturbed. He had come to doubt the direction of progress; he had accumulated fears concerning the national economy; and he had grown nostalgic. "Today we no longer have democracy. We have mobocracy," he mourned. And the elections of Senators by the electorate at large rather than by the State legislatures had been, to his way of thinking, one of the first symptoms of this new "mob rule."

Perhaps this attitude is partly due to the fact that Carter Glass, who was born in Lynchburg, Virginia on January 4, 1858, was brought up during the Civil War. He remembers gray-clad soldiers marching through his native town and he remembers Lee's surrender at Appomattox Court House less than 25 miles from his home. Carter Glass is "a red, rolling ball of fury" both by reason of his rebel traditions and his personal temperament. His father, Major Robert Henry Glass, was a rambunctious newspaper editor who distinguished himself in the war by fighting two enemies who had opened fire from opposite sides. As a result of the encounter the elder Glass lost an eye. From his father Carter inherited utter fearlessness and a blazing temper still much in evidence.

CARTER GLASS

In post-War Virginia, rife with the bitterness of the South's defeat, Glass launched a career marked by wrath, determination and single-mindedness. As a boy he had earned the nickname of "Pluck." Later he became the terror of the Senate because of his fighting words and his readiness to augment them, if necessary, with his fists. His favorite boyhood sport was cockfighting, and many have since compared the diminutive Senator to a fighting bantam because of the white hair shooting up from his head like a rooster's comb and his willingness to face an adversary at the drop of a hat.

When Glass was 15 years old he had to leave school and find work to bolster a family income badly depleted during the post-War depression. He traveled down the river to Petersburg and became a printer's devil at $1.50 a week. His fellow employees recall him as a studious and resolute redhead who spurned recreation and devoted himself to learning his trade and to reading the classics. His perseverance bore fruit; he was made a full-fledged journeyman printer in two years instead of the customary four. Glass held many jobs in the mechanical departments of country newspapers, serving variously as compositor and pressman and, as was usual at the time, turning his hand occasionally to news and editorial writing. During his journeys his baggage totaled "an extra shirt, a fighting rooster and a 'library,'" the latter consisting of second-hand classics which Glass purchased whenever possible. He was later able to augment his self-education by attending William and Mary College, where he was a member of Phi Beta Kappa; an honorary LL. D. was given him by Lafayette College and other colleges.

GLASS, CARTER—*Continued*

Drifting back to Lynchburg, Glass became editor of the Lynchburg *Daily News.* When the owner, wishing to retire, offered to sell the paper, Glass sought frantically for backers. Unexpectedly a relative came through with a loan and, at 30, Glass was a publisher and editor. He made a down payment of $100 in cash on the $13,000 proposition and then struck out audaciously. His policy was to write sizzling editorials such as the South had never before seen and to roast the opposition press with masterful invective. The paper grew, and it was not long before Glass was also able to buy the afternoon paper, the *Daily Advance,* which he consolidated with the *Daily News.* Glass still owns the *News-Advance,* which his son, Carter, Jr., now edits, and whenever he returns to his home town he heads straight for the brick structure on Main Street that houses the editorial and publishing offices.

In his efforts to pulverize the rival press Glass at one time was the object of an attack by a paper called *The Earth.* A correspondent known as "The Lion Tamer" cast reflections on a relative for whom Glass was named. Glass lashed out, calling "The Lion Tamer" "an unmitigated liar," whereupon his rival challenged him to a duel for which he never showed up. The next day Glass gave his opponent one of the most brutal editorial drubbings in the history of local journalism. Humiliated by this ridicule, "The Lion Tamer's" wife strode into Glass' office and aimed a horse pistol at his heart, saying: "My husband's a coward, but I am not." Glass faced the woman calmly. "I cannot defend myself against a lady," he said; "please get it over in a hurry." The astounded intruder could only stare and flee. Shortly after, "The Lion Tamer" and his wife departed from Lynchburg and were never heard from again.

The Virginian's political life began almost as a matter of course. His journalistic ventures attracted widespread attention; since he espoused the cause of the Democratic Party, he soon came to be recognized as a political force. In 1894 he was persuaded to run for Mayor of Lynchburg, but although he was sufficiently popular to have won had he decided to stay in the contest, he withdrew before election day. He was given a small job as clerk of the local council and in 1898 was elected to the Virginia State Senate without having waged a campaign. Glass, at the time, had been ill; periodic sickness has interrupted his activity almost from infancy, and doctors have frequently despaired of his life. His tremendous energy has always pulled him through, however, and at least one physician has become reconciled to the Southerner's outbursts of irascibility. "They're good for him," the doctor explains. "He gets rid of the poisons inside him."

In 1901, returning from New York, where he had been recuperating from another illness, Glass attended the State Constitutional Convention held primarily for the purpose of changing the liberal but seldom observed voting laws that had been the product of Reconstruction. At the meeting Glass gained considerable attention by his bold proposals to delimit the franchise. A $1.50 poll tax and the establishment of investigation boards for literacy tests, measures sponsored by him, were adopted. When asked whether this had not been accomplished by "fraud and discrimination" he replied, according to the authors of *Dixie Demagogues*: "By fraud, no; by discrimination, yes . . . that is exactly what this convention was elected for—to discriminate to the very extremity possible under the limitations of the Federal Constitution with a view to the elimination of every Negro voter who can be gotten rid of, legally, without materially impairing the numerical strength of the white electorate."

After the Convention, Glass was appointed to fill the unexpired term of P. J. Otey, Representative from the Sixth Congressional District. In 1902, when election day rolled around again, Glass campaigned vigorously and successfully against the powerful Swanson-Martin machine. It was one of the few times when he actually took to the stump to seek re-election, for since that time Glass has usually been returned to office like clockwork. There followed 10 years in Congress during which Glass delivered few important speeches and sponsored little or no major legislation; but it was he who, at the National Convention of the Democratic Party in Baltimore in 1912, delivered the entire Virginia delegation to Woodrow Wilson despite factional opposition from Senator T. S. Martin, backed by financier Thomas Fortune Ryan. Wilson's election and the seniority rules of the House resulted in the Virginian's appointment as chairman of the Committee on Banking and Currency.

With the economist H. Parker Willis, Glass next fashioned the famous Federal Reserve Bank Act which has been called the greatest achievement in financial banking since the Civil War. Five months of debate against disheartening opposition featured Glass' struggle to gain passage of the bill. President Wilson, in referring to the legislator's odd habit of talking from the side of his mouth, said: "Carter snarled the Federal Reserve Act through Congress out of one side of his mouth. Think what he would have done with both sides." In recognition of his services, the President appointed him Secretary of the Treasury; but later, when Senator Martin died in office, Glass resigned from the Cabinet to serve out the unexpired term. There he became chairman of the Senate Committee on Banking and Currency.

In 1928 Glass took to the stump for the second time. This was when the South repudiated its traditional adherence to the Democratic Party because the Democratic candidate, Alfred E. Smith, was both a Catholic and an enemy of Prohibition. Glass, a Methodist and a Dry, in speech after speech castigated religious intolerance; defied 30,000 hooded members of the Ku Klux Klan assembled in Lynchburg to impress him with their strength; and urged his state to vote for Smith. But the tide was against Smith, and Glass returned to Congress a vehement opponent of President

Herbert Hoover. He was soon excoriating Hoover's policy of granting loans to industry, insisting on holding to a balanced budget and rigid enforcement of the Federal Reserve Act.

In the Democratic Convention of 1932 Glass contributed the "sound money" plank to the Party platform. He looked forward to the election of Franklin D. Roosevelt to carry on the policies which Glass had long advocated. But Glass was doomed to disappointment. When Roosevelt later called him the "Unreconstructed Rebel," Glass said proudly: "I shall remain the 'Unreconstructed Rebel' until the policies of this Government are changed." Even more than the philosophy of Hoover did the philosophy of the New Deal run counter to the Virginian's traditions and temperament. Nothing in his long years of government service so incensed him as the "spendthrift policies of the New Deal." When the President offered him the post of Secretary of the Treasury, Glass refused. He regarded the New Deal as "dishonest and dishonorable," the "Administration of Insanity", "a disasterbound socialistic experiment." Calling himself a "Jeffersonian Democrat," he plunged into bold denunciations of relief spending, the Public Works Administration, and, later, the President's Supreme Court reform program. Twice, too, in committee investigations of 1933 and 1936, he came chivalrously forward to protect J. P. Morgan against his questioners.

It was the New Deal's fiscal policies, though, which made the Virginian's temperature reach boiling point. For years Glass had been the watchdog of the Federal Reserve Act; encroachments on its spirit and intent touched a particularly sensitive spot. Once the talkative Huey Long held up the passage of one of the Senator's banking measures for days with a filibuster that included the Declaration of Independence and the Lord's Prayer. When the measure was passed Long walked up to Glass and genially addressed him as "Carter." Glass immediately burst into a stream of profanity that left Long flabbergasted; then he offered to fight Long in the cloakroom. Glass later said, "I used words I did not even dream were in my vocabulary."

Yet, despite the Senator's distrust of the New Deal, even the most ardent members of the Administration appreciated his contribution to financial reform. In December 23, 1938 a bas-relief of the Senator was unveiled in the Federal Reserve Building in Washington at ceremonies marking the twenty-fifth anniversary of the signing of the Federal Reserve Banking Act. High Administration leaders paid tribute to the Senator's long fight for the passage of the bill. Much moved, Glass said: "I think a man's funeral ought to be held before he dies." An additional honor came to Glass on July 10, 1941 when he was elected president *pro tempore* of the Senate, succeeding the late Senator Harrison.

And eventually Glass found himself in complete harmony with Roosevelt's aims in foreign policy, at least. An early interventionist, he more than once vigorously denounced Charles A. Lindbergh (see sketch this issue). He was one of the original sponsors of the Fight for Freedom Committee. In February 1941 he said he would like to "shoot hell" out of the Nazis. And when a peace group of mothers led by Mrs. Elizabeth Dilling of *Red Network* fame conducted a sit-down strike before the Virginia Senator's office, Glass said it was "a noisy disorder of which any self-respecting fishwife would be ashamed. It is pertinent for the Federal Bureau of Investigation to inquire into whether they are mothers—for the sake of the race I devoutly hope not."

On June 23, 1940, at the age of 82, Glass was married to the 50-year-old Mrs. Mary Scott Meade of Amherst, Virginia, a widow. His first wife, Aurelia Caldwell Glass, had died on June 5, 1937, leaving four children—Powell, Carter, Mary Archer and Augusta Christian.

Among his friends Carter Glass is known as a cultured, warm-hearted, sensitive man. He likes to argue that Bacon wrote Shakespeare's plays, to tell jokes, attend baseball games and prize fights. Rarely does he miss his favorite team, the Philadelphia Athletics, when they play a visiting game against the Washington Senators. Once, in his home town, when he was displeased with the umpire of a local game, he chased him with a bat and then routed the visiting team from the field in the same manner.

The "fireball" of the Senate is rarely challenged directly on the floor today, for his fellow legislators dread serving as target for his deadly wit. On one occasion when a supporter cheered his attack on another Senator by shouting, "Blast him, Carter; dynamite him!" Carter replied: "Why use dynamite when insect powder will do just as well?"

GOEBBELS, JOSEPH (gûb'ĕls) Oct. 29, 1897- Reichsminister of Propaganda and Public Enlightenment

Address: Berlin, W. 8, Wilhelmplatz 8-9, Germany

Joseph Goebbels is the "lame, lop-eared, loose-mouthed" little man who since 1933 has been Germany's Minister of Propaganda and

The New York Public Library

JOSEPH GOEBBELS

Public Enlightenment. As perhaps the world's outstanding authority on the subject, he has said: 'Propaganda has only one object, to conquer the masses. Every means that furthers this aim is good; every means that hinders it is bad." It is in order that no publicly unenlightened facts may reach those masses with bad effect that everything published in the Reich is published with the consent of his Ministry, which employs thousands of officials.

No journalist may be employed in Germany until his acceptability and political reliability have been certified by Dr. Goebbels. Even the words of fellow Cabinet members may not be printed unless he approves of them. He can order anything he wishes published in any newspaper in the country, can command the page and the column in which he would like to see it. And his authority over German "cultural" life as a whole goes so far that he can decide when flags shall be flown at half mast, can forbid public entertainment and dances for the day, can, if he wishes, decide that traffic all over Germany shall stand still at a certain moment and all work cease while everyone in the Reich sneezes in unison. One awed foreign observer wrote: "From an anthropological viewpoint the publicity legislation of the Propaganda Ministry appears as the official organization of the ritualistic side of magic."

This practitioner of modern sorcery is the author of innumerable books and pamphlets devoted to Nazi theory, among them *The Unknown S. A. Man*; *Lenin or Hitler*; *The Second Revolution* (1926); *Buch Isidor* (1929); *Knorke*, a second Isidor book (1929); *The Damned Nazis* (1929); *Battle for Berlin* (1934); *My Part in Germany's Fight* (1935). His mind is "keen as steel, cold and calculating," remarkable for its "mixture of cynicism and guile." His energy is inexhaustible, his power of concentration unusual—he once spent three days thinking out two words for a new poster.

But if these gifts make the Goebbels touch on Nazi war communiqués, for instance, worth any number of *panzer* divisions, they do not make him any more popular with the German people, who call him "the malicious dwarf" and "the latest reincarnation of the devil." One year he ordered a motion picture made showing him among his loved ones, and titled, with brilliant bad taste, *It's Daddy's Birthday;* boos and whistles forced it out of German theatres after three performances. Even the circulation of his paper, *Der Angriff* (The Attack) has dropped phenomenally since Hitler came to power.

Yet perhaps this lack of popular applause actually sharpens the genius for venom expressed in such confessions as: "A Jew is for me an object of disgust. I vomit when I see one. Christ cannot possibly have been a Jew. I don't have to prove that scientifically. It is a fact. . . I treasure an ordinary prostitute above a married Jewess." Goebbels says: "That's my trade. Hatred. It takes you a long way further than any other emotion." And it is true that this intellectual who is famed for his rantings against intellectualism, this apostle of Nordic superiority whose exceedingly un-Aryan appearance has brought about the invention of a special classification in Aryan ethnology—*Nachgedunkelter Schrumpfgermane*, "a dwarflike German who grew dark"—has come a long way in the worldly sense of the word.

Younger than either Hitler or Goering (see sketch this issue), Paul Joseph Goebbels was born in the industrial town of Rheydt in the Lower Rhineland on October 29, 1897, the son of Fritz and Maria (Oldenhausen) Goebbels. His father's occupation has been variously reported as factory clerk, farmer, teacher; at any rate, he came of peasant stock, was none too wealthy, and his wife was the daughter of a blacksmith. Paul Joseph was lame from birth, but he was an intelligent lad. After completing his studies in the Catholic Volkschule at Rheydt and in the Gymnasium and after being rejected for military service during the First World War, he visited one university after another, helped by Catholic scholarships. (He is, however, extremely anti-Catholic today.) He studied history, philology and the history of art and literature at the universities of Bonn, Freiburg, Wünzburg, Munich, Cologne and Berlin, then finished at Heidelberg, where he took his Ph. D. in 1921.

In those days Paul Joseph, shut out from strenuous physical activity, dreamed of becoming a great writer. But the world refused to recognize him, just as it refused to recognize the creative efforts of a certain Vienna housepainter. *Michael,* written when he was 24, was described as "probably as bad a book as has ever been published." Berlin theatre managers refused to be tactful about his two plays, *Blutsaat* and *Der Wanderer.* Nor would the *Berliner Tageblatt* accept him as a reporter. Goebbels said later: "When I think of the humiliations of my youth, I see no reason to shrink from applying any treatment to our adversaries." In the light of this statement, the fact that the editor and owners of the *Berliner Tageblatt* were Jews, as were many Berlin theatre managers, may have some significance.

It was by pure chance that Goebbels, in 1922, entered a meeting hall in Munich and heard Hitler speak. Although F. L. Schuman says that he did not actually join the Nazi Party until 1924, it seems to be established that he went to the Rhineland to organize party groups even before that and, next to Hitler, became the most valuable orator in the movement. His appearance at Nazi meetings is dramatically described: "A flat brow with straight black hair brushed back and flanked by pointed, protruding ears. Piercing dark eyes in an angular, cadaverous face, deeply lined about the large, mobile mouth. Diminutive, emaciated, almost insignificant as he limped into meetings completely surrounded by S. A. or S. S. bodyguards. But on the platform he was a wizard of demagoguery, with his resonant, penetrating voice, his keen cynical intelligence, his satire and irony, his utter unscrupulousness in attack, and his restless hands with their fascinatingly delicate yet powerful gestures." Even then he was inventing catch phrases: "Heads will roll!" "Out with the Jews!" "Germany, awake!"

In 1924 expelled from the Rhineland by the French authorities, Goebbels went to live in Elberfeld. He became an organizer and agitator in the Ruhr and that same year founded and edited the *Völkische Freiheit.* This particular Nazi organ achieved little influence, but the following year he and Gregor Strasser created a secret news organ for Party members, the *Nationalsozialistischen Briefe,* and set out to bring the entire Nazi Party under their influence by attacks on what they considered the suspiciously conservative policies of Streicher and Feder and indirect attacks on Hitler himself. What little proletarian following the Nazis got is supposed to have been due to Strasser and to Goebbels; but their association was not to last long. In 1926 Strasser went to the Bamberg conference of Party delegates, taking Goebbels with him as his secretary. There, when delegates split on the issue of how much genuine socialism there should be in National Socialism, Goebbels opportunistically sided against Strasser. In October of that year he was rewarded by Hitler with the post of *Gauleiter* for Berlin, later for the entire province of Brandenburg.

During four years in Berlin, Goebbels, known as "The Doctor," built up a powerful defense squad, made Berlin the chief stronghold of the Hitlerites next to Munich itself. In 1927 he founded the weekly, *Der Angriff*, which in 1929 became a biweekly and in 1930 a daily. In his paper he reviled the "gutter press" (non-Nazi journalism), and was so reckless in his assaults on certain individuals that at one time there were 126 libel suits pending against him. But vitriol was profitable even then: in 1928 he was elected to the Reichstag; in 1929 he became town councilor and was appointed Reich propaganda leader of the Nazi Party; in 1930 he was re-elected to the Reichstag.

His split with Strasser was complete by this time. In June, at a meeting of the General Assembly, he attacked his former associate bitterly for his dangerous ideas and disruptive influence, and Strasser was ejected. Two months later a group of rebels of Strasser's faction stormed Goebbels' offices, doing much damage, and then scattered a leaflet headlined AWAKENING GERMANY BETRAYED BY GOEBBELS! This did not mean that Goebbels had ceased to talk in revolutionary terms, however. In 1931, in the pages of *Der Angriff,* he was still offering to the German worker "the fight for freedom and bread," reassuring him that "we are today a labor party in the best sense of the word," even promising that dictatorship would not be permanent.

During the years 1931 and 1932 Goebbels kept a diary, which was later published. On December 8, 1932 he was writing: "Treason! Treason! Severe depression prevails. . . Financial troubles make all organized work impossible. . . The danger now exists of the whole Party's going to pieces. . . For hours on end Der Führer walks up and down the hotel room. . . Once he stops and says: 'If the Party should ever break up, I'll make an end of things in three minutes with a revolver.'" But barely a month later Hitler was Chancellor, and although Goebbels was not made a member of that first Cabinet he wrote that the whole thing was "like a dream." In March 1933 he himself was appointed "Minister of Folk Enlightenment" in order to prevent a "political lethargy" among the German people.

It was not, however, until June 30 of that year that the Ministry of Propaganda and Public Enlightenment was officially set up, with Goebbels at its head. A decree made him "responsible for all factors influencing the mental life of the nation . . . responsible for winning allegiance to the State, its culture and its economy; for the conduct of internal and external publicity, and for the administration of all institutions contributing to these ends." It made him ruler of the press, the radio, the theatre, the cinema and most musical, cultural and even scientific activities. How this power would be used was indicated at his first meeting with German newspapermen, when he said that the press would remain relatively free—"But do not imagine that we shall allow you to swindle the people out of our hands. We know only too well how this can be done." There were, at first, clashes with Goering over the control of the Prussian theatre, clashes with Goering, Rosenberg (see sketch this issue), Rust and Frick over the control of art (was or was not

GOEBBELS, JOSEPH—*Continued*

all art propaganda?)—but Goebbels was eventually victorious in most of them.

Since that time the scope of the activities of his Ministry has been extraordinary. A Reich Culture Chamber was set up, with Goebbels as president of its central body; anyone wishing to participate in any sort of creative activity in the Third Reich must be a member of the proper chamber. The man who, as "stage manager to the Nazi Party," had invented the dramatic technique of the great mass meetings, also became stage manager of the book burnings, the May Day and Harvest Festivals and the *Winterhilfe* relief campaign, introduced in September 1933. The fabrication of stories of oppression and attacks against Germany and against Germans in other countries was an even more important part of his job. And his talents in inventing Jewish atrocities were so far-famed by 1933 that when he made his first appearance as Germany's official representative at a session of the League of Nations that year, a local paper published a caricature of him with the caption: "And who may this man be? Why, to be sure, it is the representative of the well-built, healthy, blond and blue-eyed Nordic race!" The Press Law of October 1933 and the Cinema Law of February 1934 gave that representative even greater power.

Goebbels' Ministry also got all subsidies and grants of assistance for influencing the foreign press, for foreign publications and for the construction of propaganda organizations abroad. From 1933 to 1937 the propaganda fund was said to amount to £20,000,000 sterling annually, and since 1937 it has probably been even larger. Goebbels once told Goering: "You wouldn't have to fight at all if I had my way. I could win any number of wars for you with no losses but suicides on the other side." In 1938 he became a member of the Cabinet Council.

The theory of Germany's Minister of Propaganda is that "you can make a man believe anything if you tell it to him in the right way," and he also relies on the conviction that all news is so short-lived that the memory of the masses doesn't count. That is why the author of tirades against German capitalists could write, in December 1933: "Our socialism . . . is the legacy of the Prussian Army. . . It is that kind of socialism which enabled Frederick the Great to carry on a war for seven years." That is why he could announce, straight-faced, after "Bloody Saturday" in June 1934 (he had been with Hitler at the time): "Morality, decency and purity have been restored." That is why the man who as early as May 1931 had written that "the only instrument with which one can conduct foreign policy is alone and exclusively the sword" and whose glorifications of war verge on the hysteric can still speak unblushingly of Nazi Germany's deep and abiding love for peace. And that is, finally, why a frankly pagan war against "democracy", "plutocracy", "capitalism" can turn swiftly and neatly into a religious crusade against "Bolshevism" in Nazi press releases—or back again. But there are indications that even Goebbels cannot make all the Germans believe that they are happy and well-fed. One was his warning, in November 1941, that they must resign themselves to a "hard, relentless war" which, if lost, will leave them facing an "inferno."

Oddly enough, Goebbels seems to have a certain fascination for women. His wife is Magda (Ritschel) Quandt, whom he married December 19, 1931. She had been married previously to one of Germany's greatest industrialists. She was more than 25 years younger than Herr Quandt, by whom she had a son, Harald. Still called the First Lady of the Reich, she helped Goebbels a great deal in his earlier career, giving brilliant and extravagant evening parties which were often attended by Hitler himself. They live in great luxury: Goebbels owns a great estate and a sumptuous villa in Germany, and there are rumors of millions deposited in foreign lands. He has other advantages, too. In his library at home this embittered intellectual, it is whispered, keeps thousands of books which are now *verboten* in Germany—and enjoys nothing more than reading them over and over again. His attentions to various prominent actresses are the subject of scandal all over Germany, too: at one time it was rather reliably reported that he had been beaten within an inch of his life in the apartment of one young actress and that as a result his wife had asked Hitler to let her divorce him. Shortly afterward, photographs showing Hitler with the smiling couple and their children enlightened the public to the contrary in newspapers throughout the Reich.

GOERING, HERMANN (WILHELM) Jan. 12, 1893- Marshal of the Reich; head of the German Council of Economic Warfare and of the German Air Force

Address: h. Berlin, W. 8, Leipziger Str. 3, Germany

A "mixture of Falstaff, Murat and Bismarck," Hermann Goering, the god Thor of modern German mythology, is the man who built the German Air Force, who diverted 50 per cent of the national income to war preparations, who helped to build the Army, to organize the Secret Police and concentration camps. He has been Prime Minister of Prussia, Commandant of the Prussian Police, Head of the State Secret Police, President of the Reichstag, Air Minister, Commander in Chief of the German Air Force, Chief Forester of the Reich, Reich Commissioner for the Four-Year Plan—and has held more than 20 other special offices in Nazi Germany, from Supreme Head of the National Weather Bureau and Chief Liquidator of Sequestrated Estates to Chief Huntsman and Game Warden. He has become one of the world's most powerful industrialists. The Führer himself named him as his successor.

In mid-July 1941, a report coming over the Moscow radio announced that Marshal Goering was in disgrace with Adolf Hitler because he argued that the German Air Force which he commands could not undertake the campaign against the Soviet Union without substantial reinforcements. According to this report, Hitler called his Marshal a coward, himself took over direction of the Air Force; and Heinrich Himmler (see sketch this issue), chief of the Gestapo, was said to be insisting that he be sent to a concentration camp. Later, stories appeared that both his legs had been blown off; still later, that he had been placed in supreme command of the German armies on the Eastern front.

There have been stories of Goering's friction with his Führer before, their reliability hardly enhanced by the fact that Goering has been called a "moderate" and an extreme "Rightist"; one of Hess' (see sketch this issue) best friends and one of his most bitter enemies; the man who has continually urged caution on Hitler and the man who, put in charge of Germany's destiny, would place even greater emphasis on militarism, blood and conquest. But one thing nearly all writers seem to have agreed on: Heinrich Himmler is the only man who can make the lionhearted Hermann tremble. If the Moscow report had been true, it would have indicated that dissension within the Nazi hierarchy was even more serious than the outside world had suspected. Photographs coming out of Germany, however, show Goering and Hitler together and characterize the whole story as "Russian propaganda." And on November 30, 1941 a meeting between Goering and Pétain was reported at St. Florentin-Vergigny.

One of the very few Nazi leaders who come of a distinguished family, Hermann Goering was born at Rosenheim, Bavaria on January 12, 1893, the son of Dr. Heinrich Ernst Goering, who had been the first Governor of the German Protectorate of South West Africa and Elizabeth (Lohe) Goering. He grew up in the mountains and forests of South Germany and Austria, spending much of his childhood in a medieval castle in Franconia. "School bored and irritated me," he said later. "I hated lessons. . . All I wanted was to be a soldier." He was finally sent to the cadet college of Karlsruhe.

German Railroads Information Office
HERMANN GOERING

When the First World War broke out, Goering was a mere lieutenant, a slender young man with burning eyes, in the 112th Prinz Wilhelm Infantry Regiment in Alsace-Lorraine. Later joining the Air Force, he became an aerial observer, a pilot and combat flier, eventually the ace who is reported to have shot down from 23 to 36 planes during the War. In 1917 he himself was shot down, a bullet in his hip. This war wound was to trouble him throughout his life, and some say that it accounts for his present obesity. Returning to the front, by June 1918 he had become commander of the "Flying Circus" made famous by Von Richthofen, and he received Germany's highest decoration for valor, the Pour le Mérite.

There can be no doubt of his fantastic bravery. After the Armistice, when ordered to surrender his machines to the advancing Americans, he defiantly flew them back to Germany, and they were finally destroyed only after a series of remarkable exploits. At a farewell celebration he and his officers then toasted the 56 dead Circus pilots and pledged to work for Germany's "liberation."

When Goering returned to Berlin, a group of Socialists, seeing him in uniform, tore his officer's insignia from his coat lapels. His indignation and resentment at this may account to some small degree for his later con-

GOERING, HERMANN—*Continued*

version to National Socialism, but there were more important factors. After the War there was no place for him in Germany; he was penniless except for a small captain's pension; he was untrained for anything but war. The year 1920 found him in Sweden, where, after working as a commercial pilot and mechanic, he achieved the position of official in the Svenska Lufttrafik in Stockholm. There he met and fell in love with the unhappily married Baroness Karin von Fock, who divorced her husband and returned to Germany with him.

Goering already thought of his country as the "Jew Republic." He had no more prospects there than before, but his wife had money, and there were friends who could help him, among them the late Ernst Roehm, who was already working for Hitler. In 1922, when Goering went with Karin to Munich and enrolled in the University for an economics course, he was seldom found at the lectures: he himself was busy organizing the S. A. (the "Storm Troops"), whose leader he became in December of that year. The failure of the Nazi beer-hall *putsch* in 1923 temporarily upset all his hopes. Karin's jewels had been sold; they were living on borrowed money; he had been wounded again in the *putsch*. Despairing, they made a trip back to Sweden, where in September 1925 he was admitted to an asylum as an "extremely dangerous asocial hysteric," a morphine addict. Karin was ill, too, with epilepsy—too ill to travel when he was released from the asylum. Anxious to return to Germany after the amnesty of 1926, he left behind him not only Karin but Karin's child, for they had been deprived of its custody.

During the next year Goering reorganized the S. A., and was elected to the Reichstag as one of its first Nazi deputies. He also became head of the motor-works in Munich, and tried with some success to persuade aircraft and motor industrialists that when Nazism came into power it would revive the industry through air rearmament. In 1930, safely reelected to the Reichstag, where the number of Nazi deputies had now increased from 12 to 107, he became the Nazi Party's political agent in Berlin. August of that year found him elected President of the Reichstag, where he and Hitler fought together against what they called Von Papen's (see sketch this issue) "dictatorship." Then, in October, came sad news from Stockholm: Karin was dying. He hurried back; Hitler telegraphed him to return; and it was in Berlin that he received word of his wife's death.

Goering was corpulent now, "a great, rotund man with a ruddy face, thin lips, steely eyes," and an all-consuming ambition. In 1932, with Nazi strength in the Reichstag increased to 230 deputies, he was re-elected its President. In January 1933 he informed the credulous Von Hindenburg that Von Schleicher meant to march in with troops and arrest him—and thus secured the signature of the decree appointing Hitler Chancellor. He became Minister without Portfolio, one of the three Nazis in Hitler's first Cabinet. His first step was to take over the offices of the Prussian Minister of the Interior, which gave him control of the police. Dismissing leading police officials, he replaced them with S. A. men, persuaded Hindenburg to give special powers to the police, and by his orders incited the murder of dissenters from the regime, the breaking up of opposition meetings, the plundering of Jewish business houses. As he put it: "You must all become accustomed to the idea that I am not in office to dispense justice but to destroy and exterminate." It was several months before his position was weakened by the abolition of the S. A. auxiliary police; 10 days after Himmler consolidated the control of all the state political police into his own hands, in April 1934, Goering resigned as Prussian Minister of the Interior, and shortly after that he yielded control of the administrative and criminal police.

Another act of Goering's, according to many accounts, was the plotting of the Reichstag fire of February 1933. Although he may have taken a "moral whipping" at Dimitrov's hands during the trial that followed, Goering remained urbane. Shortly afterward he saw a new ministry formed, composed almost exclusively of Nazis; he himself promptly stepped into Von Papen's shoes as Premier of Prussia. In June 1934 it is said that the voice at Hitler's ear, hinting at a plot against him, was Goering's; that the ill-fated Roehm and Gregor Strasser would have made peace with Hitler if he had not interfered; that it was Goering who made out the longest list of proscribed persons. Whatever the facts in the matter, while Hitler was superintending the executions in South Germany on "Bloody Saturday" Goering was settling accounts in North Germany, and it was he who announced the shooting of Frau von Schleicher for "resisting" her husband's arrest.

He had already begun what was to be his most important service to the Nazi Party, too. When Hitler came into power Germany had been permitted only 100,000 soldiers and a little artillery—no tanks, no planes. Hitler promptly ordered Goering to build the greatest air force the world had ever seen. In the spring of 1933 the *Reichsluftschutzbund* had therefore been founded, and the Ministry of Aviation formed with Goering at its head. Thousands of young men began learning to fly in what were presumably air sports clubs; to foreign diplomats Goering announced: "Germany has no air force yet." The construction of aviation factories went on underground and in sparsely settled regions, and if the commercial aviation industry was being reorganized in order to build transports which could easily be converted to military uses, that was a secret, too. Not until March 1935 did the young men take off their plus fours and pullovers, don uniforms and reveal themselves as the German Air Force.

The very next year, in March 1936, when Hitler proclaimed Germany's "unshackled sovereignty" and reoccupied the Rhineland, Goering handed over to the Army 56,000 soldiers quietly trained as special police. In April of that year he was put in charge of controlling and coordinating the activities of the ministries and departments concerned with questions of raw materials and foreign exchange; and in October he was made commissioner for the Four-Year Plan, previously approved by the bankers and industrialists whose foremost spokesman he was, which he introduced to the world at the Nuremberg Party Congress that year. "Guns are better than butter," he announced, and he acted on his announcement. Given powers "to subordinate to the party all banks, industrial concerns, foreign trading associations, finance and note-issuing houses," he concentrated on making Germany not only bristling with armed might but self-supporting, independent of foreign raw-material imports, with gold and foreign exchange carefully husbanded. He was now officially the Reich's second-in-command.

It was while in this position that Goering himself became one of the world's great industrialists. Under a decree of July 1937 he took over certain low-grade iron deposits, and with $2,000,000 of the Reichsbank's money formed the Hermann Goering Works. Gradually he acquired coal fields, gravel pits, quarries, lignite mines, lime deposits, refractory materials, oil fields, commercial houses and shipping companies in other countries as well as in Germany. When in 1939 Fritz Thyssen left Germany, Goering took over his holdings, the largest steel mills in Germany. By 1941 his trust's capital account amounted to $800,000,000, according to *Time's* figures; what percentage of its profits goes to Goering himself is not certain, but he is said to have $1,250,000 in a Brazil bank, large investments in stock in American railroad and steel companies, and other substantial sums tucked away in Switzerland and in Italy.

In the meanwhile Goering was also becoming well known as the genial host to distinguished visiting foreigners, among them Colonel Lindbergh (see sketch this issue), the Marquess of Londonderry, Lord Halifax, Lord Lothian, other gentlemen of the Anglo-German Fellowship, and Hungary's Admiral Horthy. They usually came away charmed and convinced that Germany's case had been much misrepresented by her enemies—or, at least, that Goering was one of the Reich's "responsible" elements. Sir Nevile Henderson, British Ambassador to Germany, was particularly impressed—called him "a typical and brutal buccaneer," but one who "had certain attractive qualities." He admired his "loyalty to Hitler, administrative ability, physical courage, sportsmanship, above all his frankness, which does not stoop to devious deceits." He wrote to the late Neville Chamberlain suggesting that for diplomatic reasons *unser Hermann* would be more acceptable than Hitler to Britain.

In February 1938 Goering was given the highest German military rank, that of Field Marshal, and in that same year became a member of the Cabinet Council. Henderson credited him with intervening decisively for "peace" in September 1938, and in August 1939 he was again conferring with the jovial Hermann. Goering promised him that if Germany and Britain went to war the German Air Force would bomb only military objectives. Henderson replied that bombs might easily fall on residential London, and that he, personally, would object to being struck by such a "present." Goering, smiling as always, retorted that if such a thing should happen he would send a special plane to drop a wreath at his friend's funeral.

Just before the Polish invasion, Hitler appointed a "Cabinet Council for the Defense of the Reich" and made Goering chairman, with authority to issue decrees without his signature. He also announced: "If anything should happen to me, my successor will be Field Marshal Goering." This, however, did not prevent rumors during the first months of the War that Goering was "in disgrace, biding his time in the country, and intriguing with the Allies." They stopped only after a decree of January 4, 1940, when a new Council of Economic Warfare, uniting all the chief offices of Germany having to do with war economy policy, was created under his leadership. In July 1940 he received the newly-created title Marshal of the Reich, and the Grand Cross of the Iron Cross was bestowed upon him. The fact that surprisingly little news of him had come out of Germany since June 1941, when he paid tribute to the activities of the German air force in Crete, may have lent credence to the Moscow report.

Goering has never forgotten his first wife. Two years after her death he built a huge memorial for her, and all Germany was required to go into mourning when it was unveiled. This, however, did not prevent him from making his second marriage (April 1935), to Emmy Johanna (Sonnemann) Henny, of the Prussian State Theatre, an occasion for national jubilation. They have one daughter, Edda, named after Mussolini's daughter; she is an adopted child, if rumors are true. The fabulous luxury of the Goering establishments is known all over Germany, and even Goering's air ministry in Berlin has 2,500 rooms. Their Berlin home is a large structure, almost a palace, in Leipziger Strasse; and in Bavaria they can boast of a castle, Karinhall, set in the middle of a 100,000-acre game preserve. Museums and private collections have been plundered for Goering's El Grecos, Raphaels, Titians and Rembrandts. Some of Karinhall's other features are Roman sarcophagi, a Byzantine room with a fountain, a Viking Hall, a Louis Quinze dining hall, a private gymnasium—and one room with an artificial mountain landscape and a miniature electric railway!

Equally famous is Goering's collection of uniforms. "Public Clothes-Horse No. 1," he is supposed to own at least 50, and all different. They include a mailed costume of the ancient Teutonic knights, and Goering once went on a hunting expedition carrying a spear and wearing bearskins and Wagnerian headgear. A

GOERING, HERMANN—*Continued*

passion for medals makes his costumes even more astonishing. It was once whispered that he donned an admiral's uniform when he took a bath, with rubber duplicates of all of them. Photographed at all sports except swimming, Germans also joke that he "sits down on his stomach" and wears corsets on his thighs—but his is "fat atop an immensity of muscle." Besides, he went from 270 to 230 pounds in 1939, and then proceeded to address citizens of the Reich: "Look at me! I have lost pounds in the service of the country. Why do you complain at cutting down your meals a little?"

Goering likes to be referred to as "Iron Hermann," and his emblem is a fist clutching an iron ring. Douglas Reed says his philosophy is: "Live, but don't let live." His conversation is "crude vernacular," seasoned with "brutal epithets of the street"; his fun is grim fun. A medieval hangman's ax hangs on the wall of one of his rooms, and he used to wrestle on the lawn with a pet lion cub, Caesar. He is said to have no regard whatsoever for life—his own or others—and in November 1938 it was he who signed the most drastic anti-Semitic decrees ever issued in Germany, although it has been said that he is personally no anti-Semite. One of the many jokes that have gone the rounds (Goering is one of the few Nazi higher-ups who always delighted in hearing jokes about himself, no matter how rude) is the tale of the time when Goering was late in meeting an English friend at a Berlin luncheon. He apologized, explaining that he had been out shooting. "Ah," replied the poker-faced Englishman. "Animals, I presume?"

GOGARTY, OLIVER (ST. JOHN) (gō′gẽr-tĭ) Aug. 17, 1878- Author; poet; physician

Address: h. 15 Ely Place, Dublin, Ireland

Oliver Gogarty is the witty, Casanovian Irishman whose semi-autobiography, *As I Was Going Down Sackville Street* (1937), first brought him wide attention in American literary circles. A later book, *Going Native* (1940), continues his autobiographical reminiscences together with sketches and episodes that are perhaps purely imaginary. One Gideon Ouseley (Gogarty himself) is the narrator: an Irishman who goes native in England. Beginning with a description of Yeats in old age, he proceeds to a visit with the vicar of Mea Culpa and a meeting with the vicar's beautiful niece. Gogarty's mixture of blarney, wit and scandalous asides is enjoyed by many readers and critics, heartily disliked by others. Some condemn his attempts to be risqué; others say of the book that it represents once again "the witty, gay and mischievous Gogarty contributing once more to the gayety of nations." He has been called "at once sensitive and savage, poet and ghoul, hero and knave." His most recent book is *Mad Grandeur* (1941), a novel of eighteenth century Dublin, a book which sparkles with "audacity, incisiveness, originality."

Beyond what may be gathered about him from reading his books, little is actually known of Gogarty. He is, in fact, a distinguished physician, a throat specialist who works in an up-to-date hospital and is a Fellow of the Royal College of Surgeons of Ireland. And although he pretends to be a carefree bachelor in his writings, he was married in 1906 and is the father of two sons and a daughter. Oliver St. John Gogarty was born in Dublin on August 17, 1878 and was formally educated at Stonyhurst, at Trinity College, Dublin and at Oxford. He became active in Irish politics and was elected a Senator of the Irish Free State, an office which he held from 1922 to 1936. Early one night in 1921 he was routed out of his Dublin house by his political enemies and "taken for a ride." He escaped only by jumping into the icy waters of the Liffey. To the Liffey he promised (should she return him home safely) an offering of two swans. She did, and although his country house was burned down and he and his family had to flee to England for safety, later he got the two swans and set them ceremoniously asail on the Liffey. Hence the title of his first book of poems, *An Offering of Swans* (1924).

In England after his fracas with the enemies of the Irish Free State, Gogarty spent some time with Talbot Clifton, English sportsman and explorer. Although opposed to the Government in Ireland he returned in 1937 and took no active part in politics. In that year his first full-length prose work, *As I Was Going Down Sackville Street,* appeared. It was a tour of Dublin and Dublin personalities, real and fictitious. Shortly after its publication a Dublin art dealer won a suit against Gogarty for "libelous verse and prose passages" in the book. In 1938 appeared *I*

OLIVER GOGARTY

Follow St. Patrick, and in 1939 *Tumbling in the Hay*, an autobiographical novel of his own medical student days in Dublin which one critic says "defies every convention of decency and reticence" and another calls "incoherent." Gogarty is also the author of further books of poetry: *Wild Apples* (1929) and *Elbow Room* (1939). His poems are noted for their use of epigram, their precision and clarity, revealing a talent "authentic within narrow dimensions." They have been called "as cool and fresh as a fountain, and delicate as a beautiful change of light."

In the winter of 1939 Gogarty came to America on an extensive lecture tour while he was completing his *Going Native*. He likes Americans; they like him. An interviewer wrote of the Dublin doctor: "With his erect stature, ecclesiastic countenance, lively blue eyes and stiffly brushed gray hair, he looks like a jolly Irish army chaplain in mufti."

Of his Buck Mulligan role in *Ulysses* Gogarty said: "I'm the only figure in *Ulysses* who swims, shaves, washes his neck and brushes his teeth. There is not another person in the work who has the slightest contact with soap and water." His feeling for the late Joyce, his fellow student, was one of sharp distaste because of Joyce's habit of keeping notes on every bit of conversation.

Gogarty has been further described as a man of fierce loyalties and fierce hates. Among literary figures he admires William Butler Yeats and George Moore. He loathes Eamon de Valera; he exalts Michael Collins and Arthur Griffith. Yeats was a frequent visitor to Gogarty's country house, which boasted an extremely active ghost. On one visit Yeats proceeded to "lay" it by sending it an itemized manifesto of "don'ts." Gogarty says it worked.

Among his many interests Gogarty lists archery, which he practices when he is at his country home in Renvyle, County Galway; and aviation: he pilots his own plane. When he was younger he was a motorcycle racing enthusiast. His personality is dynamic, many-sided, his wit as ready and keen in conversation as it is in his books. He is a devout Catholic.

GOODRICH, MARCUS (AURELIUS) Nov. 28, 1897- Author; scenarist

Address: b. c/o Farrar & Rinehart, Inc, 232 Madison Ave, New York City

Paul Woolf

MARCUS GOODRICH

Late in the '20s, a young man, doing odd writing jobs for the newspapers and the screen, used to fascinate his friends by telling them stories of violent action, colored by passionate and rich imagination, and mostly having to do with a ship. Clifton Fadiman (see sketch this issue), who had listened to those stories, writes about the young man: "Above all things he wanted to be a writer, but none of us was convinced he would ever be. He was, we thought, too good a talker. He saved nothing for the writing desk. I knew vaguely that he was at work on a long novel. As the years passed . . . my conviction was, with regret, reinforced, that Marcus Goodrich would never finish that book."

Fadiman was wrong. Marcus Goodrich did finish that book, though it took him more than 15 years to do it. Called *Delilah*, it was enthusiastically greeted by most of the reviewers when Farrar & Rinehart brought it out on January 29, 1941, and reached the best-seller list. On March 20, 1941, its author flew to Chicago from the coast to receive the $1,000 1941 award from the Friends of American Writers.

The story charts Goodrich's own experiences on a destroyer during the last War, "heightened by his study of Melville's towering symbolism, Conrad's profuse style and James' snakelike character analysis." Add to this long-drawn-out Proustian dissection of impressions and actions, as applied to the simple seaman, and you will see that *Delilah* is no mere adventure story. It is really an impassionate and highly personal study of the complicated organism that is a destroyer; the plot is a progression of increasingly brutal episodes, starting with the ship's race across the Sula Sea and ending in a "crescendo of riot, bloodshed and insanity that coincides with the declaration of war." During that time the author has been able to transmit to the reader the personalities of the violent yet sturdy people who man the ship: the Old Man, with his almost superhuman responsibility; O'Connel, the huge Irishman whose spell of bloody madness ends the book; the dapper Bidot; the bully Feenan; the old monk whose conflict with the drunken trader makes some of the best pages in the book.

Marcus Aurelius Goodrich was born November 28, 1897 in San Antonio, Texas, son of Briggs Benjamin and his cousin Helene (Goodrich) Goodrich. The Goodrich family was a well known one. Benjamin Briggs Goodrich, the author's great-grandfather, signed the Texas Declaration of Independence and helped draft the Texas Constitution; another Goodrich was killed in the Battle of the Alamo, an historical occurrence that means a great deal to Marcus Goodrich, who digresses for many pages in his book to write a vivid description of it. He received his education in the public schools of San Antonio (Stephen F. Austin Grammar School, Breckenbridge Junior High School, San Antonio High School). During that time he also acquired a passion for literature. His mother, "a blonde who read Elinor Glyn" but who "knew what I wanted and wanted to help me," fed him volume after volume of Everyman's Library. After high school Marcus served with the Texas National Guard on the Mexican border through part of the 1914 crisis there.

Shortly afterward he ran away to sea and joined the Navy as an apprentice seaman. He stayed there all through the War years, serving on cruisers, a battleship, a gunboat, a submarine and a torpedo-boat destroyer, which was lost in action. During his service he took copious notes which were very useful to him later when he wrote *Delilah*. It is probable that Warrington, the bookish Texan lad in his story, was a picture of himself in those days. He served on a tiny antiquated destroyer, the *U. S. S. Chauncey*, which was one of the first to take action against the enemy submarines after a spectacular dash from Manila to Gibraltar. He left the Navy in 1920 as a commissioned officer and naval aviator.

His Navy days over (although he had to return as reserve flying officer for a few weeks every year until 1925), he finished his education, which had been interrupted by the War, at Columbia University. He had decided to become a writer. He found employment on various newspapers here and abroad. He worked for the New York *Tribune*, the New York *World*, the New York *Evening Post*. He was for a while dramatic editor and second dramatic critic on the New York *Tribune* and also used to write special features for the New York *Times Magazine*. His essay on Maugham's *Of Human Bondage* was supposed to have renewed interest in that classic. Periodically he traveled to Europe, where he would work for the Paris *Herald*, send back stories to the *Times* and spend his time sitting around cafes with the Ernest Hemingway group and killing what seemed to be a great thirst. Goodrich himself says cheerfully of those days: "I was drunk most of the time. My father had been a drunk and my grandfather. I didn't see how I could avoid it. People told me that drinking was nothing to worry about, that great art came from liquor and that without its help imagination was not free. . . I've been pulled out of gutters in many of the best cities in the world." (What home life he had he shared with Caroline Sleeth whom he married in 1927 and from whom he was divorced some years later after the birth of a daughter Helene.)

Mr. Goodrich thought the situation over and found that drinking interfered with his writing. "I compared my writings in sobriety with my drunken efforts," he says gravely. "The sober work was better." Henceforth he devoted his time solely to writing the traditional "great novel," which in his case was *Delilah*. Since writing one book for fourteen years is not a paying proposition, Goodrich kept himself going by odd writing jobs. He wrote advertising copy for N. W. Ayer & Son of Philadelphia. He drifted into the movies, where his good "story mind" served to good purpose. His first experience was working as a scenarist with Vitaphone. Later he worked as writer and technical adviser for MGM, United Artists, RKO (*Night Waitress*, 1936), Republic (*Navy Born*, 1936) and Paramount (*The Trumpet Blows*, 1934). During that time he had been "keeping his soul alive" by talking *Delilah* to anybody who would listen.

In 1932 he signed a contract with John Farrar, who was enthralled with the book just from hearing Goodrich tell his stories about it. The publishers have helped him generously, and he took jobs only when he absolutely had to, spending his time mostly in Mexico or Central America, where living is cheap. In 1937 he collaborated on a play called *The Mighty Treve*. But his main activity was writing and rewriting his book.

Goodrich is an ardent and deliberate stylist, a man who is enthralled with the sound of words. And he prefers 25-dollar words. As a matter of fact, one of *Delilah's* failings is that in many parts they get the better of him and in his intoxication he loses the sight of their meaning. In one of the few detractory reviews of *Delilah*, Otis Ferguson of the *New Republic* remarks on that. He also says sourly that the "ear appeal of this book is apparently strong to armchair navigators but I hardly think it will go down as literature." Yet Goodrich, a tall rugged Texan with craggy features and blue eyes, is rather pleased with the style he evolved—a style which is a sort of Melville-out-of-Hemingway creation with a dash of Proust. He is frankly scornful of the "fetish of short sentences and short words", "the insistence that all Americans . . . write like backwoodsmen." He is pleased with the book as a whole. Its failure —a failure of 15 years' steady work—would have meant that his whole life was a failure. As it is, he has regained a complete sense of personal integrity and is ready to go on with a sequel, *Delilah in War*, which will take about a year to write.

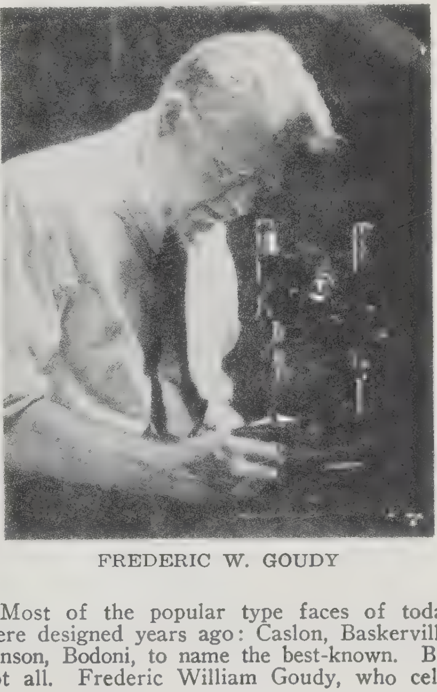
GÖRING, HERMANN WILHELM *See* Goering, H. W.

GOUDY, FREDERIC W(ILLIAM) (gou'dĭ) Mar. 8, 1865- Typographer
Address: h. Marlborough-on-Hudson, N. Y.



FREDERIC W. GOUDY

Most of the popular type faces of today were designed years ago: Caslon, Baskerville, Jenson, Bodoni, to name the best-known. But not all. Frederic William Goudy, who cele-

GOUDY, FREDERIC W.—*Continued*

brated his seventy-sixth birthday on March 8, 1941, is the creator of over a hundred type faces, "outstanding for their simple strength and beauty." These types have been widely used in fine books; they have been widely seen in advertisements and are, indeed, supposed to "have transformed the advertising pages of every magazine in America." It is easy to understand why "*Goudiamus igitur* has been the motto of printers for some years."

Goudy came to his position of eminence in the typographical world only after a career that was dogged by misfortune—a career marked by unprofitable work as an accountant, thin spells of free-lancing and two fires which destroyed a good part of his work. He was born in Bloomington, Illinois, the son of John Fleming Goudy, a schoolmaster, and Amanda M. (Truesdell) Goudy. When his parents moved to Shelbyville, Illinois, young Goudy attended school there and was graduated from high school in 1883. He had earned part of his living by acting as janitor and copying drawings, and when he left school he started to earn his living in earnest as assistant to Shelbyville's leading paper hanger.

Goudy was a paper hanger for only a short while. His father soon moved to South Dakota, where he became a Federal probate judge and a real-estate operator, and took Frederic with him as his bookkeeper. Frederic worked for his father for three years and then spent a number of years wandering through the Midwest, getting jobs here and there as an accountant, learning practical printing in small-town shops. He was becoming, during these years, more and more interested in typography and lettering; and in 1895, together with an English teacher named C. Lauren Hooper, he set up his Camelot Press in Chicago. It was here that he drew his first type face. He sent it off to the Dickinson Type Foundry in Boston with a note saying that if they could use it, it was worth $5. The company sent back a check for $10, and since this face, Camelot, is still selling today, has probably never regretted its generosity.

The Camelot Press printed a rather precious artistic journal called the *Chap-Book* which soon faded out, and the Press with it. Goudy was thrown back on bookkeeping and got himself a job as cashier for a journal called the *Michigan Farmer*. He soon lost it—before him he saw a future of a dreary succession of dreary small-town accounting jobs. Anything was better than that. He decided to strike out in another direction, and went with his wife, Bertha M. Sprinks, whom he had married in 1897, to Chicago to set himself up as a free-lance designer of book jackets, advertising layouts, initial letters. He survived, but only just.

Then things began to improve. In 1903, the year he evolved an alphabet which was used for advertisements for Kuppenheimer clothes, he acquired a partner, some 150 pounds of type and a small hand press. He and his wife set themselves up in an old barn at Park Ridge, Illinois and together ran the modest Village Press, its first book an essay on printing by William Morris. In 1904 they moved the Village Press to Hingham, Massachusetts, a little later to New York. Then in 1908 the Village Press burned. There was little insurance, and Goudy found himself back where he had been five years before.

He had to start all over again. He took desk space in an advertising agency in return for odd drawing jobs and turned his designing once more to commercial ends. Within a year he had scraped together enough to visit Europe to study old types, and he returned from his trip determined to be almost exclusively a type designer. Soon afterward he was asked by Mitchell Kennerley, the New York publisher, to design a book face and font of display capitals. The result was Kennerley, "the most beautiful type put within the reach of English printers since the first Caslon began casting about the year 1724." Kennerley, Forum Titling and other faces were taken up by such solid concerns as the British firm of Caslon, and the American Type Founders' Corporation bought his Goudy, Goudy Bold and Goudy Old Style. Other firms bought other faces—they became immensely popular, widely used for both book work and display. The Lanston Monotype Company in 1920 made him its consultant and he still holds this position.

A few years after the War, Goudy had re-established his Village Press, and in 1924, with the profits from his many commissions and from a lucky real-estate deal, bought a house and workshop (Deepdene) at Marlborough-on-Hudson. Here his wife (he dedicated his one-hundredth original font to her) composed for him until she died in 1935; his son, Frederic T. Goudy, ran the machines; and Goudy himself learned to cut matrices. Every process of book making, from design to printing, was carried out there by the family. And then, after 15 years, this workshop, too, was gutted by fire, on January 26, 1939. The old mill in which everything was housed was burned to the ground and with it type patterns, drawings, foundry matrices and machinery for cutting matrices, much of these irreplaceable. But Goudy didn't give up. "I still have my right hand," he said, "and can always buy a pencil." He started work almost immediately on drawing and pattern making and began working even harder on his autobiography. His friends and fellow artists and the general public as well rallied around and presented him with a testimonial fund at a dinner in his honor—a fund that has been used to build and equip a one-room studio addition to the Goudy home at Marlborough.

Goudy's types are, according to one critic, "beautiful because they are simple; they are dignified, they are sturdy and honest and strong." They stand up well whether they are displayed in an advertisement or grouped on a book page. "I have never permitted myself to allow my craft to become an end in itself instead of a means only to a desirable and useful end," he once said. In recognition of what he has done for American graphic arts he has been awarded the gold medals of the American Institute of Architects, the Architectural League of New York and the American Institute of Graphic Arts, as well as medals from the Ulster-Irish Society of New York and Syracuse University's School of Journalism.

Goudy has been author and editor as well as type designer. His *The Alphabet* was published in 1918, and *Elements of Lettering* followed in 1922. In 1936 *Capitals from the Trajan Column at Rome* was published and in 1940 *Typologia* appeared. Goudy has also been the editor of *Ars Typographica*, a quarterly magazine, and he has lectured in many schools and universities. It was while this genial, bespectacled typographer "who looks like a Sunday-school superintendent" was giving a course in lettering at New York University years ago that he made one of his more famous characteristic remarks. As told in the *New Yorker*, a sweet bright young thing in his class raised her hand and asked: "Professor, how do you design type?" Goudy turned to her: "You think of a letter, and then you mark around it," he easily replied.

GRACE, EUGENE GIFFORD Aug. 27, 1876- Steel manufacturer

Address: b. Bethlehem Steel Corp, 25 Broadway, New York City; h. 12th and Prospect Aves, Bethlehem, Pa.

One of the firms most important to national defense is the Bethlehem Steel Corporation, whose president is tall, slender, placid-faced Eugene Gifford Grace. Since the First World War the Pennsylvania town which claims Mr. Grace as first citizen has not presented such a picture of frenzied industry. There is a boom in steel; in February 1941 the Bethlehem Steel Company had over a billion dollars in defense contracts. And since the death of Charles Schwab in 1939 the name of Eugene Grace has been synonymous with that of Bethlehem Steel.

Eugene Gifford Grace was born on August 27, 1876, the son of John W. and Rebecca (Morris) Grace. Even as a boy he was interested in mechanical and electrical matters, and fond of performing experiments in order to work out some of his theories. When he went to Lehigh University in 1895 he used to wander about the steel mills, and would sometimes get permission to work in them in order to perform further experiments for his laboratory courses. His scholastic record was excellent, and he acquired his "L" as captain of the varsity baseball team before taking his degree in Electrical Engineering in 1899. (Three decades later the University gave him an honorary degree of Doctor of Engineering.) June 29, 1899 was his first day at Bethlehem as operator of an electric crane—a laborer's job which paid less than $2 a day. But Grace was determined to forge his career in steel.

He rose quickly. By 1902 Eugene Grace was superintendent of yards and transportation, by 1905 general superintendent of the Juragua Iron Company, a subsidiary company of Bethlehem. Charles Schwab, "the American Krupp," already had his eye on him. The following year he was promoted to the general superintendency of Bethlehem, and two years later he was elected its general manager and a member of the board of directors. It was 1911 when he was appointed both vice-president and general manager of Bethlehem and a director of the Bethlehem Steel Corporation, and it was April 1, 1913 when he became president of Bethlehem Steel Company.

At that time Schwab's company was mainly a munitions and ship firm, but even in 1914, when many other companies were losing money, its earnings were $9,600,000. With the coming of the First World War the Allies signed contracts for its full munitions capacity, and in two years $300,000,000 in munitions were sold to Great Britain. "Bethlehem became War Bride No. 1 on the New York stock exchange," rising from an average of 30 in the period from 1913 to 1914, to 600 in 1915. In 1916 Schwab bought the Pennsylvania Steel Company, doubling Bethlehem's capitalization and transforming it into a general steel organization matching United States Steel. Grace became president of the Bethlehem Steel Corporation on February 17 of that year, and he proceeded to acquire a staff of experts and metallurgical specialists to undertake research and experimentation on a vast scale and also to introduce new methods of mining, smelting, refining and manufacturing.

In October 1917 Grace also acquired the presidency of the Bethlehem Shipbuilding Corporation, which got huge Government contracts for transports, cruisers and ships of all kinds, and which became known for its success in getting the boats from the "keel-laying stage" to the water in record time. Cannon, ammunition and armor plate were also supplied to the United States Government, and "Schwab's organization emerged from the War as the

EUGENE GIFFORD GRACE

world's most prosperous and second largest steel firm."

During April and May of 1918 there was a series of swift strikes among Bethlehem employees. The National War Labor Board begged the company to bargain collectively with them. As a result, in 1918 a plan providing for the election of employees' representatives was installed in Bethlehem—a plan which also offered a program of group health, plant safety and sports. It was called the Employee Representation Plan and was considered forward-looking by Bethlehem officials, but after the fierce repulsion of the 1919 steel strikes and the adoption of ERP by such companies as United States Steel, Labor began to think of it as synonymous with company unionism.

Bethlehem continued to expand. Schwab, as chairman of the Board, acquired the Cambria Plant at Johnstown, Pennsylvania, the Lackawanna Steel Company near Buffalo, the Maryland Steel Company at Sparrows Point, the Pacific Coast Steel Company, the McClintic-Marshall Corporation. From 1917 to 1931 Grace collected from Bethlehem $12,282,000 in bonuses alone. (In 1938 the stockholders sued to check what they termed a "present" of $16,000,000 to Schwab, Grace and other officers, but they lost the suit.)

Then, in 1933, came the NIRA. The board of the American Iron and Steel Institute, which represented 95 per cent of the total steel producing capacity of the United States and numbered among its members the president of Bethlehem, organized itself as the code authority for steel. Grace was on the administrative committee. His views were that the NIRA constituted a "charter of liberties" under which "our business structure is being put on a firmer basis, which will be helpful to our national economy. . . The Government, through the Industrial Recovery Act, aims to make possible recurring profits and dividends, which cannot be accomplished by robbing the capital which makes the output possible." And, although "certain groups of labor agitators" were trying to "chisel special advantages under the Recovery Act," Bethlehem's representation plan actually represented the "democratization of industry in its highest form." In accordance with this understanding the board of the American Iron and Steel Institute set about to fix prices and labor policies in the steel industry. Grace was to serve as its president from 1935 to 1936, and later to become director.

In 1934, the year in which he was awarded the Gary Medal, Grace announced at the open banquet of the Institute: "I believe I voice the opinion of everyone within my hearing when I say that we shall continue to maintain the open shop in the steel industry and by so doing insure to the employees the recognition and reward for industrial effort as against the closed union shop where all men are equal."

Nevertheless NIRA died, and the open shop was not maintained throughout the steel industry. After 1937 the Steel Workers Organizing Committee of the CIO got contracts in Big Steel and other plants. And after an appeal to the National Labor Relations Board by the CIO, following the 1937 strike in Bethlehem's Cambria plant, Bethlehem itself was ordered to withdraw recognition from and disestablish ERP at its 10 most important plants. This order Bethlehem officials are still fighting in 1941, on the grounds that ERP is not company unionism. (For months they also refused to heed the Government's order to pay a 62½-cent hourly minimum as provided by the Walsh-Healey Act, but eventually agreed to this.) Strikes have broken out as the CIO has gained strength in Bethlehem plants; minority stockholders have protested against the corporation's labor policies.

Even in 1939 Bethlehem's big Eastern shipyards were running at full capacity, and in October of that year President Grace announced the first dividend for Bethlehem's stockholders since 1937. "We are," he said, "in a position to be War Baby No. 1, as in the last War, but I can tell you that our directors and associates don't want that kind of business." This does not mean that Grace is opposed to war profits, however. On February 25, 1935, testifying before the Senate Committee investigating munitions industries, he stated that "private industry should be aided and encouraged in time of war and in my opinion should not be subjected to conscription the same as man power," for "nothing has ever been invented, in war-time or peace-time, that would make men work as hard as the lure of money and profit" In 1940 Bethlehem profits reached an all-time peak of $48,677,524; orders on hand also set a new record. Net profit for the first half of 1941 was $16,087,485, the decrease due to a higher rate of taxation. And in 1940 Grace's salary was listed as $478,144.

Mr. Grace is a trustee of St. Luke's Hospital and president of the board of trustees of Lehigh University in Bethlehem, a member of the Iron and Steel Institute of Great Britain, of the American Institute of Mining and Metallurgical Engineers, of the Society of Arts and Sciences in New York. He is a Presbyterian. He is a champion golfer. In 1917 he won the Hay Cup in the Northampton County Country Club Tournament; in 1919 he won the cup in the Shawnee Fall Tournament; and as recently as 1928 he acquired the Saucon Valley Country Club championship. On June 12, 1902 he married Marion Brown of Bethlehem, and they have a daughter and two sons: Emmeline Marion, Charles Brown and Eugene Gifford Grace, Jr., now all grown. His house is a regal structure on what has become known as "Bonus Hill."

GRAHAM, FRANK P(ORTER) Oct. 14, 1886- Member of the National Defense Mediation Board; president of the University of North Carolina

Address: b. University of North Carolina, Chapel Hill, N. C.

Frank Porter Graham, president of the University of North Carolina and a "fiery and apostolic liberal," was made a member of the National Defense Mediation Board when it was set up in March 1941. As a representative of the public (rather than of industry or labor) he is helping to negotiate agreements in industrial disputes which don't seem likely to be settled by ordinary means.

Dr. Graham had to recommend him for this position a long career devoted to the achievement of social justice. Back in 1929, when the textile strikes in Gastonia and Marion were turning North Carolina into a battleground, he addressed to the people of the State a statement of principles which in substance asked that the constitutional and legal rights of person, property and lawful freedom of speech and assembly be guaranteed equally to all persons in North Carolina without regard to birthplace, race, ownership or labor status, unionism or non-unionism, religion, politics or economic views. This statement, signed by more than 400 people, also called for a nationwide, non-partisan economic and social survey of the textile industry in America.

FRANK P. GRAHAM

Since then, whenever industrial conflicts have started, he has written, lectured, argued as the "flaming apostle of a better social order." As president of the North Carolina Conference of Social Service he helped prepare and sponsor the first workmen's compensation act in North Carolina, still considered the best in the Southern states. And in this position he constantly pleaded for a commonwealth "where individualism will not mean the freedom of any individual to impair the lives of other men . . . where machines shall not . . . tyrannize over the bodies and spirits of men; where children in factories shall become children in school; where there shall be no industrial night work for women."

In his fight for social justice, too, Dr. Graham founded the Citizen's Liberation Movement and in 1941 is a member of the general board of the Southern Electoral Reform League, which aims at a "direct frontal attack on the voter poll tax and the politicians who defend it."

Besides his liberalism and knowledge of the industrial problems of the South, Dr. Graham had his record of government service to recommend him for his position on the Mediation Board. During the days of the National Recovery Administration he was vice-chairman of the Consumers' Board, and in the fall of 1934 was made chairman of the National Advisory Council to the Cabinet Committee on Economic Security. He is also chairman of the Industries Committee of American Railroads and a member of the President's Committee on Education.

Dr. Graham comes of a family of teachers. His cousin, Dr. Edward Kidder Graham, was president of the University of North Carolina from 1914 to 1918; his father, Alexander Graham, who founded the public schools of

GRAHAM, FRANK P.—*Continued*

Fayetteville, North Carolina and was head of the schools at Charlotte from 1888 to 1913, is called the father of the graded schools system in North Carolina. His mother was Katherine Bryan (Sloan) Graham. Frank Porter Graham was born in Fayetteville and brought up in Charlotte, where he attended high school. In 1905 he entered the University of North Carolina as a freshman, four years later received his B. A., and then studied law at the University's law school (he has a license to practice from the Supreme Court).

After a period teaching English in the Raleigh High School, Dr. Graham (he is Doctor by virtue of six honorary degrees) returned to the University of North Carolina as secretary of the Y. M. C. A. In 1914 he was appointed an instructor in history there, and the following year studied at Columbia University, which awarded him an M. A. in 1915. His next leave of absence from the University took place in 1917, when the United States entered the First World War. Dr. Graham enlisted as a private in the marine corps and rose to first lieutenant before he was mustered out in July 1919.

He returned to the University of North Carolina as assistant professor of history and for one year held the position of dean of students. It was during this year and the next that largely through his inspiration and leadership a bond issue of $20,000,000 was provided by the Legislature for the educational and charitable institutions of the State. In 1921 Dr. Graham was made an associate professor and the following year went to the University of Chicago for graduate study. Here he won the two-year Amherst Memorial fellowship. A year in Washington, D. C., studying at the Brookings Institute and the Library of Congress, came next, followed by a period of research and study at the British Museum, the London School of Economics and the League of Nations in Geneva. In 1925 Dr. Graham returned to North Carolina and two years later became a full professor.

During the years he taught, Dr. Graham did more than just his class work: he went to football rallies, gave Phi Beta Kappa addresses, attended meetings of the local post of the American Legion, led the movement to improve North Carolina's library facilities ("We mean to hew to the line and cut through ignorance, indifference, inertia and inequality," he said, "until every person has equal public access to books in every county in North Carolina"). And the last year he taught he was voted by the senior class one of the best teachers in the University.

That was in 1930, for in June of that year, "over his protests," he was elected to the presidency of his Alma Mater. He took over the position "with wider approval than could have been given any other man." Since then, "generally rated the ablest United States state university president, he has helped make North Carolina tops in the South." Shortly after he took over, North Carolina found itself "enmeshed by the depression in one of the worst educational tangles in the country." Graham was given responsibility by the board of trustees for writing the plan for consolidating the three institutions of higher learning (State College of Agriculture, North Carolina College for Women and University of North Carolina) which now constitute the University of North Carolina.

It was not long after his inauguration, too, that he became involved in one of the many fights for freedom of thought and speech which have distinguished his career. One of the first of these fights had taken place back in 1925 when the Fundamentalists tried to restrict teaching in North Carolina. Graham, who was in Europe at the time, sent a statement to the press on "Evolution, the University and the People," which urged the people of his state to fight against the "false fear of the foes of freedom" and to hold "the first line trench against bigotry." When the Fundamentalists revived their effort two years later, Graham helped stop it dead in its tracks.

His next big fight came in 1932 when a petition was sent to the Governor of North Carolina protesting the fact that Bertrand Russell and Langston Hughes were being allowed to speak on the campus. Graham in answer told a class of students that the University would never shut its windows to outside light and never close the book of knowledge. Today, when various interests and the Legislature try to silence his liberal professors, he fights back; and in speeches and in articles he fights for the cause of academic freedom and democracy in education all over the United States. Dr. Graham still holds fast to the words of his inaugural address: "Freedom of the University means freedom of the scholar to find and report the truth honestly without interference by the University, the State or any interests whatever."

Dr. Graham, after many years of bachelorhood, was married in 1932 to Marian Drane of Edenton, North Carolina. Today she shares his reputation for being "favorably known in every nook and corner of North Carolina. He calls by their first names more people than any other man in the state and is addressed by more people in the same intimate manner." And most of these people will agree that the eulogies written of him when he became the University's president still hold good today. "He combines in his astounding personality," *The Nation* wrote, "high intellectual ability, convictions that are firm but free from intolerance, an unbounded patience, limitless energy, an enthusiasm almost apostolic in its fervor, an extraordinary capacity and natural felicity for finding a direct way into personal and public confidence and above all a quiet willingness to be forgotten."

GRANT, CARY Jan. 18, 1904- Film actor
Address: h. Santa Monica, Calif.

In his years in Hollywood, Cary Grant, six-foot-one, black-haired, dark-eyed, has played in more than 40 films—parts that include everything from the mock turtle in *Alice in Wonderland*, Pinkerton in *Madame Butterfly* and Mae West's "warm, dark and handsome" young man to Katharine Hepburn's sophisticated comedy lead. And in 1941 he was even being announced for the role of Sheridan Whiteside in *The Man Who Came to Dinner*. He went to work on other films instead, among them Alfred Hitchcock's (see sketch this issue) atmospheric psychological thriller, *Suspicion*, in which critics applauded him in a new kind of role. But his reputation for versatility wasn't hurt. Cary Grant likes it. He still ruefully remembers the days when he was a stock player at Paramount, a period when "I was just the nice young man who knew how to put his hands in his pockets and smile broadly at the girl."

Now one of the highest priced actors on the screen, in constant demand by glamorous stars like Carole Lombard, Irene Dunne, Rosalind Russell and Katharine Hepburn, his performances consistently praised by the critics, Cary Grant started his acting career as a knockdown comic, clown, eccentric dancer and stiltwalker. He was about 13 at the time. He was born in Bristol, England, christened Alexander Archibald Leach by his parents, Elias and Lillian (Kingdom) Leach, and sent to Fairfield Academy in Somerset. He ran away from school to join Bog Pender's Acrobats, but his father, a clothing manufacturer who was not influenced by the fact that his own father, Percival Leach, had played Shakespearean roles with Forbes-Robertson, caught up with Archie in about four weeks.

Archie submitted to education for about two years and then, at the age of fifteen, ran off again. This time he stuck with the Pender troupe and for five years lived the hard life of an acrobatic comic trouper in training. With the troupe he came to New York in 1921 to do an act in a Fred Stone show. Pender's acrobats then moved over to the Hippodrome, and from there went back to England. But not Archie. He stayed.

CARY GRANT

There were times when he wished he hadn't. He played in honky-tonks, walked stilts in a carnival show at Coney Island and at one time is reputed to have sunk to painting neckties with Orry-Kelly. After two years of not much better than this Archie Leach returned to England, where without much trouble he landed small parts in musical comedies. An Arthur Hammerstein scout saw him and signed him to sing the juvenile lead in New York in *Golden Dawn*. After this came other parts: roles in *Polly* and in *Boom Boom*, the lead in *Wonderful Night* and a romantic role opposite Queenie Smith in *Street Singer*. The summer of 1931 was spent in St. Louis, playing the lead in 12 operettas at the St. Louis Municipal Opera in Forest Park. In the fall he was back on Broadway playing with Fay Wray and Kent Douglass in *Nikki*. This was his last Broadway appearance. For five years, altogether, Archie Leach had been working in Hammerstein musicals and for the Shuberts, and though he had been getting along all right he had hardly set the world, or even much of Broadway, afire.

He set out for Hollywood in a secondhand car, lived for a while in cheap hotels and finally found himself a job in motion pictures and the name of Cary Grant. His debut was in *This Is The Night* in 1932, his part that of Thelma Todd's gesturing, javelin-throwing husband. Other parts followed fast—in *Hot Saturday, Merrily We Go To Hell*, in *Blonde Venus* with Marlene Dietrich, in *She Done Him Wrong* with Mae West. Cary Grant still thinks fondly of his two pictures with Mae West. "I learned everything from her," he says. "Well, no—not quite everything, but almost everything. She knows so much. Her instinct is so true, her timing so perfect, her grasp of the situation so right."

GRANT, CARY—*Continued*

Grant was under contract to Paramount during these years, though he was occasionally lent out to other studios. And after his sessions with Mae West his assignments were mostly run-of-the-mill ones. He admitted "they had a lot of leading men over there with dark hair and a set of teeth like mine and they couldn't be buying stories for each of us." Then in 1936 he was borrowed by RKO for *Sylvia Scarlett*, playing opposite Katharine Hepburn. This picture did nothing to endear its female lead to the public, but it helped make its male lead a success. He liked his part of a dastardly fellow: "For once they didn't see me as a nice young man with regular features and a heart of gold," and when favorable comments began rolling in Cary Grant decided to become a free lance after his contract with Paramount expired in 1937.

Along came *Topper*, *The Awful Truth* and *Bringing Up Baby*, and within 12 months after he went on his own Cary Grant was accepted as the screen's leading light comedian, on top of the Hollywood heap. But he didn't stick only to comedy: there were serious pictures like *Gunga Din*, *Only Angels Have Wings* and *The Howards of Virginia*. And Grant was satisfied with his free-lance status. "Working for more than one company has its advantages," he commented. "You are able to get staple assignments and often a studio will buy a story with you in mind." The studios paid him well, too, reputedly $125,000 for his role in *Philadelphia Story*, for instance.

This last money he donated to British War Relief. Other money he has spent in the usual Hollywood manner. His suits are London tailored, usually worn with a scarf instead of a tie, and seldom topped off with a hat—"I never can get a hat that looks good. I have that kind of a face." His house on the beach at Santa Monica has 12 rooms, a secretary who runs it and enough servants to keep it going smoothly. Its location is perfect, he thinks. "I like the ocean because no one can build a house in front of me or plant a high hedge or put up a billboard." And its interior is distinctive among Hollywood houses because there aren't any photos of him around, no more than in his studio dressing room. All pictures of Cary Grant are kept in his bathroom, which, he feels, is the correct place for them.

Some of his earnings, of course, go to entertain his friends and especially girls, and rumors about his love-life are always current. A long time ago he was seen frequently with Mary Brian, and tales of this romance were followed by pictures of Cary with various society girls. Later Mary Carlisle was reported his main interest, then Ginger Rogers (see sketch this issue). In February 1934 he temporarily stopped speculation with his marriage to blonde Virginia Cherrill, who played the poverty-stricken flower girl in Chaplin's *City Lights*. He announced that he and his wife were going to "live a simple, quiet life." Eight months later Cary Grant was being treated in a sanatorium after what was hardly a simple, quiet separation, and finally in March 1935 they were divorced. Since then Cary Grant has remained one of Hollywood's most eligible bachelors, his name linked with Phyllis Brooks for a while and then with Barbara Hutton, but he himself noncommittal.

He gets around Hollywood a lot and likes gay parties. At them, as often as not, he gravitates to the piano to play favorites like *Nola* or *Kitten on the Keys* or even his own jazz improvisations. He doesn't need an audience, either, and the same sort of thing goes on at home. Much of the time at home, though, he studies his scripts carefully, for he's canny about his career. And he also spends happy moments reading current novels, just lying on the beach, playing backgammon or sporting with his two Sealyhams, Cholmondeley and Archie Leach, whose names (like the kippers and tea he has for breakfast) are fond heritages of old England and his own past.

GRAUER, BEN(NETT FRANKLIN) (grou'ẽr) June 2, 1908- Radio commentator; announcer

Address: b. c/o National Broadcasting Co, Rockefeller Center, New York City; h. 1 W. 67th St, New York City

Ben Grauer is the announcer of some of radio's best-known commercial programs—*Walter Winchell for Jergen's Lotion*, Lucky

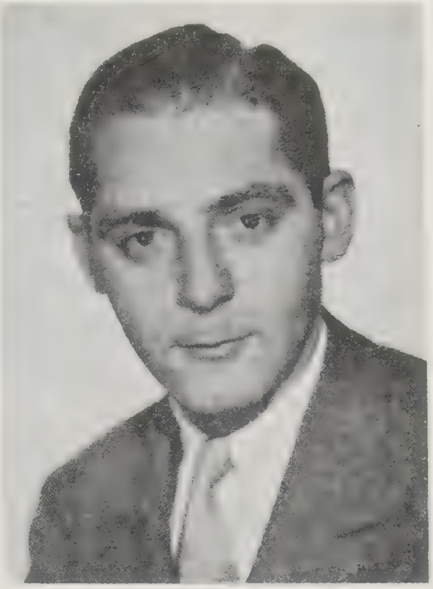
Strike's *Kay Kyser's* (see sketch this issue) *Kollege*, Molle's *Battle of the Sexes* are only a few of them—as well as commentator, master of ceremonies and quiz master. He has covered sporting events at the Olympic Games, football classics, golf matches; he has described the opening of the opera and Mayor Walker's Beer Parade; he has been quiz master of Tum's *Pot o' Gold* and of his own programs, *Name the Place* and *What Would You Have Done?*; and now he is adding to all these activities a wide schedule of NBC sustaining programs, including his own news commentary (sponsored by the American Chicle Company) titled *Drama Behind the News* and roundups of spot news in conjunction with NBC's staff of overseas commentators. Of all the things he does Grauer prefers ad lib, special events and commentating work; straight announcing, he feels, doesn't have the future these do, and these are what he intends to concentrate on.

Ben Grauer came to the microphone straight out of college. But there was a long and varied theatre career behind him. He was born on Staten Island, New York on June 2, 1908, the son of Adolph Grauer, a civil engineer, and Ida K. (Goldberg) Grauer. Six years later his family moved permanently to the Morningside Heights section of Manhattan, and young Ben went to Public School No. 10. His schooling was soon interrupted by his professional career, which started at one of those Saturday afternoon dancing schools where little boys learn how to be polite to little girls. A motion picture scout one Saturday afternoon chose several of the youngsters to take part in a film production, Ben among them. By the time he was eight he was playing in pictures at the old Fort Lee studios with stars of the "silent" days like Theda Bara, Carlyle Blackwell, Madge Evans and Pauline Frederick.

Grauer created the original role of Georgie Bassett in *Penrod* in the theatre in 1918 in a cast that included a new ingenue named Helen Hayes. Then he proceeded to do his bit during the First World War. Dressed as an army officer, he appeared at army camps throughout the East in entertainments and rallies for the doughboys. (Strangely enough today, some 23 years later, he is touring various service posts as master of ceremonies of the Clark Candy Company radio program, *Service With a Smile.*) Other stage and film parts followed—a starring part in *The Town that Forgot God*, roles in *Betty at Bay, Maytime*, and the revival of *Floradora;* the leading part of *Tyltyl* in Maeterlinck's *The Blue Bird* in 1923 and a role in the Theatre Guild's production of *Processional* in 1925. There was also, after the success of the picture *The Town that Forgot God,* an extensive personal tour of the East.

Schooling of a sort had gone on during these years, but his family felt it was time that Ben settled down and got some education. He went to Townsend Harris High School in New York and then to City College, from which he was graduated in 1930 after a career that included being dramatic critic of the school paper, editor in chief of its literary magazine and the winner of the Sandham Prize for Extemporaneous Speaking.

In college Grauer had majored in English and in his senior year had become interested in rare books and first editions. For a very short while after graduation he ran a little shop on Sixth Avenue, New York City, where he conducted a highly hazardous mail-order business. It was clear to Grauer almost from the start that he would never make his fortune as a bookseller. He decided to return to the theatre and through old friends got a job playing radio juveniles. Shortly after that he was referred to Pat Kelly, NBC's supervisor of announcers; an audition was held; and two hours later he was signed up as an announcer. This was in October 1930, and Grauer has been with NBC ever since.



BEN GRAUER

This young bachelor still keeps his interest in book collecting, particularly books on typography and the graphic arts, and has even developed new interests: golf, which he plays with relish and harrowing results, riding, tennis, and especially archeology. Recent vacations have been spent in Mexico and Central America, and if all he does on the radio and wants to do ever gives him the time, he intends to do a little serious field work in Yucatan.

GRAZIANI, RODOLFO (gräts-ĭä'nē) Aug. 11, 1882- Former commander of Italian troops in Africa

Marshal Rodolfo Graziani, self-made marquis and Italy's "best desert fighter," was until

Italian Library of Information

RODOLFO GRAZIANI

March 25, 1941 commanding all the Italian troops in Africa. He has a reputation as "the cruelest and one of the most efficient of Italian generals"; a family motto—"An enemy forgiven is more dangerous than a thousand foes"; and a nickname, "Lucky." Up to quite recently all have been quite appropriate. Early in 1941, however, the encirclement tactics of Britain's General Wavell (see sketch this issue) had brought about one Italian defeat after another; and after the siege of Bardia and the fall of Sidi Barrani it seemed unlikely that Graziani would ever use his nickname again.

Furthermore, cut off from drastically needed supplies—infantry, mechanized forces, armored power, motor transport, guns, local aviation—and faced with hints of defection from his native troops, it was doubtful that even help from the Nazis could restore the former luster to Marshal Graziani's military reputation. On the home front in February 1941, Italians were apparently being prepared for the worst. They were told that it didn't matter how much territory Italy lost in Africa and Albania—provided the Axis won the War. They were assured that an Axis victory was certain if Italy could keep fighting through the spring or summer, thus using up large British land, naval and air forces in the Mediterranean and in Africa. Late the next month the "resignation" of Graziani from his African command (and from his positions as chief of the army staff and Governor of Libya) could not have been any great surprise to them. At the same time it was reported that Nazi troops occupied El Agheila in Italian Libya, and that Nazi armored divisions in Eastern Libya had been greatly reenforced.

Rodolfo Graziani was born August 11, 1882 in Frosinone, a town in central Italy close to Rome. He was the son of Filipo and Adelia (Clementi) Graziani, and first began his military career in Eritrea in 1908, soon after having been commissioned as a sub-lieutenant. He was sent from there to Libya in 1914, and the First World War found him there. A year later he was serving as commander of the 131st Brigade. He participated in hard fighting on the Italian front, was twice wounded and won the rank of major for distinguished service. In 1919 he became commander of the 61st Infantry in Macedonia.

In 1921, not very long after the Armistice, Italy went back to Libya to reassert its sovereignty over the territory which native forces had been unsporting enough to reoccupy during the diversion of the World War. Graziani took part in the occupation of Fezzan; in 1923 he became a brigadier general and, with De Bono, finally drove back the Senussi Arabs from the outskirts of Libya's Mediterranean seaports in a series of campaigns distinguished for their military brilliancy. They were distinguished for their "pitiless severity and cruelty," too. At one time the Senussi were obtaining help from the inhabitants of the Cyrenaican desert; Graziani transported the entire population of 80,000 men, women and children to the Mediterranean seaboard and put them into concentration camps with all their worldly possessions. At the end the last fighting sheik was captured, and asked for the status of defeated warrior; Graziani had him shot as a brigand. The Italian conqueror then finished the job of mopping up by sending "flying tribunals" winging from the seacoast to the inland towns and desert villages of Cyrenaica to try—and execute—prisoners.

From 1930 to 1934 Graziani commanded the Libyan forces, in 1932 being made commanding general of an army corps for his exceptionally meritorious work as soldier and administrator; he conducted the operations leading to the occupation of the oasis of Kufra and the final pacification of the colony; and from 1934 to 1935 he commanded the Udine Corps.

At the start of the Ethiopian War, Graziani was placed in command of the mixed Italian and native armies in Somaliland, and with General De Bono he led the murderous southern campaign in Ethiopia. In 1935 he had been appointed Governor of Italian Somaliland in recognition of his ability; in 1936 he was made Viceroy of Ethiopia, charged with "consolidation" of the Italian victory. The next year, at Addis Ababa, an attempt on his life resulted in his being wounded by a would-be assassin's hand grenade. In revenge he had at least 1,600 natives slaughtered—all those who happened to be found in possession of fire arms at the time! Even Mussolini remonstrated a little; Graziani's answer was: "Mild measures never retained conquered soil." Nevertheless it was not long before another Viceroy succeeded him and he returned to Italy, ostensibly for reasons of health. In 1938 he was made Honorary Governor of Italian East Africa. The title Marchese di

Neghelli was conferred on him during the Ethiopian War.

In November 1939 Graziani became chief of staff of the Italian Army and commander of the Army of the Po—the Army's No. 2 man and field chief, commanding the divisions along the French frontier when Italy entered the Second World War in 1940. After the French armistice he was no longer needed in that position, and the mysterious death of Italo Balbo brought him (in July 1940) the appointment as Governor-General of Libya and commander of all the Italian troops in Africa. It was not until almost the end of 1940 that the series of spectacular, if short-lived, British victories began.

Marshal Graziani has been rather romantically described as a man with "clean-cut features, reminding one of pictures of the leaders of the Ancient Roman legions, a firm jaw, straight-lipped mouth and typically Roman nose. His eyes are piercing, like those of an eagle; and the wrinkles gathering in their corners are the only sign on Graziani's face that he is more than 50 years old. He is over six feet tall, tough as steel and hard as nails."

International Who's Who

GREENBIE, SYDNEY June 28, 1889-
Author; lecturer
Address: h. Penobscot, Me.

In common with many another American author, Sydney Greenbie's recent writing interests have centered in the American scene and in the American character—the character that developed the virtues of "rugged individualism" largely in the pioneer territory west of the Mississippi. Unlike other writers, however, Greenbie started "seeing America whole" only after an extended period of travel, and the writing of books about his experiences and observations in foreign countries—*Japan, Real and Imaginary* (1920); *Gold of Ophir: the China Trade in the Making of America* (1925); etc. In 1941, by way of completing the cycle of his own education through travel and return, Greenbie became interested in furthering the inter-cultural relations of the American nations and began work on a series of books, "Good Neighbor Series," on the Latin American world. They are designed to "acquaint America with the wonderful stories of the aspiration and achievements of our neighbors." There are eight titles, and they are to be used in schools, high schools and colleges.

Franco
SYDNEY GREENBIE

Greenbie's convictions about the educational values of travel have found expression, in the past, through his special work in progressive education. He was the president of an original educational experiment, the Floating University (1928-29), which endeavored to work out a college course for students to pursue while traveling around the world, and he conducted a similar experiment of his own called "Traversity" (1928-32).

Sydney Greenbie was born in Dakota Territory on June 28, 1889, the son of Benjamin and Eva (Helford) Greenbie. Growing up on a lonely pioneer farm, the highly imaginative boy dreamed of adventure and travel in far countries. He read all that he could find to read; but he was not a boy content to travel vicariously. He wanted to see for himself what the world beyond a Dakota prairie was like. The family had little money; and anyhow college in the conventional sense did not appeal to a young person who wanted more than anything else to "go, look, see." Accordingly he devised a system of college education for himself which would include not only travel and study, but long periods of residence in countries of his own choosing.

From 1910 to 1919 young Greenbie saw not only quite a bit of America, but of Europe; and he lived for two years in New Zealand and Australia, nearly three in China and Japan. After his trip to Europe (where he covered many countries on foot) he concluded that, with the outbreak of War in 1914, the "Atlantic Era of world civilization" was ending, that civilization would rebuild itself around the Pacific shores. Consequently he spent some six years living and studying near the Pacific, starting a progressive school in California and ending with teaching in Japan. He was also on the staff of the *Japan Chronicle*, a British paper, and for a time taught in

GREENBIE, SYDNEY—*Continued*

the Kobe Higher Commercial School (Japanese Government College). Meanwhile he had visited the islands of the South Seas.

It was while in Japan that he met and married (1919) a young American writer, Marjorie Latta Barstow (author of *American Saga* and other books)). The couple have two children, Barstow and Alison.

On his return from Japan, Greenbie took his notes on his impressions and experiences there to a publisher, Douglas Z. Doty of Harpers. Because of several books on Japan then appearing, at first he encountered some delay in getting a contract; but Doty was interested in the young author, and in 1920 his first book, *Japan, Real and Imaginary*, was published. This was followed by *The Pacific Triangle* (1921), and *Gold of Ophir: the China Trade in the Making of America* (1925), written with Mrs. Greenbie. A further book on the Orient, *The Romantic East*, appeared in 1930.

Nearer to his heart than these publications, however, was the idea of a travel university. In 1928 Greenbie was asked to head the Floating University. He devised a curriculum based on travel and observation as he felt it should be. He himself was convinced of the feasibility of this new kind of college education—provided that a suitable faculty could be assigned to carry it out. But he found that "the inability of the academic mind to function properly in the living world" was the greatest stumbling block to the project. Greenbie solved some of these initial problems in his own Traversity (1928-32), but depression, the Second World War and other disrupting conditions put an end to his efforts for the time being.

He observed, coincidentally, the failure of "liberal efforts" to introduce any practical understanding of world affairs. Instead there was only "mouthing about social, economic and political forces" which brought about the total collapse of world peace. International good will, he thought, must be brought about by practical technics. These ideas Greenbie voiced in a series of lectures when the United States Office of Education under Dr. John W. Studebaker started the public forum movement. Greenbie became one of the first forum leaders, and from 1936 to 1940 was a forum demonstrator stationed in various centers throughout the country. At these he conducted a regular series of discussions on world affairs. He is now a lecturer for the lecture bureau of CBS, and for several years has been a feature writer for the *Christian Science Monitor*.

His picturesque, epic stories of the early fur traders, *Frontiers and the Fur Trade* (1929) and *Furs to Furrows* (1939), received excellent critical notice not only for the accuracy of the presentation of frontier life, but for the "search for a key to some of our national characteristics." R. L. Duffus wrote in his review of *Furs to Furrows*: "The theme is fascinating, the writing (apart from a few flights whose wings might well be clipped) eloquent. No one could read this rich narrative without a better understanding of America."

Entertaining the notion that modern Americans can enjoy more leisure than they think they have, Greenbie turned his attention in 1935 to leisure as a public problem. He started the magazine, *Leisure*, which he edited for some 15 months; and in 1940 his book, *Leisure for Living*, appeared. In this he advanced the idea of "creative using" as a better basis for practical education than the current businessman's demand for "skills with which to make things." He advocated fun, love and other vital factors of full living as a means "to big dividends." Greenbie's current interests in furthering inter-cultural relations between the American nations devolved from a trip to South America a few years ago, and a residence (1940-41) in Mexico. But his was no superficial acquaintance. He has spent the last 10 years studying Latin America, and he plans to return to Mexico again in the winter of 1941-42.

For several years the Greenbies have owned a farm in the Penobscot hills of Maine, which Greenbie calls "the most wonderful spot in the world." Among these woods and hills he finds what he calls "the essence of self-surrender and self-discovery . . . the soul's greatest affirmation." He finds, too (building upon the old adage, "As Maine goes —"), the complete representation, in Maine, of a national trait, an individualism that is "one of the greatest treasures in our modern world."

Of his further interests, Sydney Greenbie has written: "I love to read the repetitious rise and fall of dictators in ancient Rome and to replace the names Gibbon gives us with the names in the newspapers. I love to watch people and think of how they act in the same circumstances in the South Sea Islands, where I have also been. I like to think of myself as a naturalist of men. . . I love to raise fruit trees, to cook, music of all kinds, dancing, and picking blueberries in the depths of my creeping juniper fields. During eight or nine months, until winter drives me out, we remain on the farm; then it is the city, or wherever fate decides.

"People are frequently curious as to how an author works. It would make them dizzy to watch this specimen circling round his typewriter. There is not a distant noise that does not justify his going to see what it's about; there is not a pedestrian task that does not put life into his heels. He writes a sentence and measures a fireplace; he adds another word, and lets the cat in. The only time he actually completes one sentence at one sitting is when he is anchored with a favored black cat in his lap."

GREW, JOSEPH CLARK May 27, 1880- Former United States Ambassador to Japan

Address: b. United States Department of State, Washington, D. C.

JOSEPH CLARK GREW

Joseph Grew, the United States Ambassador to Japan since 1932, was for a long time sure that there were "no questions between Japan and America which cannot be negotiated." But by December 1941 the issues between the two countries were more complicated than they had ever been before, and even while Secretary of State Hull continued to "negotiate" with Japan's envoy to the United States the shrewd, tactful, seasoned American Ambassador must have been wondering how much longer he would be staying in Japan. By December 7 he knew the answer.

He "has always been the foremost advocate of befriending Japan." For eight years, according to *Life*, Grew has been practicing "an honorable appeasement that was alert for moral aims and economic interests alike; an appeasement that has consisted of alternate protestations of affection and protests against outrageous behavior." According to the Grew concept, diplomacy is reduced to simple human terms: "I want to like you." He strongly dislikes the "ill-used and often misinterpreted" term "appeasement." He much prefers the phrase "constructive conciliation." There have been times when this attitude and that of Roosevelt's have differed. "You know, Joe, the only trouble with you is you're too darn nice," commented the President once.

Grew's post in Tokyo, one of the most important in the diplomatic service, was the culmination of long years of service. But young Joseph Grew was never intended for diplomacy. Born in Boston, the son of Edward Sturgis and Annie Crawford (Clark) Grew, he was the third son of a solid banking family which expected him to become a banker, too. His childhood was spent doing the right things—summers on the North Shore, bird stalking on his grandfather's estate, taking piano lessons, collecting stamps, attending teas at his family's large house on Marlborough Street. He went to the right schools—Groton and Harvard (where he was two years ahead of Franklin D. Roosevelt)—and distinguished himself at the University by becoming a champion miler, president of the Advocate and an editor of the *Crimson*.

After he was graduated from Harvard in 1902, Joseph Grew wangled a modern grand tour out of his father, planning to enter the banking business after he had got a good look at the world. Mostly he traveled over the

GREW, JOSEPH CLARK—*Continued*

East—Malaya, India, Southern Asia—and in the East was stricken with an attack of malaria that nearly killed him and left him partially deaf. It was while he was recovering in India that Grew first began to consider the diplomatic service as a career, for the American Consul there in long conversations impressed him with the importance and advantages of the diplomatic life.

Back in the United States, Grew managed to get a clerk's job in the Consulate at Cairo, Egypt, checking invoices and inspecting hides, and went out there in 1904. Very shortly after, his career really started. President Theodore Roosevelt read Grew's book on his trip, *Sport and Travel in the Far East,* and was impressed particularly by a chapter in which Grew reported a duel with a cave-tiger and a "half nelson" on an angry bear. He decided Grew would make a good diplomat and gave him a regular position in the service, as deputy consul general in Cairo.

It was while he was serving at Cairo that Grew married Alice de Vermandois Perry, granddaughter of Commodore Matthew Calbraith Perry whose American warships opened Japan to the West in 1853, and daughter of an American teacher in Japan. He had courted her before he left for Egypt; after he had been there a year he cabled a proposal; he was accepted and hurried to Boston to be married on October 7, 1905. All three of the Grew daughters have carried on the family tradition by marrying into the foreign service.

After Cairo there were short terms as third secretary in Mexico City, third secretary in St. Petersburg, second secretary in Berlin, secretary in Vienna. Then, from 1912 to 1916 were four years as secretary to the Embassy in Berlin, two of which he spent trying to keep us out of the War, as aide-de-camp to Ambassador Gerard. When relations with Germany were broken off early in 1917, Grew went to Vienna as chargé d'affairs and counselor of the Embassy, and stayed there until diplomatic relations ended.

The last winter of the War, Grew spent in Washington in the State Department, and in 1918 was made chief of the Division of Western European Affairs. Then he was chosen to go to Europe with Colonel House as secretary to the American delegation in the pre-Armistice negotiations, and after the Armistice was raised to Envoy Extraordinary and Minister Plenipotentiary and made secretary general of the American Committee to Negotiate Peace. The following year he acted as American secretary on the International Secretariat of the Peace Conference; in 1920 he was Envoy Extraordinary to Denmark; in 1921 Envoy Extraordinary to Switzerland.

In 1922 and 1923 Grew was the American representative to the Conference on Near Eastern Affairs at Lausanne, and his "energy and persuasiveness are credited with helping to prevent a recrudescence of the war between Turkey and Greece." In 1923 he negotiated and signed a treaty with Turkey, and in 1924 he was an unofficial representative for the United States with the League of Nations' Committee for Control of Traffic in Arms.

Grew became Under-Secretary of State in 1924. His appointment coincided with the passage of the Rogers Act, which took the diplomatic service out of politics, and it was Grew's job to administer the new setup. Because of this work and his work as chairman of the board of examiners for the foreign service, people began to call him the "Father of the Foreign Service." After three years' service in the State Department, Grew was appointed Ambassador to Turkey, in 1927.

In his five years as Ambassador to Turkey Grew did "a monumental job of promoting American interests there." He negotiated and signed a treaty of commerce and navigation in 1929 and a treaty of residence and sojourn in 1931. He also superbly accomplished his main task—making friends with Mustafa Kemal, which some observers say he did mainly by losing to his host in all-night poker games. Then, in 1932, Hoover offered him the post of Ambassador to Japan. As he once told it: "Mrs. Grew and I hesitated about accepting. We were very happy in Turkey. . . Finally I told Mrs. Grew it was possible that, if we took the post in Tokyo, some day we might be in a position to sway the issue of peace or war between Japan and the United States. I cabled my agreement to the assignment. We have never regretted the decision."

Once there Grew's personal qualities endeared him to the Japanese. They liked his appearance—his six-foot height, his gray hair, dark mustache and horn-rimmed glasses, which add up to the picture of a storybook diplomat. They were awed by his sporting ability—his shooting, skiing, swimming and golf. They admired his gentlemanly capacity for hard work and saki (rice wine), his good clothes, his beautiful house filled with Oriental antiques. They were impressed by the way he and Mrs. Grew fitted themselves into the Japanese scene; by Mrs. Grew's Japanese flower arrangements, her patronage of Japanese musicians, by their membership in scores of clubs and societies, by their ability to "make the touchiest Japanese patriot feel at home."

In 1932 Tokyo was already an uneasy seat. Japanese troops were in Manchuria, Secretary of State Stimson had announced a "non-recognition" policy and there was talk of boycotts and retaliation. The mortality among Ambassadors there had been high, with five in a decade and two within the past two years. Grew said he intended to do a good job and wanted a chance to do it. "If an Ambassador is to interpret the underlying aims, character and ideals of the people among whom he is living to his own country, time is important. . . I sincerely hope that I am going to be allowed to stay for a long time to come."

During his years in Japan, Ambassador Grew was outspoken when necessary: over the *Panay* incident, over Japan's interference with American rights in the East, over Japanese bombings of American property in Chungking, over obstacles put in the way of Americans who wished to leave Japan. His speech in October 1939, which warned the Japanese of "the increasing extent to which the people of the United States resent methods which Japanese armed forces are employing in China and what appear to be their objectives," was shockingly frank. He has also been a delicate negotiator who believes war is the greatest humiliation a diplomat can have in his career. He has been aided in his negotiations by one deaf ear which he knows how to turn at the right moment. There was the time in 1934 when a welcoming speech to him after a furlough in the United States said war between the United States and Japan was remote "unless the United States ever . . . prevented Japan from her pacific and natural expansion in this part of the world." Grew rose, in turn, to speak. He said he was sorry that because of his deafness he had missed parts of the speech, but he had taken notes on what he had been able to hear. Consulting them, he gave a "pleasant little talk."

It is not only deafness, but natural skill and shrewdness which have guided Grew through many ticklish situations. In November 1940, for instance, when the Burma Road situation, Axis action and Japan's turning toward the Netherland Indies had made tension higher than ever before, Grew found himself obliged to deliver felicitations to the Japanese Emperor. Yet he was able in his message to please *both* Japan and the United States by his tactful hope that Japan "would increasingly contribute to the well-being of mankind."

GRIZODUBOVA, VALENTINA (STEPANOVNA) (grê-zô-dōō'bô-vä vä-lân-tē'nä) 1910(?)- Soviet aviatrix; head of women's aviation in the U. S. S. R.

In 1908 Valentina Grizodubova's father, a poor mechanic of Kharkov, saw a motion picture showing the Wright Brothers' plane. Filled with dreams of emulating the birds, he went home and built himself a plane. In 1910 he built and flew one of the first Russian airplanes, sometimes taking his daughter with him. A picture of Valentina at the age of three crawling over its crude wings is in existence.

Fired by her father's interest in aviation, Valentina became a pilot at the age of 19, and won early recognition for her skill and endurance. She was a member of the famous Maxim Gorky Squadron which flew to remote sections of the U. S. S. R. on educational mis-

Sovfoto

VALENTINA GRIZODUBOVA

sions, and she has won many awards for long-distance flights and broken numerous records.

On September 24, 1938, as commander of the plane *Rodina* (The Motherland), Valentina Grizodubova, with two assistants, Captain Paulina Ossipenko, the second pilot, and Senior Lieutenant Marina Raskova, took off from Shcholkovo, a flying field near Moscow, in an effort to break the international women's long-distance record. The three young women ate a hearty breakfast and then set off in their well-stocked plane. When they had flown some 4,000 miles, their gasoline was running out, so a forced landing had to be made. Knowing that the plane might plunge nose first into the marsh, endangering the life of Marina Raskova, who was acting as navigator, Grizodubova ordered her to jump to save her life. Ossipenko fired a revolver as they flew on to give Marina their direction. The other two brought the plane down into a marsh. When they crawled out of their half-sunken plane, they could not find Marina. Attracted by the smell of food, bears visited them and were driven off with difficulty. A large cat which ensconced itself in the cockpit turned out to be a lynx. For three days a heavy storm threatened to submerge the plane. Their radio worked, but no one seemed to pick up their signals; passing planes ignored their flares. The Russian Government had waited until it seemed time for their fuel to give out, then a rescue mission was organized. After considerable search, they were sighted on October 3rd.

In the meantime, Marina, who had parachuted to the ground alone, had freed herself of her parachute and set out to find her comrades in the direction the plane had taken. They had food to last for two months, but she had nothing but a few chocolate bars. She managed, however, to subsist on the clear spring waters and birch leaves, caterpillars, Rowan berries and mushrooms. She was found not far from the plane at about the same time as the others.

When the young fliers and the rescue party reached Moscow, they were given a rapturous welcome. The whole city turned out in the excitement, which wound up in a great reception at the Kremlin on October 27, 1938. Government leaders, party leaders, aviators, scientists, artists, writers and workers appeared to congratulate them and make speeches. The bravery of the young trio and the glory of Soviet womanhood were in turn extolled. One speaker, expressing the tenor of the speeches, said: "Women in our socialist land have long ago shattered the chains of their age-old slavery and the old perverted theories of their inequality and lack of ability to do great deeds. . . You have demonstrated for what great things Soviet women are fitted. You have opened a fresh page in the history of the development of one-half of mankind—womankind."

Grizodubova and her party had shattered the international women's long-distance record. Their route from Moscow to the Far East, although interrupted, covered 4,000 miles in a broken line and 3,687 miles in a straight line. Added to her previous decorations, Grizodubova received the title of Hero of the Soviet Union, and the order of Lenin. She is a deputy to the Supreme Soviet of the U. S. S. R., and on March 9, 1939 was appointed to a new post as head of women's aviation.

Valentina Grizodubova is a plump young woman of medium height. When she is not engaged in aviation activities, she enjoys a cheerful domesticity with her husband and their young son, Valerik.

GROPIUS, WALTER (ADOLF GEORG)

(grō'pē̇-o͞os väl'tẽr) May 18, 1883- Architect; educator

Address: b. Harvard University, Cambridge, Mass; h. Baker Bridge Rd, Lincoln, Mass.

Walter Gropius has more than once been described in such terms as "one of the founders of the concrete-pipe-and-plate-glass school of architectural modernism known as the 'International style.'" The founder of the world-famous Bauhaus in Germany is horrified at any such suggestion of "the multiplication of a fixed idea of 'Gropius architecture.'" "I have sometimes felt a certain disappointment," he once wrote, "at being asked only for the facts and tricks in my work when my interest was in handing on my basic experiences and underlying methods."

It is his basic experiences and underlying methods that Gropius is today engaged in handing on to his young architectural students at Harvard University. Today not all of them seem shockingly revolutionary. There are many to agree with him, for instance, when he writes: "I want a young architect to be able to find his way in whatever circumstances; I want him independently to create true, genuine forms out of the technical, economic and social conditions in which he finds himself instead of imposing a learned formula onto surroundings which may call for an entirely different solution." And his early dream of developing an architecture "immediately and ideally fitted to the industrial age" has become the aim of most modern designers.

It was not always a dream that was shared. When Walter Adolf Georg Gropius was born in Berlin on May 18, 1883, the son of Walter Adolf Gropius, privy surveyor of government at the Policy Presidency in that city, and of Manon (Scharnweber) Gropius, it was an age when architecture and decoration were thought of as almost synonymous, when the theory of "l'art pour l'art" had many staunch supporters.

There were early indications that young Gropius, the great-nephew of an architect, was to be one of the pioneer exponents of an entirely different concept. He attended the "Humanistic Gymnasium" in Berlin, was graduated in February 1903, did volunteer work in the studio of Professors Solf and Wichards from 1903 to 1904, and in 1903 also began studying architecture at the Institute of Technology in Munich. From 1904 to 1905 his studies were interrupted while he served as a volunteer in a regiment of hussars (he became a corporal in 1905, a vice-sergeant major the next year), but he returned to them in 1905 as a student at Berlin's Institute of Technology. While still there he executed his first independent buildings: country houses and agricultural buildings in Pommern. Already interested in experimental low-cost housing, he also designed several workmen's dwellings in Janikow while acting as head assistant to Professor Peter Behrens of the Institute from 1908 to 1910. Then he went into practice for himself.

Even before the First World War his buildings, astonishingly "advanced" in style (a factory at Alfeld, settlements in Wittenberge and in Frankfurt, factories and residences), began to attract attention because of their clean, functional lines, their freedom from the decoration characteristic of the period, the unusual materials in which they were executed. Nor did the young designer confine himself to architecture: he designed furniture, interiors, even benzol-driven locomotives. In 1913 he was awarded a Gold Medal at the World Exhibition in Ghent, Belgium.

The First World War interrupted a promising career. For four years Gropius served in a reserve regiment of hussars, and by the time he was dismissed from the Army in November 1918 he had added several war medals to his Gold Medal. Almost immediately he was called to Weimar as director of the Grand Ducal Saxon Academy of Art and Grand Ducal Saxon Institute for Applied Arts. Here was his opportunity to introduce a new functional, all-embracing conception of art and with it a new educational method. The first Bauhaus ("building house") was founded by uniting the two schools under the name "Staatliches Bauhaus, Weimar," and its slogan was: "Let us conceive and create the new building of the future, which will embrace architecture *and* sculpture *and* painting in one unity. . . The complete building is the final aim of the visual arts." Students were set to work not merely at the drawing board but in workshops, learning as skilled artisans to create out of stone, wood, clay or whatever the suitable material might be the conceptions that were in their minds. In Gropius' own words, it was necessary "to help the formal artist to recover the fine old sense of design and execution being one, and make him feel that the drawing board is merely a prelude to the joy of fashioning."

WALTER GROPIUS

Both Gropius' own work during this period —a town theatre at Jena, various residences in middle Germany, a paper factory and warehouse at Alfeld, several tombs, a scheme for the Chicago *Tribune* Tower, an exhibition building in Leipzig—and the results of Bauhaus instruction were soon having a profound effect on techniques of art production and education in other parts of Germany and in foreign countries. His Bauhaus, however, lacked funds, and politicians accused him of teaching "architectural socialism." Finally, in 1925, when the opposition in Weimar grew too strong, the city of Dessau (a factory town in the heart of the coal belt) offered funds and a site, and a new Bauhaus building was presently being executed by Gropius. On December 4, 1926, a day after the title of professor had been conferred on him by the Government of Anhalt, 2,000 people danced at a Bauhaus ball to dedicate the new $230,000 schoolhouse, "architecturally the most important structure of its decade." "Friends of the Bauhaus" included Albert Einstein (see sketch this issue), Arnold

GROPIUS, WALTER—*Continued*

Schönberg, Franz Werfel and Gerhardt Hauptmann.

It was this new Bauhaus in Dessau that Herbert Read later called "the greatest experiment in esthetic education yet undertaken." It was here that Walter Gropius and his associates, among them his chief disciple, Lázló Moholy-Nagy, and artists Paul Klee and Lyonel Feininger, had for a brief period perfect freedom in their attempt to "fuse art with technique and reintegrate the artist into the daily work of the nation," to turn out a new type of worker who would have "an intimate knowledge of biological, sociological, technical and artistic problems" and would therefore be "able to combine the qualities of an artist, a technician and a businessman." Here the workshop method was further developed. During its lifetime the Bauhaus did as much for city planning, furniture design and painting as it did for architecture Students designed and fashioned things as prosaic as advertising display models, as practical as streamlined pottery and metalware and early tubular chairs and tables, as ambitious as models of the city of the future. And when on April 1, 1928 Gropius resigned his directorship in order to devote all his time to his own architectural practice (which he had, however, never discontinued), his associates were quite capable of carrying on without him.

Between the years 1926 and 1933 Gropius was responsible for an astonishing variety of projects, among them not only private residences but a research settlement for the Reich and a Labor Exchange Building in Dessau, settlements in Berlin, Siemenstadt, Frankfurt; a Werkbund exhibition in Paris, two building exhibitions and a metal exhibition in Berlin; prefabricated copper houses for Hirsch Kupfer, Finow; bodies for Adler cars, standard stoves for the Frank Factory and standard furniture for workmen. In 1931 he was elected vice-president and German delegate of the International Congresses for New Building.

Hitler's rise to power marked the beginning of his voluntary exile from Germany. His Bauhaus was one of the first things scrapped by the Nazis—Hitler denounced its style as "Oriental"—and in its place a *Landschule* was opened to teach domestic science to country girls. By 1934 Gropius was engaged in private practice in London, where he did much to bring contemporary British architecture abreast of the building practices of the Continent, and in partnership with Maxwell Fry he executed school buildings in Cambridge and several residences in London and in Kent. He also became vice-president of London's Institute of Sociology and added to his numerous memberships in German and foreign architectural associations an honorary membership in the Royal Institute of British Architects.

Finally, in 1937, Gropius accepted a professorship at the Harvard Graduate School of Design. He had already visited the United States in 1928 in order to study its "extraordinary building organization." Now, he said, he came once more as much to learn as to teach. It seemed, too, that there would be a resumption of his Bauhaus experiment with the opening in Chicago that same year of a school of architectural and industrial design called the New Bauhaus and headed by Moholy-Nagy, with Gropius as its adviser. It still goes on, under the name of Chicago School of Design. And students in Harvard's Department of Architecture, of which Gropius became chairman in 1938, are given a certain grounding in Bauhaus methods. Before being graduated they must have a thorough knowledge of building materials, training in three-dimensional rather than "paper" thinking and actual work under a contractor.

Bauhaus methods have also been publicized by the exhibit which was taken on a nationwide tour in 1939, sponsored by New York City's Museum of Modern Art, as well as by Gropius' book, *The Bauhaus, 1919-1928* (1939), put out by the Museum as a catalog for the exhibit. Perhaps the only actual architectural work of Gropius which had been seen by a wide public in the United States was the Pennsylvania State Exhibition Building at the New York World's Fair, executed in partnership with Marcel Breuer (see sketch this issue). Other buildings built together with Breuer include the Gropius, Breuer and Ford houses in Lincoln, Massachusetts; the Hagerty house in Cohasset and the Abele house in Framingham; a large residence in Pittsburgh, Pennsylvania; projects for Black Mountain College in North Carolina and Wheaton College in Massachusetts; Aluminum City Terrace in New Kensington, Pennsylvania, a defense housing project consisting of 250 units. But those interested in his theories will find them in many magazine articles both in German and in English, and in books other than the one already named: *Staatliches Bauhaus, Weimar, 1919-23* (1923); *Internationale Architektur* (1925); *Bauhausbauten in Dessau* (1930); and *The New Architecture and the Bauhaus* (1937).

Married in 1916 to Alma (Schindler) Mahler, by whom he had one daughter, Alma Manon, Gropius was married in 1923 for the second time to Ise Frank. Walter and Ise Gropius now live with their daughter, Beate Eveline, in their own home in Lincoln, Massachusetts, a home which Gropius designed in collaboration with Marcel Breuer. Every room has an attractive view and is turned so as to receive the greatest possible benefit from the sun; there are vast windows, protected from the summer sun, and glass doors; there is a super-heating system. One visitor with preconceived ideas of modern architecture was curious to know why it also included a fireplace. To that question Mrs. Gropius replied (and it could not have been said better by her husband): "We want to keep all that is beautiful and useful and only discard the superfluous and the awkward."

Who's Who in America

GROSS, CHAIM (grōs khī'm) Mar. 17, 1904- Sculptor

Address: h. 63 E. 9th St, New York City

Chaim Gross is a sculptor who works mostly in wood, his work saved from softness by the lusty forms and the nature of the woods he prefers: ebony, snakewood, boxwood and above all lignum vitae, which he has "exploited like a virtuoso." "I am essentially a carver," he says of his own work, "and the harder the wood the more pleasure I get from chipping away and exposing the forms that I want."

Usually the form he wants is dictated by the particular block of wood on which he is working, and his is the ability to exploit its grain and texture to the maximum degree. To be guided by the wood is only natural, he says. "Suppose several different materials—a dark wood, a light wood with colorful grain, marble or granite—were given to me with an order to make a figure from each," he once said. "The result would not be the same figure. In each case I would be concerned not only with synthesizing in a pleasing manner the forms of the figure but also with the character of the material—its texture, grain, color and hardness."

"I believe that subject matter, as such, is of little importance," this sculptor says. "It is merely an avenue through which to express the medium. The important thing is to get an esthetic response from the arrangement of forms." Yet he has consistently explored the properties of muscular acrobats in active groups, frequently with one figure poised in the air. In doing this "by a perfect weighing of mass against mass and figure against figure, tense and solid, a beautiful equilibrium and rhythmic interplay of concave and convex surfaces are achieved."

CHAIM GROSS

Gross explains his use of acrobats, in works like *Balancing, Basketball Players, High Jump, Circus Girls* and *Handlebar Riders,* by saying that he isn't interested "in acrobats *per se,* but I use these subjects because I find in them many possibilities of variations in form and movement. As a matter of fact I do not consider a work of mine successful unless it can be turned upside down and still evoke an esthetic response. My acrobats allow me to combine and interlock forms and permit a flow of one form into another. In addition, this subject matter lends itself to spiraling which aids me in achieving a three dimensional effect."

Because of Gross' predilections for linear rhythms and for making the most of the various grains of wood to enhance the beauty of his figures, there have been critics who have found his work primarily decorative, lacking a "human quality," leaving the admirer "rather cold." But even those critics who agree that it "seldom strikes the deep human chords" insist on its other exceedingly appealing qualities, and E. M. Benson says sharply to detractors: "Call Gross' work genre pieces if you are unable to control your passion for pigeonholes, but they are no less beautiful for the names you call them."

This sculptor who hasn't lost, despite academic training, the intimate appeal and rugged quality found in the work of Old World wood carvers was born on March 17, 1904, the son of Moses and Leah (Sperber) Gross, in a little mountain shack in the dense woods of the Carpathian Mountains in East Austria, where his father was a lumber merchant. "When I was seven years old," he says, "we moved to the city of Kolomyja. Three years later the World War broke out and our city was occupied by Russian Cossacks. The usual wartime hardships of homelessness, hunger, invasion by army after army and evacuation from one city to another

GROSS, CHAIM—*Continued*

marked my childhood and early adolescence." He saw his mother attacked by Cossacks and both his father and mother killed before his eyes. Completely alone, he made his way for two wretched years, taken by the Austrian Army to dig trenches and graves, trying time after time to escape, caught time after time.

In 1916, when part of the Russian Army settled down in his city and started a reign of terror, he made his escape. For months he marched with other refugees across the country, trying to find a place of refuge. Finally he landed in a refugee camp in what was later Czechoslovakia and from there escaped with a friend and made his way to Budapest. Once in Budapest, Gross supported himself for the next two years by a wide assortment of jobs in wine cellars, factories and stores. "I wandered haphazardly from job to job," he says, "and finally apprenticed myself to a jeweler. It was at this time that my interest in drawing began to manifest itself."

After the Hungarian revolution of 1918 Gross won a scholarship to one of Budapest's art schools, and made his first contact with the formal study of art. But it lasted only a short time; the revolution was suppressed and all foreigners deported to Austria. In 1921 Gross finally left Europe and at the age of 17 arrived in America. Immediately he got a position as a delivery boy in a grocery store and began spending his evenings studying at the Educational Alliance Art School in New York. He stayed there a year (he was later to teach there and at the New School of Art), and met and became friends with the Soyer brothers (see sketch this issue), Peter Blume and Louis Riback. Then he attended the Beaux-Arts Institute of Design for four years.

After this period of study was over, Gross rented a small studio and gave all his time and energy to sculpture. "My existence," he remembers, "was typical of the conscientious artist with little income. I lived from hand to mouth and often went for days without a decent meal." Finally, he confesses, "I got fed up with this haphazard existence and left New York City to obtain a dishwasher's job in an upstate hotel. Before leaving, I left a vague note on my door about being tired of life." His friends became alarmed and thought he had committed suicide; they searched for his body in the morgues and rivers. And by reporting his death they were able to make the first sale of his work, for a wealthy collector hastened to atone for his neglect of the living Gross. Then Gross returned from his dishwashing job, and, he comments grimly: "The market value of my work took a drop."

Until 1933, he says, "I had a very difficult time getting along because of economic problems." E. M. Benson thinks that the reason why the public was slow to recognize Gross' work was partly the fact that it was neither sufficiently academic to invite the interest of a *Prix de Rome* audience nor faddist enough to excite the sophisticated palates of those weaned on the more experimental types of European sculpture. Whatever the reason, it wasn't until the Public Works of Art Project was organized that Gross was able to support himself at his work. This project he believes has "produced some of the most important works created to date."

Under the Treasury Department art program ("one of the finest things that has ever happened to art in America") Gross won a national competition with his *Alaskan Mail Carrier*, which is now placed in the Post Office Department Building in Washington. The following year he earned competitively a commission to do an over-door panel, *Steel Worker*, on the exterior of the Federal Trade Commission Building and won, too, the Silver Medal at the Paris International Exposition. Meanwhile he was exhibiting his works in Philadelphia in 1935; in 1936 in a joint show with Ahron Ben-Shmuel at the Guild Art Gallery in New York; in 1937 in a large solo show chiefly of wood sculpture at the Boyer Galleries in New York. And collectors and museums were beginning to buy his work.

When the New York World's Fair was being planned, Gross was asked to do sculptures for the France Overseas Building and for the Switzerland Building. In 1940 at the Fair, in view of 100,000 pairs of eyes, he carved a statue, *Ballerina,* out of imbuya, as a demonstration of how an artist works. And at the same time he listened to hundreds of inquiries. "I would look the people over," he says, "and if they looked intelligent I would answer their questions, but if not I would keep on working." When the completed figure was bought by the Brooklyn Museum, Gross achieved a unique distinction —100 per cent coverage of the New York art museums. He is represented, too, in many museums and private collections throughout the country.

In December 1932 Chaim Gross was married to Renee Nechin, and they have one son, Yehudi Zachary.

GRUBER, FRANK (grōō'bĕr) Feb. 2, 1904- Author

Address: h. 60 Church Lane, Scarsdale, N. Y.

The mystery writer, Frank Gruber tells us, "has no social security card and is not eligible for the WPA." There are few writers, however, who have found the field more lucrative than he, and there are even fewer, if any, who are capable of an output as large and as rapid as his. Frank Gruber writes a complete mystery novel in 16 days and then "uses the other 14 days of the month to knock out a historical serial for a magazine." Four mystery novels and one historical novel appeared under his name in 1941 and in the "other eight months," he explains, "I wrote two serials for *Adventure Magazine* and a quantity of shorter fiction for several pulp magazines." He plans to duplicate this feat in 1942.

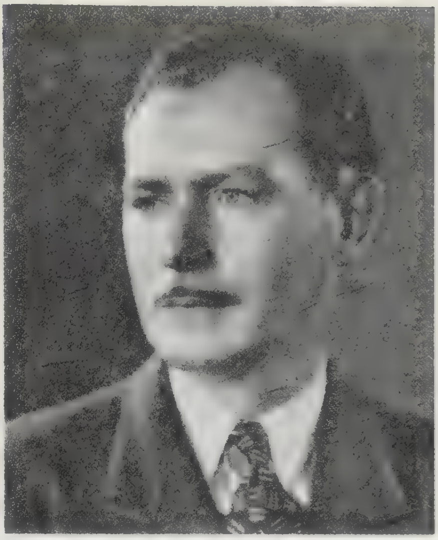
Frank Gruber was born on a farm near Elmer, Minnesota, February 2, 1904, the son of Joseph Gruber and Susan (Reisinger) Gruber. The Gruber family, he tells us, "shuttled between Minnesota and Chicago until 1920, when they finally sold the farm." In that year he ran away to enlist in the Army, serving one year in the 32nd Infantry, where he "learned how to manipulate the dice and at one time could throw thirty-five straight sevens. He has lost this skill through lack of practice."

From 1921, when he was discharged from the Army, until 1934, when he came to New York City to try his luck as a free-lance writer, Gruber worked at a remarkable succession of jobs. He was an elevator operator, bellboy, order picker, office clerk, employee of a leather factory, a paper box company, a wholesale grocery. For two months he was a hobo.

In 1927 he got a job in the Middle West on a trade journal, *The Turkey World,* and he continued to edit poultry journals for five years. He edited journals in other fields, among them *Roadstand Management* and *How To Sell.* His earlier efforts in the free-lance field were confined to money-making hints for juvenile papers, short stories for Sunday School papers, and an article on *How To Eradicate Worms From Poultry.*

All would-be writers who quit steady if uninspiring jobs to come to New York for the purpose of "crashing down editorial doors" are gamblers in a game where the odds are all against the young and ambitious. After six months of being locked out of hotel rooms for non-payment of rent, eating one meal a day on the days when he did not skip eating entirely, and riding the subways all night in inclement weather, Gruber's stories began to "click" with the pulp magazines.

He has sold over 200 magazine stories, 11 books, and has written a number of stories for Paramount Studios in Hollywood. His books include *The French Key,* "rated the best mystery novel for 1940," *The Laughing Fox* (1940), chosen by the Brentano Book Stores as their mystery selection for the month, and the four published in 1941: *The Talking Clock, Simon Lash: Private Detective, The Hungry Dog,* and *The Navy Colt.* The magazines to which Gruber contributes are: *Black Mark, Adventure, Short Stories, Argosy, Detective Fiction Weekly, Esquire, Liberty* and more than 30 others. In writing his mystery stories Gruber uses only two rules: "I always make the murderer one of the principal characters. You can't have a fellow killed by a chauffeur or butler. And I don't cheat the reader. Everything should be in the story so the reader can figure it out if he wants to."



FRANK GRUBER

Frank Gruber is a writer of what Howard Haycraft (see sketch this issue) has called "the hard-boiled tale of detection," using the "justly famous American wisecrack" to good effect. Linked with the school of Dashiell Hammett by those who consider this *genre* worthy of literary notice and classification, Gruber himself has no patience with those "literati" who raise eyebrows at pulp fiction.

Gruber was employed as a scenario writer by Paramount and Republic Studios in 1939. His Oliver Quade series was sold to Paramount, and *Death of a Champion,* starring Lynne Overman, was made from his stories.

Despite the bulk of his literary output in the crime fiction field, Gruber has had time to acquire a reputation as an authority on the Civil War period and the outlaws and gunfighters of the post-Civil War period in Missouri. He has written many articles in this field and two historical novels, *Peace Marshal* (1939) and *Outlaw* (1941). His hobby is collecting western Americana, and he owns what is perhaps the finest library of rare books on outlaws and gunfighters of the frontier.

Gruber is five feet eleven inches tall and weighs one hundred seventy-five pounds. His hair is dark brown and his coloring, in his own words, is "fair to ruddy." He was married to Lois Mahood on May 23, 1931, and has one son, Robert James, born August 11, 1940.

GUEST, EDGAR A(LBERT) Aug. 20, 1881- Author

Address: 17471 Hamilton Dr, Detroit, Mich.

Maurice Seymour

EDGAR A. GUEST

"I just take simple everyday things that happen to me and figure that they probably happen to a lot of other people, and I make simple rhymes out of 'em, and people seem to like 'em."

That is Edgar A. Guest's (he stopped being "Eddie" Guest a long time ago) own judgment of his work. He is the most popular and the best paid verse writer in the world, though no one with any pretension to critical judgment has ever called him a poet. He deals in the things ordinary people love and believe in—home, mother, a simple religious faith, hard work, the common everyday doings of common everyday men and women.

For years he has been the stock butt of the intellectuals, but their gibes simply roll off his back. John Bakeless called him "inventor of the mass-production lyric," Benjamin DeCasseres said he was "the epiphany of the qualities without which no real home is complete." He is a master of cliché. His verses are all "a wooden succession of monotonous iambics." Deliberately employing some of Guest's own clichés, J. P. McEvoy, who has been his friend for many years, said he was "simple as a child, common as an old shoe, friendly as a puppy, foolish like a fox."

This small, pale, wiry man with graying black hair that won't stay combed, with a homely smile-wrinkled face, with his old-fashioned bow tie and the spectacles he uses for reading and then forgets to take off, gives the impression of shyness and embarrassment—until one sees his keen, twinkling eyes. He is a master of crowd psychology. When he lectures, as McEvoy says, "you never hear anything that you haven't known since childhood, but it all sounds new when 'Eddie' tells it." The answer is that he himself believes all that he says and writes—that he lives just as do the people whom he writes about and who read his verses.

This apotheosis of old-fashioned Americanism was actually born in Birmingham, England, and didn't see America until he was 10. But he has no trace of "English accent"—he drawls like a Hoosier. His parents, Edwin and Julia (Wayne) Guest, were poor; they left England in a financial panic, went to Detroit, and found themselves in the midst of another panic. Eddie left high school after the first year and became a soda jerker in a drugstore at 13. To a bookkeeper on the *Free Press* he confided his longing to be a newspaperman. A $1.50 a week office-boy job followed.

In 1896 he was promoted to be editorial office boy, then he became exchange editor (which really meant handling the clippings from other papers), next a police reporter. The most he ever made in these positions on the paper was $50 a week and in the depression he was cut to $37.50. Once his reporter son got his check by mistake and was so insulted he almost quit. But Edgar Guest was getting along in another way. One day he wrote four lines of verse. He was encouraged to do some more. Soon he had a weekly column, at first called "Chaff," then "Blue Monday." For many years his column, now called "Edgar A. Guest's Breakfast Table Chat" (the *Free Press* is a morning paper), has appeared daily and has been syndicated in about 300 papers. For it he writes a "poem" every day—he figures he has written some 10,000 in all. In 1931, when he was 50, he decided to retire. He went to bed and spent a year being ill, with no apparent cause except lack of occupation. Then he got up and went back to work, and now he says he'll never retire.

In 1902 he was naturalized; in 1906 he married Nellie Crossman, a Detroit girl; in 1912 his son, "Bud" (Edgar A. Guest, Jr.), was born, and in 1922 his daughter Janet. All these events were chronicled in his verses. McEvoy remarks: "I've never heard so many things that aren't so said about anybody, [yet] an oyster on the half-shell is a closed book compared to Eddie Guest." In early days his reticent English mother, shocked by his exposure of his private life, exclaimed: "Eddie, have you no shame?" Yet this private life is so blameless and genial that there is no reason why he should not share it with the world—as he does.

It centers about his home. He hates to leave Detroit. Once he went with Charles F. Kettering on his yacht to Yucatan. He wirelessed his wife every hour on the yacht, and telephoned her so frequently when he landed that she cabled him to come home—to save expenses! He can't write unless she is in the house; when he strikes a snag in his work he wanders around looking for her, and when he finds her he goes peaceably back to his typewriter. His house is on the edge of the fairway of the Detroit Golf Club; he can tee off from his back porch and play the twelfth hole. He plays a good game of golf—usually goes around in the low 80's. He is a masterly poker player—all the better because his meek and deprecating air deceives his opponents.

He never speculates. A close friend of Henry Ford's from that industrialist's earliest days, he declined to buy any stock in so fantastic an enterprise as an automobile. But on the other hand, his refusal ever to speculate in the boom days left him thoroughly solvent when the crash came in 1929. In 1935 he was induced to go to Hollywood to star in a picture built around his verses. He stayed for a number of weeks, drawing a large salary for doing nothing. Then he went back to Detroit, disgusted at such a waste of the producer's money.

He has everything he wants (his income from books, radio talks, greeting cards, calendars and odds and ends of all kinds is more than $100,000 a year)—his big house with the white columned portico and the garden in back, his summer home at Pointe Aux Barques, Michigan, his family, and the love and praise of countless thousands of strangers who write him huge quantities of fan mail and feel he is their friend. He is a genuinely friendly person—the kind of man who always has the same waiter, the same bellboy, the same porter. Once when he heard that "his" porter was ill in a Chicago hospital he went up immediately to see him. These trips to Chicago he has taken weekly, with a short interval, since 1932, to give a half-hour radio broadcast. In 1941 the program is being given three times weekly, and he stays in Chicago for the three days, very homesick for Detroit.

"The dread of poverty has kept me trying," he said once. His first book, *Home Rhymes*, was printed by his brother on a press in the attic in 1910; there were 800 copies. Two years later his brother printed *Just Glad Things*. In 1914, when a similar small edition of *Breakfast Table Chat* was in prospect, the Detroit Rotary Club heard of it and ordered 3,500 copies. His first commercially published book, *A Heap o' Livin'*, came out in 1916. Since then he has published 13 books of verse: *Just Folks* (1917); *Over Here* (1918); *When Day Is Done* (1921); *All That Matters* (1922); *The Passing Throng* (1923); *Rhymes of Childhood* (1924); *The Light of Faith* (1926); *Harbor Lights of Home* (1928); *The Friendly Way* (1931); *Life's Highway* (1933); *Collected Verse* (1934); *All in a Lifetime* (1938). In 1938 he also published two prose books: *Between You and Me*, subtitled My Philosophy of Life, and *Edgar A. Guest Says It Can Be Done*.

In 1925 the Michigan legislature voted him the State's poet laureate. Governor Alex J. Groesbeck vetoed the bill on the ground that such an office was inappropriate in a republic. But February 14, 1936 was declared by gubernatorial proclamation to be Eddie Guest Day in Michigan. It was climaxed by a banquet at which W. J. Cameron, Ford's publicity director, was the speaker; they had been reporters on the *Free Press* together. A commentator in *Time* remarked on this occasion that Guest was "one of the most valuable newspaper properties in the United States." He is an ex-president of the American Press Humorists and a thirty-third degree Mason. Aside from this, he is not a joiner.

As has been said, Edgar Guest really believes the things he writes about; no cynic writing with his tongue in his cheek could appeal for so long to so enormous a public—a public which has bought some 3,000,000 copies of his books. But intellectually his tastes are not so simple: he reads the modern poets, (who seldom return the compliment), and his favorites among the classical poets are Browning and Whitman. He loves music, though he is tone deaf and cannot carry a tune. There is nothing flamboyant or vulgar about his taste in any direction. He simply likes simple people and simple things and knows how to say so in uninspired but competent verse. He belongs to an American tradition which has long been moribund and is not likely to survive the present world crisis; socially, politically, religiously, he is thoroughly nineteenth century in his views. He likes to think of himself as doing "the same kind of jingles that James Whitcomb Riley used to write," and this is a shrewd comparison. He is hardly a literary figure, but no one can doubt that his is a friendly and engaging personality.

GUNTHER, JOHN (gŭn'thẽr) Aug. 30, 1901- Journalist; author
Address: c/o Harper & Bros, 49 E. 33rd St, New York City

JOHN GUNTHER

"A good reporter," John Gunther once wrote, "has to be something like Dr. Freud, since he must be a psychologist; he must be something like Gibbon, since he is necessarily an historian; he ought to be like Max Planck, a scientist; he is like Dr. Gallup, a sounder-out of opinion; he certainly must be a politician; he may even have to be a prophet." Gunther himself doesn't claim to be all of these things, but no one has yet disputed the fact that the author of *Inside Europe* (1936); *Inside Asia* (1939); and *Inside South America* (1941) is, as a reporter, one of the best. *Current History* calls him the "most valuable non-fiction property in the world."

Like Vincent Sheean (see sketch this issue), tall, fair-haired John Gunther is a Chicago product. He was born there on August 30, 1901, the son of Eugene McClellan and Lisette (Schoeninger) Gunther, and took his Ph. B. at the University of Chicago in 1922. Long before that, however, he had become interested in writing; at 10 he wrote 200 pages of an encyclopedia. "It sounds childish—of course it is childish," he says. "There were five sections, Great Dates of History, Battleships, Animals, Greek Mythology, I don't remember the other. I spent a lot of my time reading and working at stuff like that. Never took much interest in games. As I grew older I developed a split personality—if you don't take that too technically I was schizophrenic. I was interested in the world around me, in who ran it and how, but the main thing I wanted to do was write literature, stories, novels. And I was hungry for travel."

He satisfied his desire for travel by making a trip to Europe on a cattle boat, and his very first job was a newspaper job—as a reporter on the Chicago *Daily News*. In two years he was in England, working as assistant London correspondent for the same paper. He hadn't been sent there, but had simply quit his job in Chicago, gone to London, and called at the *Daily News* office there for his mail. A kind editor told him to report to work, setting a bad precedent for other members of the Chicago staff who might also like to travel.

After a few weeks Gunther therefore "went over to the United Press, saved three of the ten pounds I was paid each week, and when I had enough went to Southern France and lived in a police station on a little island," where he worked on a "lousy novel" until the *News* relented and hired him back. After that he had fine experience during vacations at the various bureaus all over Europe as "the emergency man sent out to where the stuff was breaking." It was 1925 when he started his private morgue, which now contains some 75,000 clippings.

In that "neolithic yesterday that preceded Hitler and Mussolini," Gunther says, only half nostalgically, "facts were facts, names were names, wars were wars." From 1926 to 1929 correspondent for the *Daily News* in Paris, Moscow, Berlin, Rome, Scandinavia, Geneva, Spain and the Near East, he covered such definite events as the French war in Syria in 1926 and the Palestine riots of 1929. During that same period, in March 1927, he participated in another event with a happier outcome: his marriage to Frances Fineman of New York. Then, in 1930, he became Central European and Balkan correspondent for the *News*, with chief headquarters in Vienna.

The Gunthers, both connoisseurs of good food, liquor and conversation, were happy for five years in Vienna, where Gunther, in addition to his newspaper work, began sending home to *The Nation* articles about "petty revolutionary movements in Romania," about "changes in the political picture in Austria which no one but an Austrian metaphysician could understand"—descriptions of "what was almost a comic-opera world." But the comedy soon turned into melodrama. During those years Gunther covered the evacuation of the Rhineland and the return of King Carol to Romania in 1930; the Sino-Japanese "crisis" at Geneva, the Austro-German customs union crisis and the crash of the Vienna Credit-Anstalt in 1931; the Spanish revolution of 1932; the Reichstag fire trial and Germany's departure from the League of Nations in 1933; and civil warfare in Austria itself in 1934.

By the time Gunther left Vienna for London in the summer of 1935, sent there once more as the *News'* correspondent, he was not only a well known foreign correspondent and the author of material in *The Nation,* the *New Republic, Esquire, Vanity Fair, Harpers,* the *Atlantic Monthly,* the *Saturday Evening Post* and various European publications, but the author of several novels on which apparently no two critics ever agreed and which few biographers ever mention. *Red Pavilion* (1926), a study of the younger generation in Chicago with emphasis on the sex problem, was the first, and a Boston *Transcript* reviewer wrote: "Armed apparently with the *Encyclopedia Britannica,* the University of Chicago study courses and a copy of *The Green Hat,* Mr. Gunther has sat himself down to write the Great American Novel. He has not succeeded. The result of his efforts is more like *The Century Book of Facts,* with supplementary notes on the use of the finger bowl by Emily Post." Even the assurance of the London *Spectator* that *Red Pavilion* was "one of the best, most cultivated and human of recent American books" could not make up for that.

Eden For One (1927), the next, a story of a small boy's encounter with magic, was generally dismissed as the sort of thing that is "fun to write, but . . ." Gunther tried no more juveniles. *Golden Fleece* (1929) was read by Shaemas O'Sheel, who reported, in the New York *World*: "We know of no novel in which the whole close-woven fabric of life is more fully and honestly presented," but in the New York *Herald Tribune Books* there was a murmuring of "distinctly unpleasant . . . dull people." Even on *Bright Nemesis* (London, 1932), a mystery, the critics failed to see eye to eye. Summed up by the *Spectator,* it was a story of "murder in the Balkans, described as if the crime report, the gossip paragraphs and the foreign news of a go-ahead paper had got badly mixed in proof"; but, according to the London *Times Literary Supplement,* "since the days when Sidney Grier wrote about Balkan thrones and plots, no one has made any part of that picturesque but uncomfortable area live so vividly and realistically."

In London, where even an account of Gunther's dinner engagements reads like a catalog of British notables ("nine-tenths of European journalism from Europe is a combination of private ingenuity and public friendship"), he was busy putting the finishing touches on another kind of book. A little before Christmas 1934 he had walked into Harpers' New York office at the invitation of Cass Canfield, president of the firm, and *Inside Europe* had been planned at lunch that day. It was written with astonishing speed, after working hours, on week ends, "holidays." Based on two decades of experience and research during which Gunther had himself interviewed or made the acquaintance of many of the characters who appear in it—among them Flandin, Litvinov (see sketches this issue), Lloyd George, De Valera, Masaryk, Beneš, King Carol, Trotsky, Dollfuss—and had been present when much of its history was being made, it was written, Gunther says, "out of the conviction that Europe was the prisoner of three men."

Published in 1936, the colorful, gossipy, eminently readable but remarkably erudite modern history called *Inside Europe* was immediately acclaimed. Dorothy Thompson called it "indispensable. . . The book to date has no rival." The *Manchester Guardian* insisted that it had "probably the highest proportion of popularity combined with the lowest proportion of misstatement that can be achieved." Malcolm Cowley criticized the point of view "that accidents of personality play a great role in history," was sure that it couldn't always be right, but, like everyone else, agreed that it was an excellent job. It went through several revised editions, the 1940 war edition finally containing 90,000 more words than the original; it was translated into French, Spanish, Dutch, German, Norwegian, Swedish, Hungarian and Finnish; it was published in 14 countries, banned in Germany, Italy and Jugoslavia, "pirated" in Chile. It was, in other words, read.

For his second book of the same kind, *Inside Asia* (1939), Gunther's young son John, Jr., gave him the idea. Gunther had already been to the Far East four times for the *Daily News* and in 1937 and 1938 he covered 30,000 miles of territory—China, Japan, the Philippines, Siam, Persia, India, the East Indies, Palestine—as correspondent of the North American Newspaper Alliance. This book (which he really wanted to call *Outside Asia,* since he was "outside, looking in") also centered around personalities. He asks: "What would contemporary China be without Chiang Kai-shek, India without Gandhi, the Philippines without Quezon [see sketch this issue], Arabia without Ibn Saud?" *Inside Asia,* if New York *Herald Tribune Books* is to be believed, was the "biggest one-man reportorial job that has ever been undertaken, and . . . one of the most competently done jobs for a half dozen widely separated parts of Asia of which this reviewer has some knowledge." John Chamberlain credits it with "all the charm, humor, balance, factual richness and ultimate theoretical weakness that are inseparable from Mr. Gunther's character as a person." Over a million copies of *Inside Europe* and *Inside Asia* have been sold.

When Gunther left the *Daily News* as a regular correspondent, he returned to the United States, set up his home in Connecticut and for a while tried to write there. But soon he decided that he and his wife were "losing touch with things," and they moved to New York City. There he began doing most of his work, 12 to 15 hours daily, in a small midtown office. But he couldn't stay in New York. In June 1939 he sailed for Europe; in July he was quoted as doubting that war would break out that summer; in August, proving himself an incurable newspaperman, he was sending back dispatches on an interview with Poland's Minister Beck during the Danzig crisis. The next year found him in South America, gathering material for *Inside Latin America* (1941), which

GUNTHER, JOHN—*Continued*

was presently selected by the Book-of-the-Month Club as its November choice. Its reviews were almost uniformly laudatory (Harry Hansen called it "a good, balanced and exciting job"), and its sale was phenomenal. In March 1941, back from five months in South America, its author began a new series of broadcasts over the NBC-Blue Network.

A movie executive once told Norman Cousins that Gunther was Hollywood's idea of a perfect type to play the role of foreign correspondent because he had "intelligent features" and was "witty, clever, with a proper balance between sophistication and boyishness." Gunther himself, though, seems to be less confident. His English diary was full of side remarks like these: "As a rule I can never say anything satisfactory in a discussion of this kind until the next day, when it is too late." "Whenever I am with a group like this, I want to crawl away for six weeks or six years and read all the books in the world, from Plato down."

Perhaps both his chief charm and his chief weakness as a writer and as a person is liking nearly everyone. He once mourned: "I suppose I am a bad newspaperman because I instinctively tend to believe people rather than disbelieve them." That is perhaps why, a month before the massacre of February 1934, he was writing of Austria's "little Metternich," Dollfuss, as "Europe's first bulwark against Hitler" and praising his modesty and sincerity and simplicity; why, in 1936, it was to him inconceivable that Baldwin could stand for the betrayal of Ethiopia after all he had been saying for months; why, in January 1940, he was praising Daladier for having at last "united France."

Attractive Frances Gunther is also a writer and an authority on world affairs; she edits her husband's work and does much of his research for him. But it is as a maker of epigrams that she is most appreciated by their friends. Sample: "Remove liberty from Germany and you unite the country; remove liberty from France, and you have a revolution." And, speaking of Chiang Kai-shek: "There is Methodism in his madness." It speaks well for Gunther's honorable restraint that he has never appropriated them as his own for a bright chapter on Germany or China.

HAILE SELASSIE I, EMPEROR OF ETHIOPIA (hī'lĕ sê-lås'ê) July 24, 1891(?)-

In July 1940, shortly after Italy declared war, a mild, scholarly man known in Britain as Mr. Tafari alighted from a plane in Alexandria, Egypt. It was there, in the men's washroom of a former Italian Yacht Club, that he exchanged his civilian clothes for the uniform of an Ethiopian Generalissimo, drank a toast in wine left behind by the Italians, and proceeded on to the Anglo-Egyptian Sudan to try to rally some of his 10 million former subjects around him. The man was King of Kings, the Lion of Judah, Defender of the Christian Faith, Haile Selassie, Emperor of the Ancient Kingdom of Ethiopia, The Chosen of God.

On January 15, 1941, Haile Selassie arrived in Ethiopia from his Sudan headquarters, once more by plane. There a unit of his gradually expanding Ethiopian Army awaited his arrival at the secret landing ground prepared by his troops. He unfurled his red, green and yellow flag; "royal war drums sounded on the crags, summoning black warriors to turn on their Italian conquerors"; and Emperor Haile Selassie urged his subjects to raise their arms against the enemy "and wipe him from the face of Ethiopia!" Plans were for the Emperor's forces to support British troops against Italy in a lunge into the Northwest provinces of his former kingdom. On May 5, 1941, five years after the Italians drove him into exile, he returned to his throne, and in November 1941 the last Italian stronghold in Ethiopia surrendered.

The "Black Napoleon" was born Tafari Makonnen on July 24, 1891. He was the second son of Ras Makonnen, the accepted heir of Emperor Menelek. (Legend says that the Imperial Family is descended from the seduction by King Solomon of Sheba's Virgin Queen, and members of the Amhara or ruling race call themselves white people, Aryans. They were Christianized in the Third Century A. D.) Tafari Makonnen was a sickly child, but studious. He was only seven when he started to learn French from imported tutors, and in 1906, after his father died, he went to a French Roman Catholic Mission to complete his education. At 14 he was Governor of Garamollata; he became Dejazinatch Tafari of Sellalie Province; in 1909 he took on the duties of Governor of Sidamo; and a year later he was governing his home province, Harar. But it was his more vivacious and popular cousin, Lidj Yassu, who was chosen heir by the Emperor in 1909.

In 1911 Tafari Makonnen married Princess Woyzero Menen, now a "portly, olive-complexioned, heavy-lidded woman" who has been content to bear him five children (two sons and three daughters) and remain in the background. Soon the Emperor Menelek died. Lidj Yassu ascended the throne. Came the First World War—and German and British intrigue in Ethiopia. Lidj Yassu fell under German influences, and under the protection of Turkey began to show Mohammedan sympathies. The party of Coptic priests was shocked, and British agents began looking around for a rival Emperor. They found Tafari Makonnen willing and ready. In 1916 a revolt was engineered and in September of that year "the Crafty Fox of Harar" was appointed heir apparent. The Empress Zawditu, Menelek's favorite daughter, became regent.

But the deposed Lidj Yassu was not reconciled. For nearly five years there was guerrilla warfare, until in 1921 a direct attempt by Yassu to regain the throne was frustrated. He was captured and, some say, interned luxuriously at Harar until he died. Now the Empress Zawditu became a rallying point for the opponents of Tafari Makonnen. He did not have the support of all the Ethiopian chiefs, some of whom looked upon him with contempt because he was no warrior. Some criticized his attempts at reform as too radical, some as too mild. Nevertheless on October 7, 1928 he was crowned King of Ethiopia, and when the Empress died early in 1930 his coronation as Emperor finally took place. It was after 20 years of almost continuous bloodshed.

HAILE SELASSIE I

At the coronation Tafari Makonnen changed his name to Haile Selassie, which means The Power of the Trinity. (When an American was told its meaning, he announced: "He'll need all that—and more.") His wife became Queen Etega Menen, Queen of Queens of Ethiopia. Among coronation presents he received an electric refrigerator, a typewriter, a combination radio-phonograph, a bound set of American magazines and an airplane. These gifts give some indication of his admiration for Western civilization and his desire to bring some of its benefits to his backward kingdom, both judicially and scientifically.

In 1931, for instance, he proclaimed by his own free will a constitution with two legislative chambers. He tried to start a police system on European lines. He imported an American financial expert who put Ethiopia on the gold standard—at about the same time the United States went off! And he tried to bring into Ethiopia not only electric lights, films and improved roads but also new schools and research clinics in hospitals. Haile Selassie, moreover, was shrewd, and a linguist: he understood how Western civilization often dealt with civilization less advanced, he stayed on his guard and sometimes even did them one better. Once the Italians supplied him with a powerful radio station at cut rates; as soon as it was in working order he had the entire Italian staff of technicians fired.

Haile Selassie's efforts did not mean, of course, that Ethiopia was beginning to approach Western civilization by the time Mussolini approached it with bombs and tear gas. But his country was slowly advancing from the jungle to the comforts of, say, the Middle Ages. Slavery persisted, although under his laws it would eventually have disappeared as

HAILE SELASSIE I, EMPEROR OF ETHIOPIA—*Continued*

an institution; and Ethiopia remained a feudal state, ruled by feudal chiefs.

As for the country's place in world affairs, one might go back to the First World War in order to understand it. At that time Great Britain had let Italy understand that Abyssinia was reserved for her to "expand" in. Italy felt betrayed by Britain's less generous post-War attitude, but Haile Selassie (then Prince Tafari) remained uneasy. He wanted to get Ethiopia into the League for safety's sake. Shrewdly, after his request for admission had been refused, he started yielding deceptively to French and Italian efforts to obtain important concessions in his empire. By 1923 both France and Italy were insisting that their apparently cooperative friend Ethiopia be admitted.

Tafari Makonnen's first complaint after admission to the League was in 1926; he had caught Britain and Italy exchanging notes with a view to recognizing "spheres of influence" for each other in Ethiopia. It was toward the end of 1934 when he turned once more toward the League for help—an "incident" had occurred, and Italy and Ethiopia were shrieking "Aggression!" at one another. Months later a League commission decided that no one had been to blame, but in the meanwhile Italy was insisting that Ethiopia be ousted from the League and Italian mobilization was already going on. Great Britain counseled "moderation," said she would not give arms to either power, a decision which naturally caused more sorrow in Ethiopia than in Italy; diplomatic efforts to make Mussolini back down merely stiffened his attitude.

On October 2, 1935 Italian troops crossed the Ethiopian border and Haile Selassie ordered mobilization. The half-hearted application of sanctions at last began; the Hoare-Laval plan was revealed and Sir Samuel Hoare resigned as British Foreign Minister in December 1935; and by January 1936 *Time* was talking of the dangers of world war and giving Haile Selassie a backhanded compliment for "dexterously pitching the issue of the war on such grounds that the white race in general feels the future of the League of Nations to be at stake in the future of a Museum of Peoples in Africa."

It was in May 1936 that Haile Selassie announced that further defense of Addis Ababa was impossible. He, his Empress and children fled the country. Gassed, his health weakened, he boarded the British *Enterprise* at Djibouti. With him he took possessions that some claim were worth several million dollars; others say his fabulous wealth was "pure myth." In England he found many sympathizers, but not much financial support for a proposed $10,000,000 "war chest." He was offered a role in a film and the Texas Centennial Exposition made wistful advances, but diplomats snubbed him, George VI wouldn't receive him, and in June 1936 Anthony Eden told him that sanctions against Italy would be dropped.

In July 1936 Emperor Haile Selassie himself appeared before the League of Nations to make his plea against the final dropping of sanctions—an unprecedented move which, Eden warned, would "compromise his imperial dignity." There was dignity in his speech: "Apart from the Kingdom of the Lord, there is not on this earth any nation superior to any other. . . Are the States going to set up the terrible precedent of bowing before force? . . It is international morality which is at stake!" Nevertheless, in accordance with the spirit of "candid realism" in which Eden announced Geneva must act, his words went unheeded. Sanctions were officially and universally dropped. Ethiopia was "finished."

The Emperor of Ethiopia retired with his family to a 14-room Georgian house at Fairfield, Bath. Now he wore a black coat and trilby hat and kept the imperial crown locked in a London safe. He never went to restaurants or the theatre; he busied himself with a 90,000-word story of his life, written in Amharic and translated into English; he listened to his beloved Beethoven; he read his diplomatic, ecclesiastical and medical histories; he continued to keep the Coptic fasts. He looked less than ever like a warrior as he busied himself with his books: five feet four, slight and fragile, with an "olive complexion, a thin hooked nose, tiny fluttering hands, a ruff of coarse black hair brushed over a high forehead," lips thin and sensitive, chin unobtrusive "behind the dignity of mustache and beard." Yet it seems certain that Mr. Tafari Makonnen, alias Haile Selassie, was preparing for what was to come. On May 12, 1938, he made what everyone thought was his last stand before the League of Nations council table. Then, faced with the cold eyes of Lord Halifax and Georges Bonnet, who had decided to recognize Mussolini's conquest, he announced: "Whatever the world will do, my people will fight on until they have forced Italy from the country or are themselves exterminated!" Once more they fought—and this time, with England's help, they won.

HANDY, WILLIAM C(HRISTOPHER) Nov. 16, 1873- Composer; music publisher

Address: Handy Brothers Music Co, Inc, 1587 Broadway, New York City; h. 400 Convent Ave, New York City

For more than a third of a century William C. Handy, "father of the blues," has been writing down melodies, arranging spirituals, composing and publishing songs. He is an old man now, but the tunes still come to him. He is blind now but he has them written down by others.

The type of song known as "blues" was being sung and played by illiterate Negroes—"bar-room pianists, nomadic laborers, watchers of incoming trains and steamboats, street corner guitar players"—long before any of them were written down. Where the name originated no one knows, but by 1910 it was being used by Negroes from Missouri and Kentucky to the Mississippi Delta. The original blues song had a three-line verse, with a definite musical pattern, and usually expressed a lament of some kind, often ending in "ironical self-ridicule, fatalistic resignation" or "absurd incongruous laughter." There was no author or composer—as with all folk music, someone started a song, others took it up, added to it, changed it; eventually it was being sung by many people and in many different versions, and all trace of the originator was lost. Handy collected some of these songs and was the first to write them down. That is why he is called "father of the blues." He has also composed blues, these composed songs being known as "artificial blues"—in contradistinction to "folk blues," which "just grew."

WILLIAM C. HANDY

The story of his musical career, "which has affected as many lives as that of Bach, Brahms or Wagner," was published under the title *Father of the Blues* in June 1941. In this book the "Beethoven of Beale Street" tells with dignity and integrity, in rambling and entertaining fashion, all the events of his full life, all its ups and downs.

Handy was born in Florence, Alabama. In the public school there he had a teacher who introduced him to choruses from Wagner and

HANDY, WILLIAM C.—*Continued*

Bizet. He heard itinerant bands in the barber shops. He heard spirituals in the African Methodist Church built by his grandfather, in which his father was minister. Every time a band or a group of singers came nearby he tried to go listen to it. Though his mother, Elizabeth (Brewer) Handy, and father, Charles Bernard Handy, had planned for him to be a minister, he early decided that he wanted to be a musician. His father looked upon a professional musician as a "sinner," and Handy had to leave home in order to carry out his ambition. He walked all the way to Birmingham, Alabama. There he taught school for two years and then went into the Bessemer iron works, where he was better paid. At the iron works he heard songs which 30 years later he put into his *Harlem Blues.*

When the depression of 1893 (it was called a "panic" then) resulted in general unemployment, Handy organized a quartet which traveled to the World's Fair in Chicago. He did not stay there long, however, for the quartet was not well received. For several years thereafter he wandered around, working as a bricklayer, teaching music in a school in Alabama, traveling as band leader and solo cornetist for Mahara's Colored Minstrels, and finally forming his own band. At a white subscription dance in Mississippi where his type of band playing was not what the people wanted he noticed the enthusiasm with which they responded to a band consisting of a mandolin, bass violin and guitar. He had not realized that the kind of music he had heard all around him among the Negroes in the South would be acceptable elsewhere. He left Mississippi then for Memphis, Tennessee, to begin collecting these tunes and experimenting with them. As George Lee says in *Beale Street: Where the Blues Began*: "He returned to Beale Street and set his pen to music paper. Memphis woke up one morning with the blues."

During a Mayoralty election campaign in Memphis in 1909, in which there were three candidates, each with his own band, Handy had been hired by Edward Crump, later a Congressman. For the campaign song, *Mr. Crump,* which Handy wrote, he used a blues tune. Crump was elected, and Handy's band became so popular that soon he had a chain of bands, sending out as many as 90 men in a single night. His song, *Mr. Crump,* he changed somewhat and called *Memphis Blues.* When he failed to find a publisher for it he issued a thousand copies himself. Later he sold it to a white arranger for $100, and when in 1926 he published an anthology of his compositions he was not permitted to include it.

After *Memphis Blues* other blues followed: *St. Louis Blues* (the best known), *Beale Street Blues, Mississippi Blues, Joe Turner Blues*—more than 60 in the last 20 years. Some of these Handy recalled from having heard them sung around him; others he composed. In order to get them published Handy, in partnership with Harry Pace, a song writer, founded a music publishing house in New York City, "commencing a revolution in the popular tunes of this land comparable only to that brought about by the introduction of ragtime." *St. Louis Blues* became one of the most popular tunes in the history of song writing. Even today it is said to bring in $25,000 a year in royalties. In the publishing business Handy has made and lost more than one fortune, and his company has gone through various changes, the present one being a family affair, The Handy Brothers Music Company, Incorporated.

Handy's work has not been confined to blues. He has written other secular songs, made arrangements of many spirituals, and has also done orchestral work both as a composer and a leader. His evolution of the blues was used in 1924 by Vincent Lopez in the latter's first jazz concert at the Metropolitan Opera House in New York City. In 1925 Handy presented a band of his own, consisting of 30 pieces and a large chorus, in a Carnegie Hall concert which traced music from Africa to spirituals and jazz. During the summer of 1940 he appeared as guest conductor of the New York World's Fair Band, leading the Band in a presentation of *St. Louis Blues.*

Among other means of giving recognition to Handy a park in Memphis, Tennessee, once a part of the famous Beale Street, "where the blues began," has been named in his honor. One of the most colorful tributes paid to him was a series of celebrations commemorating his sixty-fifth birthday: a testimonial dinner at the Cotton Club (New York City's famous night club); a reception at the Delphic Studio, New York; the playing of *St. Louis Blues* 15 times by as many bands at a musical jamboree of the American Federation of Musicians in Hollywood; and, as a culmination, a concert in Carnegie Hall, with many of the "name bands" on the program, Maxine Sullivan among the soloists, and *St. Louis Blues* rendered in a variety of arrangements.

Handy was married to Elizabeth Virginia Price in 1898. Five of their six children are living.

HANSON, HOWARD (HAROLD) Oct. 28, 1896- Composer; conductor; educator
Address: b. Eastman School of Music, Rochester, N. Y.; h. 362 Oakdale Dr, Rochester, N. Y.

Composer, scholar, conductor and educator, Howard Hanson has probably done more than any musician "to foster an appreciation of native music." Through his own compositions, through his guest conducting of most of America's great orchestras, through his leadership of the Eastman School of Music, through his work in many musical and music-teaching organizations, this accomplished musician has wielded a tremendous influence on the musical life of our times.

Howard Harold Hanson was born in a little town in Nebraska called Wahoo, where his grandparents had come from Sweden in the '70s. His father and mother, Hans and Hilma Christina (Eckstrom) Hanson, were, like their parents, good Swedes, good Americans and good Lutherans. And Mrs. Hanson was, besides, a musician who taught her son whatever she knew.

Howard Hanson remembers Wahoo well. "The principal assets of this little city—aside from its name, which was an immense help to us in making up high school yells for the football games—were a small but excellent Swedish college, a very good public school system and a population rather above the average for a town of its size in culture." Howard went to the public schools and later to the Swedish Luther College, "where I received, among other things, a rather solid musical grounding." "My early musical fare," he recalls, "consisted of Swedish folk songs and Lutheran chorales on the one hand and the usual public school music diet of that period on the other. My earliest musical memories are a mixture of *Sweet Adeline, Down by the Old Mill Stream, Neckens Polska* . . . Lutheran chorales, the *Messiah* and something by Grieg."

In Wahoo, Hanson learned to play first the piano and then the cello and at the age of 15 left home to study further at the University of Nebraska. From there he went on to the Institute of Musical Art and then on to Northwestern University on a teaching fellowship to study composition, acoustics and the piano and to receive his Bachelor of Music degree in 1916. (Six colleges have since made him a Doctor of Music.) Next he attended the Institute of Musical Art in New York City, where Dr. Percy Goetschius encouraged him to become a composer instead of a concert pianist.

In 1919 Hanson was in California, acting as dean of the College of the Pacific at San Jose and professor of theory and composition. It was while he was here that his first compositions began to be known. He wrote the score of the *California Forest Play of 1920* and a symphonic poem, *Before the Dawn*, compositions which won him the *Prix de Rome* in 1921. He went abroad to study and spent three productive years in Italy. From them came the *Nordic Symphony*, the première of which he conducted in 1922 in Rome; a symphonic poem, *North and West* ("All of my best music," he says, "has been the result of an acknowledgement of these two sources, the North and the West"); *Lux Aeterna*, a work for chorus and orchestra; *The Lament for Beowulf*, called "pathetic, thrilling and immensely powerful . . . inexorable, granitic"; and a string quartet commissioned by Mrs. Elizabeth Sprague Coolidge (see sketch this issue).

HOWARD HANSON

As a result of his conducting of the premières of the *Nordic Symphony* and *Lux Aeterna*, Walter Damrosch invited Hanson early in 1924 to direct the New York Symphony in a first performance of *North and West*. He accepted and accepted, too, an invitation to visit Rochester to conduct the *Nordic Symphony* with the Rochester Philharmonic Orchestra. Here he met George Eastman, who had founded and endowed the Eastman School of Music at the University of Rochester, and President Rush Rhees of the University. Not long after he returned to Rome to complete his stay there they asked him to become the director of the Eastman School of Music. In 1924 he took this position.

At Rochester, Dr. Hanson has been active as teacher, conductor and composer. Here he "teaches in one of the most significant all-American composition departments in our land." His desire as a teacher, he says, "is to make good teachers rather than to hunt for genius. Genius declares itself." As director he has built the school up into "one of the liveliest centers of interest in American music." In his school "the instrumental departments have become outstanding, the student orchestra is a splendid ensemble and the ear-training is actually taught, not merely printed in the catalog. . . All the major theory teachers are

HANSON, HOWARD—*Continued*

themselves composers, many of them graduates of the school."

There are concerts at Rochester by the School Symphony, with the Rochester Philharmonic and the Rochester Civic Orchestra. Most important for American music is the series of American Composers' Orchestral Concerts, started by the Eastman School of Music in May 1925. Begun originally as "a sort of composers' laboratory to give beginners and amateurs a chance to experiment and hear their works," this series has developed into annual festivals of American chamber, choral, symphonic and stage music which "surpass in the number of American works given those in the entire country elsewhere combined." Their purpose, Dr. Hanson sums up, is "to make them the means of enabling young composers to hear the first performance of their works." These concerts "have given performances of both new and old works of established composers, enabling the hearers to form some estimate of the directions in which American music is moving"; and they have "made it possible to test and retest the value of certain manuscript works which for commercial reasons have never achieved publication."

Apart from these concerts, Dr. Hanson spends much time trying to convince conductors to play American music. "There exists in the United States," he tells other conductors, "a large number of gifted creators of music, well-equipped technically and seeking to express through their art the life of our time and of our nation." These composers should be supported: there should be "intense concentration upon our own composers," he believes.

Hanson has done much to disseminate these beliefs in articles, as president of the Music Teachers National Association and of the Commission on Graduate Study of the National Association of Schools of Music, and as a member of the Oberlaender Trust and of the National Advisory Committee of the Federal Music Project. He has probably done most to convince the public of the importance of American music through his own compositions.

Hanson's style, it was said by John Tasker Howard, "is best classified by that much-used term 'conservatively modern.' He believes in the constant expansion of harmonic, melodic and rhythmic idioms, but his innovations have their roots firmly planted in the classics." His "harmonic innovations have seldom offended concert-goers' ears, and when a juicy melody comes to mind he uses it unhesitatingly." ("I believe in melody," he said of his opera *Merry Mount.*) Busy in the late 1920's with works like *Pan and the Priest,* the *Heroic Elegy* and *Beat! Beat! Drums!*, in 1930 Hanson inaugurated "what at that time appeared to be a one-man movement in behalf of romanticism in music," with the performance of his *Romantic Symphony* by the Boston Symphony Orchestra. This work, he said, "represents my escape from the rather bitter type of modern musical realism which occupies so large a place in contemporary thought." And he added that though he recognized that "romanticism is . . . the poor stepchild without the social standing of her elder sister, neoclassicism . . . nevertheless I embrace her all the more fervently, believing as I do that romanticism will find in this country rich soil for a new, young and vigorous growth."

In this symphony and in others of his works, Dr. Hanson demonstrated his own belief that "the composer must always remain untrammeled and unhindered by theories . . . free to express himself according to the dictates of his own artistic conscience." He demonstrated it again in *Merry Mount,* his opera commissioned by the Metropolitan Opera and first performed on February 10, 1934 with Lawrence Tibbett and Gladys Swarthout in the leading roles. Most critics found it uneven ("Hanson's work at its best is manly and imposing. . . At its worst it is effect and content with mere tonal wise-cracking," said one), but there were fifty curtain calls, and though only three performances had been guaranteed, twelve were given before the season ended.

The latest work of this tall, lanky, stooped-shouldered composer, whose rather boyish face is adorned by a goatee and whose straight straw hair straggles above, is the *Symphony No. 3,* which had its first performance with its composer conducting in 1939. He has conducted much of the work of others, too, at the Composers' Concerts and in guest appearances all over the United States. Called "one of the most brilliant conductors of modern music," Hanson has an uncanny sense of contrast and climax. "Characteristic of him is the spontaneous smile of commendation he bestows on an orchestral section or soloist that has nicely turned a phrase. Careful as a rehearser, he nevertheless gets his results quickly by drawing out the performers themselves rather than by seeming to impose his will upon them."

In his conducting, as in his composing, it has been suggested that "perhaps there are too many high points, too much of horns and trumpets striving, or an over-beating of drums." But behind these "is a vigorous personality, full of the joy of living and above all thoroughly sincere."

HARMSWORTH, HAROLD SIDNEY, 1ST VISCOUNT ROTHERMERE *See* Rothermere, H. S. H., 1st Viscount

HARRIMAN, W(ILLIAM) AVERELL Nov. 15, 1891- American "defense expediter" in London; industrialist

Address: b. American Embassy, London, England; 59 Wall St, New York City; h. Harriman, N. Y.

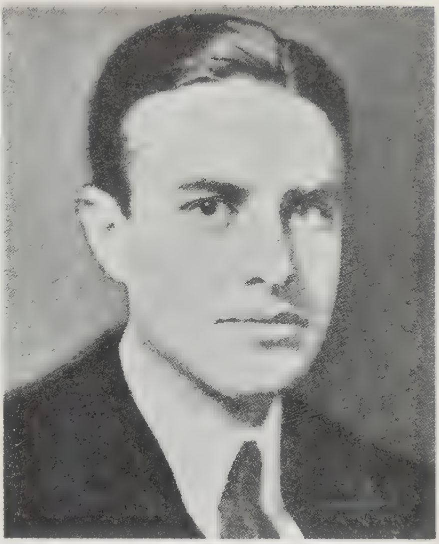
In March 1941 W. Averell Harriman left for England to coordinate aid to Britain from the British end and to carry through the details of the Lease-Lend Bill after it passed Congress. President Roosevelt called him a "defense expediter" for lack of a better title, and indicated that Mr. Harriman would not have diplomatic rank.

As liaison officer Harriman has kept this Government informed of British needs and the British Government informed of production situations in the United States. He has coped with special problems of transportation, purchasing and financing which affect United States' help to all the Allies. He has gone to the Middle East to discuss the receipt of America's equipment there. And in September 1941 John Biggers (see sketch this issue) temporarily took over his duties in London while he headed the American delegation to Moscow to consider aid to Russia.

In this last capacity Harriman informed Soviet leaders that the flow of tanks and planes from his country would be "constantly increased and eventually . . . limited only by problems of transport." Back in London, he delivered a statement for both the American and British delegations, then made a flying visit to the United States to consult with President Roosevelt and other defense heads in which he pronounced himself greatly impressed with Russia's ability to withstand the Nazi onslaught, with Russian morale and leadership. He was soon back in England, however. And, as Alexander Woollcott (see sketch this issue) put it during his own British visit: "There'll always be an England, now that Averell's here."

The second Mrs. Harriman, the former Mrs. Marie Norton Whitney, whom he married in 1930, and Mr. Harriman's two children by his first marriage in 1915 to Kitty Lanier Lawrance, have remained here. Mrs. Harriman explains that her inability to be on time for appointments, and to get things done when she hopes to, disqualify her for any pretensions toward being an "expediter."

Mr. Harriman, however, seems to have all the necessary qualifications. He is familiar with London ("I have been there off and on ever since I was a boy"); he has been around Washington enough to know how to cut through organizational and personal intricacies; he has served on the defense program since its beginning in half a dozen capacities and at the time of his appointment was chief of the Industrial Materials Division of the Office of Production Management; and he has had special experience in the fields of transportation, purchasing and finance.



W. AVERELL HARRIMAN

Mr. Harriman, who is chairman of the board of the Union Pacific Railroad, chairman of the executive committee of the Illinois Central Railroad, a partner in the investment house of Brown Brothers, Harriman and Company, a director of the Guaranty Trust Company and of the Western Union Telegraph Company, is one of America's outstanding business leaders and one of its richest men. He became a business leader through his own efforts; he became wealthy less through them than through the head start of a $100,000,000 fortune left by his father, the late Edward H. Harriman.

E. H. Harriman was "one of the most dynamic men who ever raided Wall Street: he feared neither God nor Morgan." He won control of the Union Pacific Railroad and brought it back to health. He engineered interlocking controls of other roads, won control over still others, and when he died in 1909 was the country's outstanding railroad man. W. Averell Harriman's mother was Mary (Averell) Harriman, famous for her charities and her donations to cultural activities, a woman who "tapped the resources that have enriched the life of our country." Their son was brought up to meet their standards.

After preparatory school William Averell entered Yale and was graduated from the University in 1913, a dark, lanky, broad-shouldered young man who had been elected to Skull and Bones and had rowed for the Yale crew. He had also been interesting himself in the family business, spending summer vacations in the shops and offices of the Union Pacific Railroad. With college over he went to the railroad's headquarters in Omaha as a member of the rail inspection gang and later worked as a surveyor, fireman on locomotives and workman in the shops. After a year of this he was made vice-presi-

HARRIMAN, W. AVERELL—*Continued*

dent in charge of purchases and elected a director to represent his family's dominant interest.

Harriman wasn't content to follow his father's footsteps and stick to railroading. He branched out for himself and in the next years proceeded to make and lose millions in shipbuilding, foreign mines, investment banking, aviation. Nevertheless he managed at the same time to concentrate hard on railroads and by 1931 had become chairman of the board of the Illinois Central and by 1932 chairman of the board of the Union Pacific.

When he headed the Union Pacific things began to happen. This road had not been doing well: gross revenue had dropped and passenger traffic had been especially hard hit. Harriman proceeded to do a smart merchandising job. While other railroads were retrenching in 1933, he instituted a $5,000,000 modernization program. He ordered a streamlined lightweight Diesel-driven train which saved much time and also speeded up freight traffic in other trains; he had the coaches redecorated, rates lowered, meals served more cheaply. And he built up Sun Valley, Idaho as a real and exclusive attraction. Here in the Sawtooth Mountains, on a branch of the Union Pacific, he created and advertised a skier's paradise (he's no skier himself) which has since developed into a popular vacation resort for all four seasons of the year.

At the same time that he was building up the profits of this railroad, Harriman was concerning himself with labor problems and the conditions of work for the many Union Pacific employees. As he once said: "In the railroad industry, management and labor are closer to an understanding, perhaps, than in any great industry in the country. Although the U. P. has been a leader in the railroad industry in the improvement of facilities and improvement in service, I put this human accomplishment as the greatest contribution to progress that the Union Pacific has made to the country."

This sort of attitude, which is consistent in Harriman, has won him a reputation as one of the most liberal of the big industrialists. Even in the most hectic days of the New Deal he continued to believe "that a compromise can and may be worked out between Wall Street and Pennsylvania Avenue." An old friend of the President, he was advising him on railroad policy during the 1932 Presidential campaign, and when Roosevelt was elected he was given a number of special jobs to do, among them the drafting of legislation for the relief of bankrupt municipalities.

When the NRA was started, Harriman was made a member of Secretary of Commerce Roper's Business Advisory Council and later its chairman. He was in charge of the NRA for the state of New York and later in 1933 placed on the Industrial Advisory Board. After Malcolm Muir left the NRA, Harriman became Divisional Administrator in charge of heavy industry. (At the same time his sister, Mrs. Charles Cary Rumsey, was chairman of the NRA's Consumers Advisory Board.) From NRA days on into defense program days, Harriman has frequently been consulted by the Government, which recognizes him as a financial leader who is willing to listen to all points of view.

One of the results, though perhaps not the most important, of this activity and Harriman's energy in his various businesses is that America has lost an outstanding polo player. At one time Harriman had an eight goal rating and in 1928 played in the international matches between the United States and Argentina. He still breeds ponies—"the fastest in the world"—at his Genesee Valley farm, and is known to be a right smart horse trader. He is also known as a collector of French art.

Harriman is a modest, quiet man, tall, dark-haired and sufficiently impressive in appearance to have once been placed by Madeleine Carroll on her list of America's 10 most handsome men.

HART, MERWIN K(IMBALL) June 25, 1881- President of the New York State Economic Council

Address: b. 505 Fifth Ave, New York City; h. Winship Rd, New Hartford, N Y.

In 1941 the name of Merwin K. Hart, founder and president of the New York State Economic Council, began appearing in the news, consistently linked with the names of Charles A. Lindbergh, (see sketch this issue), Father Coughlin (see sketch 1940 Annual), and Lawrence Dennis (see sketch this issue). Harold Ickes, United States Secretary of the Interior (see sketch this issue), publicly denounced him more than once as belonging to the same group of the "Fascist-minded," and in April 1941 a member of the United States House of Representatives, speaking at a Council luncheon, announced that he would not have been there if he had known in advance of the views "on our American democracy and its defense" held by "certain sponsors" of the Council. Mr. Hart was kept busy demanding retractions, denying allegations that he was "anti-Semitic, anti-Negro or anti-sharecropper," denying that he has even met any of the men with whom he has been linked except Lindbergh, with whom, he said, he frequently conferred.

Kaiden Keystone
MERWIN K. HART

Merwin Kimball Hart has had a varied career. Born in Utica, New York on June 25, 1881, the son of Henry Gilbert and Lucy Lord (Kimball) Hart, he was educated at St. Paul's School in Concord, New Hampshire and at Harvard University, where he received his B. A. in 1904. He entered politics three years later when he was elected a member of the New York Assembly, 1907 to 1909, and during the last year of his term he married Katherine Margaret Crouse of Utica, New York. After studying law he was admitted to the Bar in 1911, and became a member of the firm of Hart, Senior & Nichols. Three years later he founded the Utica Mutual Insurance Company, and he later became president of the Genesee-Hopper Corporation, vice-president of the Allied Fire Insurance Company, director of the Utica Mutual Insurance Company and of other firms.

In the meanwhile, during the First World War, Hart had trained at Plattsburg in Aug-

HART, MERWIN K.—*Continued*

ust 1915 and at Fort Niagara, New York from August to November 1917. Appointed to the rank of captain of infantry, from January 1918 to February 1919 he had served in France. He had not been very active in public affairs since 1912, when he was chairman of the Progressive County Committee in Oneida County, New York. From 1926 to 1929, however, he acted as a member of the New York State Industrial Survey Commission (representing employers); later he was chairman of the Committee of 25 of the New York State-wide Economic Congress. And in 1931, perhaps as an outgrowth of that experience, he organized and became president of the New York State Economic Council.

An announcement sent out from the Council set forth its objectives: "to curb public spending and to prevent legislation harmful to those who live by private enterprise." One commentator interpreted this as meaning that "the Council's perennial mission is to combat social legislation"; and it is true that during the heyday of the New Deal the Council's bi-monthly *Letter*, sent out under Hart's name to approximately 17,000 persons in the state of New York, usually contained tirades against "pump-priming," against such measures as WPA and unemployment insurance. In 1941 the Council had around 2,000 members, according to Mr. Hart. It is supported by contributions, and when asked from whom it received its chief support Mr. Hart replied that James H. Rand, Jr., president of Remington Rand, "contributed off and on."

Although Mr. Hart gave up his law practice in order to devote all of his time to the work of his Council, his activities were by no means confined to the one organization. He was chairman of the short-lived Committee for American Private Enterprise, chairman of the Church Layman's Association (he is an Episcopalian) and from 1932 to 1933 he was a member of the New York State Budget-Advisory Commission. The author of *America, Look at Spain* (1939), from 1938 to 1940 he was also chairman of the American Union for Nationalist Spain. During the Spanish War he went to investigate what went on in Franco's territory and over the Spanish national hookup he broadcasted an address in which he attempted to correct the impression that if Franco won he would have to depend on the Germans and Italians in order to govern. Then, upon his return to the United States, in a number of speeches before various organizations he confided that the bombing of Guernica and the massacre of Badajoz had never actually occurred, that there had been "no Nationalist atrocities beyond individual crimes (and little evidence of these)." "I have not changed my views about Spain," Mr. Hart said in a 1941 interview. He stated his belief that the United States should cultivate a much closer relationship with Franco's Government.

Hart has denied any connection with either Father Coughlin or the Christian Front. It seems to be well established, however, that an article under his name appeared in *Social Justice* and that in December 1938, at a Council-sponsored luncheon where Martin Dies was guest speaker and where Fritz Kuhn and James Wheeler-Hill, secretary of the German-American Bund, were guests, members of the Christian Front distributed leaflets announcing a mass meeting of their own. In February 1939 Hart ran a "pro-American" mass meeting at the 7th Regiment Armory in New York for which the Christian Front was one of the chief agencies of ticket distribution and at which his chief aides were Allen Zoll and Bernard D'Arcy, the latter "chief distributor of *Social Justice*." At a Madison Square Garden meeting in honor of Martin Dies in November 1939, whose proceedings Hart was chosen to direct, members of the Christian Front were admitted to the balconies on free tickets. According to the New York *Times*, at that meeting "references by speakers to General Franco, Premier Mussolini and Chancellor Hitler were applauded."

Communism never had a stauncher foe than Mr. Hart. In January 1938 he asserted that just as Communism was spreading all over the face of Europe "until the Nazis overwhelmed it," so President Roosevelt was bringing it to the United States. The undistributed profits tax, the Wagner Act and La Follette's Civil Liberties Committee seemed equally dangerous to him. His pamphlet, *Is Your Town Red*?, has been widely distributed, and he highly recommends the similar work of Harry Jung (generally considered pro-Nazi) and of Mrs. Elizabeth Dilling.

Mr. Hart believes, too, that "if you find any organization containing the word 'democracy' it is probably directly or indirectly affiliated with the Communist Party." The United States was founded as a republic, not a democracy, he assured a Union League Club audience in New York in February 1940. His views on the Second World War were also rather uncompromising even at that date. In the same speech he explained that he thought the United States was in danger of getting into it because the country was flooded by from 200,000 to 500,000 refugees, here "lawfully or unlawfully," and, "blinded by fury at the prosecution of minorities in Germany, this force would be as willing to engulf us in this [War] . . . as it was willing to engulf Britain and France a year ago." A week after the German attack on Russia he told the Senate Military Affairs Committee that the Soviet Union should be excluded from any benefit under pending legislation to permit the President to requisition private property.

One of the most active figures in the campaign against the books of Harold Rugg (see sketch this issue), in a speech entitled "Are There Subversive Activities In Our Schools?" delivered before the Exchange Club of Binghamton, New York, Hart suggested that "if the per pupil cost in New York were reduced to the per pupil cost in Indiana, which has an excellent school system, it would save $142,000,000 a year for the people of New York State." A few months later he announced the formation of the American Parents Council on Education, with the object of "rooting out the subversive teachings which are taking place in many public schools."

Hart, who has three sons (a daughter Margaret is deceased), is described as an "angular, square-jawed man, solidly built, gray-haired, his face deeply lined. He wears glasses." To a *PM* reporter he gave the impression of "graciousness and studied nonchalance. Mr. Hart is obviously a gentleman." He is a Mason and a member of the University, Harvard and Uptown Clubs in New York. He is particularly disturbed by suggestions that he and his Council are anti-Semitic. "Most of the people with whom we do business are Jews," he was quoted. "Why, we have Jewish members on our board of directors." Besides, he added, "all men are my friends—in a sense."

HAWKINS, ERSKINE July 26, 1914- Band leader

Address: c/o Gale, Inc, 48 W. 48th St, New York City

Erskine Hawkins, leader of one of the most popular Negro orchestras in the country (he is billed as "Erskine Hawkins and His Orchestra") claims allegiance to what one veteran called "the real old jazz." The solid swinging jazz born in the Midwest, where Bennie Moten's Orchestra, McKinney's Cotton Pickers and Andy Kirk's Clouds of Joy Negro dance bands stomped away from conventional dance music, is the music on which Erskine Hawkins' is based. He has taken on polish in the years, but from this vigorous quasi-folk music he has assimilated a core of rich vitality. This is true not only of his conducting but of his compositions like *Tuxedo Junction* and *Dolemite*.

Erskine Hawkins was born July 26, 1914, in Birmingham, Alabama. His mother was a schoolteacher. His father was with the A. E. F. in France during the First World War, and was killed in action. Hawkins has three brothers and a sister, all musically

ERSKINE HAWKINS

inclined. His own musical career began inauspiciously at home, and with school chums he organized a neighborhood band. At State Teachers College, Montgomery, Alabama, he brought together the nucleus of his present orchestra. Most of the musicians in it are under 30, and most of them are from Hawkins' native Birmingham.

He was graduated from State Teachers College in 1934 but taught music and dramatics for a year before putting his orchestra on a professional basis. The band, with substantially the personnel it had comprised at State Teachers College, barnstormed for a year or so before it came into New York. Billed as The 'Bama State Collegians, they made their debut in 1936 at the Harlem Opera House and soon after that went into Harlem's Savoy Ballroom. At the Savoy they were given a radio wire three times a week, got a recording contract and began to acquire a national reputation. Columnists and reviewers have been friendly to the band almost since its New York debut.

The 'Bama State Collegians could pull together with real swing, and their musical performance was refreshing to listeners. They had what more sophisticated bands sometimes lacked, the freshness of music that sounded as though the musicians were enjoying it. If they acquired a fault it was that they took on polish too soon, before they had the music to back it up. That, at any rate, was how it sounded to some critics when they played at the Harlem Uproar House on New York's 52nd Street early in 1937. They were yet to learn fully the welding of effort to inspiration —the lesson that Duke Ellington's (see sketch this issue) men had learned so well through the years.

Hawkins himself played and plays several instruments in his band, but the trumpet has always been his favorite, and he plays it with tremendous facility and brilliance of tone. They bill him as the "Twentieth Century Gabriel" and wait for him to produce high tones—which he does with the aid of a special mouthpiece he developed. Publicity stories in the late '30s used to emphasize that he blew from his stomach, instead of his lungs, and therefore could triple-tongue high C's at his leisure. Whether he did or not, he was able to win polls as an outstanding trumpet player (as an orchestra leader as well). He's seldom seen without his trumpet, which he uses even while conducting instead of a baton.

As a composer he is probably best known for his *Tuxedo Junction* (1939). Tuxedo Junction is the nickname of a suburb of Birmingham near the great steel mills of that city, a transfer point for trolleys, busses and trains. As a boy, Hawkins was intrigued by its many roundhouses, turntables and switches. He also got to know the little "juke box joint" where railroad men and workers from the steel mills often stopped to change into street clothes and, more rarely, into tuxedos, preparatory to stepping out for the evening. When the roar of the mills had died down and before the night shift had begun, through the open door there came the myriad sounds of trains switching, bells clanging and engines puffing. Within the little room the men kidded with each other as they poured nickels into the "juke box" to hear the latest records. The place seemed alive with good fellowship and gaiety. That was the inspiration for his piece, though according to Artie Atlas in *Down Beat* the musical phrase that opens *Tuxedo Junction* was for years a sign-off phrase of bands at the Savoy Ballroom in Harlem. He says that one night when the late Chick Webb was due to come on and didn't show up on time, for a joke, Hawkins and his men improvised on the phrase. In any case, Hawkins worked it into an extraordinarily effective train piece that has been used by modern dance groups as well as by dance bands.

The critics felt that with *Tuxedo Junction* it was at last possible to hear what the band could really do. The arrangement was unconventional, but without tricks; where brilliance entered into the music, it was properly a fillip and not the show itself. The orchestra was just as good in his *Norfolk Ferry* (1940), a work similar in inspiration, based on the ferry from Cape Charles to Norfolk, Virginia which bands often take when motoring to or from the South. On the boat they sometimes get out their instruments and hold impromptu jam sessions while the ferry plods up Hampton Roads past Old Point Comfort and past ships from every port in the world, anchored in the roadstead.

When he first began to write music Hawkins worked only at night. He confesses that when he was younger this seemed the proper way to go about it. "Most of the really important song-writers I knew about worked only at night," he said, "and I thought it necessary to write songs while burning the midnight oil." But he found it didn't work out, possibly because playing dance dates that ran into the small hours of the morning didn't leave one with energy to compose. Now he works at his music mostly when the sun is pouring into his window, leaving the hour or so after the night's work for relaxation. One of his first "daytime" compositions was the successful *After Hours.*

Hawkins believes that "you've got to have perseverance and fortitude in addition to talent if you want to write song hits." He decries alike the attitude that a song is something "dashed off in a leisure moment, dreamed up during a peaceful slumber," or "that there is a soul-stirring melodramatic story behind each song." Patience and industry, he believes, should be harnessed to imagination before the latter can get anywhere. Mr. Hawkins uses this method diligently and his works are both inspired and thought out. He composes usually at the piano.

Hawkins' favorite hobby is collecting old phonograph records. For recreation he spends part of his time learning to pilot an airplane, and hopes some day to make a good-will tour of South America. Erskine Hawkins married Florence Browning, a schoolteacher, in 1935. He is of average height with even features and dark brown eyes. His suave appearance is enhanced by a thin line of mustache and the double-breasted pin-stripe suits he likes to wear.

HAYCRAFT, HOWARD July 24, 1905- Editor; author; publisher

Address: b. 950 University Ave, New York City

Howard Haycraft's *Murder for Pleasure: The Life and Times of the Detective Story* was published in September 1941 and within two weeks went into its second printing. Writing in the New York *Times Book Review,* Katherine Woods declared that this book (the first full-length history and survey of police fiction) "makes an encyclopedic appeal to real students of this genre and that not merely in the comprehensiveness of its main historical text, but also in its bibliography and lists of authors and characters, in its detective story quiz, and in its chapters on the rules and the democratic alliances of detective fiction. But the general excellence of Howard Haycraft's work rests upon an even broader basis—he understands the detective story and presents it with fairness and balance, and his writing has the lively intellectual interest of a good detective story itself." Other critics were equally favorable.

Oggiano

HOWARD HAYCRAFT

Mr. Haycraft tells us in an autobiographical account written especially for *Current Biography*:

"There really isn't much to tell. I was born in Madelia, Southern Minnesota where my father [Julius Everette Haycraft] was a lawyer and at the time the local postmaster; he is now a judge. His ancestry included English, Welsh, Dutch, and Huguenot French,

HAYCRAFT, HOWARD—*Continued*

all plain people, going back to the 1660's. His father was a Kentuckian who had followed the Lincoln trail to Illinois, served in the Union Army, and then homesteaded in Minnesota. My mother [Marie (Stelzer) Haycraft] had been a schoolteacher; at one time, in fact, she was the first teacher in one of the 'boom' iron-mining towns in Northern Minnesota, when it was only six months old. Her parents both came from Germany, arriving in Minnesota just in time for the Indian outbreaks during the Civil War. No more loyal Americans ever lived than my German-born grandparents. My father was born on a farm and his formal education did not go beyond grammar school. He taught himself after that, and learned his law the old-fashioned way, by 'reading' in the office of a member of the Bar. I have been proud of my father and mother from the time I can remember, and feel that by contrast with theirs, my life has been soft and sheltered. But at least I had a small town, Middle Western boyhood, which I would not trade for a good deal.

"After finishing high school I went to the state university, in Minneapolis. The idea was that I was to follow in my father's footsteps and become a lawyer. But it wasn't to be. I had got the smell of printer's ink in my nostrils, working on the local daily paper after school and during vacations, and I started writing for the Minneapolis newspapers and for the student daily newspaper, of which I eventually became chief editor in my senior year. I did most of the things young people did and thought exciting at college age back in those distant 1920's, but I think probably the most important and lasting thing that happened was the attempt of a local Fundamentalist preacher to force an anti-evolution bill through the state legislature (this was in the days of the Scopes foolishness). The 'professional' press did not seem at all anxious to take a stand on the issue, so it fell to the student newspaper to lead the fight against the bill—which, I am glad to say, went down to overwhelming defeat and has never been revived since. This experience first gave me the strong convictions which I hold today against all forms of censorship, suppression, intolerance, special pleading, or pressure, which I feel to be the greatest internal threats to our democratic way of life. I believe passionately in the latter—for all its imperfections—as a creed and faith.

"After college I spent a short time with the University of Minnesota Press and then set out for New York, where, in January 1929, I was fortunate enough to join the staff of The H. W. Wilson Company, library and bibliographical publishers. Here I am still, having become a director in 1934 and vice-president in 1940. One of my jobs has been the editing, in collaboration with Stanley J. Kunitz, of the Wilson 'Authors' series of biographical literary dictionaries. On my own, I have edited for Harper & Brothers a series of detective story anthologies for younger readers; I should perhaps explain that reading detective stories has been a hobby of many years' standing, and I felt that these anthologies were a good way of turning a hobby into something profitable and, I hoped, useful to others. Presumably they have had some usefulness, or they wouldn't be still in print. Another idea grew out of the same thing. One day I wanted some information in a hurry about some detective story or its author—I'm not sure now what the exact question was. I went to The New York Public Library and asked for a factual history and analysis of detective story writing. To my surprise, there was no book that filled the bill, so I began to think of writing one myself. I took the idea to the D. Appleton-Century Company and they liked it. After three years of research and writing, nights, week ends, and holidays (for I continued to hold down a full-time job) the book finally was published under the title *Murder for Pleasure: The Life and Times of the Detective Story*; and at present writing it is doing quite nicely, thank you, both with the critics and the public, and is shortly to be published in war-time England. The fact that the book was issued just 100 years after Poe wrote the first detective story, and that a good deal has been made of this anniversary in the public prints, hasn't been exactly harmful to sales.

"Following the pleasant reception of *Murder for Pleasure,* I was asked to contribute a monthly department of detective story criticisms to *Harper's Magazine,* beginning in the December 1941 issue.

"I am unmarried and for several years have lived in a bachelor apartment overlooking the East River in New York City. I spend week ends on the South Shore of Long Island, where I have a small sailboat and have recently built a modest year-round cottage on a high point of woodland on an arm of Great South Bay. My hobbies are sailing, music, and—still!—reading and collecting detective fiction. I like most people I meet, but have little taste for formal 'society.' In politics I am an independent. In world affairs I was anti-totalitarian and anti-isolationist long before the brutal awakening at Pearl Harbor. I believe strongly that American isolationists of the past 20 years—however sincere and well-intentioned—must share the blame with European reactionaries for having made the hideous crime of Hitlerism possible; and I feel that the cure, for this tragic mess cannot lie in *more* of the same blind ostrich-ism that helped bring it about, but in *less.* I hope that we Americans have at last learned our lesson—that we shall never again have real peace the easy or negative way, by merely wishing for it, or prating that we are 'against' war, or talking of 'truces' with criminals and gangsters. We've got to do a lot better than we have. This time we've got to win the *peace.*"

HAZARD, PAUL Apr. 20, 1878- Professor of French history and literature
Address: b. The Sorbonne, Paris, France

Bulletin: In January 1941 Dr. Paul Hazard was summoned from his teaching duties at Columbia University to take over the presidency of the Sorbonne in Paris. However, his appointment was rejected by the German officials, and Dr. Hazard went to Lyon where he found some of his colleagues from the Collège de France. Together they tried to conduct the Collège de France. In December 1941 he was back in Paris teaching at the Sorbonne.

From March 1941 issue:

The year 1940 brought two high distinctions to Professor Paul Hazard: in January he was elected to the French Academy, to the seat left vacant by the death of Georges Goyau; in November of the same year Columbia University conferred on him a Doctor of Letters Degree.

Dr. Hazard, who is visiting professor at Columbia during the session of 1940 to 1941, has been lecturing on "Literary Portraits of the Eighteenth Century," and it is probably for his work on the eighteenth century that he is best known. His *The Crisis of the European Conscience*, *1685-1715*, completed in 1935, is considered one of the most important works of the past decade, and he has done studies of Lamartine, Chateaubriand and others. But there are many other books, articles and studies to his credit, some of them the result of his years as co-editor of the *Revue de Littérature Comparée*.

Paul-Gustave-Marie-Camille Hazard was born in the small village of Nordpeene near the Belgian border in 1878. He was admitted to the École Normale Supérieure in Paris in 1899, to the *agrégation des lettres* in 1903, and received his doctoral degree from the Sorbonne in 1910. Immediately he began to teach comparative literature at Lyon University. His reputation spread, and after the first World War he was asked to come to the Sorbonne, where he remained until, in 1925, he was appointed to the chair of Modern Comparative Literature in the Collège de France.

In 1914 Dr. Hazard was appointed visiting professor of French at Columbia University, but the outbreak of the First World War prevented him from accepting the appointment. In 1923 Columbia invited him to America again, and this time he was able to come for the academic year of 1923 to 1924. Then, from 1932 on, Dr. Hazard was made visiting lecturer at Columbia during the winter session in alternate years, directing studies of the eighteenth century and training students in the preparation of doctors' theses.

Professor Hazard, who is an officer of the Légion d'Honneur and who has received the Croix de Guerre, was made a lieutenant colonel at the outbreak of the Second World War, his duties the direction of "the more intellectual phases of French propaganda abroad." With France's armistice he was able to return to his consideration of problems of comparative literature and France's great literary figures, a consideration he is continuing in America.

PAUL HAZARD

HEATTER, GABRIEL (hēt'ẽr) 1890-
Radio commentator
Address: b. c/o WOR, Newark, N. J.

In January 1941 Gabriel Heatter, who has been sponsored by "everything from a brewery to a personal loan company," added Forhan's toothpaste to his current list, which included *Liberty* Magazine and Kreml. Five times a week he presents the news over the Mutual Broadcasting System.

As a news commentator, Heatter has broadcast from a caisson below the Hudson River, from the roof edge of a Manhattan skyscraper, from a coal mine, from an airplane (he frankly admits he prefers clean, quiet studio broadcasts). He has talked about national, international and local affairs, and once said: "Facts should be presented unbiased by personal beliefs and editorial interpretations should be eliminated." But at the same time he has been able to make them really alive. In recognition of this the Women's National Committee in Radio chose him as one of the two outstanding radio reporters, citing especially his colorful presentation, his high standard of English and his excellent diction.

GABRIEL HEATTER

Heatter's *We, the People* programs, which were on the air 1937 to 1941 aroused just as much enthusiasm. As director he introduced a half dozen or so representatives of the American public—a deep sea diver, a lady wrestler, a farm girl, an Arctic explorer, for instance—and let them tell about themselves. It was a fascinating job and inspired him to start on a book about the 50 to 75 most important people who turned up among hundreds of others on the program. Finally, though, he gave it up in order to devote all his efforts to his newscasts.

Heatter came to radio and newsreel commentating with newspaper and author training. Born on Manhattan's lower East Side in 1890, he was a reporter by the time he was 13 and in school there. Two years later he was covering Brooklyn, and acting as messenger as well, for Hearst's New York *American*. At that time Hearst was running for Governor and thought it might be a good idea to have a boy orator precede his orations. Heatter got the job and went all over New York "trumpeting the virtues of candidate Hearst."

From the *American*, Heatter went to a full-time job on the old Brooklyn *Times*, reporting crime stories. There was a short period then when he felt he wanted to be a lawyer and matriculated in the New York University Law School. This ambition lasted only until he got a real "scoop," startling the journalistic world by unearthing the hideout of a prominent, embezzling banker. From the *Times*, Heatter went to Hearst's New York *Journal*, where he mostly reported activities in New York's slums and won that day's equivalent of a Pulitzer Prize for his article *Children of the Crucible*. And from the *Journal*, Heatter went to the New York *Herald*, working as a political correspondent in Albany.

Heatter's success in Albany got him a chance to go abroad as the Paris representative for the Foreign Language Publishers' Association shortly after the War, doing articles on conditions abroad. At this time and later he was also active writing stories and articles under his own name and ghostwriting material for many prominent Americans. It was Heatter's writing, in fact, that actually got him into radio. In 1932 he wrote a series of articles for *The Nation*, debating socialism with Norman Thomas, which created quite a stir. Donald Flamm was so excited by them that he signed him up as news commentator on Station WMCA in New York City.

It was in 1936 that Heatter first appeared on the "big time" when he covered the trial of Bruno Hauptmann for MBS and distinguished himself for his impartial observations. When Hauptmann was executed Heatter unexpectedly found himself in the position of setting a record for ad libbing. The execution had been scheduled for 8:05 p. m. but it was close to 9 when Hauptmann actually died, and for 50 minutes Heatter had to keep talk going over the microphone. From then on he was one of the nation's foremost broadcasters—heard over MBS, CBS and NBC.

Heatter is a large man, six feet tall, with dark brown eyes, and is usually dressed in tweedy tweeds and blue oxford shirts. He is married and has a daughter, Nada, who is a fashion designer, and a son, Basil, who is the author of a number of radio shows. The family keeps pretty much together, especially in the country, where Heatter is an expert on dogs and a popular judge at dog shows. But all of them are aware that their country home, like their New York penthouse, is wired for the latest radio and news bulletins and that Gabriel Heatter may have to dash off any moment either to write a news story or broadcast it.

HELLMAN, LILLIAN June 20, 1905- Playwright

Address: Hardscrabble Farm, Pleasantville, N. Y.

"The theatre found its voice last night," Louis Kronenberger wrote on April 2, 1941, the day after Lillian Hellman's *Watch on the Rhine* opened in New York City. "It found its voice and gave us a play that shrivels anything else produced on Broadway this season." It was in recognition of this that three weeks later on April 23, its author was given the annual award of the New York Drama Critics Circle.

The play's core is the belief that "the death of Fascism is more desirable than the lives and well-being of the people who hate it." It tells the story of an American woman who has returned from Europe to her parents' home in Washington, D. C., with the German engineer she married years before. He is an underground fighter against Hitler, about to sneak back into Germany with funds for the movement. When his secret is discovered by another guest who threatens to inform the Nazi Embassy, the German kills the blackmailer, says farewell to his wife and children and leaves on his fearful mission which has by this time been complicated by the arrest of two of his comrades whom he must rescue from Nazi prisons.

Watch on the Rhine is, in the words of Richard Watts, Jr., "a moving and beautiful play filled with eloquence and a heroic spirit." It is, nevertheless, most critics agree, an uneven play whose first two acts are mostly talk in comparison with the last act in which "the stage takes fire," in which Paul Lukas as the German gives "one of the great performances of recent years."

Vandamm

LILLIAN HELLMAN

This play is Lillian Hellman's fourth, and the fourth to be directed and produced by Herman Shumlin (see sketch this issue), in whose office she was working when her first play, *The Children's Hour*, appeared on Broadway. Before that time hers had been rather an unsettled career, mostly connected with the stage but not actually of it. She was born in New Orleans, Louisiana, the only daughter of Max Bernard and Julia (Newhouse) Hellman, and brought up on New York's Riverside Drive, where she used to hunt spies during wartime. She attended New York's public schools (except for the short period when she became bored with home life and set out on her own at the age of 14) and eventually landed at New York University. Three years here were enough for her, though in an ambitious moment she enrolled later for courses in Dante at Columbia, and in 1924 she started earning her living.

This living consisted of the $17.50 a week paid her by Horace Liveright, Incorporated, publishers, for being a general factotum around the office. After a year of it she married Arthur Kober, playwright and author (*Having Wonderful Time, Thunder Over The Bronx*, etc.), and decided to make writing her life-work. What actually happened was that Lillian Hellman found herself in 1925 and later reviewing books for the New York *Herald Tribune*, helping her husband with his publicity work, reading plays, promoting a Rochester, New York stock company. Her own creative work appeared in one place only, the Paris *Comet*, and was called *Introspective Writing*.

By 1927 this welter of activities had narrowed down to the field of play-reading, for Harry Moses, Leo Bulgakov (she discovered

HELLMAN, LILLIAN—*Continued*

Vicki Baum's *Grand Hotel* while working for him), for Anne Nichols. Then in 1930 she went with her husband to Hollywood and found herself a position reading scenarios for Metro-Goldwyn-Mayer. The next two years were discouraging ones: she was divorced from Arthur Kober, and her own writing was getting no place. "I was selling practically nothing," she says, "living on less."

In 1932 she returned to New York and began reading plays for Herman Shumlin. She also worked on plays of her own, and in 1934 her *Children's Hour* was finally finished. (She had written another play before that, *Dear Queen,* in collaboration with Louis Kronenberger, but it never reached the stage, though at least one producer thought well enough of it to pay advance royalties.) She had worked and worked on *The Children's Hour,* written and rewritten the characters, tested and retested the motivations and each fragment of dialogue. Some of the scenes had been done over twenty times and the whole play at least six.

Based on the Great Drumsheugh Case included by William Roughead in his collection of Scotch historical trials, this story of a baseless charge against two schoolteachers by a willful student, with its dark hints of abnormality, was enough to dismay any producer. Yet actors were finally secured, Shumlin directed and produced the play, and it proceeded to last 691 performances on Broadway, to be taken on tour, to be mentioned seriously for the Pulitzer Prize and to be adapted by Miss Hellman into a successful film, *These Three.*

For a while she went out to Hollywood to adapt her play for the films, and to work on *Dark Angel* (1935) and others. (In 1937 she adapted *Dead End.*) Then she returned to New York, to finish work on her second play, *Days to Come,* and to see it fail in 1936 after only one week on the stage. No critic liked this play on the cruelty and stupidity of strikebreaking, and there was variety only in the amount of dissatisfaction.

That was the year, too, when Miss Hellman went to Europe. She saw the theatre in Russia, she explored Paris and she went to Spain, where for a month in 1937 she was under bombardment by the Franco forces. She returned to America a militant anti-Fascist, to champion actively the cause of Loyalist Spain. Since then she has continued to fight Fascism with all her heart and strength. As she once said: "I am a writer. I am also a Jew. I want to be quite sure that I can continue to be a writer and that if I want to say that greed is bad or persecution is worse, I can do so without being branded by the malice of people who make a living by that malice. I also want to go on saying that I am a Jew without being afraid that I will be called names or end in a prison camp or be forbidden to walk down the street at night." This is the feeling that inspired *Watch on the Rhine.*

Back in America, too, Miss Hellman soon started working on her third play, *The Little Foxes,* which opened in New York in February 1939 with Tallulah Bankhead (see sketch this issue) in the leading role. Called "the season's most tense and biting drama," this candid and cruel play of life in the deep South at the turn of the century ran over a year in New York and then went on tour. It is the story of the two Hubbard brothers and their sister Regina, clever, voracious and unscrupulous, who are on the eve of putting through a big business deal and who turn on each other through rapacity and lust. Written with "sound dramaturgy and an exceptional economy of style," it is the sort of play that "offers keen interest but not much pleasure."

Miss Hellman adapted this play, too, for the screen in a version that had Bette Davis (see sketch this issue) in the lead and she continued to work in Hollywood after *Watch on the Rhine* got under way. Her contract with Samuel Goldwyn is an unusual one, permitting her to write two films a year of her own choosing. If she doesn't wish to carry out an assignment, the contract is automatically extended for an additional half year.

With the money she made from her successes Lillian Hellman bought a country place and indulged in much good living. She even began to complain that success was making her fat, though her friends assured her "it had improved her disposition, smoothed down sharpish nerves."

Blond-haired, brown-eyed Miss Hellman's life between Broadway and Hollywood is a busy one, and one she likes to leave behind her occasionally just to loaf in her country place and forget that she is "the United States' Number One Woman Playwright," and a witty and sociable member of the theatre world. But she can't escape her career long: ideas take hold of her and have to be worked out. The one that is keeping her most interested these days is a plan to dramatize Zola's *Germinal.* That would be a play, she thinks!

HEPBURN, MITCHELL F(REDERICK) Aug. 12, 1896- Premier and Provincial Treasurer of Ontario, Canada

Address: b. Parliament Bldgs, Toronto, Canada; h. R. R. No. 5, St. Thomas, Ontario, Canada

Ever since, as a boy, he was accused of pelting with an apple the august head of a gentleman named Sir Thomas Beck, controversy has been ganging up on the dark, round-faced, heavy-set Mitchell F. Hepburn of Canada. "Mitch," as his friends call him, denied that he threw the apple, but many were the occasions in subsequent years when he hurled mightier missiles. His favorite targets have been John L. Lewis and W. L. Mackenzie King, Prime Minister of Canada (see sketch 1940 Annual).

According to reports the apple incident ended Mitchell Frederick Hepburn's hopes for attending college; and he had to quit St. Thomas Collegiate Institute, located in his home town of St. Thomas, Ontario, where he was born in 1896, the son of William Frederick and Margaret (Fulton) Hepburn. He subsequently got a job with the Canadian Bank of Commerce and in the three years of his employment armed himself with a practical knowledge of accounting, to which he added some courses at the La Salle Extension University. Thus equipped, Hepburn turned from banking to dairy farming and eventually became one of the best informed farmers in his district. He also began to participate in politics.

After returning in 1918 from service abroad, where he had been an infantry lieutenant and a member of the Royal Air Force, Hepburn married Eva Burton in Finegal, Ontario. Joining the United Farmers' Movement, he campaigned vigorously for better farm conditions. Gifted with an inordinate share of boldness and a gusty, flamboyant vocabulary as well as an innate appreciation of dramatic appeal that has since earned him the title of the "Huey Long of Canada," Hepburn was elected to the House of Commons. This was in 1926. Hepburn was 30 years old, the youngest member of the ruling body and a Liberal in a district that had always been Conservative.

Big Business interests quailed as Hepburn unleashed his deadly oratory; he was regarded as a rabble rouser, a Red, for he fulminated against political extravagance, high taxes and "the interests." Throughout all his extraordinary adventures, "Happy" Hepburn, as some have dubbed him, promised to make the Dominion into "Happy" Canada. Pleased with his popular appeal, Liberal Party chiefs called him from Commons in 1930, just after he had been elected for a second term, so that he could assume leadership of the Ontario branch of the Party. He was everywhere proclaimed as "The Moses of the Liberal Party" and "a rampant champion of the people"; and, true to his role, Hepburn promised to crack down on the power companies, to cut the salaries of public officials and to place their "official" cars on public auction.

MITCHELL F. HEPBURN

After a breath-taking campaign in which he covered over 7,000 miles in a month and gave an average of five speeches a day, Hepburn was swept into the Ontario Legislature. In 1934 he was overwhelmingly elected Premier of Ontario, the wealthiest, most industrialized and most populated Province in Canada. Then he proceeded for a time to carry out his widely publicized program. He canceled power company contracts made by previous Administrations, but was defeated in the higher courts; he passed legislation forcing the lumber barons to put their idle lands to use, thus alleviating unemployment; he passed a minimum-wage and a new tax law. Then he cut his own salary from $12,000 to $10,000 annually and those of his associates from $10,000 to $8,000. In addition, he actually did auction off the publicly-purchased cars of the Conservative ex-Ministers. To protect himself against the powers-that-be, Hepburn ostentatiously traveled with a group of bodyguards and drove through Ontario streets in an armored car.

One of the greatest publicity opportunities ever to befall a public official came with the birth of the famous Dionne quintuplets, and Hepburn wasn't slow to take advantage of it. As the babies became a world attraction, Hepburn's name regularly appeared in the newspapers, now in connection with a vitriolic attack on the "Stork

HEPBURN, MITCHELL F.—*Continued*

Derby" of the wealthy eccentric Charles Vance Millar whereby the Toronto mother who raised the most children in 10 years would receive $750,000; now in reference to the establishment of a special department called the Dionne Quintuplet Guardianship, whereby the babies would become wards of the King; and now in connection with the launching of a fund campaign for orphan babies. Incidentally, it was at this time that Hepburn announced that he and his wife were adopting two orphan children, their own two children having died in infancy.

But the quintuplets were not the only reason that the national spotlight was focused on the Administration of Premier Mitchell Hepburn. First, there was a financial crisis in many Ontario cities resulting, in part, from a business recession in the United States in 1937 that caused a dwindling demand for wood pulp, one of Ontario's major products. As relief payments declined, desperate families descended on town halls. The crisis also precipitated Hepburn's split from the Dominion Administration, although his relations had never been especially cordial with Ottawa. He blamed the Mackenzie King Government for having failed to provide its equitable share of relief funds.

When members of the General Workers Union entered the municipal building in Lakeview in Toronto Township, imprisoning the relief administrator for several hours, Hepburn saw this as evidence of Communist agitation and he took vigorous steps to suppress the uprising. Later, when the union members organized a "hunger march" on Queen's Park and demanded a hearing from the Premier, Hepburn had a number of them arrested, accepted the report of the relief administrator that the townspeople had been adequately provided with food and refused to increase their relief payments, saying: "There is going to be no mob-rule in the Province." When a group of prominent United Church clergymen passed a resolution condemning his handling of the marchers, Hepburn referred to them as "psalm-singing, sanctimonious preachers in Toronto" who had "lost touch with public sentiment." A further sequel was Hepburn's demand for the resignation of his Attorney General Arthur Roebuck, who had termed the action "provocative" and "high-handed."

Meanwhile Hepburn's speeches before business groups and luncheon clubs became increasingly violent. He spoke of a "Red tide" which must be beaten back with every means; of "outside agitators" who had, he said, "reduced the U. S. A. to a state of anarchy." Canadian labor was aroused. Some said Hepburn's seeming solicitude for the corporations was actually motivated by his desire to stem the sweep of the CIO before it reached the gold-mining industry, which employed many natives of Ontario. The first test of strength between Hepburn and the CIO occurred at a strike at the B. F. Goodrich plant at Kitchener. Hepburn vowed Ontario would tolerate no sit-down strikes.

His stand turned a projected sit-down into a walkout at the General Motors plants at Oshawa and Windsor, organized by the United Automobile Workers Association, a CIO affiliate. Then the Premier delivered broadsides against the CIO as a "racketeering" outfit dominated by Communists. He refused to deal with the organizers from Michigan, consented to hold meetings only with local union leaders. In addition, he challenged John L. Lewis to cross the border. The CIO leader, he said, would be arrested at once and sentenced by a Canadian judge. According to many, Hepburn's intercession helped to prolong the deadlock.

Members of the Toronto District Council accused the Premier of taking sides with the company in the conflict. An embarrassed Dominion Administration signaled its disapproval, but outside criticism Hepburn countered only by references to the "vacillating, weak-kneed" King Government. Before Hepburn had finally withdrawn the mounted police he sent, there occurred a split in both the Liberal and the Conservative Parties, as members of both organizations crossed political lines to condemn or to approve of Hepburn's policies. There was even talk of a Conservative-Liberal Hepburn re-alignment after the leader of the Conservatives quit in protest against a Party resolution favoring collective bargaining.

As the result of Dominion coolness to Hepburn's labor stand and to his policy on hydroelectric power, Hepburn proclaimed at a banquet in 1937, "I am a reformer, but I am no longer a Mackenzie King Liberal." At the end of the year he campaigned for re-election on his demonstrated policies, giving his windup speech in Oshawa to an indignant, catcalling audience of laborites. Nevertheless Hepburn's party lost only three seats—these from strong centers of union organization—and Hepburn himself was returned to office.

The most consistent cause for verbal exchanges between Hepburn and Prime Minister Mackenzie King was the proposed St. Lawrence waterway project. Hepburn opposed the plan and in the course of his opposition criticized President Roosevelt, who, along with the Prime Minister, was one of the most ardent supporters of the project. It was this issue which initially brought Hepburn in contact with Prime Minister M. Maurice Duplessis of Montreal, leader of the Union Nationale and friend of the Fascist Armand Arcand. Duplessis was the proponent of a vaguely clerical-Fascist corporate state and author of the notorious Padlock Law, which was dubbed by liberals and laborites as a most flagrant violation of civil rights. Hepburn said of Duplessis: "He is a great national character," and proceeded to gain his cooperation in a titanic effort to oust the King Government. Rallying cry for the opposition move was a Provincial version of State's rights.

Hepburn's effort to supplant King was not rewarded at the national Liberal Party caucus when delegates overwhelmingly upheld their leader, whose position had been bolstered by his conclusion of the very popular trade pact with the United States. Moreover, with the outbreak of War, Hepburn lost his main prop through the defeat of Duplessis, when the latter made a test of his opposition to conscription at the polls. At the same time Hepburn gained a measure of additional support from some sections of the population by his sponsorship of legislation liberalizing state fund appropriations for parochial schools. His position, however, was not unaccompanied by conflict; he placed a rarely-invoked closure rule on the opposition and ousted one of the more vociferous opponents from the legislative hall.

At first Hepburn's attitude toward the War effort was rather wary, though he inferentially rebuked one of his Ministers for advocating full participation in the conflict and, even when he conceded the rightness of the British cause, qualified it by citing the possibility that foreign trade interests might have had their part in the military action. Later, however, he tried a new tack. Accusing the King Government of inexcusable laxity and incompetence in organizing for defense, he cited the danger of a Hitler invasion.

In many speeches Hepburn advocated interning labor "agitators" for the duration of the War and making illegal all defense strikes. Forgetting his earlier opposition to President Roosevelt, he became an outspoken admirer of the American President, calling him, along with Prime Minister Winston Churchill, one of the greatest men of all times. Climaxing his fervent support of the War, Hepburn said in August 1941 that he planned to resign as Premier of Ontario and leader of the Provincial Liberal Party to go to Britain to engage in war work. But at the same time he continued to wage his internecine struggle against the Dominion Government as he announced the banning of the March of Time film called *Canada at War* because, he claimed, it glorified the King Administration.

Hepburn is a bold, vigorous yet unpredictable leader, who because of his faultless dress has been called the "Jimmie Walker of Canada."

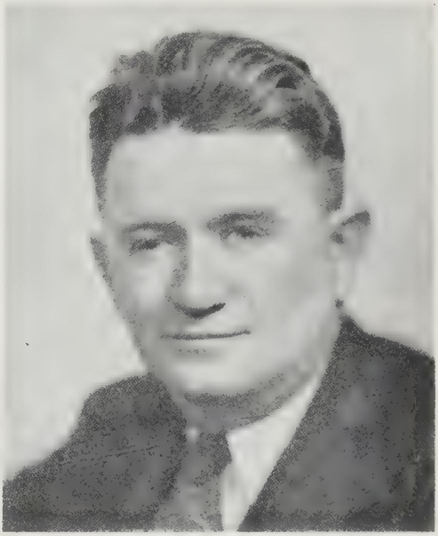
Who's Who
Who's Who in Canada

HERSHEY, LEWIS B(LAINE) Sept. 12, 1893- Director of Selective Service

Address: b. Selective Service System, 21st and C Sts, N. W., Washington, D. C.; h. 5425 31st St, N. W., Washington, D. C.

Ever since the Selective Service Act went into effect in October 1940, Brigadier General Lewis B. Hershey has been an extraordinarily busy man. He has prescribed supplementary regulations, issued public notices, orders and instructions, appointed assistants. As part of his activities in the spring of 1941, he urged local draft boards to be careful about drafting needed scientists and technicians and warned them that they must "not only select those who are needed by the armed forces, but must also defer those who are necessary in the production of defense materials." He has successfully proposed the narrowing of draft limits—men over 30 are "too settled," he says. He has told local draft boards to reclassify registrants deferred because of defense work when they "cease to perform the jobs"; he has suggested the induction of the unfit and their salvaging in the Army; he has set up a program to insure the re-employment of men released from the Army. He has discussed deferment for various groups and made pronouncements on this. One which caused a stir was directed toward college students. "I do not think there is anything sacred about a college education," he said. . . "The thing that frightens me is the 'business as usual' cry. . . Going to school because you have nothing else to do is last year's hat." His activities and his duties were tremendously increased when the United States declared war in December 1941.



Harris & Ewing

LEWIS B. HERSHEY

This "big redheaded stoop-shouldered Hoosier" who is continually explaining the laws' workings to local boards and the public and is running the whole complicated process of Selective Service is a soldier who reached the top without the academic, social or military advantages of West Point training. His father,

HERSHEY, LEWIS B.—*Continued*

L. F. Hershey, was a backwoods farmer and rural sheriff and with his mother, Rosetta (Richardson) Hershey, who died when Lewis was four, did his best to make a living from the farm near Angola, Indiana on which Lewis Blaine Hershey was born.

He attended a one-room school at a place called Hell's Point and then went on to high school in Fremont, Indiana. Before he was 17 he had been graduated and was teaching a country school near Fremont. At the same time he was attending Tri-State College, which gave him a B. S., a B. Pd., and a B. A. by the time he stopped taking courses in 1914. By then Hershey had progressed from schoolteacher to rural school superintendent, but after two years of this work resigned to serve with the National Guard, which he had joined in 1911, on the Mexican border. He was a second lieutenant before he started his service, through the simple process of having been elected one by his regiment, and was promoted to first lieutenant while serving.

When Mexican border fighting was over, Hershey entered the University of Indiana to study for his Ph. D., but his academic career was cut short by the entrance of the United States into the First World War. Shortly after he was married to his childhood sweetheart, Ellen Dygert, in November 1917 (they now have two sons and two daughters), Hershey began to train at Fort Sill. Not long before the Armistice he went to France and stayed there for more than a year, attending a French artillery school and arranging for the return of American troops.

When he returned to America in 1919, Hershey was a captain and had decided to quit teaching to join the regular Army. He passed the examinations and then was ordered to the field artillery school at Fort Sill, Oklahoma. Since then he has spent four years as assistant professor of Military Science and Tactics at Ohio State University, four years in active service and teaching at Fort Bliss, Texas, two years as a member of the General Staff School at Fort Leavenworth, Kansas. In 1934 he was graduated from the Army War College and then proceeded to Hawaii, where he was stationed until the spring of 1936. He was then called to Washington. During all these years of service Hershey's colleagues have considered him one of the outstanding army officers of his rank—one officer called him "the best battery commander I ever saw."

In Washington, Hershey, a major in the Army since 1935, became executive officer of the Joint Army-Navy Selective Service Commission, which spent the next four years shaping specific plans for a modern system of selective service. Day and night Hershey worked over the problems; day and night he tried to push home his ideas about it: that there should be local civilian control of registration, selection, review, no fingerprinting, no red tape. "Let's keep this thing so simple," he said, "that even the crooks will say, 'I'll be patriotic and register just like all the other guys.' "

While the Selective Service Act in its present form was being formulated, Hershey, now a lieutenant colonel, was much in demand at the hearings. Opponents and supporters asked him for information, and Hershey gave it—all sorts of data in his head and at his finger tips. Then in October 1940, after the Act was passed, Colonel Hershey, considered its "father" by many, was appointed acting director of the Selective Service system and continued to function as such even after Dykstra (see sketch this issue) had been appointed the civilian director of the draft. In the spring of 1941, after Dykstra's resignation, he was made its deputy director and on June 31, 1941 its director. He probably knows more about its workings both in general and in particular than any other one man. That is why a number of people were impressed in May 1941 when, in response to a question as to whether drafted men would be out of service in a year, he replied: "I'm no prophet. I couldn't tell for sure if it would rain today, but if I was a farmer and it looked like this I'd get my hay in." That is why, too, reporters eagerly sought his comments after war was declared. He told them that the future policy of the selective service system "depends entirely on what the Army believes it needs in the way of men."

In conversations like this and in his supervision of the carrying out of the Selective Service Act, General Hershey (he was made a brigadier general in October 1940) has shown himself very different from the brass hat kind of officer, "still a good civilian at heart," with a fine sense of humor that crops out now and again in the tall stories which he tells with gusto. He doesn't look or act like an officer either, with his Midwest accent and homespun manner—more like a country schoolteacher or a dirt farmer. Nor is his hobby a usual one among military men. It is the study of psychology, and his library has most of the standard works on the subject. "I want to know what makes the human animal tick," General Hershey says.

Who's Who in the Nation's Capital
Who's Who in the Regular Army

HESS, RUDOLF Apr. 26, 1894- Former Reichsminister without Portfolio

Bulletin: On the night of May 10, 1941 a twin-engined Messerschmitt 110 crashed to earth in Scotland. Its passenger, who had parachuted to safety nearby, was Rudolf Hess. The excitement and uproar of the fantastic happening spread all over the world. Rumor had it that his flight was caused by inner dissension within Germany, that Hess had broken with his Führer especially over German-Russian relations; that he had come to England with peace proposals on his personal initiative; that he had brought peace proposals from Hitler. Month after month passed, with Hess interned in England, without any solution of the mystery of his flight being given out. It was felt in some quarters in England that Churchill and a few other leaders there knew the answer, but questionings in Parliament, the press and elsewhere brought forth no information. The most commonly accepted explanation, however, seemed to be that he had come to England in hopes of contacting certain Tory appeasers who might consider a bargain by which Hitler would attack the Soviet Union while Great Britain would make peace with Germany.

From March 1941 issue:

The name of Rudolf Hess is not so familiar abroad as others among the men who run Germany. Since the beginning of World War II, he has publicly issued a few proclamations and summonses, made a few speeches, and that is about all. In Germany itself, however, it is a different matter. At the annual Nazi Congresses he gets more applause than anyone except Hitler. His office is continually so filled with office-seekers and people wanting to see the Führer that some call it the "Wailing Wall of the Third Reich." He is Hitler's private secretary, the deputy leader of the Nazi Party, and Reichsminister without Portfolio. Besides all these responsibilities, he is the man whom the Führer has named to become his successor after Goering (see sketch this issue)

Actually it doesn't seem likely that Rudolf Hess will ever become Germany's dictator, for a man with a nickname like "the brown mouse" would seem out of place at the head of the blustering Third Reich. Herr Hess doesn't talk much and has a reputation for being modest and retiring except when execution of Hitler's orders requires him to be otherwise; then he is quite ready to get into any kind of a brawl. Oswald Dutch calls him "one of the few inborn decent personalities of the party, merely induced to infamous actions by bad company." Others find little in his career, though perhaps much in his manner, to back up this judgment. But whatever his hidden motives or ambitions, it does seem to be true that almost his entire life has been devoted to Hitler. He is Hitler's shadow, watchdog of the Reich.

Many of the most enthusiastic Nazis have been born outside of Germany. Walter Richard Rudolf Hess, one of them, was born in Alexandria, Egypt. His mother, the former Klara Münch, came of a Swiss farming family, and his father, Fritz H. Hess, was in the export business. Until Rudolf was 14 he was educated in Alexandria, and there came very much under the influence of the Arabs. Already an ardent German nationalist, however, he went to Germany to finish his education. For two years he attended high school in Godesburg on the Rhine, for the most part studying physics, and then when he was 17 began a commercial course in preparation for entering his father's business. He spent a short time in French Switzerland, a short time in Hamburg, and he was in Hamburg when the First World War broke out. He immediately enlisted on the German side.

German Railroads Information Office
RUDOLF HESS

In 1916 Hess was wounded at Verdun (he later wrote a poem with the title *Verdun*). Six months later he returned to the field and fought in Romania as a lieutenant in the infantry; just before the end of the War he joined the German Air Force and flew with the scouting Flight "35." Aviation has been his hobby ever since. He had already had a chance encounter with the man who was later to influence him so much—it was in the late autumn of 1917, on the Western Front—but Hess barely noticed Hitler at this time. According to one source, in politics he had grown to think he was a Socialist, and November 1918 found him fighting in the Independent Socialist Revolution in Bavaria. According to another, he volunteered in the Munich Leibregiment against the Bavarian Soviet Republic.

In either case, it was not long before Hess became a member of the nationalist and anti-Semitic *Thulesgesellschaft*. He was out distributing anti-Semitic pamphlets in Munich one day in the spring of 1919 when he barely escaped arrest and subsequent execution at the hands of the Reds, who had chosen that same hour to raid the place where he worked. On May 1 he was fighting against the Social Democrats and escaped death once more when his friends dragged him away after he had been wounded in the leg. He decided to rejoin the mercantile profession—it was at least less dangerous—but his attempt wasn't successful. And then, in May 1921, he heard

HESS, RUDOLF—*Continued*

Hitler speak for the first time, and his career was decided. He belonged to the Leader for life. "If anyone can put Germany on its feet again, it will be this fellow Hitler," were his reported words. From that time on, Hitler's only known rival for Hess' loyalty was Ilse Proehl, whom Hess married in July 1927—and it has been said that this marriage was merely designed to kill rumors of abnormality.

During this time Hess has been reported as earning his living as private secretary to his former brigade commander, now Professor Dr. Karl Haushofer, director of the "Institute of Geo-Politics," whose theories are supposed to have formed the basis of the Nazi scheme for world conquest.

Hess was the first "gentleman" to join the Nazi Party. He also became Hitler's first bodyguard: he is the "brave Maurice" of Hitler's *Mein Kampf*. On November 8, 1923 he was in charge of the brutal kidnapping of the Bavarian Premier and the Minister of Home Affairs. At the same time Hitler's "beer-hall" *putsch* was taking place. Both Hitler and his trusted bodyguard ended up in prison at Landsberg, and it was there that Hess began setting *Mein Kampf* down on paper from his Leader's dictation. After they were freed it was back to plotting, more fights, and increasingly successful attempts to raise money from German industrialists. By 1925 the future Führer was able to afford a private secretary, and the secretary was Hess. Not until seven years later, however, did "the brown mouse" rise to any official prominence in the Nazi Party. On December 9, 1932, after Gregor Strasser's disgrace, Hitler gave him *carte blanche* authority over the Party machine, made him head of its political section. He it was who forced Strasser's followers to put their signatures to a document vowing unquestioning submission to both Hitler and himself. Unlike Strasser, as Deputy Leader he fought anti-capitalist ideas.

Not much over a year later, on February 4, 1934, with the National Socialist Party the only legal party in Germany and Hitler the Reichschancellor, Hitler created a new cabinet council—the "inner citadel of German power." It included Von Ribbentrop, Goering, Goebbels (see sketches this issue), Dr. Hans Lammers, Von Brauchitsch, General Keitel, Admiral Raeder—and Hess. Hess actually was given no government department, but became a cabinet minister who acted as coordinator among the other ministries. He excelled particularly at certain branches of "public relations." It was he who made the first public apologia for the murders of June 30, 1934—in which, according to at least one source, he had been Hitler's main executioner next to Goering. It was he who ruled that same year that a committee would henceforth watch and pass on all publications by Party writers. And, second in command of the Storm Troops, it was he who instructed them not to beat up foreign visitors to Germany or expect them to give the Nazi salute, not to wear uniforms outside Germany nor accept decorations from foreign governments.

Hess is also credited with the responsibility for having placed Germans living outside of the Reich at the service of the Nazi Government and, as superintendent of the Nazi *Auslandsdeutsche Bewegung,* to have signed his name to Dollfuss' death-warrant. On numerous official occasions he appeared for Hitler and took over some of his business and receptions; and at the Moscow treason trial of January 1937 he was named as the German official who collaborated with Trotsky for the overthrow of the Soviet Union. Still Hitler's private secretary, too, he was so close to the Führer that many thought he would be named as Hitler's successor. Apparently Hess himself had no other ambition.

It is quite possible that Hitler really would have liked to have named him before Goering. Goering is considered much the stronger man, however, and on September 1, 1939, after the Polish campaign had begun, Hitler at last made the official announcement as to his chosen successors—in case anything "happened to him." And it was Hess, his second choice, who on February 9, 1941 delivered the Breslau speech in which he boasted that "the largest war machine of all times is ready for a decisive battle," and promised that what the English had felt until then was nothing more than "a foretaste" of what they would experience in the future.

Hess is described as being "built somewhat along the lines of the prize fighter, Max Baer," large-framed, "primitively strong," his mouth "as uncompromising as the slot in a letter box," his heavy eyebrows "as woolly as a chow dog's back," a "restrained fanaticism" in his gray-green eyes. On the back of his head is a scar which, it is reported, he acquired in a barroom brawl. One interest outside of his Führer is faith-healing, and he has founded a Dresden hospital devoted to "cures" by means unrecognized by scientific medicine. He is reportedly a Buchmanite.

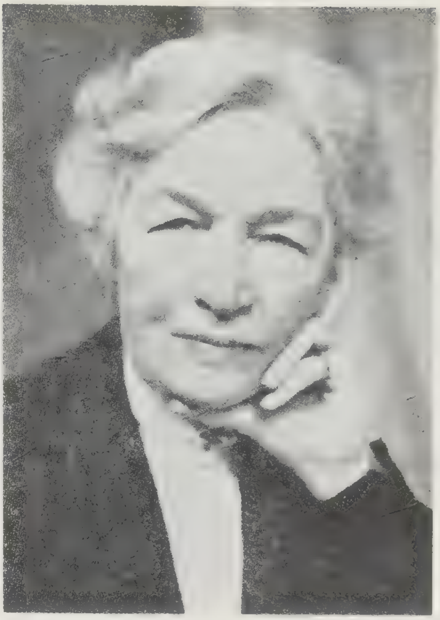
HESSELGREN, KERSTIN (hĕs′sĕl-grĕn) Apr. 1, 1872- Swedish sociologist
Address: Stockholm, Bergsgatan 16, Sweden

The general election in Sweden on September 15 and 16 (1940) returned to the Second Chamber of the Riksdag for a second four-year term Kerstin Hesselgren, Liberal, one of the country's outstanding women, the first woman to be a member of the Riksdag (she served in the First Chamber from 1921 to 1934), and the only woman ever to have held this latter office.

Miss Hesselgren is often called the "Jane Addams of Sweden." For more than 30 years she has been taking a leading part in various types of social work in her country, initiating as well as directing many programs for social betterment. For her work the Swedish Government has presented her with a medal. When the tercentenary of the founding of New Sweden was being celebrated in this country in the spring of 1938, her Government sent her as an official delegate to represent the social workers of Sweden. At a luncheon held during that celebration, in New York July 27, 1938, where 500 women representing 28 national and local organizations met to honor her for her more than 20 years of work in behalf of women everywhere, Mrs. Franklin D. Roosevelt introduced her as a "woman who has participated so richly in the life of her times that it would be impossible to do justice to all her activities without staying here all afternoon."

One of her activities she herself reported on at this luncheon. She was one of four experts on a League of Nations Committee on the Legal Status of Women, and with her American colleague, Miss Dorothy Kenyon, made an initial report of what the Committee was doing. When in 1931 the topic was first introduced into the League it caused no little amusement among the men, she said, but she felt that their attitude had changed: various scientific institutions did the actual work of the investigation, which had begun in 1937 and took three years. The investigation, she reported, embraced three divisions: public law, concerning such questions as women's right to vote, to hold office, to obtain an education and to practice a profession; private law, dealing with marriage, right to separate names, right to earnings, right to make contracts, relations of parents and children, etc.; criminal law—that is, respects in which women's criminal responsibility differs from that of men.

Since she had pioneered as a woman in many activities and had worked in the interests of women in her native country and elsewhere, Miss Hesselgren was admirably suited to be one of the experts in this field. She studied at Cassel Women Teachers Training College and at Bedford College, London. She had wanted to be a doctor, but her health was not good enough; therefore she had trained as a district nurse. When household economics was introduced as a school subject she took up the study of this, and for seven years (1897-1903) taught cooking, later becoming supervisor of the teaching of domestic science.



American Swedish News Exchange
KERSTIN HESSELGREN

In 1906 she was made inspector of housing in Stockholm, the first woman to hold this position. From 1913 to 1914 she worked as a factory inspector, the first woman to hold this position also. During the First World War she was one of the women councilors of the government food commission, and she has organized and conducted courses on the care of infants and on training for charitable and social work.

Miss Hesselgren has been called in as an expert by the League on other occasions. She has also been a delegate to the League of Nations Assemblies. Often she has attended conferences of the International Labor Office as a delegate. In 1919 she was a delegate to the International Labor Conference in Washington. A rather ironical story is told of her encountering labor trouble when she arrived for the Washington conference: at the dock she had to carry her own luggage; at the hotel where she registered a strike was in progress. From 1926 to 1929 she was chairman of an international society called Human Relations in Industry. In 1939 she was chairman of a committee appointed by the Swedish Government to make a thorough investigation of the problem of married women in the labor market.

As a result of all her experience in industrial and international affairs Kerstin Hesselgren has come to this conclusion: "Labor peace is the way to world peace."

HILL, JUSTINA HAMILTON Oct. 1, 1893- Bacteriologist

Address: b. Johns Hopkins Hospital, Baltimore, Md; h. Calvert Court, Baltimore, Md.

Justina Hill, who is head of the bacteriological laboratory of the Brady Institute of the Johns Hopkins Medical School and Associate in Urology in the same school, admits there may be another female associate in urology. But if so, she adds, we have never crossed swords. For many years her work has been recognized among scientists, and now in 1941 the layman has been given a chance to appreciate it, with the publication of her book, *Germs and the Man.* Called by Karl Menninger "the best popular presentation of an important field of biological science that has appeared," it is a conscientious and accurate, yet informal and witty, account of the war against infection. There are sections on the healing of wounds, on germicides, antiseptics and disinfectants; descriptions of how the body fights infection and the worst enemies it has to fight; and a conclusion that looks toward the future.

Miss Hill says it was "undertaken originally in fun, partly also because the information seems to me to be of vital importance to everyone. . . The story of our own defenses against infection is one of the least known, more important and most interesting aspects of human behavior." The book, she adds now that it is finished and published, "is intended for the intelligent lay reader possessed of scientific curiosity, concerned with his or her own health and that of children. The subject matter here treated concerns every civilian who may be in an automobile accident or even remotely in danger of an air raid."

Many, many years of research and practical experience have equipped Justina Hamilton Hill to write *Germs and the Man.* She was born on October 1, 1893 in Washington, D. C., the daughter of Robert T. and Jennie Justina (Robinson) Hill, and grew up in Washington. After a short time in high school there she went to Miss Capen's School for Girls in Northampton, Massachusetts for three years, next to Smith College, which gave her a B. A. in 1916, and then to Michigan University, from which she received an M. S. in 1917. (In June 1941 Smith College gave her an honorary Doctor of Science degree.) The First World War was raging when Miss Hill left college, and she was anxious to donate overseas the scientific knowledge she had accumulated, but the Red Cross decided she was too young. She did serve with that organization in this country, however, for 15 months, mostly at Spartanburg, South Carolina. There she ran a bacteriological laboratory with the Extra Cantonment Zone Sanitary Service, "a hybrid of the Red Cross and the United States Public Health Service." As she puts it: "Went from one epidemic into another and in between times cultured pop bottles, prostitutes, drinking water and mill hands."

From Spartanburg, Miss Hill went with the Smith College Unit to the Near East with the Near East Relief and "summered in Aleppo at a temperature of 110, running a laboratory for 5,000 refugees trying to get back through the Syrian bottleneck into Turkey and sorting medical supplies, also trying to prevent all of the quinine from being sent to one place, with an infinite amount of malaria and dysentery." "At mountains with no communication with the outside world, except by occasional trucks or camels. More dysentery, more malaria, plenty of typhus and one oilstove for the operating room, the delivery room and the laboratory. Fine way to develop chillblains and a philosophy of simplicity."

JUSTINA HAMILTON HILL

Back in the United States, Justina Hill found herself in the comparative calm of Johns Hopkins Hospital. In 1920 she was made an associate in bacteriology in the Brady Urological Institute and in 1922 an instructor in urology in the Johns Hopkins School of Medicine. Later she was made an associate in urology. These are the positions she holds today, and this is her work. She wants it emphasized, however, that: "I am a bacteriologist, not a urologist," and offers as evidence the efforts she is making now to try to find out more about how sulfanilamide works. "The interesting thing to me," says this scientist, whose highly technical articles have been appearing for years in scientific journals and whom *Time* calls "one of the most colorful of . . . medical women," is "doing experiments."

HILL, WILLIAM JOSEPH *See* Hill, B.

HILLER, WENDY Aug. 15, 1912- Stage and screen actress

Address: "Spindles," The Grove, Radlett, Herts, England

After some six months of intense and nerve-racking work—dodging the shots of the Luftwaffe and RAF planes, facing the "klieg" lights and directorial exactions of both Shaw and Pascal while on the set in Denham, England—Wendy Hiller completed another leading role in a Pascal-directed screen adaptation of one of George Bernard Shaw's plays. Quite different from *Pygmalion,* the first Shaw-Pascal-Hiller triumph of 1938, *Major Barbara* (which had its United States première in the Astor Theatre at New York City in June 1941) had much more to it than the usual "boy gets girl" movie formula. It was a film about "humanitarianism versus power," about "religious hypocrisy," about a soul-saving Salvation Army lass who had become thoroughly disillusioned by and far wiser from the material alliance of her co-workers with her millionaire, munitions-making father from whom she had become estranged. Preceded by an eight-minute prologue in which the inimitable Shaw personally addressed his United States audience, the screen version of his play (he wrote its scenario and dialogue) was a "cinema treat." The film had an ever timely message to impart ("35 years after its first appearance it comes to one fresh as a daisy, a daisy, moreover, which, planted in one world, has grown into another") and dialogue which was "brilliant, provocative, richly comic," to say nothing of the directing of Gabriel Pascal and the good work of the supporting cast. According to critics Wendy Hiller gave a "superb acting performance."

WENDY HILLER

It would seem that fine performances have been only the usual thing for Wendy. While in attendance at the Winceby House School, Bexhill, she won several elocution contests and participated in several school plays, thereby reaffirming her early childhood decision to become an actress. To this decision she found no family objections. On the contrary, in early childhood she frequently induced the whole family to take part in her plays; and as often as not she was staging and/or acting in the impromptu theatre which her mother, Marie Elizabeth (Stone) Hiller, helped her build in the Hiller nursery. It is not unlikely that her mother fostered in Wendy this liking for the theatre. For Mrs. Hiller's fondness for the drama and particularly her deep admiration for Sir James Barrie's plays were even reflected in the naming of her other children—René, Michael and John. Apparently Wendy's father, Frank Watkin Hiller, did not have much to say in the naming of his daughter, born at Bramhall, Cheshire on August 15, 1912.

Having completed her formal education at the Winceby School, Wendy managed to join the Manchester Repertory Company in September 1930 at the age of 18. Once in this company Wendy plodded and at times paced through the various stages from non-salaried apprentice to actor-manager. She had her share of "walk-on" parts and understudied for a whole year. Then in 1931 she became assistant stage manager, continuing to act in anything and everything—from Ibsen's tragedies to Aldwych's comedies.

Of her busy life and work with this group Miss Hiller has said: "For marvelous experience in the theatre there's nothing to beat a repertory company. For three years without a break this was my life: Get to the theatre at 10; rehearse all morning; stay in theatre over lunch hour to work with staff and music and lighting. Rehearse all afternoon (or play a matinee); plan next week's wardrobe, or stage sets, or lighting; make up for evening show, play my part, prompt and work the operating cues for the play. In bed by about half-past midnight with next week's play propped on my knees, either learning my own part or planning out stage directions, lighting, props, music cues. Lights out at two o'clock, with luck, and up again at eight next morning."

Before Wendy Hiller in her best Lancashire accent "spoke" her way into the part of Sally Hardcastle in *Love on the Dole* (1935), she had reached an impasse in her acting career. Aside from a job as extra in a Gaumont-British film, an understudy's job in *Evensong,* and a bit of radio broadcasting on a children's hour in London, she had little chance to make use of the excellent training she had received with the Manchester Repertory Company, which she had decided to leave in order to "crash" London's West End. Nevertheless, with that "inner vibrancy" and "outer glow," that "deeply felt characterization" and that "clear voice" which Miss Hiller brought to her first important role, in *Love on the Dole,* she rapidly made up for lost acting time.

With her success in that play both in London (1935) and New York (1936), and her engagement to its author, Ronald Gow (they were married in 1937), Miss Hiller went on to scale new acting heights in Shaw's *Saint Joan* (1936). Mr. Shaw had been so favorably impressed with her performance in *Love on the Dole* (he saw the play in New York) that he chose her for the part of Joan of Arc in his *Saint Joan.* It was during one of these performances at a theatre in Malvern (July 1936) that Gabriel Pascal thought she could qualify for the screen role of the Cockney lass, Eliza Doolittle, in *Pygmalion.* After a satisfactory screen test in which she competed with "five other Elizas" Wendy received the role in which she "justified the phonetics expert's prophecy, 'I'll pass this unpolished Cockney flower girl off as a Duchess!'" And, of course, Professor Higgins (Leslie Howard) brought about the transformation with corrective courses—in speech, posture, diet and dress. Her superb acting during these long, grueling, often comic pupil-teacher sessions soon won the admiration and sympathy of a new audience, and in her first movie role Wendy Hiller displayed a "brilliance of wit" and a "warmth of humanity" that is unmatched so far. The immediate success of this first Shaw-Pascal-Hiller dramatic venture is legend by now, *Pygmalion* having won the Hollywood Academy Award in 1937.

Under contract to Pascal for five years, Wendy assiduously avoided the lucrative bids of the Hollywood movie moguls who had been trying to sign her up since her film debut in *Pygmalion.* Though for two years she did not appear in any films, she preferred this arrangement to work under another director. Miss Hiller, who in 1941 was helping out at an air raid precaution post and undoubtedly concerned over her husband and three brothers (all on active duty), nevertheless had a "great ambition to come to America, drive over the country by car and see the Rockies!"

Five feet, seven inches tall, Wendy Hiller, who has "thick chestnut brown hair, hazel eyes and broad cheek bones" and is called by some "tall and scraggly," by others "graceful and lithe," has a strange and singular beauty. Her clear fresh complexion, gleaming curly hair and clear eyes reflect the wholesomeness, the vigor and beauty of her native Lancashire countryside. She is a quiet and unassuming person who does not seek publicity. Little is known of her personal life, which she prefers to keep completely apart from her screen work. She and Ronald Gow have one daughter, Anne. Miss Hiller likes to "cook, play golf, attend the theatre and every Garbo film." She "adores ballet music and goes low-brow on hillbilly songs."

HIMMLER, HEINRICH (hĭm'lẽr) Nov. 7, 1900- Reich Commander of the Elite Guard (SS); head of the German police

Address: Berlin, S. W. 11, Prinz Albrecht Str, 8, Germany

German Railroads Information Office

HEINRICH HIMMLER

As Hitler's *Wehrmacht* overruns one land after another, it is followed by a terror that to some is worse than the German invasion. In its wake come the SS-men and Gestapo agents, whose business it is to consolidate Army gains, to mop up the remnants of resistance and make sure that Hitler's triumphant path is clear and safe. These people act with dispatch and efficiency; they are armed with lists of names covering all the dangerous elements. They are feared more than the Army; and indeed there is continuous friction between the Army men and the chief of the German police, Heinrich Himmler, because of the latter's constant interference with Army efforts to placate the population. Himmler is not interested in placating the populace, but rather in the "destruction of the old order whenever we can get our hands on it." For that reason his appearances in Holland or in Norway (he revisited Norway in February 1941 to advise the Quislingists on how to control recalcitrant Norwegians) are always followed by a wave of terror and repression.

HIMMLER, HEINRICH—*Continued*

Himmler is not as well known outside of Germany as the more flamboyant Goering or Von Ribbentrop (see sketches this issue). He is nevertheless considered Hitler's eyes and ears and one of the few irreplaceable men in Nazi Germany. In the possession of his Gestapo are dossiers on every National Socialist dignitary—complete to the last detail, for Herr Himmler is an efficient and orderly man (it has even been said that he keeps a dossier on himself). As a result, if certain reports are true, even the all-powerful Goering walks softly before the meeklooking, nearsighted Police Reichsführer, whose appearance is paradoxically far from sinister. His pudgy face with the pince-nez looks singularly unmilitary beneath the steel helmet. He is quiet and retiring by disposition and could easily be mistaken for a scoutmaster. Yet, as the dread Reichsführer of the notorious Schutzstaffel and the inspector of the state secret police, he has helped Hitler keep his position by balancing powerful groups against each other in order to maintain the supremacy of the Nazi Party. He has created the greatest police system in history.

Like many other Nazi chieftains, Himmler's early career was far from brilliant. He was born on November 7, 1900 in Munich, the son of Gebhard and Anna (Heyder) Himmler. His father was a pious Catholic and a school supervisor. Heinrich got a thorough classical education in the town of Landshut, but was never too enthusiastic about it. At 17 he became an ensign-bearer in the 11th Bavarian Regiment, but saw no active service because his superiors made use of his administrative abilities behind a desk, where he dealt with requisitions and reports. In 1919, after the War was over and he found himself at loose ends, he joined the National Socialist German Workers' Party led by Adolf Hitler. At that time he worked in a fertilizer factory but spent most of his days in beerhall meetings. When the abortive *Putsch* that landed Hitler in prison took place in 1923, Himmler was too insignificant a figure to be punished. He remained at large and attended classes in experimental agriculture at the University of Munich.

During the early '20s the National Socialists lived on a fairly modest scale. Storm troops (SA) were forming slowly, and there was not much money in the treasury. Himmler lived modestly, too, operating a chicken farm with indifferent success. In 1925 his exceptional organizing talents were given some scope and he was appointed business manager of the Bavarian branch of the Nazi Party. There he did a masterly job of organization. Having acted as Gregor Strasser's secretary also, it was on Strasser's recommendation that in 1929 he was finally given a chance at the leadership of the SS—he was the fourth to try the job, and was found completely satisfactory. Under his leadership the Schutzstaffel Corps was to become a considerable weapon in Hitler's hands.

The idea of the Schutzstaffel was conceived by Hitler when he realized that the unwieldy sprawling body of the storm troopers was weak and unreliable. He decided to form a carefully chosen elite group of men upon whom he could rely implicitly. Himmler's genius for organization came in handy. By the time Hitler became Chancellor, he had at his command over a hundred thousand well-armed trained men, the toughest and most intelligent in the Party. Himmler, who in 1930 had become a member of the Reichstag, soon showed that this army could function on a national scale. In 1933, when the last vestiges of the Weimar Republic went up in the Reichstag fire, Himmler had in his possession carefully compiled lists of the opposition and was able to liquidate it at a moment's notice. No wonder then that when the late Ernst Roehm came back to Germany from Bolivia in 1930 he found the Führer's affections transferred to the SS.

Fierce internal strife ensued between the SA, of which Roehm was leader, and the SS. It culminated in the "Night of the Long Knives"—June 30, 1934, at which 1,000 or more followers of Roehm were rounded up and killed, after nearly "48 hours of uninterrupted work." Among the butchered dissidents was Himmler's erstwhile employer, Gregor Strasser. But of course by this time Himmler's only loyalty was to Hitler, to whom he was directly responsible for his actions. With Roehm dead and the SA shattered, Himmler's SS Guards and his Gestapo became the mainstay of the Nazi regime.

According to more than one source, Himmler had already added to his prestige and to the efficiency of his organization by creating the dreaded *Geheim Staats Polizei,* better known as the Gestapo. According to another source, however, others originally created the Gestapo under Goering's supervision—and Himmler started merely as Police President of Munich, first building up the Bavarian Secret Police, in imitation of the Gestapo, later heading simiiliar organizations in other small German provinces. In either case, he rose rapidly until he was named police commissioner of all the German states except Prussia, where Goering still held sovereignty. Goering was inimical to Himmler, who, he felt, was forging ahead too fast and was too close to Hitler. Nevertheless Himmler managed to creep into the Prussian stronghold. On April 20, 1934 he became the head of the Prussian Secret Police—though, according to one source, only on condition that certain of Goering's followers be given positions of influence under him. Goering was finally prevailed upon to surrender his Prussian Home Ministry, and in 1936 Himmler was proclaimed police commissioner and supreme director of law and order in Germany.

The Gestapo worked hand in hand with the Schutzstaffel, from whose ranks many of its agents were recruited. By means of this organization the whole of Germany was swathed in a network of espionage. It was the business of the Gestapo to ferret out and put down the slightest symptom of dissatisfaction in Germany. The SS-men completed the work of the Gestapo by arresting, trying and executing the victims.

The foreign section of the Gestapo, the UA-1, has, in Himmler's hands, become an important part of Hitler's expansion policy and has done outstanding work in that field. During the years of preparation for the Second World War, Herr Himmler's agents were awaiting *Der Tag* wherever German interests existed. His bright young men were serving as elevator operators in French newspaper buildings and frequenting French salons; they were compiling the data that enabled them later to lay their hands on every important anti-Nazi and fill the jails overnight in Austria, Poland and The Netherlands.

Naturally Himmler's influence has been growing apace. He has time and again proved his absolute devotion to the Führer as well as his complete ruthlessness and unscrupulousness. "With the Schutzstaffel for his arm and the Gestapo for his eyes," he is politically unassailable. The SS uniform has been worn by several members of the Cabinet. The only rival to his expanding ambitions, the Army, has resented strongly the divided authority which is created by his activities in the occupied countries. And Goering is said to side with the Army. It was Otto Strasser, the brother of Gregor Strasser whom Himmler had murdered, who said that "within one hour of the accession of Goering to power, Goebbels (see sketch this issue) and Himmled would be shot dead."

So far, however, these protests have not served to impair Hitler's faith in his police inspector. It is the information Himmler submits to the Führer out of Gestapo files that enables Hitler to deal with any spark of revolt in the Army. Dossiers on Von Blomberg and Von Fritsch, who deplored Hitler's reckless foreign policies, brought about their downfall in 1938. In order to persuade the reluctant members of the *Wehrmacht* of the wisdom of Hitler's plans, Himmler has since been put in charge of several purges that took place in the Army. He does not need to assure Hitler of his usefulness. Nevertheless it has been said that he is not above staging a demonstration occasionally. It was claimed, for example, that the Bürgerbräu Keller explosion which occurred on November 9, 1940, a few minutes after the Führer had left the place, was engineered by Himmler's men as a reminder to Hitler of the need for their existence.

Himmler's pet project is the Schutzstaffel, the "National Socialist Soldierly Order of Nordic Men." It now boasts a membership of about 250,000 and is "the most exotic body of cops the world has ever known." Not a mere police service but a cult, membership in the Schutzstaffel is considered a privilege. Himmler has created tradition by making this band of praetorians a "blood aristocracy" of Germany and by building up a semi-pagan, semi-chivalric ritual around it. To belong, the SS-men must prove unstained Aryan pedigree back to 1750. They must comply with the physical standards of Frederick the First's bodyguard. They celebrate the Solstice, a pagan festival, and on their belt buckles is inscribed the motto "True Until Death." The fact that a group of SS-men (the *Leibstandarte)* is entrusted with the task of guarding Hitler, and does so day and night, is also helpful to Himmler, who in that way knows everything that goes on around the Führer. (Another and less known regiment, the Death's Head Brigade, is given the less attractive job of guarding the concentration camps.)

It is also Himmler's idea to use the powerful young giants of the SS to build a race of supermen. Himmler does not allow his SS-men to marry without a thorough investigation of their mates; they are, however, encouraged to produce as many illegitimate children as possible. This breeding project is doubtless a carry-over from Himmler's farming days. He has recently put out a magazine called *Victory of Arms—Victory of Children,* in which he claims that "two weapons are available to every people fighting for its existence: its power to defend itself and its natural fertility." He himself is married (his wife is the former Marga Boden) and is completely devoted to his little daughter Gudrun.

A consistent man, Himmler is completely absorbed in his work. One constantly hears of his traveling to one place or another to learn more and better police methods. Only recently he appeared in Spain to study the methods of the Falange. He has read all the books on the subject and has great reverence for the notorious Colonel Nicholai of the First World War and even more for Fouché, whom he hopes to surpass. Unlike other Nazi leaders, he lives simply and unostentatiously in a modest but well-guarded house in a Berlin suburb and, when not otherwise occupied, likes to putter around his chicken farm.

HINDEMITH, PAUL (hĭn'dĕ-mĭth) Nov. 16, 1895- Composer; musician

Address: b. Yale University School of Music, New Haven, Conn.

Rudolf Hindemith

PAUL HINDEMITH

"Play this piece wildly, but always in very strict time, like a machine. Consider the piano here as an interesting kind of percussion instrument." So ran Paul Hindemith's instructions for playing the last movement of his piano suite entitled *1922.* In 1933 the Nazi Government issued instructions even more emphatic about *not* playing suites or any other music written by the acknowledged leader of the young German polyphonists. Their decree included the words "degenerate" and "culturally Bolshevistic."

"You can search me why they called my music degenerate," Hindemith told American reporters who greeted him at the dock in February of 1939. "I suppose because it is modernistic."

So non-Bolshevist an institution as Yale University apparently disagrees with Herr Hitler's official critic, for in 1940 Hindemith became a visiting member of the faculty of the Yale University School of Music, and in 1941 he was made a regular member of the faculty. Here he gives courses in advanced composition and theory, chamber music and medieval composition, no doubt indoctrinating the sons of Eli with the subversive principles of Bach and Handel, whose mastery of musical forms he admires and emulates. He is conceded to be probably the most expert contrapuntist of our day. When his appointment to Yale was announced in May 1940, it was also disclosed that he had been awarded the Howland Memorial Prize, given to a citizen of any country for distinguished achievement in literature, the arts or government.

It is ironic that Hindemith has so often been called the playboy of modern music, since he is the avowed champion of "workaday" or utilitarian music—*Gebrauchsmusik,* in the language of the fatherland that disowned him. "A composer should never write," he once declared, "unless he is acquainted with the demand for his work. The times of consistent composing for one's own satisfaction are probably gone forever." His application of his theories won him recognition as "the unrivaled leader of that section of the young generation which believes in carrying to its limit the idea that art-music should be adapted to the demands of its time." It also has gained him a piquant array of epithets and an exile tempered by honor in several countries not his own.

Hindemith was born in the mathematical middle of the decade famous for everything he grew up to condemn—in 1895, in the town of Hanau, Germany. From earliest infancy he breathed in the musical tradition of Germany—breathing it out again, the Nazi authorities believed, into smoke and flame. He came of a musical but very poor family of Silesian craftsmen and almost from childhood had to earn his living; but from the first there was no doubt about his vocation. At six he began to receive lessons. By the time he was 13 he had acquired command of the violin. From then on he played wherever opportunity offered: in movie houses, for musical comedies, at theatres, in dance bands. It all went toward making him "undoubtedly one of the most proficient musicians alive." His chief skill is on the viola, but it has been said that he could probably play on some instruments, with at least reasonable competence, any part of any composition he has written.

In his late teens he studied composition with Arnold Mendelssohn and later with Bernard Sekles, and at 19 became concertmaster of the orchestra of the Frankfurt Opera, a position which he kept until 1924. Then came a year of military service. After that he left to tour Europe with the enormously successful Amar-Hindemith String Quartet, which he and his friend Licco Amar had organized in 1921. He remained with them until 1929, as violist; and later his brother Rudolf joined the group as cellist.

During the '20s he was active in directing the Donaueschingen Festivals and it was through these that his chamber music became internationally known. The Amar Quartet played his *String Quartet No. 2* with great success at the first of these festivals in 1921. A few years later, in 1925, his *Concerto for Orchestra,* played at the Venice Festival of the International Society for Contemporary Music, "first presented its composer as a fiery protagonist of modernism."

Like many of our moderns, Hindemith has been especially interested in chamber music and works for small orchestras, feeling that for many purposes the full orchestra is uneconomical, unsuitable, unwieldy. His works for small groups often employed rather startling combinations of instruments, especially in his second phase, when he was leaning toward experiments in mechanical effects. This was the period in which he gave freest rein to a sense of fun which is characteristic of him and far from common among his compatriots. The earlier phase was formative and eclectic, groping toward an individual idiom. The third, or latest, is marked by a neo-classical strain, a more sympathetic and "humanized" outlook and a tendency to reconcile linear counterpoint with tonal harmony.

The much discussed *Gebrauchsmusik,* a product of the second period, is friendly to the machine which shapes present-day needs, tastes and pursuits. Some of Hindemith's works were actually composed for the pianola and mechanical organ—some of them to accompany the *Felix the Cat* films. He was among the first to take film music seriously and during the years 1927 to 1937, when he taught a master class at the Berlin Hochschule für Musik, he conducted a Film-Music Studio where his most gifted pupils studied "the mechanical processes of film production and the synchronizing of musical measures with sections of film, and for practice . . . [composed] music to old films cut and fitted for the purpose."

Another expression of *Gebrauchsmusik* was the notorious *Lehrstück* (Lesson Piece), once described as "an effort to carry artistic composition into the sphere of the community sing." The musical world responded to it with every emotion except indifference and even some of his ardent disciples found it too stiff a dose. Its performance in 1929 caused an outbreak of hostility, but later the British Broadcasting Company, which has performed a great deal of Hindemith's music, played it successfully.

Hindemith's works for the stage include a number of operas which were performed in Europe before enthusiastic audiences. The best known is *Cardillac* (1926), the story of the goldsmith who was so enamored of his own masterpieces that every time one of them was purchased he murdered the buyer. It was remarked that the real hero of the opera was not Cardillac but counterpoint, and that treating the 40 members of the orchestra as soloists was not strictly in the neo-classical spirit.

Even more unusual was that "engaging trifle" *Hin und Zurück,* a chamber opera which lasts only a few minutes, has five characters in the cast and eight in the orchestra. It consists of a prelude, aria, duet and trio, leading to a monologue after which the previous trio, duet and aria are repeated, but with all the stage action and the musical phrases in reverse order. The moral is that to the powers above it makes little or no difference whether man is born and dies, or dies and is born again. A more recent opera on the grand scale, *Mathis der Maler,* had its première in 1938, in Zurich.

It was his works and not the composer on which the Nazis placed their first ban—which was hotly and vainly protested by the spirited conductor, Dr. Wilhelm Furtwängler. Hindemith himself was treated with great personal consideration, and spent part of his time in Germany until 1938. He was never exiled. Four months of each year he spent in Turkey, where he served the Government as director of musical education and musical adviser, commissioned to organize all branches of music study and research in accordance with European standards. This involved, among other things, building up a state symphony of 80 men and organizing government schools of music that are already said to be turning out promising musicians and composers. He banned his own music in Turkey, declaring: "I won't have anyone say that I used my position here to get my music performed."

In 1936, just when the German Propaganda Minister ordered the press not to mention this representative of "spiritual non-Aryanism" who was destroying the musical ear of German youth, Hindemith was invited to the United States, and the following year appeared in concerts of his own works at the Coolidge Festival in Washington, D. C., with the New York Philharmonic Society, in Chicago, and throughout the country. His performance in his viola concerto *Der Schwanendreher* (turner of a barbecued swan in the kitchen), introduced at Washington, aroused more unanimous delight than the composition itself.

Since his return to America in 1939, Hindemith has appeared in a number of cities, both as performer and as guest conductor. The Philadelphia Orchestra in 1939 introduced his *Nobilissima Visione* from the ballet *St. Francis* at Carnegie Hall in New York. The ballet itself, with choregraphy by Massine, representing the conversion of St. Francis, had been performed the previous year at the Drury Lane Theatre in London. This example of Hindemith's more recent style was well received, as were the symphonic excerpts from *Mathis der Maler* played in New York by the Boston Symphony in 1940. But it was his Symphony in E Flat, which had its world première in Minneapolis in November 1941, that drew the greatest number of "bravos" from its audience. John K. Sherman commented on its "logic and urgency of message," its "close weft of pattern," and the "directness and superb unity of the work as a whole."

A stocky man with blue eyes, sensitive mouth and less hair than the old-fashioned romantic artist might require, Hindemith has been described as a connoisseur of wines and of European walking possibilities, an amateur artist in black and white, and a grief to many

HINDEMITH, PAUL—*Continued*

critics. "How can a man who has written so much excellent music write so much dull music?" wailed one. Another lamented: "If only heaven had bestowed on this composer warmth of heart and a lyrical faculty when it dowered him so plentifully with brains, systems, and counterpoint!" He has also been described as "an influence on modern musical thought second only to Stravinsky, if not by now the more potent of the two."

HIRST, HUGO HIRST, 1ST BARON

Nov. 26, 1863- British industrialist

Address: b. General Electric Co, Magnet House, Kingsway, London, W. C. 2, England; h. Fox Hill, Earley, near Reading, Berkshire, England

"When I was very young," Lord Hirst said a few years ago, "I chose the words 'I will' for my motto, and it remains the same today. My aim is constantly to advance and to consolidate. Hard work done intelligently is always repaid. Young people are apt to look at big organizations as institutions which have been there forever; they should realize that everything has been started and built up by a man's striving and determination."

Hirst has always been an individualist and has always believed in what the individual can do. At the 25th Individualist Luncheon in 1929 he said: "After the War individualism seemed to be dead. Today we hear too much about democracy and communism, and too much about nationalization and combined efforts, without realizing that we need individualists in the interests of progress." Nevertheless this typical old-fashioned capitalist who rose from nothing to the chairmanship of the world's largest electrical organization differs from the usual pattern in a number of ways. First, his is a highly inventive mind and his part in the building up of the General Electric Company was never confined to financial wizardry. Secondly, he has never forgotten his early working years and lays great stress on the importance of good working conditions. In his factories, write Bridges and Tiltman, "the heating, lighting and ventilation are as perfect as care and forethought can make them. Dining halls and canteens have been instituted where good food is provided at a low price. Rooms are available for concerts, dances and the like, and every facility is given for cricket, football, tennis and all sorts of sports. The management is in every case left to the workers themselves."

Hirst's name was originally Hirsch, and he was born of German parents. His father was a distiller and gave his son two years' training in chemistry to prepare him to enter that business. But Hugo went off on his own and joined a firm that was making the first accumulators. In those days he was quite an athlete, and when the firm produced an electrically-propelled vehicle, he was asked to run in front of it with a red flag. At this and at his other tasks he worked long and hard, he studied languages and eventually his ability and knowledge brought him up from a routine job into the head office.

As early as 1884 Hirst was offered a post by a Manchester firm which planned to send him to Australia to trade with $50,000 worth of goods. When a collapse of land values prevented the journey, Hirst proposed opening a London shop to sell the material, and when the store was opened Hirst managed it. He earned a fair share of the profits and gained valuable experience.

Shortly afterward he set out to master the business of electric lighting which was at that time in an embryonic state. One of his first successes was in securing some measure of standardization and centralization in accessories, and by 1887 he was able to produce the first catalog of electrical equipment. In 1893, when public power stations were started, he set up the Robertson Lamp Works at Witton, Manchester, and this venture was followed by the acquisition of a glass works at Lemington-on-Tyne for the manufacture of bulbs. These were set up in a crucial year, for it was in 1893 that Edison and Swan's patents for carbon filaments expired. Hirst was able to proceed with a much superior filament invented by C. J. Robertson.

Experimentation continued, however, for Hirst felt that an even tougher fibre had to be found. Eventually he arrived at tungsten, and it was from tungsten that the first stronger filaments were made. The factory for the Osram lamps, known all over Great Britain, was built by Hirst at Hammersmith, London. Then he went on to work on the gas-filled lamp. In September 1900 the General Electric Company was registered, its works at Witton the only ones in the Kingdom producing lamp-carbon. The Admiralty saw the vital importance of this material and helped on the work of Hirst and his collaborators. Through all the quiet but uneasy years preceding the First World War expan-

LORD HUGO HIRST

sion continued. Factory after factory was built or acquired; more and more types of electrical equipment were brought into the orbit of the company. In 1913, with Pirelli of Milan, Hirst established a big electric cable factory at Southampton.

After that earlier War the G. E. C. set up a big research organization at Wembley, near London. Radio was now becoming important, and the firm added radio research to its activities, producing a set which became known as the Gecophone. Another product of the company's laboratories was the mechanically controlled lighthouse which needs no keeper. Hirst watched over the expansion of his company, whose capital investment rose from £85,000 in 1900 to £9,600,000 in the most recent listing, and at the same time was ready to build a gadget himself whenever one was needed.

His interests as an industrialist have extended beyond his own company. From 1923 to 1925 he was a member of the Board of Trade Advisory Council. He has been a member of the Prime Minister's Trade and Employment Panel, economic adviser to the Cabinet Research Committee and scientific representative of H. M. Government on the League of Nations. When in 1928 Sir Alfred Mond (later Lord Melchett) embarked on a series of conversations directed toward peace in industry with the trade-union leader, Ben Turner, Hirst was among the big employers who took part. In that same year he went to Australia as a member of the Federal Government's committee to inquire into developments in that continent and returned convinced of the great potentialities there not fully realized because of an over-rigid tariff system. However, Hirst is no free trader: he has always been a Conservative and a convinced upholder of tariffs. At the same time, though, he insists that tariffs must not be used as an excuse for slackness in industry. In 1936 Hirst was appointed president of the Federation of British Industries and of late he has been particularly interested in fuel research. He has been president of the Institute of Fuel and as such has frequently deplored the British coal-mining industry's lack of imagination in research.

In 1925 Hirst was created a baronet and in 1934 was raised to the peerage as first Baron Hirst of Witton. In 1892 he married Leontine, daughter of Herman Hirsch. At the time of her death in 1938 she was described as "the devoted wife of her versatile and super-energetic husband . . . generous in charity, a gracious and charming personality." Two daughters were born to this marriage, and now Hirst's heir is a grandson, Harold Hugh, born in 1911.

Who's Who in Commerce and Industry

HITCHCOCK, ALFRED (JOSEPH)

Aug. 13, 1899- Film director

Address: c/o RKO Radio Studios, Inc, 780 Gower St, Los Angeles, Calif.

The great popular success of Frank Capra's *Mr. Deeds Goes to Town* and John Ford's (see sketch this issue) *The Informer* made millions of movie-goers acquainted with the fact that a fine picture necessarily has a good, even a fine director behind it. The great crowds who flocked to see *Rebecca*, after reading Daphne Du Maurier's best selling novel of that name, and who later had their spines chilled by *Foreign Correspondent*, will be likely to respond automatically to the announcement of another picture made by Alfred Hitchcock. The smaller but more fanatic cult which never misses a reshowing of *The Thirty-Nine Steps*, *The Lady Vanishes* and *The Woman Alone* are gratified but not surprised to have their judgment confirmed. They knew all that time that Hitchcock was master of screen melodrama of a particularly convincing, thrilling and atmospheric kind. He has established a school of directing whose imitators are perfectly frank in acknowledging that he is their master. *Blackout* and *Night Train*, which use some of Hitchcock's own actors, are examples of this sincerest form of flattery.

The master of suspense is "an affable man-mountain with bright black eyes who is given to noonday steaks and lemonade," according to Lupton A. Wilkinson. Born in London, the son of William Hitchcock, a poultry dealer and fruit importer, and Emma Hitchcock, he soon acquired an urge to travel. (Trains, buses, ships and planes figure largely in his films.) "The bright and varied goods in his father's shop set him longing for far places. By the

ALFRED HITCHCOCK

time he reached his eighth birthday he had ridden to the end of every bus line—which amounted to almost a life career in London. Those terminals included the London docks, accelerating his dreams. For a hobby he kept a huge wall map of the world. Each afternoon he asked a newsdealer to let him see Lloyd's bulletin; then he hurried home to mark with flag-pins the positions of British ships throughout the world."

After attending St. Ignatius College, a Catholic school in London, Hitchcock intended to be an electrical engineer, but was obliged to give up his courses at the University of London to help support his family by working as a technical clerk in a London cable manufacturing company. He rose from a clerkship to the advertising department, where he applied a natural talent for drawing to the making of advertising layouts. (In preparing to shoot *Rebecca* he indicated the facial expression of key characters by rough but unmistakably indicative sketches.) His friend, the newsdealer, had also lent him British film trade magazines, which he read.

Learning one day that the Famous Players Company was to open London studios, Hitchcock "went to work on a pet idea," according to Walter Wanger, producer of *Foreign Correspondent.* "He thought film titles atrocious and decided to design some to show the new producers that Englishmen too had good ideas. He spent five days and nights lettering art title cards, using the announced title of the first Famous Players London film and names of friends to fill out the customary list of credits." After running the gamut of secretaries and assistants Hitchcock reached the "head man," interested him in his work and shortly thereafter, in 1920, shifted his activities from the cable advertising department to the Famous Players title department.

Later he joined another studio (Gainsborough Pictures) as art director, script writer, assistant director and production manager. He had no thought of becoming a real director until a friend offered him a chance to direct a picture to be made in Munich. Hitchcock took a film company over most of Europe on a $50,000 total budget. During the ninth shooting his employers cabled: "Come home; use sets," and Hitchcock persuaded Alma Reville, a hazel-eyed girl who became his co-writer and general assistant, to marry him in 1926. (They now have a daughter, Patricia, and live in Carole Lombard's former home—a well-hidden, hill-side house in the Bel Air district beyond Beverly Hills and Hollywood in California.) The director reads a great deal, avoiding novels, likes hock and abhors Scotch.

Alfred Hitchcock received his first credit as a director in *Woman to Woman.* Soon after he was credited with the full direction of *Blackmail,* a picture which, in the words of the Boston *Transcript,* "made America conscious of the occasional excellence of British talkies." For several years he worked for British International, turning out *Murder, The Ring, Juno and the Paycock,* Hall Caine's *The Manxman, The Farmer's Wife, Rich and Strange, The Lodger* and *The Case of Lady Chamber. The Thirty-Nine Steps,* starring Robert Donat in an adaptation of the first story of the late John Buchan's Richard Hannay trilogy, won critical acclaim, attracted the notice of Hollywood and is still shown repeatedly in film houses which specialize in superior pictures.

In 1938, says Wanger, Hitchcock first came to Hollywood to size up the place and sign a contract with Selznick-International ($800,000 for five pictures). "He returned the next year," says Wanger, "to direct the sensational *Rebecca,* although it was not his usual type of material. When *Rebecca* was completed, Hitchcock came to us for *Foreign Correspondent* and wrote the original story from which he later directed a picture I was very proud to produce. During the filming 'Hitch' lost 30 pounds, but he has more than 200 left." In February 1941 *Rebecca* was voted the best picture of the year in the annual Academy Award.

None of the effects in *Foreign Correspondent,* as in *Rebecca,* was accidentally achieved, writes Duncan Underhill in the New York *World-Telegram.* "Hitchcock, the rotund engineer who plays Coal Oil Johnny to the Hollywood taverniers in the six or eight fleeting hours a day that he can spare away from his constructive labors, is the foremost living user of the 'gimmick,' or suspense-building device. Suspense, shock and depression are rampant on his cosmic negative, and he will gladly explain how he achieves any or all of them. 'Mrs. Danvers in *Rebecca,*' he will confess to you on a moment's acquaintance, 'upsets you because she comes suddenly from nowhere right into your consciousness. Had I built her one of those stately pedestrian entrances your reaction would have been at once, 'Oh, here comes the menace. I'm not scared a bit.'"

More than any other director in motion pictures, Alfred Hitchcock has staked his career on suspense and has made it work for him in every foot of every reel: *The Girl Was Young, The Man Who Knew Too Much, The Thirty-Nine Steps, The Lady Vanishes.* Writes Lupton Wilkinson: "Each of these British-made thrillers that built up his tremendous reputation was a separate and unique study in suspense. (Incidentally, it is interesting to note that he never resorts to horror devices.)" Another major part of Hitchcock's technique is the accentuation of the terrifying by contrast with the commonplace, the little trifles of life. "Pain, your own pain, is amusing—till it hurts," Hitchcock once said smilingly. "If someone tickles the soles of your feet, you laugh. The same act, carried a trifle farther, becomes a Chinese torture. I apply the pain gently." Hitchcock feels that the camera is really a participating actor in every action and that, representing the audience as it does, it should mingle with the actors and share their adventures with them, not merely stand aloof as an observer or, as a mechanical recording device, be jerkily shifted from one vantage to another.

In Hitchcock's picture released in the spring of 1941, *Mr. and Mrs. Smith,* he fulfilled "an often voiced ambition to direct a typical American comedy about typical Americans." "The striking thing about this film," said the motion picture critic of *Look* Magazine, "is that Hitchcock has employed the same strategy that marks his blood-chilling melodramas. Here again are his unmistakable touches—the same casual approach, the same pell-mell finish, the same corner-of-the-eye viewpoint, the same direction by indirection. The net effect is the same, too: another Alfred Hitchcock hit." His picture, *Suspicion,* with Cary Grant and Joan Fontaine (the lady of *Rebecca*), returned to "blood-chilling melodrama," but this was "a melodrama of the mind" in which he thrust aside his usual suspense-creating tricks and relied on the emotions of the characters themselves to hold the audience. He was completely successful; more than one reviewer called it a cinema masterpiece.

The famous director is "fat, 40 and full of fire," according to Walter Wanger. "I've seen him climb a ladder with unbelievable agility, and I've seen him doze off to sleep looking at pictures. Twenty-seven spotlights wouldn't faze Hitchcock if he became drowsy, and what he can do to a double-thick steak is no Hollywood secret. On the set it's different. He arrives in the morning, is punctual on the stage, makes a careful check of his script scenes before he starts and, while he drinks a cup of black coffee, directs the set-up for the first scene of the day in the minutest detail. His script is an historical document." In addition to having art directors prepare many sketches showing lights, shades and suggested composition, Hitchcock will make as many as 300 quick pencil sketches of his own to show his crew just how he wants scenes to look. When the cameras begin to turn his actors find Hitchcock a most responsive audience. At least once in each picture he plays a small character-part.

The most important task the director has to perform, Hitchcock told Cecelia Ager of *PM,* is to keep his audience awake. "You ask them to look at a square frame for an hour and a half at a time. You've got to put something in there to keep 'em looking." The hard thing, he says, is to take a dramatic moment and put in comedy. "To make of the whole, entertainment. To employ an art form satisfactorily: that is, to please the rank and file too." Yet he also told Duncan Underhill that "movies are delightfully simple. What you do is take a given piece of time, add color and pattern and you have a movie. Quite."

Who's Who

HODGES, COURTNEY H. Jan. 5, 1887-

Chief of infantry of the United States Army

Address: War Department, Washington, D. C.

A popular promotion was that of Major General Courtney H. Hodges, who on May 23, 1941 took over the job of Major General George Arthur Lynch as chief of infantry of the United States Army. General Hodges left the post of commandant of Fort Benning, Georgia, the world's largest infantry school.

He is one of the few Army leaders who is not a West Point graduate. Born in Georgia on January 5, 1887, he obtained an appointment to West Point when he was 17, and after a year was found "deficient in mathematics" and flunked out. But he was a born Army man. Once back in Georgia, he wasn't satisfied to enter his father's newspaper business in Perry: he wanted to be a soldier. Finally, in 1906, he enlisted at Fort McPherson, Atlanta, as the humblest of the privates in the 17th Infantry. For two and a half years he was a sergeant there before he got his commission in 1909 as a second lieutenant of infantry—and after that life was more adventurous.

Young Hodges served successively at Fort Leavenworth, Kansas, at San Antonio, Texas and in the Philippine Islands before being sent to Mexico as an officer of the 6th Infantry with General Pershing's Punitive Expedition. When the United States entered the First World War he served with the 6th Infantry in France, and although he saw action in St. Mihiel and other offensives, the most remarkable thing that happened to him during the War, he says, was remaining with

COURTNEY H. HODGES

his outfit under fire for 20 hours before the Meuse-Argonne offensive. He was awarded the Distinguished Service Cross and the Silver Star for valor in action.

After the World War, Hodges served at Fort Sill, Oklahoma and at the United States Military Academy, West Point, New York. In 1920 he was graduated from the Field Artillery School; in 1925 he was graduated from the Command and General Staff School; from 1929 to 1933 he was a member of the Infantry Board. After 1933 he served at the Vancouver, Washington, Barracks and as a member of the general staff of the Philippines Department, having been graduated from the Army War College in 1934. By 1938 he was an assistant commandant of the Infantry School at Fort Benning, Georgia, with the rank of lieutenant colonel; and on October 8, 1940 he was named commandant of the school after the retirement of Brigadier General Asa L. Singleton. He himself acquired the rank of brigadier general, and later with the new appointment he was made a major general.

Hodges is a slender, shy man of medium height. At Fort Benning his favorite recreation was skeet shooting: he is an excellent marksman who has won more than one distinction for his shooting ability, as well as being one of the Army's ablest leaders in the field of military tactics.

Who's Who in the Regular Army

HOGBEN, LANCELOT (THOMAS) (hŏg'bĕn) Dec. 9, 1895- Scientist; author; teacher

Address: b. c/o W. W. Norton, 1 Lexington Ave, New York City

Lancelot Hogben has a considerable reputation among scientists as a biologist, and among ordinary people as a popularizer of the mysteries of science and mathematics. In setting himself up as a combination iconoclast and Messiah of what he calls "scientific humanism," however, some critics feel that he may be in danger of letting the notoriety of his uncurbed sarcasm and indiscriminate wit rob his name of the dignity and repute to which his more constructive efforts have entitled him.

Professor Hogben, who is addressed by his Aberdeen students as "Lancelot" and "Uncle," is reported by those who have known him to be a humanist in the basic sense of the word. His *Mathematics for the Million*, which sold over 70,000 copies in the United States alone, and his *Science for the Citizen* were genuine attempts to bring these subjects within the scope of all literate persons. In *Author in Transit*, however, he indulged himself by criticizing the Russians because they don't read English and are dirty, in praising the Japanese because they have English newspapers and are clean, in indicting all students of the social sciences because they do not reason scientifically, and in coating the concept of "science" with so much of his personal idiosyncrasy that it becomes "just another philosophical abstraction, another metaphysical myth and word of power of the kind which Mr. Hogben scorns so wittily when he finds them in the mouths of economists or conventional educators."

Lancelot Thomas Hogben was born in Southsea, near Portsmouth, England, on December 9, 1895, the son of Thomas Hogben, a seaman's parson. His mother, Margaret (Prescott) Hogben, named him Lancelot, not for Tennyson's gallant hero, but for a missionary in whose steps she expected her son to follow. Many years later, when Hogben broke with those of his friends who belonged to the group of British intellectuals turned Communist, he explained that his childhood had been "largely devoted to a reluctant religion," and that he "had no intention of giving his adulthood to Communism, a dogma and faith in which he could not believe." Although Hogben became a biologist instead of a missionary, in the opinion of some critics he "retains a hereditary impulse to convert the heathen. The heathen at whom he preaches, however, are chiefly the Tories and Communists in his own country."

At Trinity College, Cambridge, Hogben was a Senior Scholar and Frank Smart Prizeman. As a college professor his career led him into widely different localities and types of work. He was a lecturer in zoology at the Imperial College of Science (1919-22), a director of animal breeding research (1923), a lecturer at Edinburgh for two years, assistant professor of zoology at McGill University, professor at the University of Cape Town (1927-30) and professor of social biology at the University of London (1930-37). He has been research professor of human biology at the University of London and served from 1937 to 1940 as Regius Professor of natural history at the University of Aberdeen. In 1941 he accepted the chair of the zoology at the University of Birmingham. In 1936 he was elected a Fellow of the Royal Society for his research work on the pituitary gland and won the Gold Medal of the Royal Society of Edinburgh for his published works on the mathematical theory of genetics, particularly human inbreeding. In 1936 he gave the Moncure Conway Lectures, which were published under the title of *Retreat from Reason* (1937), in which he expounds his doctrine of "scientific humanism," which, he claims, is based on Thomas Huxley's aphorism that "the great end of life is not knowledge but action." Although this was his first sociological work, Hogben's earliest books foreshadowed to some extent his later sociological interests. *The Nature of Living Matter* (1931) was well written, showed wide scientific knowledge and attacked the ideas of such classical scientific thinkers as Haldane, Eddington (see sketch this issue) and Darwin. *Nature and Nurture* (1933) was a brilliant study of genetics.

Mathematics for the Million (1937) was his first great success in making scientific knowledge popular. He says he wrote the book for his own amusement while recovering from an illness, in his "capacity as a private citizen." A firm believer in the popularization of scientific knowledge, Hogben believes this work is being done better in the United States than elsewhere. The American, he says, "works without the medieval hangovers that still obsess and obstruct a Europe full of young men who know all about the glory that was Greece and have no idea of how the internal combustion engine works." His specific aim in writing the book was to stimulate the interest and remove the inferiority complex of "some of the million or so who have given up hope of learning through the usual channels." Its incredible success can be accounted for because it told "what mathematics was about, not as a series of particularly baffling and useless cross-word puzzles, but by showing what it was, how it arose, and what it did." H. G. Wells declared that it was a great book, one that should be read by "every intelligent youth from 15 to 90 who is trying to get the hang of things in this universe." Because he used as illustrative material iconoclastic social criticism, and because his manner of presentation can best be described as "arrogant," he inspired some criticism, too. One American reviewer wrote: "The author knows more things that are not so in more fields, with more 'half-baked' theories, than any of the most famous extravagantists."

Hogben's second attempt in the field of popularizing difficult subjects for the layman was *Science for the Citizen* (1938). Written to obtain tuition for his daughter's university course, it, too, brought contradictory reactions from the press. Some critics regarded it as a "magnificent achievement in the line of progress and courageous social thinking"; others found it lacking in "an instinctive wisdom about human beings," and full of errors and prejudices.

In the introduction to *Retreat from Reason* (1937) Julian Huxley states that Hogben is "one of the rare few who can claim to talk with authority on the subject of scientific humanism." In this book Hogben proceeds from such statements as "reason is everywhere in retreat," and "democracy is becoming a farce," to a criticism of the educational system which he feels has brought about this condition, and a very general outline of the ways in which scientific planning for human needs can better the situation. "The supremacy of reason," he states, "can be maintained only by emphasizing the reasonable grounds for hope in the future of the human experiment." He finds that political leaders "have too little knowledge of technological resources," which makes it impossible for them to plan intelligently. "An arrogant and rather humorless tirade against practically everything extant which has any connection with public affairs," according to one critic, *Retreat from Reason* offers "little constructive except a mild restatement of the ideals of the Technocrats." The book was not without its admirers, however. Horace Kallen called it "forthright, witty, ironical," and placed its author in the front rank of the army of pamphleteers.

LANCELOT HOGBEN

Hogben's book after *Science for the Citizen* was a readable text book, *Principles of Animal Biology* (1940). It was followed the same year by a collection of essays and addresses under the title *Dangerous Thoughts* (1940), dealing with "the state of society and what ought to be done about it." The thesis of the book was still "scientific humanism," and it still, in the opinion of some, sounded very much like Technocracy. The title of the book was chosen, Hogben says, "because no church endorses my views." In it he expressed his belief that "capitalism is no longer a creative force," chiefly because it is "drab." "The

HOGBEN, LANCELOT—*Continued*

straphanging multitudes of our great cities need circuses as well as bread."

When the Germans entered Norway, Hogben and his daughter, Sylvia, were in Oslo. Hogben could have returned to England by diplomatic plane but he could not secure a place for his daughter. They took the hard way, therefore, via Sweden, Russia, Siberia, Japan and the United States. In 1940, when he reached New York after completing the first 12,000 miles out of 20,000 to get to Aberdeen, just a few miles from Oslo by the Western route, Hogben wrote *Author in Transit,* "a kind of documentary film produced in the brains of a highly receptive observer."

In Sweden Hogben found the architecture and the intellectual caste system so displeasing that the excellent food could not compensate for it. In Russia he found that the industrial system had broken down, that few people outside of scientific conferences could do simple arithmetic, that Russians did not read and that living conditions were so disgraceful that "for the next century Russian Marxism will be kept busy by the unromantic task of slum clearance." He denied that Japan is Fascist and expressed the opinion that when it recovered from its present "Boer War" politics it would have a great deal to teach the Western countries, because Japan, "perhaps more than any in the world, comes closest to practising his beliefs on the theory of living in a beautiful environment." As a matter of fact Hogben sums up his attitude towards the use of the word Fascist in these words: "Of late years the word Fascist has been used by liberals and Communists to signify dislike for a person or a system of government, as commercial pinheads, hayseed Senators, and British press lords use the word 'Bolshevik' for anyone who has a higher I. Q. than they have." For the United States, Hogben has great hopes so long as the nation is willing to adapt itself to new conditions and "peaceful planning by piecemeal persuasion" can be maintained.

Hogben's wife, to whom he was married in 1918, is Dr. Enid Charles, a scientist in her own right. They have two sons and two daughters. His daughter, Sylvia, who was the reason for his long journey home, entered the University of Wisconsin in the fall of 1940. Her father accompanied her to Madison, Wisconsin, where he delivered a series of lectures at the University on the "History and Significance of Science."

Professor Hogben's style has been described as "reminiscent of that of Bertrand Russell or of J. B. S. Haldane. He falls somewhat short of them in wit and lucidity, though not in sheer vigor." The character of his wit is exemplified by a reference he makes to the Hegelian dialectic taken over by Marx: "Authors who use a language which allows them to put the nouns on the first page of their works and collect the verbs in the final chapter of the last volume have an unfair disadvantage over the rest of us."

Although he was 45 when he visited the United States, Hogben gave observers an impression of extraordinary youth and freshness. He is small and slight, with auburn hair that hangs attractively over his forehead, dark eyes and a look of "youthful disorder." His voice is quiet and he smiles frequently. Of his personal appearance he himself says: "The surprising state of preservation which the *Evening Standard* described as my boyish appearance is due to the fact that I systematically refuse invitations to dinner parties at which people overeat and underthink in costumes to inhibit excessive cerebration." He does, however, oversmoke. He knows several languages; Russian is not among them. His hobbies are building furniture and designing gardens and he is vehement about his preference for living away from the noise of large cities. "Conventional chatter" about the Oriental virtue of contemplation, however, means nothing to him. "If the choice lies between plumbing and daydreams," he says he is "on the side of the plumbers every time."

HOLMES, JOHN HAYNES, REV. Nov. 29, 1879- Minister of Community Church, New York City

Address: b. 10 Park Ave, New York City; h. 26 Sidney Pl, Brooklyn, N. Y.

Speaking in November 1939 as a "pacifist minister to his brethren," John Haynes Holmes, pastor of the famed Community Church in New York City, warned: "We will be accused of using our pulpits for subversive purposes. . . Especially will we be denounced for dismembering the church—for spreading confusion before its altars, at the very time when the unity of the spirit should be the bond of war." Since that time he has been busy preaching against the growing spirit of militarism in the United States, warning against violation of civil liberties through Fifth Column hysteria, denouncing conscription as a Fascist measure, heading the Citizens Peace Petition Committee, making his church New York's unofficial center for conscientious objectors.

One of America's most unconventional and courageously vocal preachers, Holmes was born in Philadelphia on November 29, 1879, the son of Marcus Morton and Alice F. (Haynes) Holmes. His was a family that had settled in Plymouth back in 1630; his grandparents and parents were "respectable and even influential citizens of the city of Boston," Unitarians and conservative. His maternal grandfather, John C. Haynes, for 50 years head of the Ditson music publishing firm in Boston, provided a tradition of liberalism.

Young Holmes attended public schools, Malden High School, then went on to Harvard. There he majored in philosophy and history, joined the debating team and Delta Upsilon, and as yet showed no symptoms of social conscience. In fact, at that time he was denouncing trade unions along with most of the other students—cheering when President Eliot proclaimed the "scab" the great American hero. In 1902 he was graduated *summa cum laude* and went on to Harvard's divinity school with his Phi Beta Kappa key. He was graduated in 1904, S. T. B., already ordained and installed as minister of the Third Religious Society (Unitarian) of Dorchester, Massachusetts. Three days after graduation he married Madeleine H. Baker of Brooklyn, New York.

It was not long before he was reading Henry George's *Progress and Poverty,* Ida Tarbell's history of Standard Oil, Lloyd's *Wealth Against Commonwealth* and other similar books and finding his conservatism wearing a bit thin. After he came to The Church of the Messiah in New York ("one of the finest plums in the denomination") in 1907 Dr. Collyer, the minister emeritus, was heard asking: "What's this socialism you are talking? I don't understand it. I don't like it. But if you believe it, preach it for all you are worth." From 1908 to 1911 he acted as president of the Unitarian Fellowship for Social Justice; in 1909 as vice-president of the National Association for the Advancement of Colored People. In one sermon he revised the Ten Commandments to make them more applicable to modern times, and the late Heywood Broun, then reporter for the *Tribune,* wrote a flippant story about it. Sent by his city editor to see Holmes, Broun learned about the importance of being earnest. (A quarter of a century later, Holmes was praying for the restoration of Broun's geniality.) Broun described the young minister at the time: ". . . a consecrated young man. I thought then, as I still think, that it is a lovely head. But the expression was not warm. On the contrary, it was a little weary. Possibly John Haynes Holmes had some premonition of the quarter of a century that lay ahead of him and of the service that he would give along the front fighting for righteous and decidedly unpopular causes."

THE REV. JOHN HAYNES HOLMES

John Haynes Holmes discovered one of his most "unpopular" causes when, not long before America's entrance into the First World War, he made himself one of the moving spirits in the organization of the American Civil Liberties Union, which in 1917 emerged from the Committee Against Preparedness and the Committee Against Militarism. And the day before Congress declared war on Germany Holmes' sermon was entitled: "A Message to My People on the Eve of War." He told his parishioners: "I am opposed to war in general and this war in particular. . . In this church, if nowhere else in America, the Germans will still be included in the family of God's children." He was denounced as a traitor in pulpit and press; members of a Midwestern religious sect who incorporated sections of his sermon into their literature were sent to Federal prisons; later in the War his sermon was scattered behind the Allied lines by German aviators. But although Holmes continued to preach against the War his resignation was not demanded by the board of trustees of his church, and he himself was not threatened with arrest until late in the War, when Civil Liberties' headquarters were raided and its leaders got bail ready and prepared for the worst. The Armistice saved them from prison. Holmes did, however, have the post-War honor of being condemned by the Lusk Committee investigating "seditious activi-

HOLMES, JOHN HAYNES, REV.—*Cont.*

ties," charged with responsibility for an "insidious anti-religious campaign." When Japanese-American hostilities began in December 1941 Holmes offered his undated resignation as minister of the Community Church after telling members of the congregation that he could not "bless, sanction or support" war and must remain a pacifist. The resignation was not accepted. In the First World War the same thing happened.

In 1921 John Haynes Holmes left the Unitarian ministry, changed the name of his church to The Community Church, removed all Unitarian and Christian implications from its covenant so that it might express "the unity of all men in the spirit" and welcome Indians, Chinese, Jews, Roman Catholics and Hindus as well as Protestants. A ceremony at the tenth anniversary of the founding of the League of Nations symbolized something of the spirit and cosmopolitanism of the Church. Thirty-one members, born in thirty-one different countries, were asked to come to the pulpit. There they lit candles at a common altar, each in celebration of the country of his birth. At the end of the ceremony both participants and congregation joined in a pledge of service to humanity and the cause of human brotherhood.

John Haynes Holmes has been described as "newsboy, student, clergyman, journalist, magazine editor, author, book lover and collector, enthusiastic theatregoer, musician, husband, father, student of social and political history, courageous pacifist, ardent democrat and social reformer." He is the editor of *Unity*, published in Chicago, and a contributing editor to *Opinion*. He has reviewed books for the New York *Herald Tribune*. He has been a contributor to the *American Dictionary of National Biography*. He is the author of innumerable hymns, pamphlets and magazine articles and of books which range from *The Revolutionary Function of the Modern Church* (1912) and *New Wars for Old* (1916) to *The Heart of Scott's Poetry* (1932) and *Rethinking Religion* (1938). He "has probably established an international record for the number of other people's books to which he has written introductions." As an exponent of non-violence, he became president of the All World Gandhi Fellowship in 1929, and in the same year acting chairman of the War Resisters League, of which he is now honorary chairman. His only play, written with Reginald Lawrence, *If This Be Treason*, was produced by the Theatre Guild in 1935 and was written around the theme of pacifism. (Oswald Garrison Villard approved, but another reviewer found "a strong whiff of the parsonage in *If This be Treason's* incorrigible unreality.")

From 1914 to 1938 he traveled extensively in England, Europe, Russia and the Near East. In 1929 he was on a special mission to Palestine for the Jews, staying there several weeks as a guest of the late Nathan Straus; in 1933 he won the annual Gottheil Medal for service to Jews. From 1929 to 1938 he was chairman of the City Affairs Committee of New York, active in the ousting of Mayor Walker from office. And all this time he has championed nearly every liberal cause extant, although no longer considered a radical. In February 1940 he was elected chairman of the board of directors of the American Civil Liberties Union—chosen unanimously when the Rev. Harry F. Ward declined to seek re-election.

Tall and energetic, he has been alternately accused of extravagance in his judgment and utterances and praised for his facility in dramatizing any appeal—with "all the fervor and prophetic thundering of a Savonarola." He may denounce the evils of liquor as fervently as the evils of war or Fascism. Sometimes called a humanist, he has been perhaps more accurately described as a modernist and theist. He respects the early days of Christianity; warns, "Put not your trust in institutions." In 1934 he suggested a code for the churches: abandonment of denominationalism; fidelity to truth and to science; a pledge to democracy; a pledge to fight nationalism, war, poverty, prejudice, and to reconcile man to his "fated life on this planet."

For years Holmes has been an enthusiastic book collector. His library contains thousands of volumes, and among them are numerous first editions of Sir Walter Scott—his favorite novelist since boyhood. He has one son and a daughter: Roger Wellington and Frances Adria Holmes.

Who's Who in America

HONEGGER, ARTHUR (hôn'ĕg-ẽr) Mar. 10, 1892- Composer

Honegger says that his model is Bach, that he believes music should be constructed as solidly, accurately and ingeniously as an automobile, and that he makes his living chiefly by writing for films. Critics say that his music is wholly atonal, based on counterpoint, that its dissonances are painful, its harshness sometimes cruel but never useless, and their only real reproach is for its occasional tendency toward pedantry. What the public remembers is that this composer, who looks like a cross between a classic poet and an ex-football hero, has written music about engines and football games, and that his *Le Roi David* became a "musical best seller" in the '20s. With somewhat less publicity in America than in France, his name has steadily continued to appear on concert and opera programs, among his more recent compositions being the Quartet for piano and strings sponsored by Elizabeth Sprague Coolidge (see sketch this issue) and played at the Coolidge Festival in Washington in 1938 and *Nicholas de Flue*, presented for the first time in America in New York in May 1941. Movie-goers have heard his music with 30 or more films, of which the best known are *Mayerling, Pygmalion* and *Harvest.*

Although a Swiss citizen, Honegger was born in Le Havre, France, where business had taken his family long before his birth on March 10, 1892. One type of critic sees a connection between the city's wharves, steamers, engines and the type of music he later produced. He grew up among art lovers, though not artists, and by the time he was 13 he had crowded his classroom notebooks with two operas, some chamber music, lieder, sonatas and piano pieces—all written with one staff, since as a violin student he did not know about the F clef.

He studied composition first in Le Havre, later in Zurich, and finally in Paris under Gédalge, Capet, Widor and d'Indy; and in 1916 his work began to attract attention. That year, with a number of fellow students, he formed a group known as *Les Nouveaux Jeunes* (The New Youths) under the leadership of Erik Satie, and with Jean Cocteau as literary spokesman. They gave concerts in the Théâtre du Vieux-Colombier, where, on December 2, 1918, Honegger's first large-scale work was performed: incidental music to Paul Méral's *Le Dit des Jeux du Monde.*

Another member was the "exquisite, poetic" Andrée Vaurabourg, a highly accomplished pianist-composer. The two were married during the group's first year and from then on she merged her career with his, giving up her own composition and frequently being the first to perform his works for piano. The number of works he has dedicated to her implies his recognition of her help. One of these was the Concertino for piano and small orchestra (1925), of which the conductor Ansermet exclaimed: "This is the Mozart of today!"

In 1920 Honegger's *Pastorale d'Eté* (Summer Pastoral) won the Prix Verley, annually awarded to the best work for small orchestras. This was the year the "Group of Six" began to enjoy world-wide notoriety. It included, besides Honegger, Milhaud, Poulenc, Auric, Durey and Germaine Tailleferre; and for about six years it represented what was most novel, most daring, most artfully arty in music. After about 1926 "The Six" was heard of chiefly in the past tense, although certain of its members, notably Honegger and Milhaud (see sketch this issue), commanded increasing attention.

Honegger loves sports almost as much as locomotives, in his adolescent years was enthusiastic about football and bicycle races, and as a mature musician never misses an important match. His *Rugby* (1928) might be called a "tour de force of circumstances," for it grew out of his idle comment to a reporter that he could conceive of a symphonic poem picturing the musical equivalent of a football game. Immediately the story spread that he was writing such a composition, and comment buzzed on both sides of the Atlantic. Honegger at first was amused, then interested; and in 1928 *Rugby* had its Paris première. More recent works for orchestra are the Cello Concerto performed in Boston in 1930, and the symphony written in honor of the fiftieth anniversary of the Boston Symphony Orchestra, performed there by Koussevitzky in 1931.

ARTHUR HONEGGER

Although Honegger has remarked that "one can hardly afford to write an opera today," his *l'Aiglon* (1937), in collaboration with Jacques Ibert, was the only opera since *Der Rosenkavalier* to have twenty-one performances the first year it was put on by the Paris Grand Opera. This, Honegger asserts, was due to the popularity of the leading lady, Fanny Helden. His many other works for the stage include the opera, *Antigone* (1924), to a text by Cocteau; one operetta; seven ballets; and incidental music to thirteen dramatic works. Some of these are André Gide's *Saul* (1922); Romain Rolland's *Liluli* (1923); René Morax's *Judith* (1925)—Mary Garden sang the Chicago première in 1926; d'Annunzio's *Phaedra* (1926); Paul Valéry's *Amphion,* a ballet melodrama produced by Ida Rubenstein at the Paris Opera in 1931; Paul Claudel's mystery play, *Jeanne d'Arc au Bûcher* (1938); and his four-part cycle, *La Danse des Morts* (1940). The Swiss city of Neuchâtel commissioned him to do music for a large-scale popular spectacle at the 1940 Zurich Exposition, and it was this work, redone, which was heard as *Nicholas de Flue* in New York. He has also written numerous works for the piano and for voice.

The work hailed as marking "the complete emancipation of Honegger's talent" was

HONEGGER, ARTHUR—*Continued*

Horace Victorieux (1920-21), a "mimed symphony" based on the narrative by Livy. A more sensational reception was met by the oratorio *Le Roi David,* given dramatic performance at Mézières, Switzerland in 1923. One critic claimed that this "dramatic psalm" owed its great popularity to the fact that, as it had been commissioned for immediate use, it had to be written in great haste. It had orchestral performances in Paris and various American cities, and in 1926 was played in the Coliseum at Rome and at the Zurich festival of the International Society for Contemporary Music.

Those who know Honegger only by one work are familiar with his *Pacific 231,* played so often that Olin Downes felt it was "in danger of disaster caused by over-popularity." Some critics shrugged it aside as "mere onomatopeia," a mechanical and unimaginative transcription of a locomotive rather than a musical re-creation of one. But in 1923, when this "most provocative" of Honegger's works was first performed, machinery in music was news. Audiences twittered no less over the realistic hoots and chuggings of the orchestra than over the composer's much quoted declaration that: "I love locomotives the way other men love women or animals." When he came to America in 1929 the "bob-haired composer" gave color to his statement by riding on a locomotive of the New Haven line clad in beret and white overalls.

There is a dramatic quality in the appearance of this composer, whose greatest claim is that his music represents the "honest work of an honest workman." Of majestic build, with Roman nose, square jaw, tremendous sweep of brow and "penetratingly electric" eyes, he is given to dark green corduroy suits, sports togs and a vast collection of pipes. In 1926, a public debate was staged in Paris: Has Honegger genius? Somewhat to the surprise of the well-bred Parisian audience, the subject himself attended with his publisher, sitting in a conspicuous box. The question was argued pro and con until an admirer who had just published a dithyrambic book about Honegger clinched the argument. This musician of 35, he announced, was undoubtedly a man of genius, since at that age Beethoven had not surpassed the *Heroic Symphony,* Wagner was still at the phase of *Tannhäuser* and *Lohengrin,* and Debussy at *L'Après-Midi d'un Faune* and *Pelléas et Mélisande.*

Opinions differ, sometimes gruffly, about the precise musical evaluation of his compositions. We hear of his "scholastic pedantry" and also that "the best of his many aspects is his lyrical one . . . sometimes touched with a melancholy that expresses itself in songs of winged sweetness." One critic inveighs against his music as "mechanical romanticism" more appropriate to the cinema than the concert hall. Olin Downes, on the other hand, recovering from his earlier apathy, in 1929 declared Honegger the "most lively, full-blooded, cosmopolitan and generally contemporaneous figure among young French composers," adding: "There is speed for you. There is wow—in terms of masterful, entertaining music."
